It has often been remarked by people unfortunate enough to be the recipients of official communications in Japan, that whatever changes may have overtaken the general relations between rulers and ruled since the fall of feudalism, conservatism still holds its ground unshaken in respect of the phraseology of official documents. The haughty "*Ke-Tojin*," titled perhaps, and wealthy probably, when he receives a passport to travel and scatter his pelf among the people in the interior, remains happily ignorant that on the face of the document he is described as *migi no mono*; that is to say, "the above person," or, as some would translate it, "the above thing." Such is the style adopted universally in communications from officials to private folks. Never a suggestion of politeness, never a scintilla of deference, finds its way into the despatch or memorandum. Every one is a "*mono*" and every intimation is in the imperative mood. "Honourable officials, contemptible people" (*Kanson Mimpi*) is the stereotyped motto. Among the miscellaneous notes of the *Romaji Zasshi* we find a few strong words on the subject. The writer asks whether, in these times, when men talk so much of personal rights and of the necessity of eradicating old abuses, it might not be well to make a commencement by reforming official phraseology. He recalls the fact that English official documents breathe the very essence of politeness. The "*mono*" of Japanese style becomes "Sir" in England; a communication is prefaced by the courteous formula "I have the honour to inform you"; the "*ko ko surubeshi*" (do so and so) of Japan is transformed into "you are requested to do so and so," and the writer of the memorandum or despatch is the "obedient servant," perhaps "the obedient, humble servant," of its recipient. It is a good suggestion that in order to bring the mercantile, manufacturing, and artistic classes to a higher plane, the official class might show the way by descending a little from its traditional pedestal.

### THE ELECTION IN TOKYO.

The result of the election in the Tenth District of Tokyo was announced on Thursday, Mr. Tsunoda was successful. He obtained 350 votes against Mr. Hatoyama's 344. Nearly every elector in the District voted. It is stated that the cost of the election was very heavy, the successful candidate disbursing about eight thousand *yen*, and Mr. Hatoyama, one half of that sum. In a constituency of only some 700 voters, such an outlay is decidedly heavy. It means 17 *yen* per vote, approximately. Rumour has it that Mr. Hatoyama lost a good many voters owing to the act of armed violence perpetrated by his opponents the day before the polling. The wounding of four people with swords exercised a deterrent effect on timid folks. The story is very credible. At any rate severe methods should be employed to prevent the recurrence of such disgraceful incidents. If the use of deadly weapons comes to be a feature of Japanese elections, the reputation of the country will suffer severely.

* * *

The election of a member for the representation of the Fourth District of Osaka, *vice* Mr. Nakaye Tokusuke, who retires, has resulted in the choice of Mr. Murayama Ryuhei, who received 657 votes, against 529 obtained by Mr. Kenichi Noriyasu. Further, in the Fourth District of Shiga Prefecture, the seat vacated by Mr. Soma Nagatane falls to Mr. Wakizaka Gyozo (1,288 votes) who has defeated Mr. Yamaoka (655 votes) and Mr. Asami (642 votes).

### THE ORPHAN ASYLUM AT OKAYAMA.

The *Jogaku Zasshi* ("Woman's Magazine") of the 14th instant contains an interesting account of a visit to the Okayama Orphan Asylum, under the management of Mr. Ishii Juji. When the visitor, who employs the *nom de plume* of *Rosenshi*, reached the institution, it was time for the evening meeting of the boys and girls. Entering the hall, where the meeting was to take place, the visitor's attention was attracted by three masks on the wall, representing a blue devil, a red devil, and an *Otafuku* (an emblem of innocence and geniality). At the ringing of a bell, the orphans, about seventy in number, quickly repaired to the hall from all directions. The meeting was opened with a prayer by Mr. Ishii. A few of the orphans reported on the work they had done during the day. Mr. Ishii, then, pointing to the blue devil's mask, asked the boys and girls assembled how many of them had been wicked during the day like that devil. Whereupon fourteen or fifteen children raised their hands. Mr. Ishii next asked the orphans how many of them had been quarrelsome and mischievous like the red devil. This question was answered by about fifty hands, and one boy complained that a comrade, who had quarrelled, did not raise his hand. Lastly, when asked how many had been good and gentle like the Otafuku, only four had the courage to raise their hands. The visitor observes that the perfect naivete and innocence of the little ones in answering these questions were extremely touching. We are next introduced to one of the Saturday lecture meetings of the boys and girls. Six lectures were delivered, of which two are given as specimens. The following was spoken by a boy named Maruta Daiichi, formerly a beggar:—

As, you know, hens love their chickens dearly. When a dog or a cat comes to take away any of her young ones, a hen instantly comes to its rescue. In a similar manner our parents* love us dearly, and we owe them a debt of gratitude as high as mountains.—(Loud Cheers.)

The other address was on the Power of Prayer, by a girl named Yano Kishiyo, who is describ-

* The orphans call Mr. and Mrs. Ishii parents.

Digitized by Google

ed as the pride of the institution. It runs as follows:—

It is prayer that unlocks the gate of Heaven. The prayer of John Knox was more powerful than the troops of Queen Mary of Scotland. We, the inmates of this institution, must not, therefore, forget to pray.

The writer tells a story well illustrating the intimate relations existing between the kindly superintendent and the orphans under his care. Among the boys is one greatly lacking in brains but endowed with a strong constitution. He had been ordered with other boys to pound rice in a mortar. Presently he came back and said that he would not work unless in company with his "parent," whereupon Mr. Ishii good humouredly consented to share the toil of the rice-pounding. The object lessons with the masks are a singular innovation. Judging from the number of children that confessed to having quarrelled, it would seem that the idea of resembling the red demon has not a very deterrent effect.

### THE SPRING EXHIBITION OF ART OBJECTS IN TOKYO.

THE usual Spring Exhibition of Art Objects opens to-day in the Uyeno Fine Art Gallery. Up to the 19th instant five hundred old specimens and more than a thousand new had been sent in. The Household Department exhibits the huge pictorial scroll, a description of which was published in these columns last autumn, depicting scenes from the Chinese invasion of Japan. The exhibits are divided into five Sections: namely (1) Pictures, the judges being Messrs. Yamana Tsurayoshi, Kano Tambi, Taki Watei, Noguchi Yukoku, Ishii Shigekata, Kawabe Mitate, Kawabata Gyokusho, Araki Kampo, Satake Yeiko, and Murase Gyokuden; (2) Architectural Fittings, judged by Messrs. Tsumagi Raiko, Haibara Naojiro, and Kawasaki Chitora; (3) Carvings, judged by Messrs. Kakamura Koun, Ishikawa Komei, Ito Katsumi, Kagawa Katsuhiro, Tsukata Shukyo, Unno Shomin, and Masuda Takashi; (4) Porcelains, Bronzes, and Enamels, Judged by Messrs. Namikawa Sasuke, Wakai Kanesaburo, Takemoto Hayata, Miyakawa Kozan, Obori Seiju, Oki Soba and Suzuki Chokichi; (5) Lacquers, Embroideries, &c., judged by Messrs. Kurokawa Mayori, Ogawa Shomin, Saito Masakichi, Kobayashi Ayazo, and Shibata Kametaro.

### SIR EDWIN ARNOLD'S NEW POEM.

MR. DOUGLAS SLADEN, in a long letter to the *Chicago Tribune*, mentions the price paid for the MS. poem by Sir Edwin Arnold, "The Light of the World." He says:—"Sir Edwin read the bulk of it to me in installments as he was writing it, and I was one of the fortunate few hundred who were present on the historical occasion when he recited from it in the great hall of the Rokumeikwan—the building which contains the Tokyo Club, whose hospitalities so many good Americans have tasted. All the most representative foreigners in Japan were present, and many of the Japanese, such as that fine old Marquis Nabeshima, erst Daimio, or feudal Prince of Hizen. Tokyo was dressed for church, and Harry Deakin, the Tiffany of Japan, the prince of curio dealers, was so enthusiastic that he is said to have made his $25,000 offer for the American rights there and then, and certain it is that directly afterwards he sent a special agent all the way to New York with the manuscript to negotiate its re-sale.

### A HATCHET WANTED.

THE *Tokyo Shimpo's* joke excited a certain amount of merriment when that newspaper proclaimed that the new Japanese journal in four languages was to be directed and edited by Prince Bismarck, Sir Charles Dilke, M. Jules Ferry, and Counts Ito and Okuma. But the fun of this jest is as nothing compared with the laughter stirred by the solemn simpleton who has taken the whole thing *au grand sérieux*, and thought it necessary to inform his readers that "the list of names of persons to be connected with the new journal is sufficient to excite ridicule." Such imbecility is delicious. In future, when reproducing any piece of banter from the vernacular press, we shall add a *nota bene* to save the dear old local dotards from making themselves ridiculous.

### GREAT SALE OF ART OBJECTS IN NEW YORK.

WHEN the last mail left New York, collectors of Eastern bric-a-brac in that city were greatly excited about a huge sale of art objects then impending. The collection of no less an amateur than Mr. Brayton Ives, the well-known New York banker, was about to be brought to the hammer. The collection numbered from four to five hundred pieces of Chinese porcelain; 110 fine Japanese swords; 70 specimens of jade; a quantity of fine lacquer, sword furniture, and so forth, the whole representing $500,000 approximately. The affair doubtless constituted a sort of carnival for amateurs, Mr. Brayton Ives' specimens having long been known for their beauty and rarity.

### THE BLIZZARD IN ENGLAND.

FROM the first telegram in reference to the blizzard that recently swept over England it might be imagined that the eastern and south-eastern parts of the country were the only districts that suffered, but this morning's message shows how severe must have been the weather when six trains were snowed up in the short distance between Exeter and Plymouth, the most salubrious spot in all England without exception. Protected from the strong north-westerly gales that occur in the spring by the high tors of Dartmoor, and gradually sloping to the sea in a south-easterly direction, this part of Devonshire is a veritable flower-garden in the middle of March. Such an occurrence as that telegraphed to-day certainly never before happened within the memory of man.

### RUMOURS.

Now that the excitement of the Diet is past, people are turning their attention to the subject which stands next in public interest, namely, Treaty Revision. All kinds of rumours are circulated as to the terms of negotiation, two journals especially—the *Kokumin Shimbun* and the *Nippon*—giving detailed accounts, item by item, of the bases which they believe to have adopted. Both papers differ materially, and it seems quite unnecessary to reproduce either account, inasmuch as very little reliance is to be placed on their accuracy. We allude to them merely for the purpose of warning our readers that no faith attaches to such rumours.

### AN OMISSION.

IN our notice of the funeral ceremony of the late Honourable J. F. Swift, we omitted to mention that, conspicuous among those who attended in the Episcopalian Church was the head of the Greek Church in Japan, the Very Rev. Bishop Nicolai, who appeared in the robes of his rank, his presence recalling the Christian tolerance that has always characterised his faith, and recalling also the fact that, only five days previously, the deceased statesman had assisted at the consecration of the Cathedral of the Resurrection, and received the blessing of the Prelate who now prayed for the repose of his soul.

### THE REPORTED NEWSPAPER.

THERE has been much talk lately of a new journal to be started in Tokyo with a capital of three hundred thousand *yen*, subscribed by noblemen. Rumour asserts that the paper is to be published in English, French, and German, and the *Tokyo Shimpo* professes to give full details. The Director, it says, is to be Prince Bismarck; the Managers, Sir Charles Dilke and M. Jules Ferry; the Accountant, Count Okuma, and the Editor, Count Ito.

### DEATH OF CAPTAIN DEARBORN.

PAPERS by the American mail bring news of the death, at Tacoma, of Captain Dearborn, well known at this port as being many years in the service of the Pacific Mail Company. It appears that the cause of death was rupture of a blood-vessel in the head, brain fever supervening and death occurring a fortnight after. Captain Dearborn had been connected with the steamers of the company for over 25 years, on the Australian route, subsequently on the coast to Shanghai, and lastly on the Pacific, and was a popular man with passengers. At the time of his death he was surveyor at Tacoma.

### THE ELECTION IN THE TENTH DISTRICT OF TOKYO.

WE reported on Tuesday that a disturbance had been caused by *soshi*, acting in the interests of Mr. Tsunoda, the day before the election of a member of the Diet for the Tenth District of Tokyo. It appears, now, that swords were employed by the rioters, and that four persons were wounded, though happily not seriously. Rumour says, however, that in consequence of the lawless conduct of the *soshi*, several electors who desired to vote for MR. HATOYAMA, were deterred from coming to the poll.

### ENGLISH AS SHE IS WROTE.

HERE is an example of English as she is wrote in this Settlement; we take it from the columns of the *Japan Herald*:—

We can only say that the *Mail's* returning to the subject by the flurry the editor was in after our paragraph appeared, that his libelling of the foreign mercantile community might lead to farther withdrawals by them of subscriptions and advertisements.

### STORM OFF THE COAST OF HITACHI.

EARLY in the morning of the 15th inst. a severe wind storm arose with violent waves, and caused great loss of property and of life. Some 13 boats belonging to the town of Iso-no-hana, are known to have been lost, and others are missing. The number of lives lost cannot yet be accurately ascertained, but from 40 to 50 fishermen are missing. The sound of the waves could be heard at Mito, 7 miles away.

### QUOT HOMINES.

TASTES differ, or perhaps we should say, the modes of expressing them. The *Japan Gazette* found some parts of the funeral service last Friday "most enjoyable," and says so, with fine open rusticity. These are not sentiments usually inspired by the obsequies of a man for whom the public mourns.

### COUNT ITO.

IT is stated, but we cannot vouch for the truth of the assertion, that Count Ito resigned both the offices held by him, namely, that of President of the House of Peers and Privy Court Councillor, but that, by special command of the Emperor, he has consented to retain the latter post.

### THE CHARITY THEATRICALS IN TOKYO.

OWING to the lamented decease of the American Representative, it has been decided to postpone until the 1st of April the theatrical performance originally fixed for the 21st instant, in behalf of charitable objects. The place of performance remains as before, the Rokumeikan, Tokyo.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

Movements of political parties, reported changes of Cabinet Ministers and, Governors of Cities and Prefectures, the Korean question, and Treaty Revision constitute the principal topics of discussion in the columns ofthe vernacular press during the week.

* * *

The political parties of the present day are all in a transitory state. Regroupings and disintegrations are constantly taking place among them. The *Rikken Jiyu-to* has been holding a series of conferences at Osaka. No accurate report of the results of the meetings has yet been published; but it was rumoured that a certain section of the party contemplated proposing the election of Count Itagaki to the leadership of the party. This question of leadership, in whatever manner it may have been decided, will no doubt cause a further split in the party.

* * *

It is reported from Nagoya that Viscount

Digitized by Google

Tanaka Fujimaro, late Minister to France, is organizing a local party professing liberal principles. In league with him are said to be Colonel Aoyama, Mr. T. Kato, formerly Private Secretary of Count Okuma in the Foreign Office, Mr. Na ai Kynichiro, a Private Secretary of the Minister of Education, and other persons of Nagoya origin. For the present, this party will maintain an independent existence, but it is believed that it will eventually join the *Rikken Jiyu-to*.

* * *

Reports about probable changes in the Cabinet still continue to engage the attention of the political world. The *Jiyu Shimbun*, referring to the Minister President's supposed intention to resign his post, advises him to identify himself with some party, and then to decide as to whether he is to remain in office or leave it, according to his party. By this time, observes our contemporary, Count Yamagata must have become aware of the impossibility of keeping aloof from political parties. The perpetual continuance of one set of statesmen in power is liable to engender abuses in official circles, and popular disaffection toward the Cabinet may possibly lead to alienation of the people's hearts from the Imperial House. Thus Count Itagaki's organ counsels the present Minister President to carry courageously into practice the principle of Government by party.

* * *

The *Hochi Shimbun*, reproducing the opinion of a certain high dignitary of State, observes that the report as to changes in the *personnel* of the Cabinet is not well founded. When Count Yamagata consented to accept his present post, he told his colleagues that he did not like to remain long in office, and that he could not promise to stay after the close of the first session of the Diet. The present rumours as to his intended resignation and consequent changes in the Cabinet, have no other foundation to rest upon than this declaration, made many months ago. Moreover, Count Yamagata has the responsibility of carrying out the changes in the Government necessitated by the amendments in the Budget. Some changes of Cabinet Ministers may take place after the accomplishment of these reforms, but not before. Lastly, our contemporary states that no credit is to be placed in the story now circulated as to the probable appointment of Count Inouye to succeed Count Yamagata, in case the latter resigns. The *Hochi's* information seems to be pretty correct.

* * *

There appears to be ground for the report that some changes will be effected in Governors of Cities and Prefectures. It is rumoured that six or seven new Governors will be appointed from among members of the Diet. We do not know whether this rumour is well founded or not, but there is little doubt that the Cabinet has really under contemplation some changes in the *personnel* of the local authorities. The *Kokkwai*, writing on this subject, observes with regret that many of the Governors of Cities and Prefectures do not seem to be at all capable of discharging the important functions of their office. Much scandal has been from time to time created by exposures of the immoralities and extravagance of local officials. Our contemporary hopes that the Government will replace all Governors of evil reputation by men of proved ability and honesty.

* * *

The *Choya Shimbun* observes that hitherto the appointment of local officials has been in many cases controlled, more by the convenience of the Central Government, than by any consideration as to the capacity of particular persons. For instance, whenever some economy had to be effected, local officers were put on the retired list, and their place taken by functionaries from Tokyo. Such a practice may have caused comparatively little evil in the past, but with the carrying out of the new system of local government, the duties of Governors have become far more difficult and important than before; and our contemporary asks the Government to change its method of appointment. The subordinate functionaries in the various departments of State need not necessarily be men of exceptional ability; but the Governors of *Fu* and *Ken* possess must constructive capacity. Unless this truth is practically recognized by the Government, there is—says the *Choya*—no hope of giving satisfaction to the people of the provinces.

* * *

The Korean question attracts serious attention. Judging from what has appeared in the press on this subject, it appears that the public, especially the rising generation, is in favour of a strong policy towards the peninsular Kingdom. The Government is asked to keep a vigilant watch over the course of events there, and to take steps for the protection of Korean independence, in case any foreign Power should attempt to endanger it. Formerly China's interference in Korean affairs was the principal subject of criticism in this country, but of late a certain section of the nation has come to look with suspicion upon the policy of Russia at the Korean court. This uneasiness is increased by a report that the Korean populace is very much excited because 1891 is the five hundredth year of the rule of the present dynasty, the popular belief being that the House of Li will fall in the five hundredth year of its rule. The *Nippon*, writing on this topic, observes that the history of Eastern countries, especially China, furnishes abundant instances of the founder of a new dynasty of princes predicting the length of his house's tenure of power. Such predictions very often are the means of bringing about their own fulfilment. Chinese and Koreans are peculiarly liable to put faith in prophecies of this nature. Possibly the founder of the present dynasty of Korean kings may have foretold the fall of his family, in accordance with the examples set by some Emperors in China. Whatever be the origin of the prophecy, it is a fact, avers the *Nippon*, that the Korean people have fallen into a mood capable of being imposed upon by daring adventurers. Our contemporary fears that some calamity may befall the distracted nation, in the form of either foreign invasion or civil war. Japan, we are told, has a friendly duty to discharge towards the Koreans in case they should find themselves in trouble, for the two nations are closely related to each other in race, language (written), and history. The *Nippon* asks the Government to pay due attention to Korean affairs.

* * *

As to the policy which Japan ought to pursue towards Korea, the *Kokumin Shimbun*, which represents an intelligent section of the rising generation, writes in an alarmist strain. It believes that Russia has gained a strong foot-hold in the Korean Court, and that the hermit kingdom may at any moment be converted into a Russian dependency. Under such circumstances, it is, says the Tokyo journal, vitally important for Japan, as a means of self-defence to maintain the independence of Korea. The time has come for the Japanese to open their eyes, and to adopt a definite and strong course of action, instead of the temporizing policy hitherto pursued.

* * *

The sudden and unexpected death of the late Minister to Korea, Major Kawakita, is deeply lamented by the press, and the question of the appointment of his successor is discussed with interest. The Tokyo newspapers unite in arguing that Japan's Minister in Korea ought to be a diplomatist of the first rank. The ideal representative described by them is a man of courteous manners but of the greatest decision of character. The *Nippon* observes that hitherto Japanese Representatives at the Korean Court have been simply Resident Ministers or *Chargés d'Affaires*, but that hereafter they ought to have the rank of Minister Plenipotentary and Envoy Extraordinary. As to the appointment of a successor to the late Major Kawakita, the Government is advised to choose some officer in the Army or Navy. The *Kokumin Shimbun* writes in a similar strain, being of opinion that the new Minister ought to be a diplomat perfectly competent to keep the Korean Court in good humour, for both Russia and China are perpetually striving to gain new allies among officials near the King's person.

* * *

The question of Treaty Revision is beginning to attract public attention once more. The Tokyo papers are not yet in possession of trustworthy facts relating to the matter, and their discussions are consequently vague and general. But it is certain from what has already appeared that they will not be satisfied with any terms not decidedly favourable. The *Kokkwai*, after alluding to an alleged treaty programme of Viscount Aoki lately published in the Tokyo press, observes that the particulars of the programme are incredible, as they do not tally with the public professions of the Minister of Foreign Affairs. From his declarations in the House of Representatives, in reply to Mr. Arai Shogo and Mr. Misaki Kamenosuke, and in the House of Peers, in reply to Mr. Nishimura Shigeki, Viscount Aoki's object is inferred to be recovery of tariff and judicial autonomy in part, the granting of mixed residence, in return for the abolition of Consular Jurisdiction, the withholding of the privilege of owing real estate, as well as that of participating in the coasting trade. Pending the publication of the details of the scheme, the *Kokkai* calls it premature to pronounce any decided opinion either for or against the treaty policy of the present Minister of Foreign Affairs. Meanwhile it recommends its countrymen to keep a keen watch and obtain more trustworthy information on the subject.

* * *

The *Chinsei Nippo*, the organ of the Conservative party under Viscount Torio, asks its countrymen whether they are determined as to the last resort in case Japan's demands be rejected by the Treaty Powers. It is all very well to express dissatisfaction with any scheme of revision not coming up to the desired standard, but how many out of those who opposed the preceding Minister's programme were really prepared to answer the above question? Our contemporary thinks that the number of such people is extremely small. Unless the whole nation makes up its mind to have its wrongs righted, even at the point of the bayonet, it will be futile, says the Conservative organ, to attempt any satisfactory accomplishment of the objects of Treaty Revision.

* * *

The *Kokkai*, writing on the approaching visit of the Russian Prince Imperial, observes that in a certain quarter grave apprehensions are entertained respecting the object of the visit, and strongly condemns people cowardly and unmanly enough to exhibit distrust toward Russia, while in point of fact there exist the best of relations between Japan and that country. Further Russia will become a great purchaser of Japanese tea, and with the development of Siberia, the commercial relations between the two countries will grow more and more intimate. Our contemporary advises its countrymen to receive the august visitor with every possible mark of respect and goodwill.

* * *

The *Nichi Nichi Shimbun* is engaged in reviewing the history of the late session of the Diet. The *Hochi Shimbun*, alluding to the growth of sericulture in Italy, France, and the United States, calls upon Japanese sericulturists to improve their goods so as to compete successfully with foreign rivals. In another article, the same journal cautions the *soshi* not to adopt violent measures against the Tei family. The *Yomiuri Shimbun* is discussing, in a long series of articles not yet concluded, the various constitutional questions relating to the Budget. The *Mainichi Shimbun* and the *Nippon* are reviewing the labours of the Diet during its first session. The *Jiji Shimpo* is engaged in an interesting series of articles on the development of Japanese navigation and commerce. The *Rikken Jiyu Shimbun* suggests the desirability of granting a maintenance fund to the Imperial University from the Imperial purse.

Digitized by Google

## *THE FUNERAL OF THE UNITED STATES MINISTER.*

TEN o'clock on the 13th inst. was the hour fixed for the official funeral of the late Honourable JOHN F. SWIFT, Envoy Extraordinary and Minister Plenipotentiary of the United States in Japan. The body had been carried the preceding evening to the American Episcopalian Church in Tsukiji, and had remained there under military escort during the night, the coffin lying before the chancel, covered with the Stars and Stripes, and under a mass of floral wreaths. The Church, by far the handsomest and most spacious place of Episcopalian worship in Tokyo, proved wholly inadequate to accommodate the large assemblage that gathered to pay the last tribute of respect to the memory of the deceased. Their Imperial Majesties the Emperor and Empress, by whom magnificent wreaths had been sent, were represented by their Excellencies Marquis NABESHIMA, Grand Master of Ceremonies; Viscount SUGI, Grand Master of Services; Mr. SANNOMIYA, Vice-Grand Master of Ceremonies; Viscount MATSUDAIRA, Grand Master of Ceremonies; and several of the Ladies in Waiting. All the Ministers of State were present, except H. E. Count YAMAGATA, who is still suffering from influenza, and all the Foreign Representatives, with the exception of H.E. M. SCHEVITCH who also is indisposed, and H.E. M. NEYT, who attended in Yokohama. These with other members of the Corps diplomatique and Consular body, as well as a number of minor Japanese officials, and Naval Officers, American and Japanese, were in full uniform. The front rows of pews were reserved for the use of persons attending officially, and in the remaining space the whole foreign Protestant community of Tokyo—for of absentees there were scarcely any—found seats so long as sitting room was available, and ultimately massed themselves standing. Outside, a battalion of troops was drawn up under arms, and another battalion lined the road on either side at the western entrance to the Tsukiji Settlement. Precisely at the appointed hour the Episcopalian clergymen of the American and British Churches in Japan with the Choristers in surplices, passed up the nave in procession, the Rev. J. M. FRANCIS leading, and the Rev. J. T. COLE reading the prefatory verses of the service. The procession included the Rt. Rev. Bishops BICKERSTETH and WILLIAMS and the Venerable Archdeacon SHAW. Filing past the bier, the clergy took their places on either side of the chancel, and the service proceeded, the lesson being read by the Rev. Mr. COLE, the prayers said by the Rt. Rev. Bishop WILLIAMS, and the Psalm chaunted by the Rev. Mr. FRANCIS. The singing was excellent, especially that of Mr. FRANCIS, and indeed nothing could have been more impressive than the manner of performing the whole service. A somewhat painful impression seems to have been produced by the fact that the official element of the congregation did not observe the usual forms of episcopalian worship, but remained seated throughout. It is obvious, however, that this course is invitable; for among those attending a funeral *ex officio* many, possibly a great majority, do not belong to the sect or creed of the deceased, and are therefore unacquainted with the routine of the service, even supposing that they have no scruples about joining in it. While the last hymn was being sung, the procession of clergymen and choristers formed again and passed slowly down the nave, the coffin being carried behind them, and deposited in the hearse outside. Then with wonderfully little confusion or delay the immense crowd of carriages fell into line, and the cortége took its way to the Shimbashi terminus, a battalion of troops with a band marching in front and another bringing up the rear. At least fifty wreaths and other handsome floral offerings, some prepared in Japanese style, were laid inside the hearse or carried in the procession, and minute guns were fired by Japanese men-of-war lying off Shinagawa as the cortége travelled towards Shimbashi. It is scarcely necessary to add that a decorous but intently gazing crowd lined both sides of the streets throughout the entire distance. On arriving at the terminus, the coffin was carried to the inner waiting-room, where due preparations had been made for its accommodation, and after having seen it deposited there, the Ministers of State, members of the Foreign Corps Diplomatique, and other officials repaired to the chambers in the upper part part of the building, the mass of the mourners remaining below. A brief delay ensued before the platform could be completely cleared for the departure of the special train, which shortly afterwards steamed slowly out of the station, carrying away from Tokyo the remains of a Minister who had won all hearts during his brief term of service in the capital. Here the official ceremonial ended, only the chief mourners, and a very few others accompanying the body to Yokohama.

In accordance with the suggestion made public at the meeting of American residents on the previous day, most of those intending to take part in the Yokohama procession collected at the Railway Station about noon. The platform was kept clear by officials, and marines and sailors from men-of-war in port were drawn up as they arrived opposite the Station buildings. The detachment from the *Alliance* was first on the ground, marching up headed by the band, which had been transferred from the *Omaha* previous to that vessel's departure. The men from the *Volturno*, and those from the *Tsukuba Kan* and the *Hyacinth* came later, and prolonged the line towards the bridge over the creek. The wait at the station was much longer than had been anticipated, and it was not till about 12.50 that the train drew up at the platform. The Diplomatic, Prefectural, Consular, and naval officers collected on the platform near the entrance, the majority of the mourners, however, remaining outside. Some delay took place in removing the hearse from the car in which it had been conveyed from Tokyo, and harnessing the horses that were waiting, but ultimately the coffin, carried by eight bearers (sailors of the *Alliance*) who had mounted guard over it during the journey, was placed in the hearse. A body of clergymen and choristers preceded the hearse as it moved along the platform, among whom were Bishop WILLIAMS with the Rev. Mr. COLE as his Chaplain, Bishop BICKERSTETH with the Rev. Mr. FREESE as his Chaplain, Archdeacon SHAW and the Rev. Mr. WOODMAN, the Rev. Messrs. WILLIAMS and JEFFRYS; the Rev. Messrs. MOORE and GARDNER; and the Rev. Mr. FRANCIS, who acted as precentor. These walked two abreast in the order we have indicated. Outside, the work of organizing the procession took some time, but the various bodies composing it fell into their places with such order and regularity that no confusion occurred, and at length the head of the cortége began to move over the bridge in the following sequence:—

Mounted Police Inspector. Mounted Police Inspector
Four blue-jackets carrying banderoles draped with crape.
The Band.
The American flag draped with crape.
Company of marines with reversed arms, marching in single ranks of 12 men each.
The Clergy.
Pall Bearers. THE HEARSE. Pall Bearers.
Carriage containing Admiral Belknap, Lieut. Reamey, Mr. E. Dun, First Secretary of Legation and *Charge d'Affaires*, and Mr. Gardiner, Second Secretary.
Carriage containing Dr. Whitney, Interpreter of Legation, Ensign Boughter (Admiral's aide), Messrs. G. H. Scidmore, Vice-Consul-General, and J. McLean, Deputy-Consul-General.
Carriage with wreaths.
Two companies of sailors from *Alliance*.
Company of sailors from *Volturno*.
Company of sailors from *Tsukuba Kan*.
Company of sailors from *Hyacinth*.
United States naval officers.
Italian naval officers.
Japanese naval officers.
English naval officers.
American and other residents.
Consular body.
Diplomatic corps and Governor of Kanagawa.
Carriages.
Japanese Floral tributes.
Mounted Police Inspector.

The pall-bearers elected by the American residents were Messrs. J. F. MCGRATH, A. O. GAY, A. GENTER, JOHN LINDSLEY, E. R. SMITH, and W. S. STONE. To this number there were added by appointment of Admiral BELKNAP, Captain TAYLOR of the *Alliance* and Doctor GRAVATT, U.S.N. It will be observed that the most distinguished bodies occupied the last place in the procession, but this apparent reversal of ordinary rule was in reality due to the observance of established custom at naval funerals, the arrangements being under the charge of Admiral BELKNAP. Excellent order was maintained by the large force of police detailed for that purpose, and in consequence the passage of the *cortége* along the streets was unattended by any confusion. The Hearse, drawn by four horses, moved slowly along. The bells of the ships in the Harbour had in-

Digitized by Google

dicated half-past one when the head of the procession emerged upon the Bund, and the *Alliance* fired the first of a series of minute guns, followed at a second's interval by the *Volturno* and the *Tsukuba Kan*. The *Hyacinth*, not being a saluting ship, did not take part in the demonstration. The streets all along the line of route, with the exception of the space kept clear for the procession, were crowded by spectators, the windows of the buildings being also all occupied. By the course taken (Honcho-dori, the Bund, and Camp-hill) passage through the business part of the foreign settlement was avoided, but all places of business remained closed till after two o'clock. At the Cemetery the coffin was carried from the Hearse, the chief mourners closely following. Arrived at the temporary grave, which had been dug in the locality set apart for American naval interments, Bishop WILLIAMS and the Rev. Mr. COLE took up their position at the head of the grave, the clergy being grouped together with the Legation and Consular officials, on their right, the marines drawn up in single rank opposite, and the band stationed on the left. The American Flag was now removed from the top of the coffin, and the latter was lowered into the grave. The opening part of the service was read by the Rev. Mr. COLE, and the band then played a solemn dirge. The clergy, led by Bishop WILLIAMS, joined in the Lord's Prayer, and the service having been brought to a close by the Bishop, the hymn "Rock of Ages" was sung, and the mourners dispersed.

In addition to the gentlemen whose names we have already given, there were present the Belgian Minister, French, Russian, Danish, German, Swiss, and British Consuls, Lieut. RICH and officers of the *Alliance*, officers from the *Hyacinth*, *Tsukuba Kan*, and *Volturno*. Mr. MITSUHASHI, and Marquis NEMBRINI-GONZAGA, of the Kencho, and about eighty foreign residents among whom were Dr. HOWE, Dr. TRIPLER, Messrs. F. H. OLMSTED, A. D. BRAMHALL, N. F. SMITH, F. MACONDRAY, A. T. WATSON, C. S. ARTHUR, H. DEAKIN, L. EPPINGER, A. ETLINGER, W. A. CRANE, E. A. SARGENT, KILDOYLE, J. MAYERS, E. H. TUSKA, W. DENING, J. H. BROOKE, T. W. KENNAWAY, Rev. Mr. LOOMIS, Rev. Mr. BALLAGH, Messrs. N. J. HANNEN, H.B.M. Judge, J. MENDELSON, W. J. KENNY, J. B. RENTIERS, Rev. Dr. MEACHAM, Messrs. A. BRENT, E. W. TILDEN, M. B. N. HEGT, J. A. FRASER, C. G. WILSON, WILSON WALKER, H. Z. WHEELER, R. M VARNUM, A. STEIN, C. P. LOW, W. T. PAYNE, J. P. MOLLISON, J. R. SIMON, C. POPE, G. W. ADAMS, W. L. MERRIMAN, C. GIBBENS, R. ABEMHEIM, S. SONDHEIM, J. O. AVERILL, Jun., Rev. E. C. IRWINE, Mr. E. LEOPOLD, Professor MILNE, Rev. Dr. HEPBURN, Messrs. C. ROHDE, W. J. CRUICKSHANK, Dr. HARRIS, Messrs. B. GILLETT, A. BARNARD, &c.

The coffin was of *hinoki*, with electro-plated mountings, and covered with cloth. It bore on a centre panel a massive plate with the plain inscription :—

JOHN FRANKLIN SWIFT,
BORN 1ST MARCH, 1829.
DIED 10TH MARCH, 1891.

Many beautiful wreaths were sent, particularly noticeable among which was a splendid one from H.M. the EMPEROR, the ground of which was white, of lillies and orchids, with double violets and snowdrops. Attached to this wreath was a white silk ribbon bearing in silver the Imperial crest. A fine wreath was also sent by the Yokohama United Club.

## "*TRUMPETER UNUS ERAT.*"

WE should indeed be sanguine if we imagined that the old habit of misrepresentation, so steadily practised by certain foreign writers in this Settlement, had been abandoned or modified. There is no change. If anything published in these columns can be twisted, however unjustly, into a text for accusing us of running down the foreign merchant, the opportunity is never lost. Of course the aim of this kind of thing is palpable enough. There are SHORTS and CODLINS in every community. Contemptible as the motive is, however, its expression is sometimes sufficiently skilful to call for notice. A case is before us. One of our local contemporaries attacks us vehemently on the pretence that we have claimed for Japanese traders as much integrity of dealing as Chinese traders possess, and even as much as European merchants exhibit. Both propositions are, of course, strenuously denied, and a great deal of fustian flattery is published about "the integrity and upright dealing of respectable British, European and American merchants," and about the "gross libel" of "lowering them to the same level as those (*sic*) with whom they come in contact in trade in the East." One gets a little weary of these blatant panegyrics. They recall too forcibly the Pharisee, his upturned eyes and his pious pæan, "Lord I thank thee that I am not as other men are." Only that the Pharisee spoke good Greek and the local puffer is not strong in English. As to the propositions put into our mouth, they are obtained by the ingenious but somewhat hacknied device of quoting a part of one of our sentences and leaving the rest unconsidered. What we wrote was :—

> Guilds have their uses. It is to their existence from old time in China that we must attribute the development there of a sounder system of commercial morality than can be found in Japan, though individually it is not credible that the Chinaman is one whit more honest than the Japanese, or that either is less honest than the European.

There is here a distinct admission that a sounder system of commercial morality exists in China than in Japan, and there is not a word justifying the inference that "European merchants are lowered to the level" of Japanese merchants. But by cutting out the first five lines, and considering the last four only, the CODLIN-SHORT brood find an opportunity to pose once more in their attractive attitude of trumpeter to the immaculate Western trader. The fact is that the Japanese merchant does not belong to the same social class as the foreign merchant with whom he is usually compared. If the two are to be placed side by side for purposes of comparison, we must either take the very highest types of Japanese, as Messrs. IWASAKI, SHIBUSAWA, MASUDA, ONO, SUMITOMO, FUJITA, KONOIKE, KASHIMA, MITSUI, and a host of others whose names will easily occur to everyone acquainted with Japan; or we must descend to the rear rank in the foreign phalanx. Nobody, however prejudiced, will venture to pretend that the Japanese merchants whom we have mentioned and their peers do not stand on the level occupied by the best foreign merchants, or that the word of any one of them is not just as good as his bond. Equally certain is it, on the other hand, that the general body of persons engaged in commerce in Japan were never in ancient times accorded, and do not yet occupy, the same social position as that enjoyed by merchants in the West, and that, consequently, the conduct of the former is not subserved to the same strict obligations as those acknowledged by the latter. On the one side the gentleman's code of honour, is observed; on the other, the petty tradesman's. Add that, even among Japanese merchants, the least reputable are those who have established relations with foreigners—the *Boyeki Shônin*, a byword in their own country. But when all this has been granted, the only justifiable conclusion is that commerce has not yet been elevated in Japan to the place of respect and consideration accorded to it in the West. It does not follow for an instant that because in Japan a particular occupation is abandoned to men of inferior social position and therefore, speaking generally, less scrupulous integrity than the men who engage in the same occupation in Europe, individual integrity throughout the Japanese nation must be of a lower type than individual integrity in Europe. To this distinction alone we addressed ourselves in the sentences quoted above; a distinction that ought to be clear to the most casual reader. But there are none so blind as those that will not see. To submit such questions to the kind of controversy fashionable with a section of the local press of this settlement, is like employing an agricultural implement to perform a delicate anatomical operation. Mutilation, not dissection, is the result. Honesty forsooth! A peg whereon to hang a panegyric that shall tickle the vanity and attract the subscriptions of the Western merchant—that alone is what these ingenuous metaphysicians seek.

## *THE EVER-MEMORABLES.*

STILL, even after an interval of six months, the projectors of the celebrated meeting of last September appear to smart so much that even to point a finger towards them, however gently, makes them wince and cry. Obviously a very painful sore has been established, which remains to this day in a festering and sensitive condition. Some suspicion of this state of affairs induced us to be as tender as possible in composing a recent allusion to the Meeting's procedure, but even our zephyr of comment seems to have touched the rankling wound with the force of a hurricane. The projectors, speaking through their organ, are as frantic as though we had mercilessly re-applied the flail that inflicted their original bruises. They charge us with "effrontery;" hysterically proclaim their meeting "ever memorable;" accuse us of a "palpable falsehood;" call us a "person," and declare that "no amount of ignorance, actual or pretended, on our part, can astonish them." Truly had we known that the spot smarted so much we should have applied balsam, not a probe. And yet, could we have expected that our little question would have provoked such an outburst? Our point was simply that no reasons had been given for the resolutions passed by the meeting, and that, as reasons are said to have been subsequently compiled, their submission to the public would be interesting and beneficial. What is the answer, delivered in a tumult of excitement and invective? The answer is that the resolutions passed by the meeting were founded on reasons contained in the advertisement convening the meeting. Here is the advertisement:—

> Negotiations for the revision of the treaties having been resumed, and there being grave reason to apprehend that Her Majesty's Principal Secretary of State for Foreign Affairs may be induced to concede the demand of the Japanese Government that British Subjects shall come under the jurisdiction of the Japanese Courts, without any of the safeguards that have, hitherto, been considered necessary for their protection, it is thought that no time should be lost in formulating and transmitting to Her Majesty's Government the views of British Subjects upon this very serious and momentous question. Another point calling for an expression of the opinion of those interested is the alleged proposal to interfere with the vested interests of land holders, by altering the conditions of their tenure without their consent. A Meeting of British Subjects, at which all are invited to attend, will, therefore, be held at the New Chamber of Commerce Rooms on Thursday, the 11th instant, at 3.30 p.m. for the purpose of taking these and cognate matters into consideration, and of taking action thereon.

In this paragraph, it is now alleged, reasons are set forth sufficiently clearly to convict us, who fail to detect them, of the crassest moral obliquity. Now, since we are dealing with folks who lay claim to a great deal of consideration and weight, let us consider briefly what the principal resolution was, and what is the reason now assigned for it. The easiest method of contrast is to place them side by side:—

| Resolution. | Reason. |
|---|---|
| That the time has not arrived either when Consular Jurisdiction can be unconditionally surrendered, or when any estimate can be formed of the period within which it may be unconditionally surrendered. | That there is an apprehension of the British Government's consenting to surrender Consular Jurisdiction unconditionally. |

Whether the subtle intellect which places these two statements in the mutual relationship of reason and result, is capable of detecting, in a few simple words, something quite beyond the ken of ordinary brains, we cannot tell. But to us it seem like a large and very audacious jest to pretend that the advertisement contains any semblance of reason for the declaration embodied in the resolution. The advertisement says that the British Government is believed to be about to consent to a certain thing; the resolution says that such consent, or the giving of any pledge to consent at a future date, would be altogether premature. And the advertisement is now declared to contain the reasons for the resolution! We repeat, what we have often written before, unhappy cause that rests on such rotten props of trifling and prevarication! The public wants to know why certain international action would be premature; the answer given hotly and hysterically, is because the nations seem inclined to take such action. A new science of induction appears to be among the probable results of the "ever-memorable" meeting, little else as it has accomplished. Example:—The sky is over-cast; therefore, a fall of rain would be premature.

If, however, the champions of the meeting have still some faith in their logic, perhaps they will examine the words used by the mover of the principal resolution himself. Here is what he said—we italicise the expressions bearing directly upon the present point of discussion:—

> We are here for the purpose of expressing our opinion upon two subjects of great and serious interest and moment to the community at large. That opinion has been passed into the form of a resolution which you have just heard read from the chair, and I will ask you whether it embodies your opinion as representing this community—whether it embodies your opinion upon that question. If it does, *then there is no reason whatever to proceed to any arguments in support of this resolution.*—(Applause.) That applause, gentlemen, shows me that it will not be necessary to depart from *my original resolution, namely, to hold my peace entirely as to the reasons why we have this opinion.*

So, then, the fact is that the resolution was explicitly submitted to the Meeting "*without any arguments in support of it,*" and that its mover avowedly "*held his peace entirely as to the reasons*" for it. Yet now when we venture to affirm that no reasons were given, we are accused of "effrontery," of "palpable falsehood" and of the *ne plus ultra* of ignorance!

No reasons, then, having been put forward in support of the resolutions at the time of the meeting, and it being generally understood that among the Chambers of Commerce to which the resolutions were sent some asked for explanations, there is a natural curiosity to know what form the explanations took. There ought to be no secrecy whatever in such a matter. The projectors of the meeting truly claim that it was perfectly open and above-board; that copies of the resolutions were circulated beforehand; and that everybody was free to come and discuss them. A representative Committee was appointed publicly by this public meeting. Unless, therefore, some unexplained, and, as we think, inexplicable reasons for secrecy have since become apparent, the arguments said to have been compiled by that Committee for transmission to England, and the letters written by it when forwarding the resolutions, ought to be published. We suggested that this should be done, and what answer do we receive from the organ of the promoters of the meeting? That we are "fishing," and that we "write with the object, but scarcely with the hope, of finding out what is being, or has been, done on the subject of Treaty Revision by the Committee of the foreign residents of Yokohama." Is it then essential that the Committee should work in the dark? Are we to conclude that the arguments prepared by it to prove the justice of the resolutions adopted by a public meeting of the residents of Yokohama, will not bear the light of day? Certainly, we did not expect that any such admission would be published. It is indeed true that whenever an attempt has been made by speakers and writers in Yokohama to bolster up the cause of anti-revision by a statement of facts, the result has been a fiasco. But the Citizens' Committee ought not to anticipate such a fate, and do not anticipate it, we are assured. Whatever they have written they must be prepared to stand by, and since it has been written for a public purpose and in pursuance of resolutions publicly passed, secrecy becomes ridiculous. Yet to ask for information is courteously described as "fishing," and the inquirer is sneered at for being so silly as to think that anything can be discovered of the Committee's doings. If these retorts are made with the authority of the Committee, it appears to have lost sight of one of the principal functions assigned to it at the time of its creation, namely "to act as the representatives of the Community in any and all questions incidental to, or arising out of, the foregoing resolutions, now or at any time hereafter." Secret representation was certainly not contemplated by the drafters of this function.

## *THE HIGHER MIDDLE SCHOOLS AND THEIR CENSORS.*

THE foundation some four or more years ago, by the late Viscount MORI, of five Higher Middle Schools throughout the empire, was a measure the wisdom of which could scarcely be gainsaid by thoughtful educationists. It established centres for more advanced education in the provinces, thus moving in the line of that decentralization which is so much needed at present in Japan. With only one national University, and that in the capital, Japan ran the risk of having an edu-

Digitized by Google

cational congestion in her political centre. The dangers to the development of character—which, after all, is the supreme end of true education—from the massing of giddy, ill-balanced youths in the boarding houses of Kanda and Honjo, subject to all the excitements and temptations of a restless city, are excessive, and must be kept particularly in view by educational legislators here. Again, Japan is looking forward, undoubtedly, to the multiplication in due time of her Universities. Already two institutions, one in Tokyo the other in Kyoto, are anxious to receive charters, the former founded by public subscription, the latter mainly by donations from abroad. But the Government itself will, sooner or later, take the matter in hand, and found new Government institutions north and south, probably in some cases by developing these Higher Middle Schools into Universities. A so-called economy, which would break the schools up just when they are getting into working order, seems too rash an extravagance to be coolly reasoned with. And yet members of the Diet, even, it is said, a powerful party there, are or were moving for the abolition of the Higher Middle Schools. They talked of throwing the higher work on the University, and leaving the other work to the ordinary Middle Schools. Probably this is but the thin edge of a wedge whose insertion would lead to further curtailing of Government effort and expenditure on education.

It is a curious movement to spring up in Japan, this movement in favour of free-trade education. In countries where, comparatively speaking, Government is not everywhere as in Japan, but is almost effaced, the question of education is becoming more and more a national one, a question recognized as coming primarily and essentially within the sphere of official action. A heedless, unpractical desire to be in the forefront of reform with HERBERT SPENCER and his American followers, may be a powerful motive with the promoters of the Japanese movement. Yet the loose, haphazard organization of the private adventure schools of Tokyo, with their absurd knuckling-down to the students who attend them, is a sufficient warning against the abolition of State institutions. Let the representatives of the people in their Diet by all means advocate economy and the introduction of every useful and needful change and reform in the national University and schools; but the extinction of these as national institutions would be a national calamity. The fault lies, not in the fact of governmental administration, but in the false ideals and methods of the age, which is fond of constructing and of educating by contract, and is only now, after bitter experience, going back on the miserable system of "payment by results" in school education. We challenge the free-trade educationists to show us any solid grounds for believing that private effort in education avoids, nay rather does not accentuate, the conspicuous weaknesses of our modern education.

However, this may be slightly beside the actual subject in hand. Granted that the censors of the Higher Middle Schools are anxious merely for their levelling down so that the ordinary Middle Schools may be levelled up, the practical question follows, can the University take up their higher work? School work differs from University work mainly in the element of drill. By the time that a student is prepared to enter on University work, it is supposed that he has been sufficiently drilled in the fundamentals of science and art to benefit by a more suggestive, liberal, and original treatment of literary, philosophical, and scientific subjects. Also that he has acquired ease in the use of languages, the grammatical part of which is never learned well in a University course. Are the present Higher Middle Schools really doing University work? It is, we believe, the general testimony of those who have to deal with their graduates, that no work of a University grade is really attempted or carried out. Especially is it felt that the language training is defective, and that the knowledge of English, for instance, shown by entrants at the University leaves much to be desired.

If the criticisms and complaints of those who would deal summarily with the Higher Middle Schools should lead to the reform and better development of these institutions, a good work will have been effected. The present condition of the First Higher Middle School in Hongo has been causing grave anxiety to interested outsiders. Perhaps the Director, Mr. KINOSHITA'S, favourite system of self-rule has not yet had a fair trial, but it cannot be said, so far, to have justified itself, and strange stories of mis-rule and unseemly behaviour are afloat. However, the Director's position is a difficult one, and he is not to be judged precipitately, being a man of energy and ideas. The institution, to begin with, is too large, having to educate yearly from twelve to fifteen hundred pupils. At a University when there is a fair sprinkling of older students, and where each professor is virtually autocratic in his own department, discipline may easily be kept up with a still larger number of students; but in a school, where the masters are subordinates and the pupils all mere boys, matters are different. In any case, for drill in languages, the classes in the Higher Middle School are overgrown. The Hongo institution might, therefore, be well broken up into three Higher Middle Schools. And the energies of the students, moreover, are frittered away on a score of subjects, instead of being concentrated on three or four important branches. A thorough and efficient knowledge of one of the foreign languages used at the University is worth all other training in a mass. They have plenty of little subjects, each of their numerous teachers "making up," to use Mr. FREDERIC HARRISON'S somewhat inelegant analogy, "a kind of mental pemmican, which he crams into the learner's gullet. When the pupil vomits up these pellets, it is called 'passing his examination with honours.' Teachers and pupils cease to think, to learn, to enjoy, to feel. They become cogs in a huge revolving mill-wheel, which never ceases to grind, and yet never grinds out anything but chaff." And so the graduates of these Higher Middle Schools are apt to enter the University in this de-educated state, lame in their knowledge and use of English or German, *the* important matter, and "pemmicaned" in a host of other subjects. We agree with Professor TOYAMA in believing reform and development to be the policy demanded. Smaller classes, more concentration on vital subjects, fewer examinations, more personal supervision, less of system and more of trust in teachers; this is the goal to be striven after. It is surely extravagant and unwise to clamour for the abolition of institutions barely in working order, which are the results of much careful and capable planning and organization, and which are on the lines of the best institutions in other lands.

## *JUDGE DENNY AND KOREA.*

NO name has been more prominently identified with the questions and interests of Korea during the past five years than that of the Hon. O. N. DENNY, who has just left the Hermit Kingdom for America.

Judge DENNY first came to the East as United States Consul-General at Shanghai where his strict adherence to right and justice, and his administrative abilities, won for him the respect and esteem not only of his own nationals, but also of all others brought into contact with him. His relations towards the Government and people of the country to which he was accredited were so uniformly courteous and impartial as to gain the personal respect of high Chinese officials, among whom none entertained greater regard for him than His Excellency the Viceroy of Chili.

In 1885 LI Chung-tang was requested by His Majesty of KOREA to suggest the name of a competent man for the post of Foreign Adviser to the Korean Government, and Judge DENNY was immediately nominated by the Viceroy as one well qualified in nationality, ability, and record for the position. And in urging upon him the advisability of accepting the post, the Viceroy even went so far as to pledge his influence and support to Judge DENNY in maintaining peace and good order, and in advancing the prosperity of the Peninsular Kingdom. Under which circumstances the post was accepted and entered upon in April, 1886.

Digitized by Google

At his very induction into office, however, Judge DENNY met with what he esteemed a presage of ominous import, in the segregation of the office of Inspector-General of Customs which had previously been included in the post of Foreign Adviser. By this act the Korean service became a department of the Imperial Maritime Customs of China.

From the very first Judge DENNY devoted himself entirely to the interests and good of Korea. And while at Söul, as at Shanghai, his manly qualities won for him the warm personal regard of all, his vigorous, single-hearted measures to rectify the soiled and turgid conditions produced by conflicting political elements in the Peninsula gained for him enmity in quarters both influential and unscrupulous. He conducted the administration of his office with tact and courage. He soon found that, while it would be next to impossible to inaugurate many of the reforms he contemplated, he could, and did, unearth many abuses. Grasping with proper estimate of their importance the true condition and aspect of affairs, internally as well as externally, he attempted to provide, as far as the duties of his post made it incumbent upon him to do so, a solution for existing difficulties. His policy, as far as we can judge of it from those portions made public, was friendship and strict neutrality towards Foreign Powers, and purification of the shamelessly corrupt native administration. Throughout his whole course it is conceded by even those who differ widely from him politically, that he was conscientious and sincere in the discharge of his duties to the Korean Government. No one has yet thought of charging him with subterfuge or a "questionable alliance." It is out of the question to speak at any length of his public career as Foreign Adviser. In fact it is impossible at this early date to properly estimate the possible bearings of the measures advocated or accomplished by him. Among the most important of these is undoubtedly the obtaining of the return of Port Hamilton to the Korean Government. This harbour, important only for strategetical purposes, had been occupied by England at considerable expense. Her object was notorious. Judge DENNY knew that England's presence there in such an attitude would render all claims of the neutrality of the Peninsula, especially in Russia, not worth the paper they were made on. And though no Anglo-Russian question had existed here in the East, his course could not have been otherwise than perfectly plain. Previous to his time others had recognised the dangerous character of the occupation of the port, but had made no attempt to secure its surrender. Under the sanction of His Majesty the King of KOREA, Judge DENNY prepared a statement of the facts and bearings of the case, and forwarded it to the English Government with a request in the name of the KING for Port Hamilton's surrender. This reasonable and straightforward course met with immediate success, the English Foreign Office cabling, we are told, the surrender of the port. Thus was a serious impairment of the neutrality of Korea remedied and an unmistakable assurance given to the Treaty Powers of the sincerity of her attitude towards them.

Another important measure accomplished by Judge DENNY was the dispatching of Embassies to the United States and Europe. The making of the Treaties was the death-blow to Korean isolation, and while the foolish "Hermit" policy was undoubtedly voluntarily given up by the leading Progressionists of the realm, their sincerity still needed one further seal, which was given in this dispatch of Koreans to the various Governments of the "barbarians." The measure was also important from another standpoint. It had an intimate bearing upon certain questions already mooted as debateable. Upon the appointment of these two Embassies the fight began. China immediately denied Korea's power to accredit envoys; this was defended by Judge DENNY; and China's last argument was a fleet in Korean waters to forcibly detain the envoys if they should attempt to depart.

It is needless to discuss here the character of such an interference. Both Embassies got off, the Envoys to Europe going as far as Hongkong where they stranded, native courage giving out. The Embassy to the United States embarked in the U.S. flagship *Omaha*, which, on her way out, met the Chinese Fleet. Unconscious of how their prey was slipping through their hands, the Chinese saluted the little ship as she steamed through their midst, thus missing their only opportunity to "argue" on the Envoy question. The Embassy arrived safely at Washington; was received as the representative of a Sovereign Power, and is still maintained there by the Korean Government.

The backbone of this Embassy was undoubtedly its Foreign Secretary, Dr. H. N. ALLEN, who, selected for the post by Judge DENNY, was in thorough sympathy with his views, and successfully piloted the Embassy through some of its dangers. And possibly if the European Embassy had had such a backbone, it might have gone farther than Hongkong.

The greatest work Judge DENNY did for Korea was, probably, his discussion of her relations to China. After making a thorough investigation of the latter's charge of vassalage, and becoming convinced of its slender nature, he embodied the results of his investigations in a small brochure entitled "China and Korea." By his efforts not only has the sovereignty of the Korean KING been vindicated against the charges of China, but also the misty and suspicious historical precedents appealed to by her have been exhibited in their true bearing on the case, and completely invalidated as premises upon which to base a claim of dependency. An attempt was made, we are told, to prepare an answer, but as it has never to our knowledge appeared, we surmise that the attempt was abandoned, probably for lack of evidence.

In dealing with the internal condition of Korea, a more complicated problem presented itself to Judge DENNY. The KING, surrounded by a mass of corrupt officials, was, and is, almost powerless to inaugurate reforms. Every attempt to introduce the adjuncts of modern civilization had accomplished nothing more than the enrichment of a few officials. The Powder Mill was in ruins; the Mint idle; the Postal system a failure; the equipment of the Army a farce, and the steamers worthless or attached for debt. Such spasmodic efforts at progress might have done among some people, but among the Koreans their end was sufficient to convince anyone that the route of reform for the Peninsula did not advance viâ Powder Mill, Mint, Post Office, Army, and Steamships. As internal improvements some of these things must come sooner or later, but more radical reforms were necessary before such adjuncts could become even a possibility. Judge DENNY trusted to accomplish this by the appointment of a Board of Control composed of two foreigners and three high noblemen, who should have entire charge of the financial affairs of the realm. The efficacy of such a measure can be seen at a glance. By this he would have swept away the whole brood of parasitical sycophants who now drain the resources of the country into their own coffers, and would have placed in the hands of responsible men power and means to further the development of the country. More than once this was actually promised by the KING, but the "boodlers" about HIS MAJESTY knew just as well as Judge DENNY against whom such a measure would work, and its realization proved abortive on one pretext or another. That this measure would make possible other reforms which will benefit the people cannot well be denied, and it remains to be seen whether Judge DENNY'S scheme does not hereafter prove the final solution of internal problems.

The most unpopular measure advocated by Judge DENNY was the abrogation of the privileges now enjoyed by the Yang Bans, the hereditary aristocracy of the land. The idleness and extravagance of this class render national prosperity an impossibility. Holding up to the KING the courageous and wise policy of HIS IMPERIAL MAJESTY of JAPAN towards the *Samurai*, Judge DENNY advocated an analogous course towards the Yang Bans, pointing out the good which would accrue from the accession of this caste to the wealth-producing classes of the nation.

Digitized by Google

The only result was intense distrust and enmity on the part of the Yang Bans.

Judge DENNY met, in the discharge of his duties, experiences which are the lot of public men the world over. He encountered a full portion of personal abuse and vilification; but this, coming as it did from persons who misunderstood him and his public course, who found in him a rock of offence over which they stumbled to failure, rather redounded to his credit. The enmity of some is more honourable than their friendship. We can only say that with the departure of Judge DENNY, Korea loses an able and tried official, and HIS MAJESTY a staunch friend. The old office of Foreign Adviser has now been abolished, and in its place two new offices are created, one, that of Legal Adviser, being filled by the former Consul-General of the United States at Yokohama, Mr. GREATHOUSE; the other, that of Financial Adviser, being filled by General CHAS. LE GENDRE, formerly of Tokyo.

GUY PALMERSTON.

## *MUNICIPAL AND LOCAL GOVERNMENT IN INDIA.*

THE last official report on the moral and material progress of India contains some interesting information about the great experiment of applying municipal institutions generally in India. In every province the cities and larger towns manage their own local affairs, through the agency of commissioners or committees appointed from among the citizens. The municipal bodies exist, raise funds, and exercise powers under enactments which provide separately for the special requirements of each province, and of the three presidency capitals, Bombay, Calcutta, and Madras. In most places the majority of the commissioners or committees are elected by the townsfolk under precise rules, while in some towns all, and in all towns some, municipal members are appointed by the Government. In almost every municipality one or more Government officials are members; but the number of Indian and non-official members everywhere exceeds the number of Europeans and officials. The municipal bodies are subject to the control of the Government in so far that no new tax can be raised, no work costing more than a definite sum can be undertaken, and no serious departure from the sanctioned budget for the year can be made without the previous consent of the Government; and no rules or bye-laws can be enforced without similar sanction and full publication. In Great Britain, it may be remembered, local bodies are subject to similar control. The sources of municipal revenue are mainly:—house tax, tax on rentals, octroi duties, bazaar or market rents, carriage tax, water rates, conservancy taxes, rents of public lands and properties, public gardens and parks. The objects on which municipal funds can be spent are, mainly, water supply, hospitals and dispensaries, streets and roads, vaccination, drainage and sanitation. Muncipalities do more for the benefit of their citizens under these heads than was done before by Government officers; and the commissioners or committees evince for the most part diligence and public spirit in the performance of their honorary duties. The interest in the municipal elections, and in municipal affairs generally, is growing on the whole every year. It is reported that in every province municipal work is generally well done, and municipal responsibilities are faithfully performed, though occasional shortcomings and failures occur in particular towns. The tendency of these local bodies is to be slow in incurring new expenditure; and they are generally unwilling to impose new taxes even for purposes in themselves beneficial. In some towns there is a tendency to devote educational funds mainly to middle or higher education rather than to primary schools. The members of municipal bodies are diligent in their attendance to work, whether at meetings for business or on benches for decision of petty criminal cases. The more important totals of municipal statistics for British India are:—Number of municipal towns, 745; total population, 14¼ millions; total income in 1888-1889, inclusive of loans, Rx.* 3,385,882; total expenditure, Rx. 3,546,750; yield of octroi duties, Rx. 739.908; yield of direct taxes, or imposts other than octroi, Rx. 1,316,221; amount of loans credited in the income of the year, Rx. 579,420. For the conduct of port and harbour affairs local bodies called Port Commissioners have been established at Bombay, Calcutta, Madras, Rangoon, Kurrachee, and some few smaller ports. Their income is raised partly by tonnage dues on shipping, and partly by rates charged for the use of wharves, storehouses, and appliances for landing goods. Local merchants, Indian and European, sit on these port trusts, and on the whole give much satisfaction to the public and to traders. Their funds are spent on pilots, on port and harbour improvements, and port conservancy of all kinds; some of the port trusts have borrowed considerable sums for the construction of docks, wharves, and other permanent improvements. The yearly income of these trusts ranges from Rx. 440,000 in Bombay and Rx. 330,000 in Calcutta, to small sums in the case of minor ports; every trust pays its way and provides a sinking fund for its loans, while most of the port trusts have during the last 10 years materially reduced the rates of harbour dues on shipping and the rates of charge for wharves and landing facilities. The local bodies charged with the administration of local funds and undertakings in rural districts are of more recent creation than the municipalities and port trusts. In the older provinces there is a board for each district, the members of which are partly nominated and partly elected by local or subdivisional boards. These boards are charged with the expenditure and control of all funds available for local roads and bridges, local hospitals and sanitation, and in some provinces they undertake the control of educational affairs in their jurisdictions. In Madras and in Bengal these boards, or analogous bodies, have existed for several years, and are doing good work in a manner commended by the local authorities. Elsewhere the district and local boards are gradually establishing themselves as independent bodies, which conduct local affairs to the satisfaction of the people and the Government.

## *THE NEW BRITISH FOREIGN JURISDICTION ACT.*

ONE of the characteristics of recent British legislation is the application of codification to various topics which have been the subjects of previous legislative enactments. A considerable number of English philosophical lawyers and jurists had been for years urging the necessity and importance to the public of codifying whole areas of English law. Sir JAMES STEPHEN, Sir FREDERICK POLLOCK, Lord COLERIDGE, and others would, for example, have the whole criminal law in two codes, one of crimes and punishments, the other of criminal procedure; they would have the law of evidence and much else put in a similar form. Indeed, in 1873, Lord COLERIDGE, then Attorney-General, introduced into Parliament a Bill, drafted by Sir JAMES STEPHEN, codifying the English law of evidence. In 1878 Sir JOHN HOLKER, the Conservative Attorney-General, introduced a bill containing a criminal code drafted by the same eminent lawyer, which was ultimately referred to a Commission, and the bill was mentioned in the QUEEN'S Speech in 1882, but neither measure ever got beyond the first reading, and whether they will ever see the light again is a matter of considerable speculation. Meantime, by a process characteristically English, the work of codification goes on, though not called by that name, being performed, as it were, in the dark. The English Parliament and English statesman will never do anything which they have theoretically the right to do; they will seldom or never do anything on a large scale unless forced by hard necessity. They will take existing machinery and alter it here, mend it there, and patch and cobble it until nothing of the original structure is left. Then it will occur to them that it is better to sweep the whole thing away, and substitute entirely new machinery. In legislation, to take a

Digitized by Google

hypothetical case, an Act dealing with Highways was passed in 1786; it was supplemented and altered in 1787; in 1814 it was amended by a special Act; in 1820 it was further amended by two clauses in the Act of a local vestry; in 1827 it was further amended in another Act of another local vestry, and so the process went on until only the merest shreds of the original Act were left, and in 1879 it occurred to somebody in authority that there might be advantage in bringing together the thirty or forty Acts and the hundreds of judicial decisions dealing with the whole subject. Then a new statute was passed embodying the remaining portions of all the previous Acts and the results of the decisions, and this became the Act at present in force. This, we say, is a purely hypothetical case, but anyone who cares to examine the law on, say, Bills of Exchange prior to the codifying Act in 1881, or on Merchant Shipping prior to the great Act of 1854, will find that our hypothetical statement underestimates, rather than exaggerates, the chaotic condition of English legislation.

Among the latest instances of this codification is one in which our readers are very largely interested. We refer to the Foreign Jurisdiction Act of 1890 (53 and 54 Vict. chapter 37), entitled "An Act to consolidate the Foreign Jurisdiction Acts." From the 3rd Schedule to this Act it repeals wholly seven different statutes and two sections of another statute. These are the great Foreign Jurisdiction Act of 1843, the amending Acts of 1865, 1866, 1875, and 1878, as well as the Jurisdiction Acts relating to Siam and the Straits Settlements of 1857 and 1870, and two sections of the Slave Trade Act of 1876. In addition to this, the 2nd Schedule gives HER MAJESTY power by Order in Council to revoke or vary the statute of 1861 relating to Sierra Leone, and one of 1867 relating to South Africa, while the 1st Schedule gives the QUEEN power to extend the provisions of all or part of twelve different statutes dealing with such various subjects as Admiralty offences, evidence, fugitive offenders, merchant shipping, and a formal ascertainment of British law, Colonial law, and foreign law. Fortunately the new Act reduces this chaos to order, and the whole subject of Foreign Jurisdiction is practically contained within the four corners of an Act of nineteen sections. The entire matter of the Foreign Jurisdiction Acts is described by Sir JAMES STEPHEN in his History of the Criminal Law of England as one "of great curiosity and very little known." It includes not only various Acts of Parliament, but innumerable Orders in Council. Sir JAMES says:—"The importance and curiosity of these Orders lie in the fact that they show how wide is the extent over which English Criminal law is in force, and under how great a variety of circumstances it is administered." This is very true, for these Acts, as we know, are in force in such countries as China, Japan, Siam, and various Mahommedan States, where they, in fact, form the bases of laws under which British subjects are governed; but they also deal with such territories as the groups of islands in the South Pacific and with the slave trade wheresoever carried on.

The new Act consolidates, without material alteration, the Foreign Jurisdiction Acts already referred to, and it covers two classes of countries; first, those in which "by treaty, capitulation, grant, usage, sufferance, and other lawful means HER MAJESTY the QUEEN has jurisdiction," and secondly those countries, which are not subject to any Government, over which the QUEEN might obtain jurisdiction—in other words uncivilized countries like certain regions of Africa and the South Sea Islands. The Act provides that HER MAJESTY may hold, exercise, and enjoy jurisdiction in these countries in the same manner as if she had acquired that jurisdiction by cession or conquest of territory. The definition of "Foreign Country" is, "any country or place out of HER MAJESTY'S dominions" and is therefore of the largest character. In the case of countries having no Government, the Act *ipso facto* gives the QUEEN jurisdiction over her subjects residing there; in other countries, of course, the exercise of jurisdiction depends upon treaty. Section 3 provides that matters done in pursuance of the QUEEN'S jurisdiction under the Act shall be as valid as if done according to the local law, and it is provided that whatever is so done shall be recognized by every Court under the QUEEN'S authority. There is an improvement here on the old Acts, which only provided that the validity in question was to be recognized by the Courts in the QUEEN'S dominions, leaving the QUEEN'S Courts outside her dominions to recognize the Act or not as they pleased. By section 4 the answers of the Secretary of State to questions propounded to him with that object, are to be taken as conclusive evidence as to the existence or extent of the QUEEN'S Jurisdiction in a foreign country. By section 6 the QUEEN has power by Order in Council to direct that all persons charged with offences in a foreign country may be sent for trial to British possessions, and by section 7 HER MAJESTY has a corresponding power to direct where the punishment of persons convicted of an offence in a foreign country may be carried out. For the protection of the prisoner, however, it is provided that the prisoner's witnesses may be examined in the place in which the crime was committed, and that the law applicable is to be that of the British Court in the country in which the offence is alleged to have been committed. Thus, if the QUEEN ordered that a certain offence committed in Japan be tried in Hongkong, the law governing the reception of evidence on the trial of the prisoner would be that applicable to British subjects in Japan, not to those resident in Hongkong. The remainder of the statute gives protection to persons acting under the Act and deals with the extent to which Orders in Council are to be void because of repugnancy to the principal Act. Section 14 continues the power of section 6 of the Act of 1878, under which the QUEEN has the same power for the government of her subjects in any vessel not more than a hundred miles from the coast of China and Japan, as she has with regard to subjects in this country. Sir JAMES STEPHEN, in commenting on the corresponding section of the Act of 1878, suggests that this must mean any vessel other than a British ship, inasmuch as all persons on board any British ship are already subject to the criminal law of England. The other sections of the Act to which we have not specially referred are either formal, or refer to Acts connected with the slave trade. It is, at any rate, satisfactory to know that there is now no necessity to search through old volumes of statutes, some of them very difficult of access to the persons chiefly concerned, in order to ascertain the powers given to the executive by Parliament for the government of British subjects in these countries.

## *CORRESPONDENCE.*

### DID JESUS TEACH ANYTHING NEW IN ETHICS?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If not he is a more wonderful person than if he did. If he did, the superior morality of the man who practises the teachings of the Son of Mary might be ascribed to the new teaching of morals by the Nazarene. Admitting that the world had a perfect code, of ethics, the state of the world at that time and the confessions of its best men show plainly that man was unable to obey that which he acknowledged to be right. The same thing is evident by comparing nations who have morals without Christ to-day. Confucius was a good teacher, but you ask the Chinese if they believe the Confucian code they will say "Yes;" ask them if they observe it, they will say "No." They will pick up a piece of paper in the street sooner than step on it lest it should have one of the characters of their language on it, but a dying man they will pass by with indifference; Confucius is dead.

Whether Jesus taught any new morals or not, I leave for the next man to tell; if he did not, his is the harder task of reaching across the centuries, and in spite of all our fleshly and selfish propensities, giving the spirit power to conquer, and enabling his true followers to live the best life in their power. A new life is infinitely more than a new code of ethics. A sign-board can tell a man where to go, but the ability to go comes only with life. Jesus said he came that men might have life, and have it abundantly. No other teacher ever made such a claim. Jesus is living.

NON-SECULARIST.

### EX-SECRETARY WINDOM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your Kyoto correspondent, "M. L. Gordon," deserves hearty thanks for his defence of ex-Secretary Windom against the aspersions of your San Francisco correspondent. His quotation from *Harper's Weekly* would have even greater force if he had stated that the editor of that paper is, if not a Democrat, at least a "Mugwump," and is far from inclined to treat Republican office-holders with praise.

Permit me to quote from another paper, whose editor is far less inclined than even George William Curtis to treat Republicans with leniency. The *Nation* of Feb. 5th says, editorially, "Mr. Windom was one of those useful average statesmen who are necessary to all countries, and who keep things going in about the right way from

Digitized by Google

generation to generation. He had twice filled the office of Secretary of the Treasury, and in both instances creditably." Surely, a public official whom political opponents praise so strongly cannot be a very bad man.

The writer can testify, from personal knowledge, to the high esteem in which William Windom was held by the people of Minnesota, and especially by the residents of Winona, his home. He was regarded by all citizens, regardless of party affiliations, as an honest and upright man. He was honoured by elections to the House of Representatives and the Senate, and by the complimentary vote of Minnesota in at least one Republican convention for the nomination of a President. At the time of the infamous "Salary Grab," he was one of the few Representatives who returned the "back pay" into the Treasury.

Permit one anecdote to illustrate his decision of character in what he thought to be the right course. He entered Congress as a teetotaler at a time when there was seldom, if ever, a public banquet at which wine was not served. He invariably turned down his glass, and was many times the only abstainer in a large company. He was ever regarded as a sincere Christian, a man of a pure and upirght life, both in private and in public.

E. W. C.

Mito, March 14th, 1891.

## GENERAL SHERMAN.

To the Editor of the "Japan Mail."

Sir,—The unjust disparagement of General Sherman in the communication from your San Francisco Correspondent, as contained in the last number of your weekly issue, leads me for the first time in a twenty years' residence in Japan to send a communication to the press here. Permit me as one who was, as a private soldier, as an officer on staff duty or in command of a regiment, near General Sherman, and most of the time under his direct command for four years from 1861 to 1865, to say that your correspondent's representations of General Sherman are extremely unjust. He speaks of his march to the sea as "his *one* achievement," of his nonentity since the war, characterising him as "a chatterbox."

Impartial history will record the march to the sea as *one* of the achievements of General Sherman, but *only* one. General Adam Badeau, who was on General Grant's staff tells us in his *Century* article on General Grant, that Grant "often spoke of Sherman as the greatest soldier living," and this was before his march to the sea. General Grant was most intimate with General Sherman; the latter served under Grant for two years, and Grant said it was to Sherman that he largely owed his successes in the West, the safety of his army the first day at Shiloh, the victory at Vicksburg, and at Chattanooga.

General Sherman was a graduate of the Military Academy at West Point in 1840, he served for twelve years in various subordinate positions in the army; and then resigned his commission and engaged in other pursuits. The outbreak of the rebellion found him in charge of a military academy in the State of Louisiana, but before that State seceded from the Union, General Sherman wrote to the Governor of the State, asking to be relieved of his position at the academy. The moment the State determined to secede he wrote, "on no earthly account will I do any act, or think any thought hostile to, or in defiance of the old government of the United States." After the battle of Missionary Ridge, in Nov., 1863, General Grant was transferred to the East, and General Sherman was assigned to the immediate command of the four armies of the Tennessee, the Cumberland, the Ohio, and the Trans-Mississippi. His masterly conduct of the Atlanta Campaign, in the spring and summer of 1864, when, with wonderful strategy he drove the Confederate army under the able General Joseph E. Johnston back to Atlanta, with but little loss to his own army, and, capturing that city, at once laid his plans for the march to the sea, which he successfuly carried out, and then the march through the Carolinas to the final surrender at Chapel Hill, form a fitting close to four years of service which was full of brilliant "achievements."

On these campaigns there was only one tent used by General Sherman's head-quarters, and that was used by his Adjutant-General and his clerks. General Sherman slept with his staff on the ground under a tent fly. From March, 1869, to November, 1883, when he reached the age at which officers are retired on half-pay, General Sherman was General-in-Chief commanding the United States Army. During that time, "he traversed every State and Territory and visited every military post in the United States, except two." With the exception of General Scott, Sherman held this position the longest of any man who has been raised to it in the United States. General Sherman, though loyal to the core, was never a partisan in politics; no one can point to any one of his speeches since the war as a partisan political speech; although he had a brother, John H. Sherman, in the United States Senate, who has had Presidential aspirations, the General always refused to use his influence directly or indirectly to advance the political interests of his brother. I leave it for the unprejudiced reader to judge whether the march to the sea was "his one achievement," and whether he has been only a nonentity and a "chatterbox" since the war ended.

Sincerely yours, J. D. DAVIS.

Dōshisha, Kyoto, March 16th, 1891.

## THE YOKOHAMA GAS COMPANY.

Sir,—I should like to be informed when foreigners became associated with the Yokohama Gas Company, as appears by some accounts published in the *Japan Gazette* on Saturday night?

Respectfully, C. A. W.

Yokohama, March 16th, 1891.

## THE AMERICAN MINISTER'S FUNERAL.

To the Editor of the "Japan Mail."

Sir,—As a report has been widely circulated in Tokyo to the effect that the body of the late U.S. Minister was left without a guard during the journey from Shimbashi to Yokohama, may I trouble you to state that the sailors, who acted as pall-bearers, were stationed in the car with the Minister's body during the transit.

Yours truly, X.

Tokyo, March 18th, 1891,

## *THE BUDGET.*

The Budget for 1891-92 was promulgated on the 11th instant. The total amount of the revenue is estimated at *yen* 83,462,532.755, and of the expenditure at *yen* 77,012,252.300. The maximum amount of Treasury Bills to be issued in the 24th fiscal year is fixed at *yen* 17,913,000. The following is a summary of the Budget:—

### REVENUE.

#### Odinary Revenue.

| | | |
|---|---|---|
| 1. | Taxes | 66,423,196.742 |
| 2. | Licenses and Fees | 1,766,393.684 |
| 3. | Receipts from Government Industries and Properties | 9,262,709.192 |
| 4. | Miscellaneous Receipts | 720,694.997 |
| 5. | Interest on money deposited | 1,370,870.255 |
| | Total | 79,543,864.870 |

#### Extraordinary Revenue.

| | | |
|---|---|---|
| 1. | Donations | 90,646.000 |
| 2. | Sales of Government Properties. | 656,222.549 |
| 3. | Miscellaneous Receipts | 147,289.000 |
| 4. | Amounts transferred from contributions for Coast Defence | 75,521.002 |
| 5. | Amounts transferred from fund for preparing and issuing Consolidated Public Loan Bonds | 100,350.000 |
| 6. | Amount transferred from Distress Relief Fund | 163,100.000 |
| 7. | Amount transferred from the previous Fiscal Year | 2,685,539.334 |
| | Total | 3,918,667.885 |
| | Grand total of Revenue | 83,462,532.755 |

### EXPENDITURE.

#### Ordinary Expenditure.

| | | |
|---|---|---|
| 1. | The Crown | 3,000,000.000 |

#### Foreign Department.

| | | |
|---|---|---|
| 1. | Department Proper | 145,619.200 |
| 2. | Legations and Consulates | 595,478.119 |
| | Total | 741,097.319 |

#### Home Department.

| | | |
|---|---|---|
| 1. | Ise and other Shrines | 27,113.000 |
| 2. | The Department Proper | 316,156.161 |
| 3. | Shrines, Temples, &c. | 179,698.250 |
| 4. | Expenditure on offices for Superintending Public Works | 130,293.000 |
| 5. | Expenses of Penitenitaries | 388,313.652 |
| 6. | Railway Bureau | 23,674.875 |
| 7. | Metropolitan Police Bureau | 293,998.000 |
| 8. | Police Expenses of the Seven Islands of Izu | 1,580.000 |
| 9. | Hokkaido Administration Board | 1,092,531.081 |
| 10. | Sapporo Agricultural College. | 38,589.977 |
| 11. | Hokkaido Prison | 517,792.171 |
| 12. | Cities and Prefectures | 4,768,960.330 |
| 13. | Local Expenses of the Bonin Islands | 8,124.000 |
| 14. | Local expenses of Okinawa Prefecture | 152,897.600 |
| 15. | Local police expenses of Tsushima | 8,149.000 |
| 16. | Local police expenses of Oshima | 6,705.000 |
| | Total | 7,954,576.097 |

#### Financial Department.

| | | |
|---|---|---|
| 1. | The Department Proper | 441,265.500 |
| 2. | National Debts | 21,370,870.255 |
| 3. | Rewards and Pensions | 896,282.524 |
| 4. | The Cabinet | 284,939.000 |
| 5. | The Privy Council | 113,709.000 |
| 6. | The House of Peers | 227,585.000 |
| 7. | The House of Representatives. | 338,038.650 |
| 8. | Accounts Examination Bureau. | 113,098.251 |
| 9. | Administrative Court | 35,533.000 |
| 10. | *Official Gazette* Bureau | 153,748.000 |
| 11. | Custom Houses | 210,405.000 |
| 12. | Expense of levying Domestic Taxes | 1,718,823.128 |
| 13. | Cost of dealing with currency. | 511,107.000 |
| 14. | Moneys for miscellaneous repayments, and for supplying deficiencies and losses | 160,000.000 |
| 15. | Salaries of officials on Retired list | 131,563.604 |
| 16. | Reserve fund of the Treasury | 1,000,000.000 |
| | Total | 27,706,967.912 |

#### War Department.

| | | |
|---|---|---|
| 1. | The Department Proper | 214,714.672 |
| 2. | Military Expenses | 11,549,667.156 |
| 3. | Gendarmerie | 296,576.076 |
| 4. | Colonial Militia | 438,653.845 |
| 5. | Donation to the *Yasukuni Jinja* | 7,550.000 |
| | Total | 12,507,161.749 |

#### Naval Department.

| | | |
|---|---|---|
| 1. | The Department proper | 138,399.202 |
| 2. | Naval Expenses | 5,577,071.764 |
| | Total | 5,712,470.966 |

#### Judicial Department.

| | | |
|---|---|---|
| 1. | The Department proper | 180,137.944 |
| 2. | Courts of law | 3,512,399.209 |
| | Total | 3,692,537.153 |

#### Educational Department.

| | | |
|---|---|---|
| 1. | The Department Proper | 169,514.400 |
| 2. | Schools and Libraries | 746,068.855 |
| | Total | 955,583.255 |

#### Agricultural and Commercial Department.

| | | |
|---|---|---|
| 1. | The Department Proper | 326,670.539 |
| 2. | Forestry Offices | 504,163.470 |
| | Total | 830,834.009 |

#### Department of Communications.

| | | |
|---|---|---|
| 1. | The Department Proper | 334,581.079 |
| 2. | Marine School (*Shosen Gakko*) | 26,022.700 |
| 3. | Expenses of Communications | 4,303,162.907 |
| 4. | Postal and Telegraphic School | 20,437.800 |
| | Total | 4,684,206.486 |
| | Sum total of ordinary expenditure. | 67,785,432.906 |

### EXTRAORDINARY EXPENDITURE.

#### Foreign Department.

| | | |
|---|---|---|
| 1. | Cost of Repairs | 4,289.000 |

#### Home Department.

| | | |
|---|---|---|
| 1. | Subsidies | 314,975.000 |
| 2. | Subsidy towards expense of shrines | 10,000.000 |
| 3. | Subsidies towards expense of works | 409,412.573 |
| 4. | Repairs and construction of rivers | 795,000.000 |
| 5. | Cities and prefectures | 850.000 |
| 6. | Yokohama Harbour Works | 123,000.000 |
| 7. | Office for building shrines | 1,500.000 |
| 8. | Cost of building offices & houses | 249,600.000 |
| 9. | Rebuilding of shrines | 65,000.000 |
| 10. | Construction and repairs | 36,217.700 |
| 11. | Emigration of Totsugawa residents | 22,543.200 |
| 12. | Competitive exhibition for products of Hokkaido | 12,443.300 |
| 13. | Expense of building railway between Yokokawa and Karuizawa | 1,000,000.000 |
| 14. | Rebuilding of temporary Houses of Parliament | 215,423.334 |
| | Total | 3,255,965.107 |

## *ASIATIC SOCIETY OF JAPAN.*

A general meeting of the Asiatic Society of Japan was held in the Society's Rooms, No. 17, Tsukiji, on Tuesday, March 17th, 1891, at 4 p.m., Rev. Dr. Amerman, Vice-President, in the chair.

The minutes of last meeting were read and approved.

The CHAIRMAN then called on Mr. Van de Polder to read his paper entitled "An Abridged History of the Copper Coins of Japan." The following is an abstract:—

LADIES AND GENTLEMEN,—For several years past I have occupied myself with collecting old coins of Japan, and as I believe that few have yet given anything about this most interesting subject, I have in my leizure time, by the aid of my ancient as well as new Japanese books about the coins of Japan and China, tried to put together a good deal of historical, and I believe very interesting information and particulars, and I might venture thus to call this little work an abridged history of the copper coins of Japan. I have of course consulted many Japanese coin books, but the work where I have found the most information is the great work of 46 volumes published by the Okurasho or Finance Department, called *Dai Nippon Kwa-heishi*, in the 9th and 10th years of Meiji (1876 and 1877) in the time of Count Okuma's administration of that department. From what I have been able to find in my books, we see that coins were already in use before the time of Empress Jingo Kogo. This Empress, as is known, crossed over to Korea, and is said to have conquered Shinra, Koma, and Haksai, which are the names of different parts into which Korea was divided. This Empress was the consort of Tchin Ai Tenno who died in the 9th year of his reign (201 A.D.); the Empress became Regent and reigned for 69 years until her death in the year 269 A.D. In the year 201 A.D. she crossed over to Shinra, a part of Korea, embarking at a place called Wakitsu (in Tsukushi or Tchikuzen, now Fukuoka Ken). The King of Shinra, without taking up arms or showing any opposition whatever, submitted and gave himself up to her, and Her Majesty returned to Japan with 80 vessels laden with gold, silver, and other precious things. The two Kings of Koma and Haksai, two other parts of Korea, also submitted to her. These particulars are taken from a work entitled *Nippon Shoki*. After this time, it would seem that tribute of gold, silver, and other precious things were received. It is said that the Empress brought also some coins or money of the shape of a bird. This coin, however, is only mentioned in old books, no drawing being given. In the 38th year of the Regency of Empress Jingo Kogo (238 A.D.) it is said that gold and other precious things were again received, but this time from China. In the 14th year of the reign of Emperor Ojin Tenno (282 A.D.) it is stated that one Yudzuki-Kun, later on said to be a son of the King of Haksai, came to Japan bearing gifts of gold, silver, &c., and according to the work entitled *Dai Nippon Shi* or History of Japan, His Majesty the Emperor was highly pleased to accept these presents, and as guerdon, accorded him permission to reside in the Empire and further assigned to him a gift of land. I find in my Japanese *Shinsen Nempio* or Japanese Chronology, an article corresponding in date with the arrival of this Korean, which although it has no connections with numismatics, is, nevertheless from an historical point of view, very interesting. I shall therefore give it: "At the same time two women were sent over from Korea as presents to teach in Japan the way of weaving silk with figures on brocade; they were kept at the court, and there they instructed pupils in their art. These two women were sisters, one being named Ayaha and the other Kureha. The elder, Kureha, really did the weaving, while the younger Ayaha sat above the loom raising the threads as the work proceeded, as was necessary, to produce the figures in the woven cloth. Now even down to this day that part of the work in this trade is still called *ayadoru*, a word derived from this woman's name; so in like manner is the term *gofuku* which the Japanese apply to woven goods, derived from the name Kureha which is only another reading of the same characters. In Kyoto these women came to be deified and worshipped as the tutelary goddesses of that trade. According to the work *Dai Nippon Kwahei Shi*, there was silver money in the time of Emperor Guenso Tenno (485 A.D.) one piece had a diameter of one *sun* (1 Jap. inch or 3 centimetres) and weighed 1 *momme* 8 *fun*=104.97 grs. troy. Another of the same diameter weighed 3 *momme*=174.99 grs. troy. The fact that since the time of Empress Jingo Kogo quantities of gold and silver were received, and the existence of the above mentioned pieces conclusively proves that coins were already in use in Japan at that time. In Guenso Tenno's time we find even that, on account of the crops having been plentiful and the consequent prosperity of the farmers, the price of rice was fixed at one silver piece per one *koku*. In the time of Emperor Hansho Tenno (406-11 A.D.) there were gold, silver, and copper coins, and all these must have been made from metal received from abroad, inasmuch as it is not recorded that gold, silver, or copper had up to that time been found in Japan. In the time of Empress Suiko Tenno, and in the 13th year of her reign (605 A.D.) according to the work *Nippon Shoki*, gold was received as tribute from Korai (Korea) and of this gold by Imperial decree and by order of the Prince Imperial and the Ministers, an idol was made,—and when the King of Korai heard of this, he sent a further tribute of 300 gold *rio* more. The origin of gold, silver, and other tribute being paid to Japan by Korea is said to be really thus: one night the Empress Jingo Kogo dreamed that the God of Sumiyoshi or Sumiyoshi Miyojin, whose shrine and temple are in Osaka, appeared to her and said: "I give the gold and silver countries Korai, Haksai, Shinra, and Ninna to the Emperor you bear within you." Her Majesty was pregnant at that time, and it was on account of this dream that she undertook to cross over and take possession of those countries, appointing officials to administer the realm during her absence and stationing guards along the coast to protect the Empire from invasion. In the 1st year of the reign of Empress Kokiyoku Tenno (642 A.D.), tribute of gold and silver was received from Korai borne by an embassy which landed at Naniwazu or Osaka. In the work *Shinsen Nempio* I find that again in 647 A.D. and 653 A.D. embassies came from Korea to Japan bearing tribute. In the 3rd year of the reign of Emperor Temmu Tenno (675 A.D.) in the 3rd month, silver was received from the Island of Tsushima, and regarding this, in the *Nippon Shoki* we read that in that month the Governor of Tsushima, Oshiumi Okuni, found for the first time silver in his province and presented it to the court. This was the first silver found in this Empire, and consequently the precious metal was first offered up to the different Gods, after which portions were given to the high officials and to all those of the rank of *Shokin* and *Daibu*. The Governor of Tsushima received the rank of *Shokin* in recompense for the zeal and activity which he had displayed in the matter. In the 8th year and 10th year of the reign of Emperor Temmu Tenno (680-82 A.D.) tribute was again received from Shinra consisting of gold, silver, copper, iron, piece goods, silk, deer and other skins, fine hemp, and banners embroidered with gold and silver. As a proof that the tribute must have been very plentiful at that epoch, I may aduce the fact that in a sumptuary law promulgated in that year the costumes to be worn by the different classes from the Princes down to the lowest of the people were regulated and fixed. In the same decree the wearing of gold and silver embroideries was also placed under certain restrictions and regulations. In the time of Emperor Kotoku Tenno (645 654 A.D.) a law was already passed forbidding the burial of the dead with gold, silver, copper, or iron in the coffins, as this had become an almost universal custom with the people. In the 12th year of the reign of the Emperor Tenmu Temo (684 A.D.) it is said that copper coin was first circulated, the circulation of silver coin being stopped. But in the same year the silver coinage was resumed. This was the 10th year after silver was first found in the Empire, and thus the the silver coin spoken of will probably be that which was made in the time of Guenso Tenno in (485-87 A.D.) I may further remark with regard to the decree in which the use of copper coin is prescribed, that it is the first notice which we find of the existence of such coin at all, and as the decree contains nothing but the bare prescription that copper coin in future is to pass current, we have no basis upon which to ground a statement as to where these coins came from or when they were struck; it is, however, most probable that it was a Chinese coin brought over through Korea, although it is possible that it may have come from China direct. In the 2nd year of the reign of Emperor Mombu Tenno (698 A.D.) copper ore was received from Inaba, at present known as Tottori Ken, and from Iyo, now Ehime Ken, tin and tin ore was received. From Suwo, at present Yamaguchi Ken, copper was brought and some also was received from Tsushima. It is further said in some of my books that it was only in the 12th month of the 3rd year of the reign of Emperor Mombu Tenno (699 A.D.) that a director of the mint was appointed and that this function was called *Tosenshi*; still this position was created already two years before as aforesaid in my work, but at this time a new director was appointed, one named Nawo-no-oshi Nakatomi Ason Imimaro. The first copper piece of Japan is said to be a coin quite plain, and without any characters on it; in shape it is circular, and it has a round hole in the centre. On the face around the hole, are four small round marks each with a cross. At the back there is nothing, the surface being entirely smooth. It is very roughly made. Illustrations of this coin are found in nearly every old book treating on coins, and it is always stated to have been struck in the time of Mombu Tenno (697-707 A.D.) but it is impossible to find out either the exact date or its size and weight, and I believe that although we see that copper ore had lately been found and presented to the court, still the quantity then found was small and the true method of coining was not yet well understood in Japan, and this is probably the reason why this piece is roughly made and rather uneven. It is even more likely that it was made of copper received from abroad, as that was at this time much more plentiful than that which was mined here. In the 4th year of the reign of Emperor Mombu Tenno (700 A.D.) Prince Ginobu Shinno and two other ministers, were ordered by His Majesty to make Regulations and Laws, and in these laws it was ordered that the *Okurasho* or Finance Department should have the administration of the entire finances and taxes, and should decide the values and prices of coins, gold, silver, precious stones, copper, iron, ivory, feathers, lacquer ware, and piece-goods, and regulate weights and measures in the interest of commerce in general. It was further laid down that the *Okurasho* should enjoy a monopoly of the minting of gold, silver, copper, and iron coins. In an article of the above laws, relating to mines, it was enacted that mines which were discovered and not taken over by the Government, might be worked by the farmers themselves upon application being made for permission at proper quarters. In the 3rd year of Taiho (703 A.D.) silver was received from the province of Kii no Kuni, Wakayama Ken, and it is further said that from the two counties in this province named respectively Nakagori and Nagusagori, in this year, instead of the taxes being levied in linen they were received in silks; and from the three counties Ategori, Idagori, and Morogori taxes or revenue were collected

Digitized by Google

in silver, which proves that this metal was found in Kiushu. According to the works *Zoku Nippon-ki* and the *Midzu-kagami*, in the reign of Empress Genmei Tenno in the 1st year of Wado (708 A.D.) copper was received in payment of revenue from the Province of Musashi, where a director of the mint or *Tosenshi* was appointed. The copper coin called *Wado-kaichin* was put in circulation at that time. There were, however, two kinds of this coin, for besides the copper one, we find another made of silver and of the copper one different varieties again were made. In the same year (708 A.D.), in the 1st month, from the county of Chichibugori, in the province of Musashi, copper was presented to the court, and it was in commemoration of this, the first discovery of copper in the Empire, that by Imperial decree, the denomination of the year was changed and a new era called Wado was inaugurated (Wado meaning our copper, or copper of Japan.) The first of the Wado coins were made in the province of Omi, now the Shiga ken; later on the same coin was made in Dazaifu in Chikuzen, and in Harima, now embraced in the Hyogo Ken. Afterwards Nagato no Kuni, now Yamaguchi Ken, was, it seems, definitely set apart as the place for minting these coins. The main reason for the choice of this place was that by degrees as copper at the places Suwo, Harima, Inaba, Bitchu, Bingo, and others, was more and more produced, this place was found to be more centrally situated and therefore more convenient. In the 2nd year of Wado (709 A.D.) it was prohibited by Imperial decree for private persons to make silver coin. We find also in books that at different times silver coins were abolished and copper ones only ordered to be used. In the work *Zoku Nippon-ki* it is said that in the 4th year of Wado (711 A.D.) 6 *sho* or over 9 quarts of rice was worth 1 *mon* or one cash, and now the same quantity is of about 600 times that value. Of this time a law determining the salaries of officials was made; and another law was made providing that persons who saved money should obtain rank, and on the other hand that those who were found coining money on their own account should suffer decapitation. It was in the 10th month that the *Rokuho* or scale of official emoluments or incomes according to rank was fixed as follows:—The yearly income of a *Nihon* or Prince of the second rank and all *Ni-i* or officials of the second grade was fixed yearly at 30 *piki* of linen cloth (60 *tan*), 100 *kin* or pounds of raw silk, and 2,000 *mon* or cash, about 2 *yen* of the present currency, and so on becoming less, depending upon the rank. Although no comparison can be drawn between the present enlightened era of Meiji and the times from the annals of which I am giving extracts, yet as the official ranks of that period still exist to-day, it is interesting to note the contrast; thus the present Naikaku or Cabinet is composed of officials ten in number who are all of the second rank, *Ni-i*. I am afraid that with the present style of living a yearly income such as was enjoyed by their predecessors of 60 pieces of linen, 100 pounds of raw silk, and 2,000 cash would not go very far. We can see that the people, and especially the farmers, had no desire at that time to use coin, and in order to teach them its value as a medium of exchange, an Imperial edict was promulgated in which it was decreed that as the farmers, being accustomed to the old system of barter, did not seem to be willing to understand the value and utility of money, they should begin gradually to take it in lieu of their produce and in their other business transactions, and in order to encourage their use of it, it was further decreed that every person who should have accumulated over 10 *kwanmon* or 10,000 cash should be entitled to receive a rank below that of *Juroku-i* or 2nd of the 6th grade, and anyone having amassed double that was entitled two ranks higher. Coins, the existence of which we are sure of, are first thus:—

| | A.D. |
|---|---|
| The Mumonji-sen of silver | 708 |
| The Wado Kaichin, silver and copper | 708-14 |
| Kaiki-shoho of gold, Taihei-guempo of silver, Mannen-tsuho of bronze | 760 |
| Jingo-kaiho | 765 |
| Riyuhei-yeho | 796 |
| Fuju-jimpo | 818 |
| Showa-shoho | 835 |
| Chionen-taiho | 848-50 |
| Kiyoyeki-shimpo | 859-69 |
| Jogwan-yeho | 870-89 |
| Kwampei-taiho | 889-90 |
| Engui-tsuho | 907-57 |
| Kengen-taiho, bronze and lead | 958 |

and nearly each time that a new coin would be minted and put in circulation, there appeared in the decree that the new one was worth ten of the former, although their intrinsic value had not improved. In fact in most of the cases in these last years the coins got poorer in quality, which cannot have suited the people very much; but we must not forget that by this time Japan had entered a very critical period, what with rebellions, etc., like for instance the rebellions of Fujiwara no Sumitomo, who burned the mint in Dazaifu (Fukuoka-ken), and of Taira no Masakado which lasted over nine years. Now from this time to about 600 years later, or up till the period of Tensho (1573-91 A.D.) hardly any coin was made. We find in different books that in Emperor Godaigo Tenno's reign (1319-37 A.D.) there was a coin called *Kenkon-tsuho* in circulation; this was in the time that the Imperial Court was divided into the North and South Courts, but not one of these coins has yet been found; during that time and for many years the old coin formerly made in Japan and further mostly cash imported from China was all that was used. The quantity that was imported from abroad was very great; further, during this time affairs being very unsettled and the Government not minting any coin, many imitations were made of the Chinese coins by private individuals. One reason why Japanese coins were getting to be more and more poor in quality is that the good copper and the good coins even were turned into idols and copper Buddha statues. Emperor Shirakawa Tenno (1073-1129 A.D.), for instance, had large and small idols made to the amount of over 3,000, and this is without counting what the priests had made of cash, and others. In the time of Emperor Gouda Tenno in the 3rd year of Kenji (1277 A.D.) merchants were sent to Guen or China with gold in order to get copper cash for it as cash was wanted here. Later, in Ashikaga's time, gold was sent to Min or China to be exchanged for copper coin. Specially in the time of Ashikaga Yorimasa (1475-83 A.D.) great quantities of copper coin was received from China; and he finally, without sending anything in exchange, wrote to China in a style which was not very much appreciated here, and begged China to send coin, saying that the finances of the country were in a very poor condition, what through big fires in Kyoto, etc. After this long unsettled and poor state of affairs, things got by degrees more settled again, and in Toyotomi Hideyoshi's time we see coins were made; the finest gold and silver pieces date from his time also. The bronze coin that was made now was called the *Tensho Tsuho*; it was made in the 10th year of Tensho (1587 A.D.); a silver coin of the same shape and denomination was also made. The next in Hideyoshi's time was called the *Bunroku Tsuho*, a coin made in the 1st year of Bunroku (1592 A.D.), two kinds were made, one of silver and one of bronze; the further coins which were made now by degrees were; *Keitcho Tsuho*—1 silver and 1 bronze—made in the 11th year of Keitcho (1660 A.D.); *Genna Tsuho*, which was made in silver and bronze in the 3rd year of Genna (1617 A.D.) Regarding this period we find in the work called *Tokugawa Jikki*, a decree which appeared on the 20th of the 5th month of the same year, fixing the travelling expenses along the Tokaido or, better said, the lodging fees, and deciding it to be in each stoppage place, per one person for one night 4 *Kio-sen* or Kyoto made cash, and for one horse 8 cash, but if the traveller should bring his own wood (for boiling his rice, which wood they would often pick up on the way themselves), then the inn-keeper could only charge half the above fee. This was in Tokugawa Hidetada's time; people were rejecting the former coin for the one fault or the other, so although it had appeared already before, a new decree appeared prohibiting the rejection of other cash but six kinds already mentioned in a previous decree; and as people seemed still to go on with the habit of rejecting, the punishment of the stigma or burnt marks on the face was again promulgated and put in force. It was also and anew decreed that the value of one *rio* would be 4 *kwanmon* or 4,000 cash, and any one who should disobey this decree would have the whole amount of the transaction confiscated, both parties to be dealt with in the same way; besides, where such an infringer of the law should be found, the village officer would be fined 5 *kwanmon* or 5,000 cash, and each house of that village 100 cash. In the 12th month of the 4th year Kwanye (January, 1628 A.D.) in each province a director of the mines and of Finance was appointed, and in the 6th month 13th year Kwanye (July, 1636 A.D.) the coin *Kwanye-tsuho* was made. The first were minted in Sakamoto in Omi, and in Yedo at Asakusa, and some at Shiba; the minting of the coin was kept on for many years and they were made in different parts of the Empire; they are all the same in denomination, but can be distinguished either from their shape or size, form of characters or marks at the back, either a dot above the square hole or the one or the other character showing the period or place where it was minted. In the Hoye period, 5th year (1708 A.D.) a large copper cash called *Hoye-tsuho Taisen* was made; it was ordered to be used as being worth 10 former coins although its weight and value was only about three times that of the former coins; the result was that the people would not take to it, its size being also much larger and less practicable. Then *Kwanye tsuho* was made again in Sado in Kyoto, Shichijo and Kameido and Fukagawa, Yedo, Nambamura, near Osaka, Ishinomaki, Sendai; some were made also in a place called Jumantsubo in Fukagawa, Yedo, in Konmemura in Wakayama, in Udo and Nakajima in Kishu, at Fushimi, and Takatsu near Osaka, Ashiwo near Nikko and other places. Some were made of iron, but the worse of the iron ones were made in Sendai after the *Sendai-sodo* or Sendai rebellion, and as punishment the Daimyo of the province was ordered to make the Sendai-bori or cutting or canal which is behind Surugadai. In the 6th year of Tempo (1835 A.D.) the *Tobiaku sen* or *Tempo sen* was made; this was in the time of Emperor Ninko Tenno. In the Ansei period (1857 A.D.) a coin was made in Hakodate called *Hakodate Tsuho*. In the Bunkiu period (1861 A.D.) coins were made in Linkiu, and the coin called *Bunkiu Yeho* was made and the minting of the old style of copper coins was kept up till, I believe 1868 A.D. Now, ladies and gentlemen, as it will be much easier for those who interest themselves in numismatics to read over the whole little work at ease when it will have appeared in print in this society's transactions, I will abstain from giving any more passages out of it, fearing I have been too long already, but as I thought it might be interesting to the honourable audience to see the collection I have been able to gather, I have brought it here with me to-day. My pieces are somewhat mixed, as I put them on the cartoons by degrees as I found them. In conclusion, allow me to thank you all for the attention you have so kindly paid to the subject I have ventured to treat upon.

After reading his paper, Mr. Van de Polder drew the attention of the audience to the collection of coins, Japanese and Chinese, which he had arranged, and which included pieces ranging from the *Wado Kaichin* of 708-714 to the *Tempo* and *Bunkyu-sen*—up to 1868.

The SECRETARY read the following communication from Professor Wigmore, who was unfortunately prevented from attending the meeting:—The *eiraku-sen* was a coin of particular importance because of its connection with prices. Its full weight caused it to be taken as a special measure of equivalence, and this merits a few words on the subject of its origin and history, in addition to the facts which the learned author of to-day's paper has adduced. First, as to the introduction of this coin. Mr. Van de Polder speaks of it as having occurred in the Kwanto, in 1403-24, a shipment having probably been unloaded by mistake in Sagami. This surmise finds confirmation in a story which I found in *Denyen Jikata Kigen*, "History of Land in the Provinces," quoted from *Chuko Chiranki*, "History of Peace and War in the Middle Ages." In the 10th year of Oyei (1403) says the story, the greatest typhoon ever known in Japan drove a Chinese ship to Misaki village in Idzu, now Soshu. Ashikaga Matsukane, in command of the Kwanto, sent three high officers to Misaki to see the ship. The people of the ship told the story of how they were driven out of their course, and requested a harbour. Five or six *kwan* of *eiraku-sen* were found on board; and on hearing of this, Matsukane sent word to Kyoto to Yoshimitsu, the *inkyo* Shogun, and Yoshimochi, his son, the Shogun, to ask what should be done. Matsukane was told to decide for himself. So he confiscated the ship's cargo and after provisioning the crew with *miso*, salt, fuel, and rice, sent them back to China. The author of *Denyen* does not credit this story; for he says (1) the 10th year of Oyei, when this incident is said to have happened, was only the first year of Eiraku in China, and the *eiraku-sen* was not coined until the 9th of Eiraku, on about 1413, the 19th of Oyei; (2) the ex-Shogun Yoshimitsu died in the 15th of Oyei; (3) Matsukane died in the 17th of Oyei; so that neither of them could have ever seen an *eiraku-sen*, nor could one have been imported in the 10th of Oyei. This may all be, and yet the story may have a framework of truth. It corroborates very aptly the supposition of Mr. Van de Polder. Secondly, as to the subsequent history of the *eiraku-sen*. From the above authority I glean the following. Towards the latter half of the 16th century the *eiraku-sen* had begun to displace the ordinary money (*aku-sen*, bad money) in the Kwanto. In 1573, Hojo Ujiyasu conquered that region, and soon afterwards he called a meeting of some of the chief lords of the region and submitted a proposition prohibiting the use of any money except *eiraku-sen*. His reasons were: (1) the *eiraku-sen* was of much better quality; (2) disputes about media of payment must be stopped; (3) such a measure would stimulate trade. His views met with favour, and the law was passed. (Incidentally this method of passing it raises questions of great interest.) Thereafter, says the chronicler, all the bad money in every *machi*, *gun*, *sho*, *go*, *mura*, and *sato*

Digitized by Google

was collected and sent to the Kamigata (or Kyoto region); from this time bad money was called *Kyoto-sen*. In 1590 Tokugawa gained the mastery in the Kwanto, and (in some unexplained manner) the *Kyo-sen* came partly into use again, and its ratio to the *eiraku-sen* was fixed at 4 to 1. But disputes again arose, and a law was passed more than once prohibiting the use of *eiraku-sen* except for the payment of taxes. The reason for this law was said to be a dream of Iyeyasu; for one night in his castle at Sumpu (now Shizuoka) he dreamed that he was changing his castle, and on telling this to Honda, an official, the latter interpreted it as meaning that the money should be changed. Perhaps Honda had a stock of *Kyo-sen* which he was anxious to put upon the market. This account differs slightly from that of the authorities cited by the learned author, (1) in regard to the time when the rate 4 to 1 was fixed; (2) in regard to the time when the term *Kyo-sen* came into use. But my purpose in mentioning it is to call attention to the important connection between the *eiraku-sen* and the history of land-tenure. Under Yoritomo there came the final step in the process of commuting the old labour and commodity taxes into money. From his time (the middle of the 12th century) until Iyeyasu, the principal taxes (*ta* and *hata*) were paid in money. *Kwan* being the unit of coinage, the amount due from a given piece of land was called the *Kwandaka*. It is probable that the amount of *Kwandaka* was determined in the beginning by the amount of land producing sufficient to support one horseman for the lord's service. Now when the *eiraku-sen* came into use, the value of the *Kwandaka* came to be often expressed in the terms of the *eiraku-sen*. When so expressed, the term *eidaka* was used. The income of the *samurai* was paid in *eiraku-sen*, and the term *eidaka* was thus forced into being. Ordinary taxes were *sen-no*; taxes paid in *eiraku-sen* were *ei-no*. The use of *Eidaka* apparently began about the time that Hojo Ujiyasu made *eiraku-sen* the sole lawful medium. The important consequence of this double reckoning is that for a period of two or three decades, we are without the means, in many cases, of knowing whether the assessed value of land is to be taken as named in terms of *Eidaka* or of the ordinary *Kwandaka*. In the deeds of the time the lands is usually described as having such and such an income, and it is impossible to base any conclusions on such ambiguous data. This ambiguity is the more deplorable as it was about the same period (1590) that Hideyoshi altered the area of the *tan* and made it consist of 300 instead of 360 *tsubo*; for thus another kind of data is rendered ambiguous. Such is one of the interesting questions on which Mr. van de Polder's history of the coinage throws light.

The CHAIRMAN said they must bear in mind that Mr. Van de Polder had not only condensed the work of eight or ten years investigation of this subject, but he had also, his paper being long and somewhat technical, taken on himself the further labour of preparing an abstract of it, to which they had just had the pleasure of listening. For that, and for his kindness in bringing his large collection of copper coins, the society was much indebted to him, and the Chairman had much pleasure in extending to him the thanks of the members.

Dr. KNOX remarked that in the earlier part of the paper Mr. Van de Polder repeatedly spoke of the tribute brought to Japan from Korea, which included Chinese silver and gold coins. Were any of these still in existence?

Mr. VAN DE POLDER said he had spoken simply of silver and gold—not in the form of coins. The first coins made in Japan were of silver and gold brought from China.

Dr. KNOX had been interested by the thought that light might be thrown on the history of that time in Japan, if coins then brought were still in existence. There were many things that people were inclined to doubt, the invasion of Korea and indeed most of the occurrences alleged to have taken place before the 4th century. But of course silver and gold, other than coins, would leave no trace behind.

Mr. VAN DE POLDER said it was stated that the Empress Jingo Kogo brought back from Korea a coin shaped like a bird, but of that he had found no sign. There was a person in Osaka who had a specimen of the first silver coin struck in Japan.

The CHAIRMAN noticed that Mr. Van de Polder had several coins in his collection to which were attached images of *Daikoku-fukujin* and *Ebisuko*; were these rare?

Mr. VAN DE POLDER said they were rare. They were called *Miya-sen*, and were Sendai coins. When they were first struck some were made specially as offerings to temples, and hence the gods, and the name *Miya-sen*.

Mr. DIXON said that would furnish the answer to a question that was aked in *Notes and Queries* in December last, whether there were coins struck in Japan bearing the guardian angel of Japan.—(Laughter.)

The meeting shortly afterwards dispersed.

## *GAS COMMITTEE.*

The following is the Report of the Yokohama Gas Committee:—

Statement of receipts and expenditure for the tenth year, ending February 15th, 1891.

| | | |
|---|---|---|
| Balance from last account | | $1,029.44 |
| Receipts from subscribers for 12 months | | 3,595 90 |
| | | $4,625.34 |
| Payment for Gas: 4 months | 1,206.40 | |
| Payment for Gas: 2 months | 516.20 | |
| Payment for Gas: 6 months | 1,461.60 | |
| | 3,184.20 | |
| Secretary's salary and collector's commission.. | 379.07 | |
| Stationery, &c. | 24.00 | |
| | | 3,587.27 |
| Balance in Bank and in hands of Hon. Treasurer | | $1,038.07 |

The charge for gas was reduced in August last to *yen* 2.10 per lamp, and a reduction of 20 per cent. on subscriptions of one *yen* and upwards was made from that time. The number of lamps now lighted is 116 at a cost of $243.60 per month, while the net income from subscribers is about $250.

The present Committee consists of Messrs. A. O. Gay, Chairman; A. Dumelin, Hon. Treasurer; J. H. Brooke, J. Ph. Von Hemert, W. B. Walter, and E. Blanc.

## *LETTER FROM SAN FRANCISCO.*

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, February 26th.

The end of the session approaches, and the Committees are working extra time to get the appropriation bills through. It often happens that in the hurry and confusion of the close of a session, bills which have hung fire for months are surreptitiously passed, sometimes as riders to appropriation bills; and thus it is possible that the shipping bill may yet become a law. But the chances are against that and all other measures. Report declares that Mr. Harrison is in a sulky fit, in consequence of the defeats his policy met with, and that he may veto any bill which is passed in the closing hours of Congress.

He has done one act which is greatly to his credit. He has appointed as Windom's successor in the Treasury Department Charles Foster of Ohio, one of the ablest and purest men in the country. Foster has been a successful man from his birth. Beginning life as a small shop-keeper, he rose to be a great merchant, and retired with a fortune and wide popularity. He then went to Congress, and served three terms with credit to himself and advantage to the country. At the end of his third term, he retired to become Governor of Ohio. To this office he was twice elected; he only left it when his party lost the State. He will now administer the finances of the nation at a time when he will need a clear head and a stout backbone to resist the "grotesque gimracks" of the labour unions and farmers' alliances; but he will be the right man in the right place. Charles Foster stands conspicuous among Ohio politicians, who are as a rule, to use Conkling's words, "of the white livered order." If Mr. Harrison had had more like him round him, his administration would not have been such a failure.

The political campaign is under full headway in Canada. Sir John A. Macdonald charges the Liberals with high treason, for discussing the subject of annexation to this country. Messrs. Goldwin Smith and Farrer of the Toronto *Globe* are likely to bear the imputation with fortitude, as their predecessor in treason, John Rose, was afterward chosen by the British Government on more than one occasion to represent the Empire in delicate diplomatic negotiations, and was knighted for his services. But among the old English and Scotch settlers, the name of treason is odious, and it is quite possible that Sir John may have dealt the Liberals a severe blow. In many parts of Canada, loyalty to Great Britain merely means antipathy to the United States; and in the Eastern provinces, the priests are united against union with a godless nation like ours.

The bill providing for international copyright passed the Senate by 36 to 14, and now goes to the House. It is believed that if it can be got at, it will receive a majority vote, notwithstanding the efforts of those who hold that there is no wrong in stealing from an author, though it is very wicked indeed to steal from a grocer. But nothing is certain. The American people live in dread lest international copyright should end the era of cheap books, and oblige them to pay $4 or $5 for a work which can now be bought for fifty cents. Should this result really follow the passage of the Bill, the spread of intelligence would be checked. We are accustomed in this country to buy the novels of Jerome, Kipling, Stevenson, and other writers of like standing for half a dollar, and the consequence is is that they have far more American than English readers. That admirable poem by your neighbour, Sir Edwin Arnold, "The Light of the World" is for sale for fifty cents, and is in every one's hand. Stanley's book, on the other hand, which was printed in England, and is more or less securely protected by a copyright, sells at $7.50 in New York; it is only bought by libraries and by a few book collectors. Our own novel writers, like Marion Crawford, James, Howell, and Cable occupy a position between the two. Their tales, when published in duodecimo form, sell for $1.50. But most of them reckon on getting their reward out of their serial publication in magazines.

The silver miners who have been trying for weeks to induce Congress to take their product off their hands at 25 per cent. above its value have at last given up the struggle. A report of the coinage Committee in the House in which both parties concurred has administered to them their quietus, and for this session at all events, they will not be heard from again. It is astonishing how they ever acquired the influence they had. The silver producing states are few in number, and small in population, yet by bawling, and enlisting the services of a few newspapers, they managed to make the silver question appear a Western question, and rallied to their support a sufficient number of western votes in Congress to ensure the passage of the ridiculous law of last session requiring the treasury to buy 4,500,000 ounces of silver every month, whether bullion was needed or not. Their idea was that the Government purchases would put up the price of silver to the old parity with gold, or $1.29 in gold for the silver ounce. But the scheme failed, as such schemes generally do. There was a spurt in silver when the bill passed, and the price touched $1.20, but it has ever since been declining, and is now quoted at .98½. Exasperated at their failure, the silver miners then insisted on the free coinage bill, a measure which would have compelled the Treasury to give a standard dollar, worth in the market one hundred cents, for every 75 cents worth of silver bullion. This was too much for the stomach of the Eastern men who stood ready to yield to the West on non-essentials. They kicked the free coinage bill out, after Cleveland had trampled on it; and next Congress will probably repeal the Silver Purchase Act.

We have had our usual winter cyclone on this coast, and it may not be amiss to describe it, as it was a type of its kind. All cyclones which strike the Pacific Coast of the United States originate at sea, and reach the coast in the vicinity of Cape Flattery, or some point on Vancouver Island; thence they travel south, in opposition to the wind, and while some of them occasionally deflect into Nevada and Idaho, they almost all die out in Arizona. The cyclone of February 18-24 was no exception to the rule. It was a double perturbation. One cyclone struck the coast on the 18th, and was followed on the 20th by another; the two combined forces on the 21st, and swept down the coast as far as the Mexican boundary, with a heavy rainfall, and gales in which the wind travelled at the rate of fifty miles an hour. Railroad tracks were washed away, and bridges carried off, landslides blocked the roads, villages in low-lying sites were flooded, rivers were swollen till they converted the lowlands into lakes. The most serious accident was the wreck of the ship *Elizabeth*, which occurred on Sunday afternoon. She was making for the entrance to the port, in tow of a tug. If was broad daylight, and there was no fog. The ship was not disabled: she carried an efficient crew; the tug was powerful. Yet she was not only unable to make the four or five miles which divided her from the Golden Gate, but she was irresistibly, as if by the hand of fate, driven upon the rocks above Point Reyes, where the angry sea converted her timbers into kindling wood, and drowned her captain and the bulk of her crew. Within eight miles of the spot where she was wrecked there is a life-saving station, with a full crew. But the lifeboat lost her captain in trying to reach the wreck, and had to put back, a contemptible example of inefficiency. On the same spot, thirty-eight years ago, the steamship *Tennence* ran ashore with a shipload of passengers; but she took the land in a sandy cove, and not a life was lost.

A curious rescue from the grave is reported from Pennsylvania. Eighteen days ago, a cave

Digitized by Google

in a coal mine near Hazleton entombed eighteen miners. Three shifts of men were immediately set to work to dig them out. But though the work never stopped for an instant night or day, over a fortnight elapsed before any of the imprisoned men were reached, and when they were found, they were corpses. Up to Monday last thirteen of the eighteen who were missing had been discovered dead. Five remained to be heard from. On Monday night, one of the diggers thought he heard a faint tapping on the rock inside. He and his comrades redoubled their exertions, and in the course of a couple of hours came upon the whole five, alive, though nearly dead. Only one of them was strong enough to be moved. His story was pitiful. When the miners realised their entombment, they put themselves on short allowance, and made the contents of their dinner pails last them six days. Then they lived on the oil from their lamps and from the can from which they were replenished. When their thirst became insufferable: they drank the water which oozed out of the cracks in the rock, though it was so strongly impregnated with sulphur as to be almost poisonous. It is said that all five men will survive.

General Sherman had a grand funeral at St. Louis. The military display was large. The only curious feature of the occurence was the announcement by the General's son, the Rev. Father Sherman, that his father died, as he had lived, a good Catholic. The secret had been faithfully kept in view of the possibility that at some time or other General Sherman might become an available candidate for the Presidency.

The civil war in Chile does not seem to be nearing its end, and the advantage is with the insurgents, who have got possession of the bulk of the fleet. They have taken Iquique, which is the southern station of the foreign fleets that cruise on the west coast of this continent. The British flagship *Warspite*, which is at anchor there, nearly got involved in a recent skirmish between the belligerents. On the other side of the continent, old General Fonseca has just been elected President of Brazil. He headed the revolution which overthrew the ex-Emperor and now fitly takes his place. He is a man of high character and a good soldier.

Prize fighting has received some set backs lately. In this city, a meeting was arranged between a noted bruiser known as "La Blanche, the marine," and one Mitchell, an importation from the old sod. A good deal of money was placed on the mill, and the disgust was profound, when in the middle of the fight, La Blanche lay down and refused to come to time. At Columbus, Ohio, a contest took place yesterday between one Seville, and a professional with the high sounding name of Majesty. Seville knocked out his opponent in the seventeenth round with a blow delivered simultaneously with both fists on the top of the head. When Majesty was picked up, the doctor set his broken nose, and sewed up a lot of rents in his scalp, but when he examined his crown, he found the skull fractured. The man died an hour afterward. It is no easy job to crack the top of a skull with a blow of the fist; the hitting must have been pretty heavy. Prize fighting is suffering in public estimation in consequence of these occurrences. It is not raised by the behaviour of John L. Sullivan, who is perambulating the country, and indulging in a series of plain drunks—in some of which he has been kicked and cuffed by men who could not stand before him in the ring for a minute. Some day, this unmitigated blackguard will meet some impertinent gentleman who will perforate his epigastrium with a bullet, and the world will say with a sigh of relief, *Requiescat in pace.*

## *HONGKONG.*

Acting Governor FLEMING to LORD KNUTSFORD.

Government House, Hongkong,
September 15, 1890.

My Lord, I have the honour to forward the Blue Book of this Colony for the year 1889.

REVENUE.

2.—It is satisfactory to find that the revenue continues to increase. Sir G. William Des Vœux, in his Despatch of the 31st of October, 1889,* remarked that the revenue for 1888 ($1,557,300) was larger than in any former year. But the revenue for 1889 was $1,823,549, exceeding that for the previous year by $266,249.

3.—There was a continued increase on the amount derived from "Stamps" and "Assessed taxes," the former rising from $187,150 in 1888 to $213,479 in 1889, the latter from $360,291 to $374,857.

The very large amount of business done during the year on share transactions must have given rise to this addition in stamp revenue, however much this speculative business may have proved detrimental in other respects.

The increase in "Assessed taxes" may in great measure be attributed to the number of houses built during the year, but the better assessment of property no doubt tended to further the increase.

4.—The large increase of $246,325 derived from opium is owing to an agreement which was entered into in March, 1889, in virtue of which the opium monopoly was sold for a period of three years at $477,600 per annum, being $295,200 over the price previously obtained.

5.—Another important increase is that of $10,582 on leased lands, which is to be accounted for by several land sales that took place during the year.

6.—The decrease of $12,586 under the heading of fines tends to show a falling off in the number of convictions before the Police Magistrate's Court, while the increase of fees is some proof that the business before the Supreme Court had not lessened.

EXPENDITURE.

7.—The ordinary expenditure in 1889 was $1,459,167 as against $1,461,459 in 1888, the extraordinary expenditure being $374,551 as against $530,870. The total expenditure, therefore, in 1889 was $1,833,718, being $158,611 less than in the year before.

8.—The decrease in the amount expended on extraordinary public works in 1889, when compared with 1888, is, to a considerable extent, attributable to a large amount spent in 1888 for the distribution of water, and for the purchase of land for a new central market in the city of Victoria.

9.—It may be added in connexion with revenue and expenditure that the Chinese inhabitants contribute, by a voluntary assessment among themselves, towards the pay of what are called district watchmen, who are appointed by the Governor under an Ordinance passed in 1888, for protecting those portions of the town especially alloted for the residences of the Chinese inhabitants. In 1889 the amount contributed by them was $7,350, to which $2,000 were supplemented by a grant-in-aid from Government.

10.—The military contribution so-called was in 1889 the same as in former years, viz., 20,000*l.* a year, although it has since been increased, under the instructions of the Imperial Government, to double that amount on the assumption that the garrison is to be considerably enlarged.

But the amount paid for this military contribution by no means represents the entire cost entailed on the Colony for military purposes. The military property, which is of considerable extent, is situated in the centre of the town; it is in itself of great value, but apart from this it pays no rent nor taxes.

LEGISLATION.

11.—There were 35 Ordinances passed during 1889, the principal being an Ordinance referring to Chinese emigration, an Ordinance to regulate the construction of buildings in the Colony, and one providing for the extradition of Chinese criminals. Some laws of importance have been passed since the commencement of the present year, and several of more or less consequence, including a new Ordinance on bankruptcy, are under consideration.

EDUCATION.

12.—Two additional schools subject to Government supervision were opened last year, the present number being 99.

The total number of scholars in Government schools during the year was 2,388, as compared with 1,933 in 1888; in grant-in-aid schools 4,814 as compared with 4,325.

The total expenditure for these schools amounted to $44,321, which was somewhat less than in 1888, owing to a discontinuance of a scholarship, and the amalgamation with salaries of rent allowances formerly given to some of the masters.

13.—The Victoria College, the principal school of the Colony, was opened during 1889. This has proved a very costly building, but it no doubt provides much increased accommodation for scholars as well as for a teaching staff.

14.—The Governmen central school for girls was opened not long since. It is as yet premature to offer an opinion on its future success, but any step towards the better education of females should receive every encouragement. Much good must result in Eastern countries by the proper position of women being felt and recognized, and there is nothing more likely to bring this about in this Colony than in careful training and education of Chinese girls.

15.—The principles upon which the grant-in-aid system is worked in Hongkong give every satisfaction, and it is seldom that any question arises in connexion with the system that cannot be amicably settled.

POPULATION.

16.—The estimated population at the close of the year was 194,482, of which only 56,449 were females. The number was less by 21,318 than that estimated at the end of 1888 and less than in any year since 1886.

I entertain doubts whether the population of the Colony has a tendency to increase at the present time. It is, of course, difficult to form any safe opinion on somewhat unimportant fluctuations of a comparative short period, while a mere estimated calculation is necessarily of no great value. The census, however, which will take place next year will be a far more accurate criterion as to what the population really is.

PUBLIC HEALTH.

17.—It is very gratifying to find, from the report of the Colonial Surgeon, that the general health of the Colony during the year was exceptionally good.

The number of deaths among the European residents was lower than for several years past, while among the Chinese number was the smallest for the last 16 years.

There was no epidemic and even the influenza which, during the latter portion of the year, attacked with such virulence so many different countries, only appeared here in its ordinary form.

The improved condition of the Colony as regards health is in all probability due to the many measures which have been lately taken to secure a more perfect sanitary system, and a more plentiful supply of wholesome water for the community.

PRISONS.

18.—The only gaol in the Colony is the Victoria Gaol, situated in the town, in which the average number admitted during the last few years has been about 4,000. The daily average during 1889 was 581 as against 531 in the year before. Many among these belong to the mendicant class, who find their way to Hongkong from the mainland of China, and who, when they arrive here, are arrested as vagrants, and committed accordingly. It is to be feared that prison life in regard to these is anything but a deterrent to crime. They frequently enter prison in such a state as to be at once placed on the sick list, and the gaol is, in fact, rather a hospital in which they are cared for than a house of detention in which they are punished. The introduction into the Colony of this class of Chinese should be discouraged as much as possible; but with the constant means of communication between Hongkong and the different parts of China their arrival is very difficult to guard against.

19.—The prison accommodation in the Victoria Gaol is unquestionably insufficient for the number detained there, and this subject is now receiving the serious attention of the Colonial Government. It is very satisfactory to find, however, notwithstanding its somewhat crowded condition, that the gaol is so healthy. There were only four deaths during the whole of the year, and the admissions to the hospital were but 244, as compared with 306 in 1888.

PUBLIC WORKS.

20.—Most of the public works now in course of construction were referred to by Sir G. William Des Vœux in his despatch above mentioned, but I may state that the Praya reclamation scheme (the object of which is to reclaim a large portion of land along the western front of the town of Victoria), the new drainage and water works, the new central market, and a new lunatic asylum for Chinese are rapidly being proceeded with. To these may be added the progress of the work connected with the Gap Rock Lighthouse, the foundation stone of which was laid a short time since. The rock on which this lighthouse is destined to stand is a small island, 400 feet in length, about 33 miles south-west of Hongkong. It consists of two rugged mounds of rock separated from one another by a long narrow gullet, and this it is which gives the island the name of the Gap Rock. Much difficulty was at first encountered in obtaining the permission of the Chinese authorities to erect the lighthouse on what still continues to be Chinese territory. It is, I think, to be regretted that when Hongkoeg was ceded to Great Britain some of the small islets around, and which naturally belong to it, were not also acquired.

To have lighthouses adjacent to Hongkong, although situated on Chinese territory, is no doubt better than to have none at all; but in case of a war, or of any complications taking place between the British and Chinese Governments, it is impossible to say what difficulties may not arise.

MISCELLANEOUS.

21.—No particular event happened during 1889 to call for special notice.

22.—It became generally known towards the

* Colonial Possessions Report No. 84.

Digitized by Google

close of 1889 that their Royal Highnesses the Duke and Duchess of Connaught would visit Hongkong on their way home from India, on the termination of His Royal Highness's period of service as Commander-in-Chief in Bombay.

Their Royal Highnesses accordingiy arrived in Hongkong on the 31st of March last, when they were received with a most loyal welcome by all classes of the community. After seeing as much of the Island as the limited time at their disposal would permit of, and after having paid a visit to the neighbouring city of Canton, their Royal Highnesses sailed for Japan *en route* for Canada on the 4th of April.

23.—The present condition of this Colony, its increased population, and its rapid strides in advancement generally since it became a British possession less than half a century ago, were vividly described by Sir G. William Des Vœux in the despatch I have quoted.

I venture to think, however, that the future prosperity of Hongkong must, in a great measure, depend upon the future of that great Empire to which it belongs geographically, although not politically.

The more trade with China is opened up, which can only be done by an increase in the means of her internal communication and by a reduction of her inland taxation, the more advantageous will it be in the interests of this Coiony.

The Chinese are naturally averse to innovations and tardy in carrying out changes of any description, but there are some among them as shrewd and as intelligent as can be found in any other nation, and when these perceive what the extension of the railway system and the introduction of modern improvements have done for the neighbouring Empire of Japan, where during the last few years the foreign trade is said to have doubled, they will scarcely be able to close their eyes to the expediency of doing what cannot fail to benefit a country which possesses the largest population of any country in the world.

To encourage China in the adoption of modern ideas, to assist her, in so far as possible, in opening up her vast territory, and to facilitate intercourse between her and other nations, should surely be the duty of a Colony, whose interests are interwoven with her interests, and whose prosperity will be retarded in proportion as hers is held back by a policy of too conservative a nature.

I have, &c., (Signed) F. Fleming.

The Right Hon. Lord Knutsford, G.C.M.G., &c., &c., &c.,

## *BITS OF OLD CHINA.*

Several successive issues of the *Whitehall Review* contain a series of paragraphs under the above heading which are worth reproducing:—

It was a good many years ago when a Chinese carter deposited me and my baggage in the courtyard of the British Legation at Peking. I had travelled nearly ninety miles in the machine which, innocent of springs, had been dragged over the most awful apology for a road ever essayed by wheeled vehicles. It was bitterly cold, and the keen wind had covered cart, self, and belongings with a sandy dust, reducing the vizage to a dirty leather colour. The torture I then endured—evinced by bruises which were obvious for several days thereafter— has stamped itself indelibly on my memory. But a warm welcome from the junior mess made amends for a good deal. I was at least in better condition than another junior, who had travelled by the same conveyance from Chefoo, a distance of some 400 miles, and had become frost-bitten on the journey!

* * * * *

Peking (foreign) society in those days was at least select. It consisted, firstly, of the inmates of the British Legation, numbering some sixteen or eighteen, with a mounted escort of old cavalry soldiers of the same number. Next came the Imperial Maritime Customs employés, who numbered about a dozen, residing in roomy quarters about a mile away. The French Legation had five members, the American three, and the Russian about eight or ten. No other Legations were at that time in residence, and the sixty individuals above enumerated were the sole foreign inhabitants, excepting one American and two English missionaries. There were only two ladies.

* * * * *

As a large majority of the above-described community consisted of young men about twenty-four years of age, life was by no means so dull as might have been imagined. Good hard study for about four or five hours each day was succeeded by riding—the only amusement practicable outside our respective premises. But when evening drew on, and we met at dinner, each mess seldom without a few guests from the neighbouring yamêns, song and story beguiled the time until the "wee sma' hours," and old College or University days were lived over again.

* * * * *

Most people have a vague idea that Chinese is a "difficult" language to acquire. The idea is well founded, but it may be well to say that there is no more a general "Chinese" language than a "European" one. Some seven "dialects," as they are most erroneously called, but which are, to all intents and purposes, separate languages, are spoken throughout the empire, and these again are subdivided into about 360 "dialects," using the word in the same sense as Lancashire or Devonshire English. To us, of course, Chinese meant the official or Mandarin language, which is spoken with unimportant variations throughout a large portion of the Northern provinces. Peking and Nanking (the old "Southern" capital) are the quarters of the official speech, so far as a line drawn between them extends, but the Hupeh variation is apt to puzzle a tolerably expert speaker of the standard tongue.

* * * * *

My introduction to the mysteries of this most exasperating of languages was not devoid of a comic element. Having duly called upon the eminent official who supervised our studies, he asked me if I had acquired any preliminary idea of the written character; and, on my replying in the negative, proceeded with admirable lucidity to explain to me the system of radicals or "keys" which formed the basis upon which the formidable-looking characters were constructed. Thence he proceeded to show me how the search for any given character was to be conducted in the ponderous six-volume dictionary (Morrison's, then the only one available) which filled a shelf over his table.

* * * * *

It occurred to me that a search of this description was very like hunting for a needle in a haystack, but I was unprepared for the amusing sequel. After satisfying himself that, in a general way, I understood his explanations, my instructor requested me to choose any character in a book lying open before us, so that I might be practically shown how to "look it out." I naturally chose the most complicated upon which my eye fell. "Ah, yes," said he; "yes, that will come under the 17th radical," and down came a volume of Morrison from the shelf. The eminent scholar spent some minutes in hunting amongst its pages, and at length exclaimed, "Dear me, how stupid I was! Of course I should have said the 65th." Down came another volume, but a second and longer hunt failed to find the erratic character. "Very extraordinary," muttered the great man. "Oh! ah, yes; it must be the 25th," as another volume was hastily taken down. "Well, really, I can't ——Oh! *of course*, the 102nd," as the fourth volume followed its predecessors and began to inconveniently crowd the table. A further search followed, and I felt that the situation was becoming depressing. Suddenly a volume was hurled to the other end of the room, and my instructor shouted, "There, sir, that will do! I've studied Chinese for twenty-five years, and I can't find the first character you show me. You know all I can tell you. Go away, sir!" I saw that, possibly, the difficulties of written Chinese had not been exaggerated!

* * * * *

As above stated, we were a very cosmopolitan community. As a rule, English was the universal means of intercommunication, but I recollect a dinner-party at which the only language common to us all was Chinese. Carl B——, the nephew of a leading European statesman, represented Germay; P——, now a professor in the States, answered for the Stars and Stripes; I stood for the Rose, and McW—— for the Thistle, of the United Kingdom. Young D——, now a Consul-General, was in those days a subject of his Imperial Majesty Napoleon III. A Mongolian military mandarin and a Chinese subordinate of the Salt yamên, completed our oddly-assorted party, and the only language we could all (more or less) speak was Mandarin.

* * * * *

D——, the Frenchman above alluded to, was a good fellow, of partly Scotch parentage, and with a rabid antipathy to everything English except his personal friends. We mostly spoke French enough amongst us to keep up a conversation, but D—— always persisted in talking what he supposed was English. One winter morning the cook of the French Legation was found suffocated by the fumes of a charcoal fire which, *more Chinense*, he had lit in his room without providing for any ventilation. D—— gave us the news when he called in next day, and was asked if they had tried to resuscitate him. "Oh, yas," was the reply; "ve did friction him on ze poitrine mit ein shuatszu pour les souliers." (*Shuatszu* is the Chinese for brush.)

* * * * *

As was natural in a community of which riding was the only amusement (theatricals, lawn-tennis, &c., were the dissipations of a later day), racing held high favour in our esteem. Our racecourse was the dry bed of a former shallow lake, not far outside the walls, and our semi-annual meetings were usually honoured by the presence of Chinese officials of high rank. On one occasion a considerable body of native soldiery, with three or four field-guns, attended the sport, in order to receive some native of high rank with the orthodox Chinese salute—three, or a multiple thereof. Unfortunately, the cartridge-box of one of the squads was left lying open not far from the muzzle of a gun, with the result that on a discharge taking place the box blew up, killing one man and maiming others. The mandarin in command did *not* hold a court of inquiry into the matter, but within ten minutes the party responsible for such carelessness was laid upon his stomach, sat upon by three comrades, and beaten with a broad bamboo to an extent which speedily reduced him to much the same condition as the most severely injured of the survivors.

* * * * *

A curious little industry sprang up in the environs of the city consequent on the horsey proclivities of the Europeans. This was getting run over, which was generally accomplished by rushing in front of a horse and throwing up the hands. One of two things always happened. Either the horse shied and his rider came off, to the huge delight of the Chinese mob; or the gesticulating party was knocked down. In this latter event, cautioned as we all were to give no offence, if possible, to the natives, a dollar was generally handed as salve to the artful victim, whose screams and yells that he had been killed never failed to draw a large and sympathising crowd of friends, who regarded the "foreign devil" with most unfriendly looks. In one particular village this sort of thing became at last intolerable, and we decided that if any further attempt was made to startle our horses we would ride down the culprits intentionally. As usual, on our next visit three or four young *gamins* essayed the usual dodge. Being fully prepared for it, nobody was unseated, and a minute afterwards, as we turned back at full gallop, three or four Chinese were hurled into the hedge by our horses. We did not stop to offer dollars on this occasion, but were never afterwards troubled by a repetition of the attempt.

* * * * *

Seriously, however, we did in those days, to some extent, carry our lives in our hands. The native Government was friendly, or, at least, firmly convinced that hostility would have most unpleasant results. But there was a large party of malcontents who hated us and their own officials about equally. Rumours constantly reached our ears of intended attacks upon the Legation, and on at least a dozen occasions our pistols were carefully inspected before retiring to rest, the sentries were doubled, and the least noise induced anxious attention. Nothing serious ever came of the threatened attacks except a spasm of hostility on the part of the villagers outside the walls, who, believing the rumours that we were shortly to be exterminated, thought it safe to intimate by showers of stones when we passed them that they fully approved of the intended massacre. On one occasion I began to realise what being "stoned to death" really meant. Of course I was only struck two or three times, but I felt that, had my horse not soon placed me out of reach, I should have required but a very few more stony mementoes of the ride to have left my body and bones at the mercy of the mob. One of our little band only—a member of the escort guard—was actually murdered during my residence in Peking; but, all things considered, the natives treated us very well.

* * * * *

The surest defence against an angry Chinese mob, if you happen to be unarmed, is a joke. Of course, we all spoke Chinese after a time more or less fluently, and were thereby enabled on many occasions to disarm impending hosility. I remember a striking illustration. A party of young men had gone to visit Yuen Ming-yuen, the "Summer Palace" destroyed by us and the French in 1860. A crowd of Chinese collected around them, and one of their number who happened to possess a capacious mouth, was very voluble in his abuse of the "foreign devils." Going up to him and pointing to his face, one of the Europeans quietly remarked in Chinese, "Don't open your mouth so wide, or I shall tumble in." The crowd laughed and began to chaff the orator, while a few good-tempered remarks completely turned the tables

Digitized by Google

on the would-be tormentor, and the visit passed off without a symptom of further disturbance.

* * * * *

The junior officers of the Peking Legation nearly thirty years ago comprised a mess of thirteen individuals, one of them being the talented German before alluded to, and the remainder student-interpreters in our own service. The office of mess-president and caterer was filled by a very worthy ex-missionary, whose powers of controlling a baker's dozen of young fellows averaging about three-and-twenty years in age, and full of youthful spirits, did not at all equal his acquirements as a Chinese scholar. The food was (for so good a source of supply as Peking) abominable; but no one cared to put the matter plainly to our worthy president. At length matters became unbearable, and a witty member, G——, declared that he would expostulate that very evening. We sat down, and poor old B——, the president, had commenced the usual grace—"For what we are about to receive——" when G—— mimicking his tone, added from the other end of the table—"We pay thirty dollars a month, and infernally dear at the price." B—— stared in blank amazement at the audacious youth for a moment, and then quitted the room. He resigned his position as caterer next morning, and within a few weeks died suddenly of apoplexy as he was eating a solitary meal in his own quarters.

* * * * *

Of course, the spirit of mischief could not be repressed among a body of youngsters situated as we were. One of our exploits was to rob a neighbouring temple of its principal idol, about two-thirds life-size, and convey it to our own quarters by scaling the garden wall. But then contrition—or rather the dread of discovery—seized us, and, after some deliberation, we buried it at dead of night in a cave or artificial grotto within the grounds. There was a great hullaballoo about the loss of his godship, but as his image was never found the natives opined that he had gone to heaven, or the opposite locality. I fancy, however, that the officials guessed pretty truly the state of the case, but did not think of our having buried the idol. Idol-collecting (stealing, I am afraid, in some cases) became, by the way, quite a mania for a time with some of our number.

* * * * *

The comforts of the British Minister's house and table were looked after by a worthy old lady, aged about fifty-two, who had been long attached to the Elgin family, and at times rather presumed on the connection. She had followed Sir F——B—— all over the world, and prided herself on the way she could manage "Harabs and all them Heastern folk." She quite declined to recognise any particular reasons for acting in Peking otherwise than she had acted at Cairo or Constantinople, and the first morning after her arrival sallied forth, basket on arm, to do her marketing for the day. When I add that she knew not a word of Chinese, that none of the natives spoke English, that she was about five feet high and ten feet round the crinoline, and was the first female European ever seen by the Pekingese, her enterpise will be judged to have been braver than she knew! However, nothing daunted, she entered a butcher's shop, closely pressed upon by an inquisitive and delighted crowd. Before she could even look at joint or chop she was hemmed in, and one waggish native, bolder than the rest, gave her a substantial dig in the crinoline, shouting in Chinese, "Let's see if she's solid." But the laugh was not for long on his side. Seizing a chopper from the block, Mrs. A——made a mighty blow at his head, which he happily evaded. In less than a second the shop was clear, the terrified natives tumbling over each other in their haste to get away. A European who came upon the scene at the moment beheld the startling sight of some 500 Chinese rushing up the principal street pursued by an infuriated old woman armed with a chopper. With some difficulty she was persuaded to abandon the chase—and her basket, which she had dropped in her excitement. But it is on record that for a good two years thereafter Mrs. A—— was allowed to shop in peace, and became a "Black Douglas" to troublesome Chinese children in the vicinity of the Legation. The most hardened baby was scared into good behaviour by a threat of being handed over to the "Foreign She-Devil."

* * * * *

Mrs. A—— was in charge of the staff of coolies whose duty it was to clean and dust the chancellerie and other offices, and one day incurred a severe reprimand from the Assistant Chinese Secretary for allowing them to neglect their work. On going to his office text morning, the official in question found Mrs. A—— at the door anxious to express a hope that on this occasion there would be no cause for complaint. "Yes, Mrs. A——, the place looks much more tidy. You've made those lazy fellows do their work—used a little manual persuasion, I suppose?" "Ah, sir," she replied, simpering, "that's what I'm afraid people will say of me—that I'm *more manual than feminine!*"

* * * * *

The old lady finally had to be dismissed, having been found seated on the French cook's stomach, while her fists and nails were inflicting dire injury upon his face. But all who now survive those old days at Peking will have a kindly recollection of the really good-hearted old woman who made us many a delicacy—especially at Christmas-time—and really was an angel sometimes, albeit by no means a Venus, when sickness laid its hand upon one or other of our number.

* * * * *

Our native servants—each two students shared a "boy" between them—were variously recruited, and amongst them we had several members of the imperial clan, or, in other words, cousins (and pensioners) of the reigning emperor. Sensibly enough, in view of the fact that the imperial harem may often contain 300 inmates, such cousins, although recognised as of the family, and receiving a small monthly dole in consequence, are not necessarily held to belong to the aristocracy, and vast numbers are servants, carters, water-carriers, and what not. But they have one privilege of which they are very proud, viz., being entitled to wear a yellow girdle in token of their royal descent. Our principal water-carrier in the Legation was a "yellow-girdle," and was much chaffed thereat by those who knew Chinese enough to indulge in jokes.

* * * * *

Another body of men to whom the Foreign Legations afforded employment was known as "teachers" or "writers." The acquisition of colloquial Chinese being impossible without *viva voce* instruction, these men, who were mostly failures at the public examinations, were selected to aid us. As regarded teaching properly so called, they were as ignorant as a North-American Indian. But as living dictionaries they had their virtues, and some of them were much esteemed by us. Several were confirmed opium-smokers, and, so far as we could judge, not one whit the worse for it. We must often have taxed their patience enormously, but as a rule they maintained the imperturbable calm regarded as a sign of native good-breeding, and only swore at our stupidity (as *they* thought it) under their breaths, after we had done ditto to them in vigorous Anglo-Saxon.

* * * * *

I do not know if they have of late years been undeceived, but all the Chinese I ever met who had seen Scotch troops have persisted in asserting that they were women. There are no bare-legged soldiers in the "Middle Kingdom," but there are bodies of men most eccentrically uniformed—the "Tiger Braves," to wit. These men are clothed in a tight-fitting yellow suit streaked all over *à la tigre*, and are about as demoniac-looking as can well be conceived. They are a special corps, the Tartar army generally being divided into eight "banners," each answering somewhat to an "army corps." Swords were the only weapons when I saw them reviewed, and each man carried a shield of the same prevailing yellow colour painted in remote resemblance to a tiger's head.

* * * * *

As before stated, the Russians are represented in Peking by an establishment similar to our own, but previous to 1859 the resident diplomatic chief was an archimandrite. By a treaty made about 1727 permission was given to establish a Russian mission of six ecclesiastics and four lay members; and the head of this mission conducted all diplomatic intercourse, until the appearance of other European Powers at the capital induced a change. There was a good deal of heart-burning about the supersession of the reverend Chargé d'Affaires, but the new minister plenipotentiary made short work of his predecessor's protests. One of the great subjects in dispute was the valuable library which had been collected by the mission. As, however, the new-comers occupied the same premises, now greatly enlarged, as those they superseded, but faint echoes of what we understood to be a very bitter quarrel reached the outside world.

FOR NERVOUS DEBILITY USE HORSFORD'S ACID PHOSPHATE.

Dr. W. WILSON, L.K.Q.C.P., 80, Broad-street, Pendleton, Manchester, says:—"I have found it advantageous in cases of nervous debility."

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, March 14th.

A small quantity of tea from the Gartmore Estate, Ceylon, has just been sold in Mincing-lane at 212s. 6d. per pound.

The telephone cable between London and Paris has been successfully laid.

London, March 15th.

Six trains have been buried in the snow on the South Devon Railway, between Exeter and Plymouth. The passengers suffered horribly.

Later.

Fighting continues in Chile, and in a battle near Iquique the Government troops have been defeated with loss.

London, March 16th.

The Portuguese have seized a British steamer on the Limpopo River.

*The Times* says that Portugal must account to England for this outrage.

London, March 19th.

Mr. Gladstone, in a speech at Hastings, said that he was satisfied with the foreign policy of the Marquis of Salisbury, but he severely criticised the financial schemes of the Government. Mr. Gladstone adheres to the Home Rule programme of 1886.

Later.

The steamship *Utopia*, when off Gibraltar, leaving the Mediterranean bound West, came into collision with Her Majesty's ship *Rodney* (ironclad), and sank in five minutes. The *Utopia* had on board a large number of Italian emigrants, of whom 576 were lost.

[The *Rodney* (10) is a twin screw battle ship of the first class, of 10,300 tons and 11,500 horse-power, commanded by Captain John B. Warren, and attached to the Channel Squadron. Naturally any ordinary steamer coming into contact with such a heavy ship, would be liable to damage that would sink her in a very few minutes.—ED. *J.M.*]

(FROM THE "SINGAPORE FREE PRESS.")

London, February 25th.

The expenditure for the Royal Navy is estimated at fourteen million pounds. Sixty-nine out of the seventy ships provided for under the 1889 programme will be completed before 1894.

London, February 27th.

Owing to the pressure of public opinion the French painters who acceded to the request of the Empress Frederick (when she was staying in Paris) to exhibit their pictures at the Berlin Exhibition, have all withdrawn their promise. This has caused great irritation, and the *Cologne Gazette* has published a violent article in which it says that the Germans are deeply outraged at the insults offered to the Empress, and in which it demands satisfaction from the French people and Government.

Her Majesty the Queen has launched at Portsmouth the *Royal Arthur* and the *Royal Sovereign*. Huge crowds were present to witness the ceremony.

London, March 2nd.

The French newspapers resent the violent article recently published in the *Cologne Gazette*, regarding the French painters and the Berlin Exhibition, but the fact remains that the recent visit of the Empress Frederick to Versailles and St. Cloud has been a failure, in so far as it was intended to be the means of a reconciliation between the two countries.

(FROM MANILA PAPERS.)

Madrid, February 20th.

It has been agreed that French and Spanish gold coins of ten and twenty francs and pesetas shall circulate on equal terms in both countries.

Madrid, March 2nd.

The opening of the Cortes took place to-day. The ceremony was a brilliant one. Their Majesties the child King and the Queen Regent were present, the speech from the Throne being read by the Queen. Mention was made of the Philippines.

### PASSENGERS.

ARRIVED.

Per British steamer *Ancona,* from Hongkong viâ ports:—Mr. Peyton, Rev. Dr. Sheshadri and servant, Dr. and Mrs. Reeves Jackson, Mr. and Mrs. Tod, Mr. Tod, Jun., Miss Tod, Messrs. H. Dewner, W. T. Warner, T. Douglas Murry, Mrs. and Miss Douglas Murry, Mr. L. Wallace, Mrs. Hart and maid, Mr. H. M. Pugh, Mrs. Dudley and 2 children, Dr. Ernest Hart, Mr. F. Meck, Mr. Melson and son, Mrs. Stewart, Miss Stewart and maid, Rev. and Mrs. S. A. Barnett, Miss Paterson, Mr. C. J. R. Fraser, Mr. F. Rivington, Misses Rivington (2), Miss Smalley, Miss Ell, Mr. Ah Yau, Mr. and Mrs. J. Benton, Mr. and Mrs. G. Benton, Mr. J. T. Gilman, Miss Cole, Mr. E. McFarlane, Mrs. Goodrich, Messrs. Goodrich, H. D. James, C. W. May, and F. Van Gander in cabin; one Japanese in steerage.

Per British steamer *China,* from San Francisco:—Mr. W. Darlington, Dr. W. E. Osborn, Mr. R. B. Lawrence, Mr. and Mrs. C. C. Vinton, Mr. R. S. Miller, Mr. and Mrs. E. L. Meinertzhagen, Mr. O. K. Dalrymple, Rev. and Mrs. W. J. White, child, and maid, Messrs. H. Shugio, E. Chiedell, and Kabayama in cabin. For Hongkong: Mr. and Mrs. V. A. C. Hawkins, child, and nurse, and Mr. Edward F. Stork in cabin.

Per Japanese steamer *Nagato Maru,* from Kobe:—Messrs. R. Suwa and J. Ito in cabin; 26 passengers in steerage.

Per Japanese steamer *Wakanoura Maru,* from Kobe:—Miss Hellyer in cabin; 11 passengers in steerage.

Per Japanese steamer *Saikio Maru,* from Shanghai and ports:—Mrs. T. Buchanan, Miss Ure, Messrs. J. J. Enslie, H. A. C. Bonar, and B. C. Howard in cabin.

Per American steamer *City of Rio de Janeiro,* from Hongkong:—Miss Annie Woods, Messrs. Chas. J. Barnes, Alex. J. Ferguson, P. E. Heerman, W. J. Bate, and W. Bray in cabin. For San Francisco: Mr. and Mrs. Chas. D. Harman in cabin.

DEPARTED.

Per French steamer *Salazie,* for Shanghai viâ Kobe:—Miss P. Klobukouski, Mr. A. Klobukouski, Messrs. E. Pereira, Vivanti, Lowder, L. Samil, Lichtenstein, Roaget, A. Bianchi, Miss A. Rickett, Messrs. F. Retz, G. Volterlorni, N. Lavacry, C. Opffer, S. Dolambo, O. Klusabuno, L. Laichi, P. Caron, Y. Langlois, C. Stammarstoicht, F. Conan, S. Lecorre, L. Lecolvez, P. Bellani, P. Auger, H. Rascher, and P. Stavron in cabin.

Per British steamer *China,* for Hongkong:—Miss Wilson and Mr. J. A. Crawford in cabin.

Per Japanese steamer *Yokohama Maru,* for Shanghai and ports:—Dr. Osborne, Mr. L. L. Fobes, Mr. O. K. Dalrymple, Dr. and Mrs. H. May and two children, Mr. and Mrs. Dare and three children, and Mrs. Nomura in cabin; Messrs. Hara, Watanabe, Matsuoka, Mr. and Mrs. Lee Suing and two children, Mr. and Mrs. Chong Ching Wing, Mr. Dare's servant, Mr. Loo Hong Sam, Mr. and Mrs. Sugihara, Miss Sugihara and two children, Messrs. I. and N. Mizokawa, and Miyayama in second class, and 79 passengers in steerage.

### CARGOES.

Per French steamer *Salazie,* for Shanghai viâ Kobe:—Raw Silk for France 889 bales; for Italy 20 bales; Waste Silk for France 228 bales. Treasure for Singapore $100,000; for Shanghai $5,100.

### REPORTS.

The Japanese steamer *Wakanoura Maru,* Captain Kenderdine, reports:—Left Hakodate the 11th March at 2 p.m.; had light northerly winds and snow; passed Shiriya-saki at 6.30 p.m. with moderate wind from the north and heavy N.E. sea continuing through the night. Arrived at Oginohama the 12th at 3 p.m.; fresh winds from the west and fine weather. Left the 13th at 5.15 a.m.; had light variable winds and fine weather; passed Inuboye at 8.50 p.m. with light southerly winds and fine weather; on the 14th at 2 a.m. set in cloudy with rain; at 3 a.m. wind shifted to N.W. with fresh breeze continuing to port. Arrived at Yokohama at 8.45 a.m.

The British steamer *China,* Captain Seabury, reports:—Left San Francisco the 26th February; for ten days had hard S.W. to N.W. gales; off the coast of Japan very heavy N.W. gales and heavy seas.

The Japanese steamer *Satsuma Maru,* Captain Brown, reports:—Left Kobe the 14th March at 0.30 p.m.; had moderate to fresh N.W. winds to Oshima, which was passed at 8.30 p.m.; thence wind increased to moderate and fresh N.W. gale with nasty confused sea to Omai-saki; passed Rock Island the 15th at 10 a.m.; had light to strong northerly winds and clear weather up to arrival at Yokohama at 3.30 p.m.

The Japanese steamer *Nagato Maru,* Captain Ekstrand, reports:—Left Kobe the 16th March at noon; had fresh southerly winds and overcast sky; passed Oshima light at 9.17 p.m. had strong E.S.E. winds and high head sea and heavy rain till arrival at Yokohama the 17th March at 8.45 p.m.

The Japanese steamer *Wakanoura Maru,* Captain Kenderdine, reports:—Left Kobe the 18th March at noon; had fresh breeze from the N.W. and fine weather; passed Oshima at 9 p.m.; midnight fresh breeze from E.N.E. and fine weather; passed Rock Island at 1.12 p.m. with fresh breeze from E.N.E. and fine weather; passed Cape Sagami at 5.45 p.m. Arrived at Yokohama the 19th March at 8 p.m.

The Japanese steamer *Saikio Maru,* Captain Conner, reports:—Left Shanghai the 13th March at 1 p.m.; had light northerly winds and fine clear weather. Arrived at Nagasaki the 15th at 8 a.m. and left the 16th at 5 p.m.; had fresh westerly winds and rain. Arrived at Shimonoseki the

Digitized by Google

17th at 7 a.m. and left at 11 a.m.; had light westerly winds and cloudy weather. Arrived at Kobe the 18th at 8 a.m. and left the 19th at 12.25 p.m.; had calms and light E.N.E. winds and clear weather to port. Arrived at Yokohama the 20th March at 3.55 p.m.

The American steamer *City of Rio de Janeiro*, Captain Ward, reports:—Left Hongkong the 15th March at 6.36 a.m.; through the Formosa Channel had strong N.E. monsoon with heavy sea, since fine weather and smooth sea. Arrived at Yokohama the 21st March at 3 a.m. Time 5 days, 18 hours, and 42 minutes.

## *LATEST COMMERCIAL.*

### IMPORTS.

The Import Market generally has been rather dull during the week. Prices of English Yarns are slightly easier, but Bombays are higher. Shirtings continue quiet, and Woollens neglected. Sales for the week amount to 200 bales English Yarns, 150 bales Bombays, and 4,000 pieces Shirtings.

COTTON PIECE GOODS.

| | |
|---|---|
| Grey Shirtings—8¼lb, 38¼ yds. 39 inches | per piece. $1.50 to 2.20 |

METALS.

Some revival in this market, and fair sales have been made at the undernoted quotations. Holders have succeeded in their efforts to establish better prices, and buyers were bound to replenish their stocks.

| | |
|---|---|
| Flat Bars, ½ inch | per picul. $2.80 to 2.85 |
| Flat Bars, ¾ inch | 2.90 to 2.95 |
| Round and square up to ¾ inch | 2.85 to 2.95 |
| Nailrod, assorted | Nom. |
| Nailrod, small size | Nom. |
| Iron Plates, assorted | 2.90 to 3.00 |
| Sheet Iron | 3.00 to 3.40 |
| Galvanized Iron sheets | 6.20 to 6.40 |
| Wire Nails, assorted | 4.40 to 4.70 |
| Tin Plates, per box | 5.70 to 6.00 |
| Pig Iron, No. 3 | 1.40 to 1.45 |

KEROSENE.

No fresh arrivals since the steamer *Martha* on the 8th instant. There have been a fair amount of sales at some reduction on previous quotations. Deliveries are fair, but there remains a stock of 675,000 cases on hand at the Nakamura godowns.

QUOTATIONS.

| | |
|---|---|
| Chester | $1.65 to 1.67½ |
| Comet | 1.62½ to 1.65 |
| Devoe | 1.60 to 1.62½ |
| Russian | 1.55 to 1.60 |

SUGAR.

A fair current business, and holders have succeeded in getting rather better prices for Brown, the fresh arrivals from Takao selling well. White is in fair demand also.

| | |
|---|---|
| | per picul. |
| Brown Takao | $4.00 to 4.10 |
| Brown Daitong | 3.20 to 4.00 |
| Brown Canton | 5.25 to 6.25 |
| Brown Java and Penang | 5.50 to 6.00 |
| White Refined | 5.00 to 7.75 |

### EXPORTS.

RAW SILK.

Our last issue was of the 13th inst., since that date settlements in this market amount and to 975 piculs divided thus: *Hanks*, 59; *Filatures*, 618; *Re-reels*, 207; *Kakeda*, 77; *Oshu*, 14. In addition to these figures, Japanese have shipped 45 bales to Europe, making the total business of the week equal to 1,025 piculs.

We have had a good current trade from day to day. Exchange has been favorable; holders of silk were not impracticable and considerable parcels have been fixed for the out going steamer.

The current business doing has induced some supplies from the interior, and the stock list only shows a reduction of 200 piculs on the week. Best chop silks are in some demand, and the supply of these grows less and less every day.

There are plenty of orders in town at low limits, but holders struggle hard, and, so far successfully, against cutting prices too much. From all appearances it would seem that we cannot see a rising Market here for some time to come.

There has been only one shipping opportunity since we last wrote, the French Mail steamer, *Salazie*, on the 15th inst., taking 909 bales for Europe. Present export figures are therefore 22,931 piculs, against 34,615 last year and 37,664 at the same date in 1889.

*Hanks.*—Some little business has been done the last day or two, *Shimare* bringing $510 and *Shimonita* $515. Stock is small and insignificant.

*Filatures.*—Good daily business both in full and fine sizes; prices practically unchanged but inclining towards ease, although holders fight hard against every small reduction. The news from consuming markets is dull and depressing, and shippers do their best to "hammer" prices accordingly, but without much effect. Among the recent sales we find *Gakosha*, $607½; *Choshinsha*, $590; *Kanayama*, $585; *Saishinsha*, $585; with other marks of equal quality at the same price. In fine sizes many parcels have been taken at from $570 to $615, according to quality.

*Re-reels.*—These have been rather neglected on account of the high prices which holders require for the prime qualities. One parcel of *Katsuyama* brought $620, while ordinary No. 1 *Maibashi* was done at $580. In *Oshu* sorts low quality brought $540, and some inferior *Bushu* $510.

*Kakeda.*—The recent business in this class has brought in fresh supplies from the interior and considerable trade has been done. The latest arrivals, however, are winter reelings and do not show up very well as regards quality. Some few parcels really good silk brought $575 and $570.

*Oshu.*—The only transaction has been one parcel of *Hamatsuki* at $530.

QUOTATIONS.

| Available supplies to date | 33,400 | 37,300 | 41,200 |

WASTE SILK.

Transactions in this branch reached 615 piculs, divided thus: *Noshi*, 405; *Kibiso*, 102; *Neri*, 108.

Stock is still reduced and buyers complain loudly of the absence of good quality. Holders show themselves current with such stock as they have, and on the other hand buyers would pay some advance in price if they could procure better quality.

The French Mail steamer *Salazie* on the 15th inst. carried 248 bales of various Waste for Europe, and the present export figures are now 26,236 piculs against 24,706 last year and 27,948 at the same date in 1889.

*Pierced Cocoons.*—No transactions, and it looks as though the season were finished.

*Noshi.*—Some business done in medium *Oshu* at from $80 to $117. *Joshu* has also been taken in considerable parcels at from $70 to $75. A few bales of choice quality being entered at $85. One parcel *Tama-ito* brought $260, and a little filature $135.

*Kibiso.*—Small business, a few bales filature taken at $117, *Oshu* $77, *Joshu* $30. *Low Curlies* are freely offered without finding many buyers.

*Sundries.*—A few parcels of *Neri* have been booked at prices ranging from $12 to $14 for the uncleaned stock.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

## STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

## KEATING'S COUGH LOZENGES.

COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

---

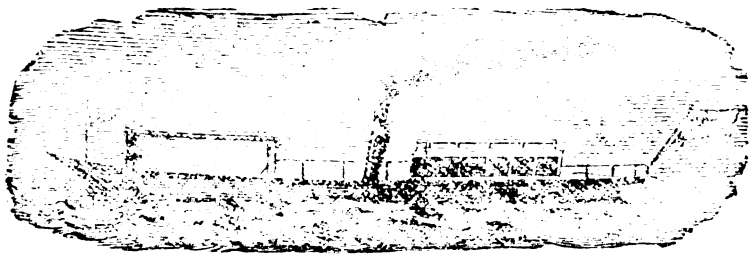
## THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

### SIMPLE, SAFE, AND CERTAIN!



## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

## The Japan Weekly Mail.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 28, 1891.

DEATH.

On Monday, 23rd instant, WILLIAM FALCK, a native of Norway.

## *SUMMARY OF NEWS.*

THE Retired List with pay has been abolished.

THE new Law of Weights and Measures has been promalgated.

PRINCE SHIMADZU left the capital on the 23rd instant for Kagoshima.

DURING the week ended the 9th instant there were 513 births and 502 deaths in the capital.

THE *Chiyoda Kan* sailed from Singapore on the 21st instant for Hongkong *en route* for Japan.

COUNT ITO left the capital on the 19th instant for Odawara, starting from the Shimbashi Station at 3.35 p.m.

MR. SUYEMATSU KENCHO will leave the capital shortly to make a political tour through the north-eastern provinces.

MRS. SWIFT, wife of the late United States Representative, will, it is said, leave the capital about the 15th proximo for home.

MORE than sixty officials of the Agricultural and Commercial Department were placed on the *hishoku* (retired) list on the 20th instant.

AN earthquake was felt in the capital on the 20th instant at 8h. 32m. 38s. a.m. The direction was from east to west, the shock being a sharp one.

AN action for libel raised by Mr. Suyematsu Saburo against Messrs. Takagaki Noriharu and Tezuka Senzo, of the *Tokyo Shimpo*, was decided on the 20th instant in the Tokyo District Court in favour of the plaintiff. Messrs. Takagaki and Tezuka were sentenced to major confinement for fifteen days, and to pay each a fine of *yen* 2.50.

THE Shareholders of the Osaka Tea Export Company were to meet on the 25th instant to decide whether or not the company should be wound up.

THE opening ceremony of the Nobles' School for Boys, which was to take place about the 27th instant, has been postponed to the beginning of next month.

IMPORTANT changes will be carried out in the Cabinet Office in a few days, prior to which, however, Count Yamagata, though not perfectly recovered, intends to return to the capital.

THE *Hiroshima Maru*, a new steamer of the Nippon Yusen Kaisha, sailed from Singapore on the 19th instant *en route* for Japan. She will, it is expected, arrive at this port about the 31st instant.

MR. ASADA, Governor of Kanagawa, proceeded to the Home Office on the 20th instant. The visit was in connection with important changes which will, it is said, take place in the Kencho about the 25th instant.

IT is stated that the Russian Prince Imperial, who will arrive in Nagasaki about the beginning of May next, will visit Kagoshima, and that Prince Shimadzu, of Kagoshima, is now making preparations to receive him.

THE Nippon Yusen Kaisha's steamer *Yamashiro Maru* will arrive at this port about the 29th instant from the Hawaiian Islands. It is stated that she will leave again on the 14th proximo with over a thousand emigrants.

A RUMOUR is current that the Government has decided to appoint Mr. Sonoda, Assistant-Chief of the Metropolitan Police, to succeed Viscount Tanaka as Chief of the Bureau. The appointment will, it is said, take place in a day or two.

EARLY in the morning of the 17th instant an outbreak of fire took place in a house at Kubikigori, Niigata Prefecture, and destroyed one village office, one Buddhist temple, and thirty-two dwellings before the flames could be got under control.

A GENERAL MEETING of the Tokyo Temperance Society was to take place on the 21st instant at the Society's rooms at Konyacho, Kyobashi. Mr. Ando Taro, formerly Consul-General to the Hawaiian Islands, and a few others were to deliver speeches.

IT is announced that at a general meeting of the *Rikken Jiyu* party, held on the 20th instant, it was decided that the party should be ruled by a President, and that eleven persons should be elected to form a Committee for the investigation of Treaty Revision.

H.M. THE EMPEROR, accompanied by Lieutenant-Colonel Yoneda, Viscount Higashizono, and Count Nishisanjo, Chamberlains, Mr. Nagasaki, Private Secretary, Dr. Ai-iso, Court Physician, and several other officials, proceeded to the Aoyama Palace on the 23rd inst.

THE sections between Kurozaki and Monji, and Kurume and Takase on the Kyushu Railway, have been completed, and the Government examination took place on the 16th instant. It is expected that the lines will be opened about the 1st of next month.

THE Weights and Measures Law was promulgated on the 23rd instant over the signatures of Count Yamagata, Minister-President; and Mr. Mutsu, Minister of State for Agriculture and Commerce, and consists of 22 articles. The Law is to come into force on the 1st of January, 1893.

A SPECIAL general meeting of shareholders of the Sapporo Sugar Manufacturing Company was held on the 20th instant at the Kosei-Kan, Kyobashi, Tokyo, at which over fifty persons attended. Messrs. Fujita Kuman, a Councillor of the Hokkaido Administration Board, and Okano Chiso, an Accountant of the Board, were also present at the meeting.

MR. MUTSU, Minister of State for Agriculture and Commerce, accompanied by Mr. Saito, Director of the Commercial and Industrial Bureau in the Department, and Mr. Uchida, a private secretary, left the capital on the 25th instant for Osaka to attend the opening ceremony of the new buildings of the Osaka Chamber of Commerce.

H.I.M. THE EMPEROR, accompanied by Marquis Tokudaiji, Grand Chamberlain, Viscount Hijikata, Minister of State for the Imperial Household, Lieutenant-Colonel Yoneda and Lieutenant Hirohata, Chamberlains, secretaries of the Imperial Household Department, and court physicians, proceeded on the 20th instant at 9 a.m. to the Toyama Military School at Ichigaya, returning to the Palace about noon.

A "SOSHI" named Handa Goro, aged 20, who had been under arrest for some time on a charge of having attempted to assault Mr. Hamaoka, a member of the House of Representatives for Kyoto, was sentenced on the 17th instant in the Kyoto Local Court to one month's major confinement and to pay a fine of *yen* 5. He appealed against the decision.

THE amount of Government paper currency and bank notes in circulation on the 1st instant, was *yen* 58,441,512.400, of which *yen* 24.798,913.000 represented Government notes over 1 *yen* face value, *yen* 8,064,120.900 Government notes under 50 *sen* face value, and *yen* 25,578,478.500 bank notes. As compared with the previous month the above shows a decrease of *yen* 334,967.200 in Government notes and *yen* 116,120.000 in bank notes.

THE Import trade remains much as last reported, the fluctuations in exchange necessitating caution on the part of both buyers and sellers. The easy condition of prices for English Yarn noted last week has resolved itself into a fall of 25 cents per picul, due mainly to the weakness of some holders. Bombay spinnings are also slightly lower, with not much enquiry. In Piecegoods things are very quiet, small quantities of Shirtings and Italian Cloth being the extent of transactions. The Metal trade is much the same as last reported, and though holders try to advance rates as exchange falls, they are not very successful, and there is but little difference in the prices paid for the small parcels of Iron taken. The Kerosene business is quiet, buyers seeming well supplied for the moment, and holders are firm. There have been sales of Sugar at late rates. There has been a good deal of Silk sold—2,000 piculs for the week—at fairly easy prices. Stocks have been reduced to little more than 6,000 piculs, and it appears probable that very little Silk will be carried over into the new season, especially if arrivals continue as at present. There is nothing trustworthy to report in regard to the new Tea crop. Exchange has fluctuated again, and after dropping a point for several days in succession, recovered slightly on Thursday.

## *EDITORIAL NOTES.*

### FOREIGN EMPLOYÉS.

THE action of the Diet in reducing the Budget has had an effect on the foreign employés of the Government. Gradually the spirit of independence has been growing among the Japanese until it has now become almost morbid. If that once popular song the refrain of which runs "We're going to do without'em, We don't want any more," could be rendered aptly into Japanese and set to the *Koto* or *Samisen*, we should expect to hear it sung habitually at evening *réunions* in the *Chaya* and *Machigaisho* of the capital. The foreign employé has assumed in the eyes of the rising generation the character of a constant witness against the competence of the Japanese, and whenever the necessity arises to practise economy, the employé must expect to suffer. It is all very natural, but he were a rash prophet who should assert that it is not more or less premature. Among those shaken out of their places by the present earthquake is Mr. W. B. Mason, of the Telegraph Department, a man whose services would be invaluable in any capacity requiring industry, sound judgment, and fine tact. Many of our readers probably know Mr. Mason chiefly by his delightful writings, unhappily few and far between, but thoroughly characteristic in directness, grace, and artistic feeling. Possibly Mr. Mason's loss of his appointment may be the public's gain, if it brings him leisure to employ his pen more frequently. The Japanese deprive themselves in him of an exceptionally valuable servant, but it happens too often, here as elsewhere, that the unostentatious, faithful worker, who never pushes his own claims or trumpets his own capacities, fails to obtain the recognition of the many, however he may endear himself to the few. After seventeen years' service Mr. Mason finds, we believe, that the economy imposed on the section of the Administration to which he belongs is exactly covered by his emoluments, and the Japanese Authorities, having to choose between losing him and dispensing with the services of several teachers of their own nationality engaged at the school where he is employed, have chosen as might have been expected under the circumstances. It is a pity. Those of us who would fain see this country grow and prosper cannot witness without much regret and some misgiving, the gradual departure if not from its shores, at any rate from its service, of men whose assistance would contribute materially to the healthy development of any State. Another sufferer by the economical commotion is Mr. W. L. Merriman, hitherto in charge of the Foreign Mail and Telegraph Section of the Yokohama Post and Telegraph Office. Mr. Merriman had come to be regarded as an integral part of the institution, to the smooth working of which his competent industry and unfailing serviceableness have contributed materially. Such appointments as his are, of course, exceptionally liable to be brought within the sphere of enforced economies.

* * *

It has been stated, we observe, that Mr. F. A. Satow's approaching departure from Japan is connected with the retrenchments necessitated by Budgetary changes. Such is not the case. Mr. Satow had with difficulty been induced to postpone his return to England until the conclusion of his work on the new Civil and Commercial Codes and Code of Civil Procedure. He now leaves entirely by his own choice and to the keen regret of a wide circle of friends.

### CORRESPONDENCE IN FOREIGN JOURNALS.

THE Rev. H. Loomis, referring to anti-Christian Agitation in Japan, publishes the following statement in the San Francisco *Weekly Bulletin*—we re-quote from the *Hyogo News*:—

In the City of Tokushima fierce opposition is reported, and at a meeting held there in February last there was such a determination shown to prevent the spread of the Gospel as has not been witnessed before in sixteen years. At Kanazawa the opposition has sometimes been so strong that men who were baptized have had to leave their homes because no one would rent them a place in which to live. At the Normal School, Fukuoka, the Bible and all Christian books have been prohibited as pernicious literature. It is reported that at one of the largest schools in Tokyo no teacher will be employed hereafter who will not worship a picture of the Mikado.

This paragraph seems to us quite out of touch with the spirit generally shown by earnest missionary workers in Japan. These men often have to contend with great difficulties and sometimes find themselves in positions of considerable peril, but their habit is to toil on in silence. They have not invariably approached their task with all the tact desirable. Militant and destructive, their teaching in many cases has aroused opposition before attracting sympathy. But their present attitude is, as a rule, admirable—if we may be permitted to say so without impertinence—and we have watched with applause their unostentatious zeal and quiet courage. It will be a new and inconsistent departure if they begin now to cry out against the Japanese nation because it declines to receive an alien faith with absolute docility. We must remember that a persistent and strongly organised attempt to convert England to Buddhism or Confucianism would surely excite opposition both radical and demonstrative. It has been charged against the Japanese, to their discredit, that their attitude towards all religions is one of indifference. The verdict is, we think, superficial. But, if evidences of deeper feeling have begun to show themselves, it is not for those to cry out who formerly blamed the absence of all feeling. Mr. Loomis, too, does not appear to write with great circumspection. His reference to the incident of the Emperor's picture is distinctly misleading. The obeisance which teachers were required to make to the picture at a Tokyo school was a simple mark of respect. It had no manner of connection with religion. Those persons who hastily and foolishly, as we think, attached to the performance a religious significance, ought first to have considered whether any creed in Japan prescribes the worship of living personages. How can religious significance belong to a proceeding which does not constitute a part of any recognised form of worship? An indication of loyalty to a reigning sovereign and an act of worship of a supernatural being are two totally different things. If Mr. Loomis seeks to convey to American readers the impression that to bow to the Emperor's portrait is idolatrous and anti-christian, he not only draws an extravagant deduction, but also invites a dangerous and needless conflict between the faith he seeks to propagate and the strongly rooted feeling of loyalty which every genuine Japanese cherishes. "Honour the King" is a leading precept of the Christian creed. We find it amusingly inconsistent that men who bend the knee before their own Sovereign and kiss her hand, should call it anti-Christian and pagan on the part of a Japanese to incline his head before the portrait of his Emperor. And seeing that Mr. Loomis pronounces such incautious verdicts in one instance, we may be permitted to doubt whether the other points of his story are absolutely uncoloured by prejudice. Obviously he finds difficulty in regarding a question from the standpoint of those he criticises. He would be the first, we suspect, to denounce a Protestant School where the Roman Catholic bible or Roman Catholic books were suffered to pass into the hands of the students, yet he alludes with plain reproach to a precisely similar sentiment of religious exclusiveness on the part of Japanese educationalists. Christian propagandism in Japan will not be promoted by the publication of such criticisms.

### FUNERAL OF THE LATE MR. ENTHOVEN.

As briefly announced in our issue of yesterday, the interment of the remains of the late Mr. B. Enthoven took place at the Foreign Cemetery, Kobe, in the Jewish section, on March 17th. The coffin was taken first to the Masonic Hall, the deceased having been a member of the Hyogo and Osaka Lodge, where the impressive funeral service of the Order was commenced under the superintendence of the R.W.M. Rro. R. M. Thomson, assisted by the Rev. Bro. J. L. Atkinson (Chaplain of the Lodge), the musical portion being ably performed by Bro. Pearce, and over 50 members of the Lodge being present. At the conclusion of the first portion of the ceremony a procession was formed, the members of the Lodge preceding the coffin. There were two sets of pall-bearers, the one composed of members of the Lodge, including Bros. Abrahams, Phillips, G. H. Whymark, Drewell, Maitland, and A. Cameron, who carried the coffin from the Masonic Hall to the hearse, and the other composed of friends of the deceased, including Messrs. Ailion, Abrahams, Grimble, Berigny, Cameron, and R. de B. Layard, who carried the body from the entrance to the Cemetery to the grave-side, where the service was concluded, the R.W.M. Bro. R. M. Thomson reading the service, and the Rev. Bro. J. L. Atkinson the prayers. The procession was constituted as follows:—The Tyler, the Stewards, members of the Lodge, Secretary and Treasurer, Junior Warden, the Past Masters, the Master, the Clergyman, the Coffin, on which rested the deceased's regalia, the pall-bearers walking at the side; the Chief Mourner, Mr. E. C. Passey-Adams; other mourners, two Stewards, Inner Guard; the general friends and sympathizers following. There were upwards of 200 persons present. A very large number of wreaths were sent to place on the coffin, most of them being anonymous, with the exception of those from Miss Whymark, Mrs. A. Drewell, Mrs. Maurice Fitzgerald, and Messrs. R. de B. Layard, J. Mackey, E. C. Passey-Adams, H. L. Phillips, R. M. Thomson, and J. A. Ailion, and the Rising Sun and Hyogo and Osaka Lodges. The R.W.M. of the Hyogo and Osaka Lodge requests us to thank the large number of brothers and friends who attended the funeral.—*Hyogo News.*

### THE FOREIGN TRADE OF FRANCE IN 1890.

THE official statistics of the foreign trade of France for last year are published in *Le Temps*, and are of special interest because of the impending changes in the commercial policy of that country, foreshadowed by the Customs Tariff Bill now before the Legislature. The annexed table shows, in francs, the values of the imports and exports of the country during 1890 and 1889, under the officiail subdivisions of food products, raw manufacturing materials, manufactured goods, and miscellaneous merchandise:—

IMPORTS.

| | Francs.—1890. | Francs.—1889. |
|---|---|---|
| Food products | 1,470,763,000 | 1,422,097,000 |
| Raw manufacturing materials | 2,222,690,000 | 1,193,780,000 |
| Manufactures | 603,005,000 | 567,044,000 |
| Miscellaneous products | 126,797,000 | 133,847,000 |
| Total | 4,423,255,000 | 4,316,768,000 |
| Equal in sterling to | £176,930,200 | £172,670,720 |

EXPORTS.

| | | |
|---|---|---|
| Food products | 832,498,000 | 812,339,000 |
| Raw manufacturing materials | 756,229,000 | 821,859,000 |
| Manufactures | 1,915,458,000 | 1,847,628,000 |
| Miscellaneous products | 215,936,000 | 213,131,000 |
| Total | 3,720,121,000 | 3,703,957,000 |
| Equal in sterling to | £148,804,340 | £148,158,280 |

There is thus an increase both of imports and exports during last year, notwithstanding the special impetus which the Paris Exhibition of 1889 gave to foreign trade during that year. *Le Temps* is disposed to attribute this increase to the continued good influence of the Paris Exhibition. The Exhibition, it says, has tended to strengthen the position of France in the markets of the world, and the increase indicates an undoubted general revival of commercial enterprise. In its review *Le Temps* enquires how a sensible Frenchman can desire an alteration in the present commercial policy of the country so far as its foreign trade is concerned. It asks whether in view of these official returns it is wise to incur the risk of such an important and adverse change in the foreign trade of the country as must necessarily result from the adoption of the Tariff Bill. If the Tariff Bill should be passed it will certainly lessen greatly the foreign trade of France. Some British exports to that country will be reduced, but on the whole British trade with France has already been so far curtailed by the existing tariff that any further increase of duties is not of very much importance. The advanced rates of duty prescribed in the Tarlff Bill, now under the consideration of the Tariff Committee appointed by

Digitized by Google

the French Legislature, are framed solely upon representations of the protected interests. The interests of French consumers have not been considered.

### MR. ERNEST HART.

MR. ERNEST HART, editor of the *British Medical Journal*, the well-known author of the series of Lectures on Japanese Works of Art, delivered before the Royal Society for the encouragement of arts, manufactures, and commerce of Great Britain, is here for a few days prior to his departure to the country, where he purposes spending some time visiting the principal places of interest. His works on Japanese art, frequently quoted in this country, enjoy a high reputation in Europe. Mr. Hart possesses an extensive collection of objects of art, including rare specimens in every department. The printed catalogue containing the dates and names of the greatest Japanese artists, is a favourite handbook for collectors. He was the first person in England to think of cataloguing in a methodical and comprehensive way the works of the principal Japanese metal workers, potters, and lacquerers, and has thus rendered a signal service to the cause of art in Japan. Appointed by the Prince of Wales one of the Commissioners to the South Kensington International Exhibition, he rendered important services to the Japanese Commission. He is the bearer of letters of introduction from the Japanese Legation in London. While in Hongkong, Mr. Hart was entertained at a banquet offered in his honour by the staff of the Hongkong College of Medicine for Chinese, presided over by Dr. Cantlie, the Dean of the College.

### A STANGE STORY.

FROM Chicago comes a strange story, told by a Mr. H. Slocum, of Peking. While in San Francisco he was invited to "a sale of some choice Japs." Proceeding to the appointed place, he found a richly furnished house where "several well known citizens and a number of old women" were assembled. "Suddenly, the folding doors at the further end of the parlour were flung open, and through them came about twenty young Japanese girls, none of them more than sixteen years old. It was with evident reluctance they entered the room, and most of them hid their faces in their hands for shame at the paucity of their clothiug. The girls had just arrived here from Japan, whence they had been enticed by unscruplous wretches with promises of easy and remunerative employment. They were auctioned off at prices varying from $40 up to $500 a piece. Such sales occur every month or two, but nothing is done to prevent them." We do not believe Mr. Henry Slocum's narrative. Possibly it may pass in Chicago, but here in Japan it will scarcely be included among the examples of veracity which help to shed lustre on Occidental truthfulness.

### THE RETIRING VICE-MINISTER OF COMMUNICATIONS.

VERY old and familiar is the habit of politicians in opposition to make capital out of every retirement of a prominent official. The outgoing Minister, or Vice-Minister as the case may be, becomes for the moment a hero, whose delicate conscience forbids him to endure the pain of longer association with corruption and incompetence. Mr. Mayejima, who has just resigned the post of Vice-Minister of Communications, figures at present in the role of a flail to thrash his former colleagues. The agitators have suddenly discovered that his high integrity made it impossible for him to continue in a Department where the practice of swindling the State has been developed into a fine art. One or two of the opposition papers show address that is quite pretty in discussing this incident. They dip their critical pens in tears as well as in gall, and profess to be be really pained by rumours which they nevertheless find it their duty to ventilate—rumours that the Department of Communications is in a shockingly demoralized condition, and that the upright Mr. Mayejima, *vir integer vitæ scelerisque purus*, would have been stifled had he remained any longer in its atmosphere of vitiated morality. Slander is proverbially too garrulous to be logical. It does not occur to these critics that their accusation turns, not against the Government, but against Mr. Mayejima himself. Only a few days before his retirement, that official attended in the House of Representatives as Government Delegate, and with conspicuous skill defended his Department against every insinuation of corrupt or irregular dealing. There had been some talk among the uninitiated in connection with the fact that the Department of Communications did not always accept the lowest tenders for work done under its direction. People inferred that such a departure from the common custom could only be accounted for on the hypothesis of favouritism and bribery. Mr. Mayejima was questioned pretty closely about this suspicion, but he treated the whole thing with lofty disdain, explaining that the Department accepted tenders the terms of which were consistent with satisfactory performance of the work undertaken, and even going so far as to hint that the perplexity of the members of the House on this point arose from pure ignorance. A few days afterwards he sent in his resignation, and therewith the opposition cried out that a righteous man had severed his connection with unendurable iniquity. In other words, Mr. Mayejima, having successfully and stoutly repelled every insinuation that corruption existed in his Department, immediately retired because the corruption there was so terrible. Pretty creditable for Mr. Mayejima, it must be confessed. Amusing too, to those acquainted with the true reason of the outgoing Vice-Minister's retirement, namely, that his personal relations with the Minister of the Department were of such a nature as to render official cō-operation exceedingly difficult. The existence of friction, evolved by political and private considerations, had been recognised for many months, and the catastrophe did not arrive until long after its imminence had become apparent. But this very simple fact will of course signify nothing to the mischief-makers. They have their own hatchet to grind.

### "SCRUTATOR."

THE Yokohama correspondent signing himself "Scrutator," who imagines that contact with Japanese children or with children having Japanese blood in their views would contaminate European or American children, now enables us to estimate his moral bias more clearly than before. He falls back upon the gracious and polite subterfuge that the editor of the *Japan Mail* is paid to "flatter Japanese vanity." Men of "Scrutator's" type may constitute a very noble band of conservatives, but is it not possible that they place themselves on a pedestal just a trifle too high? Their readiness to attribute mercenary motives to every one differing from them is simply a confession of the exceeding coarseness of their own moral fibre. Nothing was wanting to complete the unsightliness of "Scrutator's" position except his reference to Christ. The great apostle of charity and universal brotherhood is honoured by such company, and Christianity becomes a pleasant burlesque when men apply its tenets to support a Pharisaical assumption of superiority to their fellows, and to justify that noble attitude of fierce intolerance and wholesale condemnation assumed towards all Orientals by the kindly Occidental. "Scrutator" has travelled. He knows the world, and takes us to Calcutta in search of precedents for his exclusiveness. According to his account the Indian city has a school to which are admitted only children having "three non-Oriental grandparents." If "Scrutator" goes a little farther afield he may discover that the purely non-Oriental ancestors of the Calcutta exclusionists burned people at the stake because they denied the divine authority of the Pope, and persecuted the countrymen and countrywomen of Christ because of their nationality. We do not feel absolutely bound by Calcutta traditions in Japan, neither do we admit "Scrutator's" right to set himself up as the exponent of "the leading foreign merchants of Yokohama." He is a very good exponent of the unreasoning prejudice on which too many Occidentals build their fine title of superiority to all Orientals, but it is simply a part of his self-sufficiency to imagine that the vacuum of reason and experience in which he moves is universal.

* * *

"Scrutator," we observe, echoes the silly criticism of a local journalist who found fault with us for alluding to the "Greek" of the self-satisfied Pharisee in the parable. "Scrutator" does not know, apparently, that the utterances of the Pharisee have come down to us in Greek and Greek only. The children of Calcutta with three non-Oriental grandparents could doubtless instruct "Scrutator" on this point.

### THE LAND-OWNERS OF THE NORTH.

WHEN the question of special re-assessment of land for purposes of taxation was embodied in a Bill and submitted to the Diet, the land-owners of the northern districts, to whom re-assessment on the proposed basis meant an increase of some twenty-five per cent. in the amount of their tax, subscribed to send a deputation to the capital for the purpose of doing everything possible to oppose the passage of the measure. The members of the deputation, arriving in Tokyo, took up their abode at comfortable inns, engaged private *jinrikisha*, and let no day pass without organizing a *shimon-kai*, or a *konshin-kai*, or an *enzetsu-kai*, or some other form of gathering for the exchange of opinions or the ventilation of views. What, if any, effect all this contrivance and industry exercised on the fate of the Bill, no one pretends to judge, but the fact is that the measure was thrown out, and the members of the deputation went home rejoicing, each carrying a bill of another kind in his pocket. It appears that, at the outset, only a certain sum of money had been actually put up by the land-owners, there being an understanding that additional expenses should be subsequently dealt with. An understanding, however, is generally open to more than one interpretation. When the successful lobbyists returned home and presented their accounts, they discovered that the land-owners understood themselves not to be liable for anything in excess of what had been already disbursed, and a terrible complication ensued. No settlement is yet reported, but of course the usual give-and-take process will be resorted to in the end. Under any circumstances, to the *O-u* lobbyists will belong the honour of having furnished an example which will doubtless prove useful to the members of future deputations from the provinces.

### AMUSING EPISODE IN THE BRITISH COURT.

MR. WILLIAM WILSON, a gentleman whose language proclaimed him Scotch as his demeanour evidenced his sublime indifference to the usages and customs of a court of law, appeared on Saturday in H.B.M. Court before N. J. Hannen, Esq., to defend a claim for $2.50 brought against him by a jinrikisha man. It appeared that on the 12th inst. the latter, having taken a fare from the Hatoba to No. 187, was waiting outside when Wilson drove along in a carriage, which came in contact with the *kuruma* and caused damage, assessed by the owner at $2.50. Wilson entered the box, and after a good deal of irrelevant talk was at length got to state that the horse which he was driving had bolted with him, and that the coolie, seeing this, deliberately placed the jinrikisha in the way. The defendant embellished this statement with much fanciful expression, describing how the horse danced about, and how he had to get out and take it by the head, as no one else would do so. Asked by the Judge—who treated him throughout with a degree of consideration which the subject of it was much too drunk to appreciate—whether he knew any of the spectators, he replied in a reserved kind of manner that he dared say Jack Adams was there. "But" he continued, "look here, you can't put us in for more than three days." Then, as an attempt was made to detain him in the box—"Not another word will I say to anybody. No use writing that down, sir; if you are going

Digitized by Google

to charge us, charge us." He deigned to inform the Court that he could not pay the claim, and that what he chiefly desired was to leave Yokohama. Condescending at length to answer a question put to him, he said Jack Adams was an American citizen. But, he added, it was no use writing that down. "It's no use doing that, man," he said to his Honour; "I would rather stand for it myself. It wasn't my fault, but I'm willing to go to jail. But don't bring anybody else into it." The Judge hastened to assure him that there was no present desire to put him in jail. The defendant continued to refer to the "—— country," and in tones of sorrowful regret to the circumstance that he had "got roped in" over a difference with a jinrikishaman. Finally the Judge said he would adjourn the case until Monday, until the defendant got sober. If he came into Court again in his then state he would be committed for contempt. ("Contempt?" interjected the defendant enquiringly). He was under the influence of liquor. ("That's a mistake of yours," corrected Wilson). His Honour was convinced that he was correct. ("All right. You may be convinced;" from Wilson). If defendant wanted to call any witnesses—(Defendant—"I don't want no witnesses, whatever. You can do your worst; you can only put me in jail.") His Honour then left the bench, and Wilson left the Court, removing absently from its place a hat belonging to one of the reporters. When this was discovered a moment later, an attempt was made to recover the defendant and the hat—the latter, if possible, before he could put it on—but they had vanished into the moist and misty beyond. The owner of the missing property sadly but withal gingerly, led the venerable affair that Mr. Wilson had left behind him, into the Consulate, and painted in such vivid colours the contrast between it and the valuable article of which he had been deprived, that the usher departed hastily in search of Wilson. But though aided considerably by the trail of Grogtown aromas, which remained floating in the air to mark the course that Wilson had taken, the expedition proved unsuccessful, and, indeed, the owner ceased very shortly to yearn for his hat. He, therefore, accepted one of a reserve stock kept on the Consular premises, and went on his way rejoicing.

### WHALEBONE.

SEEING that whalebone is at £2,300 per ton, the local Whaling Company, with a modicum of luck during the coming season, ought to pay a good dividend. The long talked of exploitation of the Antarctic in search of the *Balæna mysticetus* seems to be as far off as ever, and it is not certain that this member of the *mutilates* will be found there when search is made. He is, however, getting very scarce in the north. We find the following in reference to the price of whalebone in a home paper:—"The year 1890 began with a price of 2,200*l.* per ton for whalebone. That was thought a very hige price, for it was very nearly 300*l.* above the average of 1889. But when in October it was known that the Greenland whale fishery was a failure, the price rose to 2,250*l.*, the highest price on record. American successes in the Pacific brought it back to 2,000*l.* in November, but it is again rising, and 2,300*l.* is the quoted price for the new year; and, unless the talked-of Antarctic fishery for whales should prove a success, and balance the failure of the Arctic fishery, a still higher price is expected in the near future."

### ATTRACTING FOREIGNERS.

THE *Jiji Shimpo*, commenting on the fact that there are every year some 1,500 visitors to Japan—though whether this figure applies only to those who come here for health purposes from the hot regions near the equator, or also includes the genus globe-trotter, is not quite clear—observes that if each one spends $1,000 during his or her stay, the gain in money to the Empire may be represented at $1,500,000. But our contemporary regards the means available in this country to attract foreigners in larger numbers as very inadequate. There are one or two hotels in the capital, but their prices are hardly moderate enough to be in keeping with the accommodation they offer; and visitors who start out to buy Japanese goods are at once scared away by the exorbitant prices asked by shopkeepers. Not only are intending purchasers thus driven away, but they warn others and in many cases even prevent them from coming here at all. Again, if a visitor wishes to enjoy a celebrated view or to associate with high class Japanese, he has few means of gaining his object, and his enjoyment is consequently limited. In Tokyo and Osaka steps are absolutely necessary to attract foreigners, for if provision is made for such visitors they will stay longer and come oftener, besides persuading their friends to come also. More can be gained in this way than even by the opening of new and productive kinds of business. It is stated that the mattee is at present being considered by a leading merchant of Tokyo. Exactly what form of attraction the *Jiji Shimpo* would provide for foreign visitors we are at a loss to understand, and consequently we await with some little impatience the result of the "leading merchant's" cogitations.

### THE ACTION OF LIBEL AGAINST THE "TOKYO SHIMPO."

MR. SUYEMATSU SABURO was prime mover in the action taken by the House of Representatives with regard to the imprisonment of its member Mori Tokinosuke. The House did not gain much honour by that action. On the contrary, it came off distinctly second best, for, after long debate and some bluster on the part of the Representatives, the refusal of the Administration to disturb the due process of law remained unshaken. Failure is always condemned. Plenty of critics hastened to make a display of *ex-post-facto* sagacity when the unsuccessful issue became apparent, and some were so intensely astute that they discovered occult evidences of collusion between Mr. Suyematsu Saburo and the Government. Conspicuous among these excessively wise onlookers was the *Tokyo Shimpo*. In its issue of the 9th of December, it charged Mr. Suyematsu with being a tool of the Authorities, and declared, almost in so many words, that in accordance with a secret arrangement between him and the Minister of State for Justice, the House of Representatives had been betrayed into a position from which it could not retire without loss of dignity. He had, in fact, joined in a conspiracy to bring ridicule and discomfiture on the Diet, of which he enjoyed the honour to be a member. Mr. Suyematsu at once instituted proceedings against the *Tokyo Shimpo*, and the case came up for hearing on the 20th instant, in the Tokyo Local Court, before Judge Yamagawa Tokuji, and Assistant Judges Mochizuki Genjiro and Nakajima Seisuke. The plaintiff gained his suit, the judgment being that, in accordance with the 89th and 90th Articles of the Criminal Code, the defendants, Mr. Takayagi Tokuji, publisher, and Mr. Tatsuka Senzo, editor, of the *Tokyo Shimpo*, having been guilty of libel, should be imprisoned for 15 days with hard labour, and pay a fine of 2.50 *yen*.

### THE ELECTRIC LIGHT AT THE GRAND HOTEL.

ON Monday evening the directors of the Grand Hotel formally inspected, under the guidance of the engineers, Messrs. Bagnall and Hilles, the engines, machines, and other fittings of the electric lighting system which has just been installed in the hotel. The examination was most satisfactory, all the directors present, Messrs. J. F. Lowder, E. Blanc, J. Walter, and Dr. Gravatt, expressing their pleasure with the working of the plant, and Mr. Lowder, on their part, assuring the engineers that the light had given every satisfaction to the directors as well as to the public. Six hundred and seventy-six lamps have been distributed throughout the extensive premises of the hotel, of which 14 are 32-candle power, 40 are of 10-candle power, and the remainder are of 16-candle power. These are incandescent lights, and in addition to this system of internal lighting, there are provided 4 lamps of 2,000-candle power each, three of which are on the Bund side and one on the Water Street entrance to the building. The power for supplying electricity to these lights is obtained from three machines, two of which—that for the arc lights, and one for the incandescent installation of 225-candle capacity—are driven by one engine, and the other, of 450 candle capacity (also incandescent) is driven by a second engine. Steam for the engines is generated in a Buckeye tubular boiler, which works at about 90 lbs. pressure; the engines are of the Buckeye double-valve, automatic, cut-off type, one of 30 and the other of 45 horse-power; and the dynamos are Brush shunt-wound machines, having a self regulating power, which, joined with the cut-off principle of the engines, renders the installation practically self-regulating, and independent of the instruments usually required for that purpose. The arc machine is also Brush, of the kind which was first used in Japan for external illumination (in the Palace grounds at Tokyo). All the wire used is Grimshaw's White Core, manufactured by the New York Insulated Wire Co. and is of the very highest insulation; and the electrolics are from the Mitchell, Vance Co. of New York. Seventy lamps of 16 candle-power (a centre piece of ten, four groups of 4 and the remainder single) are used to light up the large dining room; a similar number is fitted up in the billiard-room and bar, and there are 25 in the old dining room, the hallways, corridors, verandahs, &c., being all well illuminated. Apart from the high insulation of the wire employed, precautions against fire are multiplied in the form of safety fuses. No lamp has less than four of these soft metal fuses between it and the dynamos and many lights have six, so that risk may with perfect truth be said to have been reduced to the lowest point possible. The distributing arrangements are of ideal convenience, for irrespective of the switch-board in the machine room, by which the power of the engines may be divided or combined according to the number of lights burning, there are three switching places in different parts of the building, one containing 3, one 4 and one 7 switches. Last evening the engines, running at about 170 revolutions to the minute, worked smoothly and regularly; the switching off and on of the machine supplying the four big arc lights (an addition of 5 horse-power) failing to affect in the slightest degree the engine to which it is attached. The system altogether reflects the very highest credit on the engineers, and the shareholders of the hotel are to be congratulated on the completion of a work which cannot but enhance in a remarkable degree the value of their property.

### THE GREAT ENGLISH FROST OF 1890-91.

DURING the last week of January the British public was undergoing the process of being thawed out. Since the 9th December there had been an almost uninterrupted frost of a character unknown since the year 1813. At intervals there would be brief thaws covering the ice with a few inches of water which was immediately frozen by the returning frost. The bitter cold was accompanied by a succession of fogs, the like of which had been unknown in England for many years. For thirty-five successive days in December and January the Sunshine Recorder of the Meteorological Department at Westminster recorded no sunshine. On December 19th snow, which had been threatening for some time, began to fall, and exceeded in depth and intensity anything since the great snowstorm of 1881. For weeks it lay on the ground and rendered traffic, save in large towns, all but impossible. Until it was cleared away from the lines, trains found considerable difficulty in going on; express trains, for instance, on the Great Western line which first stopped at Swindon, were compelled to pull up at wayside stations near Reading to replenish their boilers which were exhausted in the struggles to go forward through the snow. As for the ice and frost, they are not likely to pass out of the memory of the present generation. The water in the London parks had ice nine inches thick, and London was not by any means the coldest place in South Central England. At Oxford, to

Digitized by Google

which this honour belongs, the Thames was not only frozen over but a coach and four with passengers was driven from Iffley Lock to the Tolly Bridge. At one time one might have skated with scarcely any intermission from Cricklade at the head of the Thames to Teddington Lock where the tide begins. If, here and there, the skater found dangerous places, it was because of the efforts of the tug boats to pass through the ice. In London itself huge sheets of ice passed up and down with every tide and sometimes completely concealed the water underneath. Here and there oxen and sheep were roasted on the ice in accordance with what is supposed to be an old custom on such occasions. The force of the frost was almost inconceivable. At Topsham on the estuary of the Exe a fleet of fishing boats were left stranded by the departing tide. The frost bound them so firmly in the mud that the incoming tide could not release them; they were held fast, and the water passed over them leaving nothing but their masts visible. In the estuary of the Dee, as the tide went down the ground from which it receded was immediately frozen, and at low water from shore to shore there was nothing visible but a mass of ice. With the incoming tide came the famous bore which is characteristic of the Dee and the Severn. Not being able to melt the ice, the water rushed under it and forced it high up into the air in all directions and in the most fantastic shapes. At a great fire in London the firemen employed in pouring water on the flames became masses of icicles from the spray, and had to be frequently relieved for the purpose of being thawed out. Almost everyone in Southern and South-eastern England has his own story of the tricks played by the frost. All this time, not only the West of England, but the extreme North of Scotland, enjoyed bright mild weather. As one travelled on the Great Western line out of London the frost and snow remained unchanged in intensity as far as Bristol; beyond that, as the traveller crossed the Somersetshire Marshes through Bridgewater towards Taunton, there were signs of a decrease in intensity, and as one ran south towards Exeter the snow gradually disappeared, and along the south coast was not to be seen at all. The vapour on the carriage windows, which was frozen between London and Exeter, thawed between the latter city and Torquay. In the south of Scotland there was bright sunshine, and certain winter flowers were blooming. Meteorologists, no doubt, have their own explanations of these eccentricities; to have to endure them is more than enough for the average man.

## LYING CORRESPONDENTS.

We have already drawn attention to an extraordinary article about Japan published under the heading of "Special Cablegram" by a Colorado newspaper. On further examination we find that the article is a portion of correspondence which appeared in the *New York Herald* of February 10th, dated "Yokohama, Japan, January 11th, 1891," and headed "Special correspondence of the *Herald*." The part telegraphed to the Colorado journal and already reproduced in the these columns, forms the concluding paragraphs of the correspondence. The preceding portion is as follows:—

The Japanese Diet has now been opened about six weeks, and during that time has demonstrated one thing at least very clearly to the world in general—namely, its utter inability to reflect lustre and renown upon the country. From the very first day of their assembling themselves together it became evident to all that their career was not going to follow the commonplace lines generally characteristic of parliamentary assemblies. That the regulation for candidature had not been sufficiently stringent to keep the House purged from characters not above the temptations of filthy lucre, also became evident, as the very first action the Diet took was a strenuous effort to wrest a brother member from the clutch of the law on account of misplaced attentions on his part being bestowed on funds committed to his care. Now, although this indiscretion on the part of this erring member was undoubtedly a very serious one, it was still more indiscreet of the Diet to take offensive steps to reinstate him, and a lively passage of arms between the government and the new constitutional assembly was the result, ending in the slight discomfiture of the latter.

A Diet composed as this is, however, of young and warm blood, is not easily abashed, and speedily recovered itself sufficiently to plunge into the question of the budget, which has provided some rather lively debates, the bone of contention being a wholesale reduction of the expenditure. Now, it is always pleasant to see a well balanced detestation of reckless waste, and no one would feel inclined to quarrel with a Diet prompted in its actions by motives of practical economy; but in reducing a national expenditure it is customary, if not arbitrary, to specify under what particular headings the reductions were to be made. This happened to be exactly what the Diet did not seem inclined to do. Whether this little matter of detail appeared to the House to savour of lowering its dignity has not been given to the common herd to know, but certain it is they did not enter into detail, but merely expounded a theory that $10,000,000 of the annual expenditure ought to be dropped. Even when pressed to unbosom themselves more full on this point, the only item they condescended to enumerate as requiring curtailment was the salary of the President. This was uncommonly unneighbourly, especially as not a single member volunteered to renounce his own. There is one direction, however, in which an increase is almost unanimously clamoured for. This is the national defence, both military and naval. It is thought that the latter should at least be equal to the Far East squadrons of England, Russia, and China, but for what reason no one acquainted with Japan's peaceful platform can be expected to readily comprehend. This formidable increase is estimated as the work of seven years.

Previous to the opening of the Diet the Japanese Bar was figuratively a "public lounge," at least outsiders were not unnaturally led to consider that any and every youngster with a fancy for legal argument had access to it, to judge from the annual number of candidates. Something like two thousand went up a few months back, but quite a small percentage passed, only 250, and even this modest number causes one a shudder of apprehension lest any unlucky chance should involve one in a law suit. Fancy 250 barristers annually! These happy go lucky days are gone for the law, however, and legal aspirants of the future must examine their pockets as well as their brains ere they can hope to distinguish themselves in the courts of their country. A bill—for the "Prevention of Barristers" it should be called—has just been successfully carried making some of the most especial qualifications for the Bar to begin with quite a pretty substantial figure in the form of fees, besides a really stiff examination and a final condition that all candidates must be "sound in mind and body" before being permitted to practise. This ought to keep the courts fairly clear. The title of barrister is not to be permanent, either, but a matter of arrangement; but the precise duration which a man may and may not consider himself a full blown pleader has not been publicly announced.

The constitutional movement that has really been convulsing Japan to her centre is, however, the commercial code. This, as every one knows, was to have come into operation in eight months' time, but as the day approached consternation began to paralyze one and all whom it would effect. High and low far and wide began to realize how utterly unequal they were to the task. Useless for the Government to suggest that the backs would be fitted to the burden, useless for teachers to run hither and thither through the land seeking to make plain the intricacies of the terrific code—the terror could not be stemmed, and has resulted in a universal and undignified cry for postponement. This has been warmly contested, but the vote has passed, and now the commercial and civil codes will come into force in double harness. Count Yamada, Minister of State for Justice, warmly advocated the immediate enforcement of the code, but when, the Cabinet seconding it, the bill for postponement was introduced and finally passed he at once sent in his resignation. The Emperor declining to receive it, the Count sent it in again, at which His Majesty consented to allow him a temporary retirement on account of his health. This is the position of affairs at present. The Count will retire from active service for a season nominally for medical treatment, but virtually till he has recovered from his umbrage at his personal opinions being set aside.

As an instance of how the code would have affected only one class of society even, I may cite the fact that hotel keepers would have become responsible for the property of their customers in the same way as they are liable in the Occident, and this, seeing that no Japanese house has the most elementary substitute for a fastening to doors, windows and walls, all of which slide about in an equally unconventional manner, the responsibility entailed upon "mine host" at Japanese hotels would have been burdensome in the extreme, nay, positively impracticable.

When the Diet opened a stern mandate was in vogue that "no ladies" would, could or should be admitted upon any pretext whatever; but strange to say for once feminine influence has been allowed a "sphere" and permitted to overrule the lordly man even in Japan, and ladies did have and still have access to the Strangers' Gallery, where it is to be hoped they will get that insight into what is going on which their natural intelligence deserves. How it happened no one seems to exactly know, perhaps—but this is pure supposition—it was a *musume* with a member's lunch?

Of course there is only one epithet applicable to this rigmarole: it is a tissue of falsehoods and blunders, and the man who penned it can be nothing but an unprincipled romancer. The opinions of the correspondent are, of course, his own property, but whenever he undertakes to make a statement of facts, he errs grossly. He errs about the controversy between the Government and the House of Representatives in the matter of a member's detention in arrest; he errs about the Budget; he errs about the examination of barristers; he errs about the Barristers' Bill, and he errs about the admission of ladies to the Diet. It is very regrettable that the columns of a newspaper like the *New York Herald* should be open to such a graceless impostor.

## MISS BIRD.

Mrs. Bishop, better known to the world as Miss Bird, had before the last mail left, just returned to London from an extensive and hazardous journey in Central and Eastern Asia. Mrs. Bishop's husband died some time ago, and left a large sum of money wherewith to found a hospital in the most out-of-the way place where it would be likely to be of service. Loyally carrying out her late husband's wish, Mrs. Bishop has been travelling in Asia over a year. She has been among the Karakorum Mountains, where she met Captain Younghusband, whose return to India is just announced. To this remote region she made her way through Cashmere and Sadak, and in the former country she selected a spot on which to erect the hospital endowed by the piety and humanity of her husband. Among the Karakorum Mountains she encountered great difficulties, but fared much better than she did on returning through Armenia. In Luristan she met a party of officers of the Indian Survey, and accompanied them some time while they carried on their work. In Persia she visited some rarely visited regions. She is, we believe, the first European to explore the course of the Karun river, the upper course of which is unknown. She found that the river rushes full-grown from a cave high up in the mountain side, inside which are the springs which give the Karun its genesis. Almost immediately after leaving the cave the Karun passes underneath two great bridges of snow, and runs for over 100 miles between precipitous rocky banks. Its waters, Mrs. Bishop states, are of a green intense beyond all she has ever seen in Switzerland, and the scenery altogether is of the most unique character. While passing through Armenia she found the country in a state of desolation and terror, completely devastated by the merciless Kurds. She halted at a hut near Erzeroum, was arrested by a band of Zaptiehs under pretext that she was in league with the Armenians, dragged through the streets to the police station, and searched in the worst manner possible. Her difficulties were not over when her captors, finding they could substantiate no charge against her, unwillingly allowed her to go free. She was rearrested and subjected to many indignities, but eventually was able to set out for the coast. On her way news reached her that the Kurds had again determined to make her a prisoner; but she eluded their search and in the end crossed safely over to Constantinople. Here she paid a visit to Sir William White, the British Ambassador, who mentioned Mrs. Bishop's arrival to the Grand Vizier. That official at once expressed a desire that Mrs. Bishop should give him such information as she had gathered during her travels of the actual state of things in Armenia. In an audience of more than an hour and a half she spoke with the greatest frankness of the atrocities committed by the Kurds, and the Grand Vizier expressed his thanks to her for the information she had given him. It was, he said, impossible to get at the truth from the official reports he received. "What did Mrs. Bishop think the best policy to adopt?" "Send half a dozen regiments of infantry and a regiment of cavalry to give the Kurds a lesson which they will not readily forgot. They have not forgotten the lesson the Persians gave them ten years ago. Let the Turks give them a similar lesson." The Grand Vizier promised that in the spring he should take the vigorous measures indicated by Mrs. Bishop, who soon afterwards returned to London, where she is now engaged in preparing for Mr. John Murray, the publisher, a volume descriptive of her latest adventures.

## THE RUSSIAN PRINCE IMPERIAL.

Lieutenant-General Kawakami, as reported by the vernacular press, has expressed himself very sensibly, and with well merited severity, in regard to the thoughtless utterances of the busybodies who lately sought to create an excitement, by proclaiming that the imminent visit of the Russian Prince Imperial was inspired by a desire to examine Japan's military condition, and to ascertain the strategical features of the country. The General says that such rumours betray not only the ignorance but also the thoughtlessness of their ventilators. The Heirs Apparent of Great Western Potentates do not travel in state for the purpose of accomplishing military and topographical surveys. If such work needs to be done, they have a thousand trustworthy and competent officers to whom it can be entrusted. Suppose that, owing to the silly fussiness of these unreasoning folks, the Emperor of Russia should come to entertain the idea that the next occupant of the Russian Throne, instead of being received with the honour due to his rank and the amity due to his friendly intentions, might look forward to encountering in Japan suspicious looks and a half-hearted welcome, His Majesty would certainly not hesitate to direct that Japan should be left out of the Prince's route—an intentional omission from which Japan would suffer materially in the eyes of the civilized world. The General, doubtless with entire truth, observes that only an insignificant minority of the

Digitized by Google

people can entertain such short-sighted notions as those which the agitators would fain circulate, and that the nation, *en masse*, will welcome the advent of His Imperial Highness, and do everything possible to make his gracious visit a pleasant reminiscence. Russia is Japan's neighbour on the north, and everything counsels this country to cultivate the most friendly relations with her.

### CHINESE GINGER.

THE *Bulletin* of the Royal Gardens, Kew, for January contains a section on Chinese ginger, from which it appears that the article known by that name has in fact nothing to do with the ginger plant. As long ago as 1878, Dr. Percival Wright, Professor of Botany in the University of Dublin, wrote to Kew, pointing out that the "large flat ginger-like masses sent to this country from China as preserved ginger," differed from anything that the ordinary ginger plant (*Zingiber officinale*) could possibly produce. The question then naturally arose what was the plant used by the Chinese? Ginger itself, as is the case with so many cultivated plants, is unknown in a wild state. But there can be little doubt that it is a native of Asia. It was known as a spice to the Greeks and Romans, who received it by way of the Red Sea, and supposed it to be a production of Southern Arabia. It was very early introduced into the West Indies, whence it was shipped for commercial purposes to Europe as early as the 16th century. The dried ginger met with in British commerce is almost entirely derived from the West Indies, Sierra Leone, Egypt, and India. It is noteworthy that none is received from China. At the instance of Professor Wright, Mr. Playfair, of H.M. Consular Service, sent a case of Chinese plants to Kew in 1878. They were propagated without difficulty and largely distributed to tropical colonies. That the plant was different to ordinary ginger was obvious. But plants of the ginger family are shy of flowering in cultivation, while their foliage is all so much alike that it affords no adeqnate means of discrimination. The plant obstinately refused to flower at Kew, as it also appears to have done in Ceylon, and there was nothing to do but to wait until some lucky chance as to conditions of growth in some colonial garden enabled Kew to be furnished with the necessary material for identification. In the meantime a root of a ginger from Siam shown in the Health Exhibition at South Kensington in 1884 proved to be alive when received at the Kew Museum. As it obviously differed from the ginger of the shops it was handed over to the assistant curator for growing. He succeeded in raising plants from it, and ultimately in flowering it in 1886. On comparing it with the drawings and specimens in the Herbarium it was identified with a specimen labelled "*Alpinia* sp., Bangkok," which was collected by Sir R. Schomburgh in 1864, and which is very near to *A. Allughas*, also a native of Siam, where, according to Schomburgh, it is cultivated for its Cardamom-like fruits, and is known as *Luk-Reu* or Bastard Cardamom. Under the name of Galangal, *A. officinarum*, a Chinese species is cultivated for the sake of its aromatic rhizomes, and this unnamed species now in flower at Kew is apparently largely cultivated by the Siamese as a substitute for ginger. The rhizome is very thick, slightly flattened, and not so freely branched as in common ginger; it has the pungent aromatic properties of ginger, so far at least as could be ascertained by tasting it. There is some reason for believing that the Chinese Ginger of commerce is not obtained from *Zingiber officinale*, the source of Jamaica ginger, but from a species of *Alpinia*, and possibly this unnamed one at Kew. In 1887 Sir Joseph Hooker figured the plant in the *Botanical Magazine* as a new species, *Alpinia zingiberina*. The rhizomes he describes as "very aromatic;" they "smell and taste a good deal like the official plant; they are, however, very much larger, at least three times as thick, are much more shortly and irregularly branched, and the branches are thickened in the middle." In December, 1888, Kew received the first authentic flowering specimen of the "Chinese Ginger" from the Botanical Department, Jamaica. This proved to be an *Alpinia*, and also identical with the Siam plant. It is in fact nothing more than the well known *Alpinia Galanga*. In a letter to Kew Mr. Playfair says that it has been established as incontrovertible by Dr. Hance that the ginger plant in China never flowers, and the natives assert the same. The plant is propagated entirely by tubers. Canton is the head-quarters of preserving ginger; the plant grows in Amoy too, and is used as a condiment, but not as a sweetmeat.

### THE RETIRED LIST.

ON the 22nd instant the following Notification appeared in the *Official Gazette*:—

We hereby direct the repeal of a portion of the Retired List Regulations, and order the same to be duly promulgated, the change to come into operation from the 1st of April, 1891.

(Imperial Sign Manual.)
(Great Seal.)

NOTIFICATION No. 23.

The 5th Article of the Retired List Regulations is hereby repealed. Provided that officials who are on the Retired List on the 1st of April, 1891, shall, during the remaining period of their Retired Service, receive one-fourth of the salary then payable to them.

The Retired List Regulations referred to in this Notification were promulgated on the 4th of January, 1884. Their provisions, in sum, amounted to this:—that, thenceforth, in the event of an Office, Bureau, or Department being abolished, or in the event of disabling sickness, officials might be placed on the Retired List, by order of the Emperor in the case of *chokunin* officials; by order of the Minister President, in the case of *sonin* officials; and by order of the Head of a Department, in the case of *hannin* officials. On retirement, an official retained his rank, but discharged no duties. He could, however, be re-appointed to office at any moment by authority of the same nature as that exercised in respect of his dismissal. The term of retirement was three years, at the end of which all official connection ceased, and the retiring allowance was one-third of the pay actually received by the official at the time of retirement. The object of these Regulations was plain enough. They were intended to provide a golden bridge for the retreat of superfluous officials, who, though no longer required by the administration, had neverthless served too faithfully to be dismissed off-hand. Moreover, it was evidently thought convenient to retain touch of these retired officials so that, in case of public necessity, they might be re-appointed to office without submitting to the usual routine of competitive examination and probationary service (as *Shiho* or *Minarai*). The Regulations served their purpose fairly well, but nevertheless, little by little, public opinion turned against them. It appears to have been thought that unless an official had served long enough to entitle him to a pension, the State ought not to be at any charge in the event of his services being no longer required. The fact that Pension Regulations were issued on the same day as the Retired List Regulations, and that the two have been in operation side by side during the past seven years, has perhaps helped to accentuate this feeling. At all events, when the various political parties compiled their programmes last year, it was found that the abolition of the Retired List Regulations was a common plank, and people expected that the subject would receive early consideration by the Diet. Like many another measure, however, it seems to have been thrust out of sight by the Budget. Not until the 4th of March did it appear in the Orders of the Day, on a motion ef Mr. Minobe Teiryo, and beyond being announced on two or three consecutive days by the President as one of the proposals awaiting immediate consideration, nothing more was heard of it during the session. Nevertheless the Government has now recognised that the wish of the nation points to a change of these Regulations, and the result is the issue of the above Notification. The portion now expunged from the Regulations is the article fixing the retired allowance at one-third of the retiring official's salary. For the rest, the Regulations remain unchanged. Officials can still be placed on the Retired List, retaining their rank, and remaining eligible for re-appointment during a term of three years, but they will receive no allowance. Further, the allowance of officials whose names are on the List when the change now announced comes into force, will be reduced by one-twelfth—namely, from one-third to one-fourth. It will be seen that while, on the one hand, all retired allowances, except those enumerated in the Pension Regulations are abolished, on the other the Government still retains the discretionary power of placing an official on an unpaid Retired List for a period of three years, during which time he is eligible for re-appointment without submitting to any of the tests provided by the Official Examination Regulations. According to the pension system, fifteen years' service is necessary to qualify an official for a life pension, the amount of such pension being one-fourth of the official's active-service pay with an additional $\frac{1}{240}$th for every additional year's service up to thirty-five years, when the maximum pension of one-third is reached. Short of fifteen years' service no retiring allowance can any longer be granted, a change which will doubtless be welcomed by the country.

* * *

The reduction of one-twelfth applied to allowances already granted to officials on the Retired List, may seem a somewhat arbitrary measure. But it must be remembered that the receipt of these allowances has never partaken of the character of a right. Eligibility for the Retired List is not determined by any prescribed conditions. The Government possesses an absolutely free hand in the matter, and has always exercised its power so as to suit administrative convenience. Officials have no sort of claim to retired pay—no claim such as they acquire under the Pension Regulations after fifteen years' service. Those who are in receipt of retired allowances at present cannot, therefore, complain of being subjected to a reduction, especially when they know that the salaries of the upper grades of officials on active service are to be reduced simultaneously. The Government is evidently resolved to carry out the wishes of the Diet, expressed or implied, and it certainly seems fair that when economy has to be extended to the cutting down of salaries, it should also be made to include retiring allowances which are based on salaries.

### THE RADICALS AND TREATY REVISION.

IT has been already stated that the Radical Party, at its recent meeting in Osaka, elected a Committee of eleven members to investigate the subject of Treaty Revision. The names of the Committee are now published. They are Messrs. Hoshi Toru, Oi Kentaro, Kono Hironaka, Arai Shogo, Kawashima Jun, Ishida Kannosuke, Matsuda Masahisa, Suzuki Teiichi, Higashio Heiichiro, Suzuki Shoji, and Komabayashi Koun. The objects which the Committee is instructed to keep in view are, first, the re-consolidation of the five parties which formerly united for the purpose of opposing the Government in respect of Treaty Revision; secondly, to inquire into the aims constituting the basis of the present Cabinet's programme of Revision; and thirdly, to contrive that all politicians, to whatever party they belong, who share the views of the Radicals as to Treaty Revision, shall combine their strength. Our readers doubtless remember that in the summer of 1889, when Count Okuma's scheme of Treaty Revision seemed to be on the point of consummation, its opponents formed an association called the *Godantai*, or five-party league, their watchwords being "no foreigners on the Japanese Bench," and "no foreign land-owners in Japan." It is this league that the Radicals now seek to re-construct. At its head was the *Daido Danketsu*, the other four constituents being the *Kokusui Hoson-to*, or Nationalists; the *Hoshu-to*, or Conservatives, led by Viscounts Torio and Tani; the *Shimei-kai*, a Conservative Club numbering among its members several men of

Digitized by Google

note, as Mr. Inouye Ki and Mr. Furusho Kamon; and finally, a group of Independents. Whether any considerable portion of these malcontents could be again brought together for the purpose of opposing a programme of Treaty Revision that no longer includes the provisions objected to in 1889, is very problematical. The Radical Party itself is in a disintegrated condition, and its leaders probably think that Treaty Revision might be employed as a common standing place for re-union. We scarcely venture to express any distinct opinion on the subject. It is perfectly well known that the new scheme of Revision does not include any provision for the employment of foreigners in the capacity of Judge, and does not confer the privilege of land-ownership by foreigners outside the settlements. If, then, the objections advanced by the Five-Party League in 1889 were honest and exhaustive, there should be no real basis of opposition today. Yet the Radicals are obviously organizing a campaign in opposition. This time, it would, seem, that their motto must be *Taito-joyaku* (Unconditional Revision), plain and simple. Indeed, well informed persons affirm that such is the fact. The Cabinet, however, if we may judge by Viscount Aoki's speeches in the Diet, does not contemplate unconditional Revision. To do so would be obviously inconsistent with the first principle of negotiation, for men do not negotiate when they have no intention whatsoever of compromising. Thus we have, in effect, the situations of 1889 and of 1887 reproduced. The Government, in the exercise of proper and prudent statesmanship, is willing to compromise; the anti-Governmental section of the nation will be content with nothing short of complete victory.

* * *

Perhaps the most perplexing element in the situation is the attitude of the *Kaishin-to*. Less than two years ago the members of this great party were singing a pæan of triumph because their leader, Count Okuma, had achieved the remarkable feat of reducing the bases of negotiation to a point acceptable by foreigners and highly satisfactory to Japan. Count Okuma regarded with great satisfaction the prospect of a certain number of foreign legal experts being appointed to the Japanesu Bench, and the prospect of foreigners being permitted to own real estate in the interior. The former he counted not only a means of improving the Japanese Judiciary, but also a safeguard against international disputes; the latter he welcomed as a step in the development of the empire's resources. These liberal and wise views were heartily endorsed in the press and on the platform by the whole of the Count's Party, but their programme fell before the bitter opposition of the very men who now seek to array themselves against the new scheme. What side is to be taken by the *Kaishin-to* under these circumstances? They allied themselves with the Radicals in the Diet to oppose the Government on the Budget question, and they carried their opposition to such lengths that their desire to overthrow the Cabinet evidently took precedence of any genuine wish for fiscal reform. It is true that in this campaign they advocated a scheme of administrative organization mapped out by Count Okuma himself while in office. Thus, in one sense, their attitude was perfectly consistent. But ready association with former political opponents and a marked disposition to push the struggle *à l'outrance* betrayed the bitterness of their animosity to the Government, and render it most improbable that they will now support the Cabinet in the matter of Treaty Revision. On the other hand, they cannot possibly endorse the opposition of the Radicals, because the latter's claim is that the new programme concedes too much to foreigners, whereas the programme of the *Kaishin-to* conceded a great deal more. Their position is, therefore, decidedly perplexing. The *Choya Shimbun*, discussing the matter, observes that the *Kaishin-to*, in order to avoid either stultifying itself or supporting the Cabinet, would have to preserve a strictly neutral attitude. But neutrality in respect of a question that engrosses the whole nation's attention, means effacement, and the *Kaishin-to* will scarcely consent to blot itself out of the political page at this crisis.

### THE WEIGHTS AND MEASURES BILL.

THE Weights and Measures Bill, one of the few important measures passed by both Houses of the Diet, has received Imperial sanction and become the law of the land. It will be remembered that this Bill provoked much debate in the Upper House, the Conservative Peers objecting to the fact that the French metre was mentioned in the body of the law, and objecting even more to the fact that a foreign standard—although the only scientific standard of length in the world—should have been taken for the purpose of connecting the Japanese system with that of the West. These scruples were not unnatural, and to the credit of the Peers it must be confessed that a great majority of them showed intelligent appreciation of the purpose and scope of the measure, which, for the rest, was admirably explained and piloted by the Government Delegates, especially Professor Kikuchi. Nevertheless, when the Bill reached the Lower House, the Representatives were entirely occupied with the Budget, and there appeared to be very little chance of their finding time to consider a complicated reform of the national system of weights and measures. No sooner had they disposed of the Budget, however, than they settled down to legislation with such earnestness that the Weights and Measures Bill was passed after a brief debate, every attempt to reject, alter or add to the amendments introduced by the Peers, being outvoted immediately. So slender was the margin of time for considering the measure that any alteration proposed by the Lower House must have been fatal to the passage of the Bill during that session, since such alteration would have necessitated a conference of the Houses and re-submission of the Bill to the Peers. The debate in the Lower House showed that the Representatives had carefully followed the progress of the Bill in its various stages before the Peers, and had resolved how to treat it when it came into their hands. A pretty full analysis of the provisions of the Bill has already appeared in these columns, but as the subject is of great importance, we shall take an early opportunity of publishing a full translation of the new law.

### ACCURACY AND MORAL DECENCY.

IT is singular that even such a simple matter as the number of members in the House of Peers should be misstated by the local English journal which has adopted for itself the rôle of exposing official abuses, imaginary or real, in Japan. That accurate newspaper charges the House with perfunctoriness because, on the important occasion of discussing the Budget, "only 154 out of 300 numbers put in an appearance." There are not 300 members in the House, but 252, made up as follow:—

| | |
|---|---|
| Princes of the Blood | 10 |
| Princes | 10 |
| Marquises | 21 |
| Counts | 15 |
| Viscounts | 70 |
| Barons | 20 |
| Imperial Nominees | 61 |
| Representatives of the Highest Tax-Payers | 45 |
| Total | 252 |

From this number the Princes of the Blood must be subtracted, in considering attendance for parliamentary discussion, and of the other members more than thirty were unavailable owing to sickness, absence from Tokyo or other unavoidable causes. The truth is, then, that out of a possible attendance of, not 300, but a little over 200, there were found in their places 154 members, at 9.45 p.m., the sitting having lasted from 10.30 a.m. This in itself would not be a bad showing; but when we add the fact that the opposition numbered less than 45, it becomes plain that a fuller House would have been quite unnecessary. In England full Houses are found when a close division is anticipated or when a vigorous struggle has to be carried on; but when the opposition is in a hopeless minority, members not desiring to speak and having no need of further debate in order to make up their minds, are apt to absent themselves. It seems to us that a critic must be in great straits for a ground of attack when he manufactures charges out of such material.

* * *

We notice this matter, not because the public is likely to attach any importance to criticisms of the nature described, but because the thing is typical of the whole plan of anti-Government campaign pursued by the journal which a number of leading British residents of this Settlement have openly established as their organ. We fail to perceive by what right, or on what principle of expediency, an English newspaper published in Yokohama lays itself out deliberately to play the part of a political agitator. Foreigners residing in this country claim exemption from any obligation to observe the laws of the land, and are certainly exempted from the processes of those laws. Holding themselves aloof from the nation in everything that regards prohibitions or penalties, moral decency requires that they should refrain from thrusting themselves into its political disputes, and from seeking to discredit the Government in the interest of political agitators. Doubtless we shall be hotly told that nothing of the kind is done by the journal in question. But when we find "attention called to the disgraceful nature of the legislation forced on the Upper House by the Government;" when we read that the proceedings of the House in respect of the Budget were "a travesty on legislation;" that the "House stultified itself and established a dangerous precedent by consenting to act as a tool of the Government;" that only a handful of "earnest men protested against the despotism of the Government;" and when finally we see a hope published "that the members of the House of Peers who have ideas of their own and feel themselves to be something more than puppets, to be moved to and fro at the will of the Government wire-pullers, will organise a party in the House which will be able to command a majority against the arbitrariness of the Executive"—when we read all this, we have conclusive evidence that the journal printing such editorials is simply an anti-Government agitator of the most pronounced type. To people conversant with the facts of the Budget question, the silliness of the whole criticism will be apparent. But that it is criticism at once seditious towards the Government and exceedingly insulting to the House of Peers, cannot be denied.

### KOREAN GOSSIP.

A CORRESPONDENT writes from Korea:—The foreign community of Söul is under a shadow just now. The new *Chargé d'Affaires* of the Japanese Legation, Mr. Kawagita, who succeeded Mr. Kondo, arrived here a little over a month ago. On the Korean New Year, with the others of the diplomatic corps, he called at the Royal Palace. While waiting for the audience which was to have been at nine o'clock, but did not take place until about twelve, he got thoroughly chilled. Returning to the Legation he took to his bed, from which he never rose. He died on the 9th inst. and his body will be taken from Sōul on next Sunday the 15th inst. He will probably be buried in the Japanese cemetery in Chemulpo. Col. E. H. Cummins and Major J. G. Lee, formerly of His Majesty's Military Service, but for the last eighteen months insisting on a settlement of their claims with the Korean Government, have finally reached a settlement satisfactory for the present, and the two gentlemen leave by the steamer that carries this letter. Notwithstanding the fact that this Government is slow to carry out its contracts, it does not seem to have any serious difficulty in filling vacancies. Dr. W. B. Scranton of the Methodist Episcopal Mission, with his family and mother, after a residence of six years in Sōul return to the U.S. This is the oldest mission in Korea, having been practically opened by Rev. Dr. R. S. Maclay in the summer of 1884.

Digitized by Google

To the question whether any Christian work has or is being done in Korea, it is enough to state that in addition to the thousands treated by Dr. Scranton every year for the past few years, and the Christian books sold daily in his dispensary, his mother, Mrs. M. F. Scranton, the founder of the woman's work in Korea, not only established a girls' school, but is at the head of a religious work to which the women come with commendable regularity. The number has risen from none in 1885 to an attendance of something like a hundred in 1891—true not large, but a good beginning. Japanese enterprise is making itself more and more felt in Korea. It is well known that, apart from the enterprising firm of Messrs. Morse, Townsend & Co., the bulk of the Korean trade is carried on by the Japanese. The latest scheme is to run a stage-coach between Sōul and Chemulpo. To make the distance between these two places either in sedan chair or on pack pony is a day's work. With two or three relays the trip can be made with ease and comfort in six hours. The scheme is not a new one, but up to this time it was expected that the Korean Government would father it. We believe the Japanese will succeed in this enterprise, and if they do they will render substantial service to all travellers between Sōul and Chemulpo.

### THE "KOBE MARU" IN COLLISION.

A COLLISION occurred soon after 5 p.m. yesterday, says the *N.-C. Daily News* of the 18th instant, between the *Kobe Maru*, inward bound from Japan, and the *Telemachus* going out. The two vessels collided on the bar, and the *Kobe Maru* is damaged about the bows, the fluke of her anchor going through her plates just below the port hawse pipe. She has lost the anchor and some of her rail. The *Telemachus* is more seriously damaged, and has returned to Shanghai for repairs.

* * *

The *Telemachus* is now (19th) alongside the Old Dock, having the necessary repairs made after collision with the *Kobe Maru*. The damage done to her consists of two holes torn in her port side, a little abaft the foremast, and the injury was caused by the flukes of the *Kobe Maru's* stockless anchor, the head of which was left adhering to the side, while the shank remained in the hawse-pipe of the *Kobe*, being broken clean off at a part where it is eight and a half inches thick and five inches through. The fore bridge of the *Telemachus* is broken, and a heavy boat-davit has been torn away from the socket, the boat, however, being uninjured. Some of the rail is gone and further aft again the main bridge is smashed. Near the stern, there is more damage, and the after boat is smashed. Two or three plates will have to come out, and the waterway has to be cut, and the half-round beading removed before this can be effected. The work is in the hands of Messrs. Farnham & Co., and the repairs to the *Kobe Maru* are being done by Messrs. Boyd & Co. The *Kobe* has two plates broken, some four frames are bent, and her port hawse-pipe is smashed, The *Telemachus* is built of iron and the *Kobe* of steel. To see the peculiar position of the *Kobe's* anchor in the side of the *Telemachus*, a large number of people visited the steamer yesterday, and Mr. Mathieson took a photograph showing the position of the anchor.

### ENGLAND AND RUSSIA IN THE EAST.

IN a series of articles just concluded, the *Kokumin-no-Tomo* reviews at great length the positions of Russia and England on the Continent of Asia. The first article discusses the general aspect of the subject, and observes that a collision between England and Russia will inevitably take place on the borders of India. The ultimate object of the Asiatic policy of Russia is to conquer India, which England is determined to retain at whatever cost and risk. To illustrate Russia's ambitious designs upon India, the Tokyo periodical alludes to the gigantic plan of aggrandizement formed by General Skobeleff. England, we are told, is determined to suffer no interference with her Indian Empire, where she finds profitable markets for her manufactures. The *Kokumin* gives statistics showing the value of England's trade with India, and the general economic value of the latter. As to an alliance between England and Russia, the Tokyo journal thinks, with Sir Charles Dilke, that the only result of such an alliance would be to place England in an extremely disadvantageous position *vis-à-vis* Russia; since an agreement could only be effected by suffering Russia to have her own way in the Balkans in return for a guarantee of India's security. The consequence would be a gradual increase of Russian influence in the Mediteranean, to the serious injury of England's trade with Turkey in times of peace and to the hampering of her fleet's movements in time of war. The second article of the series gives an elaborate account of the sucessive stages of the progress of Russian influence in Central Asia, and notices that the great Northern Power is now ready to push forward into Afghanistan. The third article asserts that the field of contest between England and Russia will be Afghanistan. The history of the latter State's relations with England and Russia in recent years is described, and special attention is directed to the strategical position of Herat, which important place, the *Kokumin* predicts, will fall an easy prey to the advancing arms of Russia. In the fourth article, our contemporary considers the relative positions of the two Powers, from the standpoint of their facilities for transporting forces to the scene of combat. In time of war, we are told, it will be extremely difficult for England to secure the use of the Suez Canal for her transports and war vessels. Moreover, there is a strong probability of the English fleet being attacked in the Mediteranean by French squadrons. Thus England will have either to double Africa or to make use of the Canadian Pacific route. The latter course would be more convenient and secure than the former, but the connection is not continuous throughout, and the route is consequently objectionable. On the other hand, Russia is capable of putting her troops on the field of battle much more rapidly and conveniently, by making use of river and lake navigation, and of railway lines within her own territory. As to the forces that the two countries can bring into the field, the *Kokumin-no-Tomo* observes that, in this respect too, the balance is certainly in favour of Russia. Against the immense numbers of soldiers that Russia can at short notice pour down upon India, Great Britain has but 224,000 troops, of whom only 72,000 are Europeans. Further, military command is very much divided in India, and would be greatly hampered in its exercise in time of war. Three other circumstances contribute to lessen the value of the defences available in India against foreign invasion; namely, the absence of patriotic ardour in the Sepoys; the existence of several semi-independent native Princes, who maintain their own military establishments; and the general discontent among the mass of the people against British rule. In the art of ruling a subjugated people, England cannot, in the opinion of the Tokyo periodical, claim superiority over Russia. Indeed, the *Kokumin* is inclined to give the palm to the Russians, who, being in some essential respects an Asiatic people, know well how to assimilate an Asiatic race. Russia's manner of dealing with her subject people is magnanimous and open-handed. The *Kokumin*, in short, insinuates that the people of India would not show much enthusiasm to prevent a change of masters. Yet another element of danger to Great Britain, we are told, is the circumstance that a portion of the advancing troops of Russia would be Mohamedans, and this fact would probably operate to deter the Mohamedan Sepoys in the British service from fighting against the invaders. Thus England finds herself at a great disadvantage in her probable conflict with Russia. Is England, then, doomed to defeat? The Tokyo journal think that the only hope for England lies in an alliance with China. The latter, with immense masses of troops stationed on her north-western frontiers, can easily so far reduce the effective strength of any Russian advance on India as to enable England to stand her ground. On the sea, the Northern Squadron of the Chinese Navy would be of great service in intercepting the advance of the Russian fleet towards Hongkong or Australia. In conclusion, the *Kokumin-no-Tomo* alludes to the close bearing which the probable collision between England and Russia must have on the position and safety of Japan. This part of the question our contemporary reserves for discussion on a future occasion, but judging from the manner in which it speaks of Russia as a Power destined to cause immense troubles in the East, we infer that, unlike Mr. Takahashi Kiichi, whose article on this subject was noticed in these columns some time ago, it does not desire to see Japan allied with the great Northern Power.

### FISHERIES OF THE UNITED KINGDOM IN 1890.

THE official returns relating to the fishery industries of Great Britain and Ireland in 1890 have recently been published. The value of the fish returned as "landed on the Scotch coast" is considerably in excess of the preceding year (1889). The total for 1890 is set down as being £1,627,461, as against £1,493,578 in 1889, showing a difference in favour of last year amounting to £133,883. In the matter of the quality of fish captured, which, for round and flat fish, is stated in hundredweights, there is reported a slight falling off as compared with the take of the previous year, the weights being given as follows:—1890, 5,362,115 cwt.; 1889, 5,416,012 cwt. The take of cod is noticeably less; herrings, too, show a deficiency; but an improvement is manifest in the sprat-fishery, as also in the weight of whitings captured, and of skate. Coal-fish (saith) seem to have been singularly abundant, the take of 1889 having been exceeded last year by 21,000 cwt. The weight of herrings taken in the two years for which statistics are now furnished was in 1890, 3,513,810, and in 1889, 3,554,283 cwt. As regard values, herrings, whitings, and haddocks show an increase, and cod-fish a decrease, on the preceding year. The shell-fish fisheries show a slight improvement as compared with 1889, as the following figures will show:—

| | 1890. | 1889. |
|---|---|---|
| Number of crabs caught ..... | 2,845,716 ..... | 2,770,600 |
| Number of lobsters caught ..... | 652,364 ..... | 571,900 |
| Oysters dredged ..... | 350,200 ..... | 316,800 |

The money value of the shell-fish landed is stated for the two years as being respectively £67,849 in 1890, as against £62,947 in the preceding shell-fish season, so that, on the whole, it may be taken for granted that the Scottish fisheries are not retrograding so quickly as some economists have been asserting. Turning now to the English fisheries, we find that so far as the value goes of the quantities of fish landed on the coasts of England and Wales, the figures of 1890 denote an excess ever those of 1889. They are given as follows:—£4,742,406 for last year and £4,167,082 for the year preceding. The catch of what are known in the English markets as "prime" fish (turbot, soles, and brill chiefly) was considerably in excess of the take of the preceding year. Mackerel, plaice, and sprats were also much more abundantly captured in 1890 than was the case in 1889. In the figures given relating to the oyster supplies, there is shown a large increase in the number of oysters, and also in the lobster capture, but crabs have not been taken in such great numbers as in 1889. The money value of the shell-fish fisheries is represented by a sum of £374,060 in 1890 and by £305,346 in 1889. The improvement in value of 1880 over 1889 may be stated at £575,324, which is so far satisfactory. In Ireland, also, it has to be premised that the year recently closed showed an improvement in respect of fishery values over 1889, but the total figures are still considerably under half a million sterling for the fish returned as landed on the Irish coasts. It has to be kept in mind, however, that probably not so much as half of the fish caught in the Irish waters is brought ashore in Ireland. The oyster fisheries show a considerable falling-off as compared with the results of last year's dredging, and the same has to be said of crabs and lobsters. The value

Digitized by Google

of the flat and round fish taken in Ireland in 1890 amounted to £362,804, of the shell-fish to £11,045, making a grand total for last year of £373,849; the total figure for 1889 was £33,044. The number of oysters dredged in 1890 was 534,910, not a tenth part of what could be obtained some 20 or more years ago. The mackerel fishery of last year yielded a sum of £212,285, an amount very considerably over what was placed to the credit of the fishermen in the preceding year. The respective amounts for the three kingdoms are as follows:—England, £4,742,406; Scotland, £1,627,461; Ireland, £373,849, making a grand total for the United Kingdom in 1890 of £6,743,716. These figures are to be accepted as representing "the actual values returned by the local officers" at the various fishing ports. In all probability the public pay not less than 12 millions per annum for their fish supply. These figures show the magnitude of this industry in the British Islands, which, for the rest, are not in an ideal fish producing region—nothing for instance to compare for wealth and variety with the Japanese Islands.

### RETROGRESSION.

THE *Jiji Shimpo*, writing of the action taken by the House of Representatives with reference to the land tax, says it is matter for regret that the people's delegates, while well aware of the inadvisability of interfering with the Land Tax, should have decided to reduce this source of national revenue by a half per cent. The *Jiji* thinks that the difficulties that present themselves outside are much more serious than those to be encountered within the country. It does not, in speaking thus, refer to the probability of war, but has in its mind only the fact that while foreign countries are striving to enrich themselves Japan is distinctly retrograding. It is therefore the duty of the people not only to be industrious in their respective spheres of work but also to bear cheerfully their burdens, while the Government, on its side, applies its best efforts towards keeping down expenses. The reduction of the revenue from the land tax will, in our contemporary's opinion, benefit only the landholders. It may be said with perfect justice that in Japan the land tax is heavy and the national expenditure by no means small. But even with this admission, how does Japan's expenditure compare with that of other Powers? Take Italy for instance. The Italian people have to bear the burden of an annual expenditure of about *yen* 360,000,000; even Belgium spends *yen* 70,000,000, and Turkey *yen* 150,000,000. With these compare Japan's *yen* 80,000,000. After commenting approvingly on the course pursued by so poor a State as Italy to keep herself in the path of progress, a course which it says the Japanese are too weak to imitate, the *Jiji* asks what impulse can be given to navigation colonization, commerce, agriculture, or industries in general by means of such a paltry sum as *yen* 80,000,000; and ought not Japan to be termed the Land of the Setting, rather than the land of the Rising Sun!

### THE PANAMA CANAL.

THE Paris *Figaro* has published the text of the arrangement concluded between the Government of the United States of Columbia and the Panama Canal Company, according to which the following are the principal clauses of the contract:—"(1) The time allowed for the completion of the canal is extended for a further period of ten years; (2) the concessionaire to effect the liquidation of the old company, the assets of which will be transferred to the new company; (3) work on the canal to be effectively resumed before February 28th, 1893; (4) the concessionaire to provide for the support of 250 soldiers charged to protect the line of the canal during its construction; (5) the concessionaire, in exchange for services rendered by the Columbian Government, will pay to the latter ten million francs in gold and five million francs in 10,000 of the new company's shares; (6) the Columbian Government will have the right of appointing a special delegate to sit on the board of the new company." The contract bears date December 10th, 1890, and is signed by Señor A. Boldan, Minister of Foreign Affairs, on behalf of the Columbian Government, and by Colonel Bonaparte Wyse, the representative of the liquidators of the old company.

### THE REV. SAM JONES.

THERE are good muscular Christians in Texas. The New York *Sun* says:—

Palestine, Feb. 8.—At a series of meetings held here in November last the Rev. Sam Jones of Georgia assailed sinners in general and several individuals in particular. Among those mentioned by the evangelist, was Mayor J. J. Ward, to whose official and private character Mr. Jones alluded before a large audience in the severest and most pointed terms. The Mayor was absent from the city at the time. For the last three weeks the city has been all agog over the announcement that the evangelist would be here again to deliver his lecture, "Get There," and there was a rush for seats.

Mr. Jones arrived last night, and the lecture was delivered before a large audience. At 8½ this morning, just before the evangelist took the train for the West, Mayor Ward was seen to approach him and vigorously strike him with a cane.

The cane exchanged hands during the struggle, and the Mayor received several severe blows before bystanders parted the angry combatants. Heavy bruises were inflicted, and both bled profusely.

In a few minutes the train pulled out with Sam Jones on board, and the Mayor was arrested and is now under bond for aggravated assault, and carrying a pistol. A meeting of citizens was held to-night and the act of Mayor Ward denounced.

Mr. Jones sent this despatch to Atlanta to-night: "The one gallus Mayor of Palestine, Texas, tried to cane your uncle Jones this morning at the depot. I wrenched the cane from him and wore him out. I am a little disfigured, but still in the ring. I criticised his official career last November. It needed criticising."

### EXPORT DUTIES.

As already stated in these columns more than once, the question of the entire abolition of export duties now levied at the open ports is engaging the attention of business men. Mr. Taguchi, editor of the *Keizai Zasshi*, one of the most enthusiastic advocates of the measure, recently delivered a lecture on this subject before the *Keishin* Club, which is composed of the leading merchants of the capital. Knowing that Mr. Masuda of the *Mitsui Bussan Kaisha* was a strong advocate of the reform under consideration, the lecturer had urged him to take some active steps towards the realization of their common aim, and Mr. Masuda had suggested the delivery of a lecture. Declaring himself very reluctant to address the accomplished and experienced members of the club on a subject so plain and simple, Mr. Taguchi said he had one welcome disclosure to make. In 1888, in a conversation on this topic with Count Matsukata, Minister of Finance, the Count had avowed his wish to see all the export duties abolished, but had explained that the condition of the public finance did not permit him to realize his desire. The Government, however, had just abolished export duties on more than a hundred articles; consequently the present seemed an auspicious time to revive the topic. In consequence of the reductions effected by the Diet, a surplus of more than six and a half million *yen* would be shown in the Budget of the current year, and the lecturer had no doubt that, should his listeners memorialize the Government, the latter might so far sympathize with them as to convene an extraordinary session of the Diet and lay the matter before it. The export duties at present aggregated about 1,600,000 or 1,700,000 *yen* per annum, and consequently a small portion of the surplus would suffice for the accomplishment of the much desired reform. Considering the question from a diplomatic point of view, the Foreign Office might—though Viscount Aoki was too shrewd to entertain such a notion—think it advisable to reserve the abolition of export duties as a concession wherewith to purchase the Treaty Powers' agreement to Japan's proposal for an increase of import duties. That would be like asking a man to allow himself to be pinched on the plea that a neighbour would then stop pinching himself. Who paid the export duties? Mr. Taguchi concluded that it was the Japanese themselves. Consequently, whatever benefit resulted from the abolition of these duties, would be so much gain to Japanese producers and Japanese merchants. Thus the reform would be eminently in unison with the popular cry *min-ryoku kyū-yō* (nursing of the people's resources). Mr. Taguchi advised his audience to approach the Authorities on this subject by all means. He was of opinion that the majority of the members of the Diet would be inclined to favour the measure.

* * *

Most persons will agree very readily that the proposed abolition would be a distinct advantage to trade, but we are unable to follow Mr. Taguchi when he asserts that export duties come out of the pockets of Japanese producers and merchants. It is a principle, not of abstruse political economy, but of simple reasoning, that all taxes on productions and manufactures are paid, not by the manufacturer or producer, but by the consumer. Indirectly the Japanese suffer by having to pay export duties, because, in the case of such of their products as find competitors in foreign markets, every *sen* of export duty places the Japanese article at a disadvantage, and, other things being equal, reduces the demand for it. The duty, however, must of necessity come out of the consumer's pocket. That is as plain as the first rule of arithmetic. While, therefore, the abolition of all taxes on Japanese exports is to be greatly desired in the interests of the country's commercial development, it is entirely misleading to assert that such taxes come out of the pockets of Japanese producers and merchants. On the other hand, every additional *yen* levied by the Customs on imports from foreign countries has to be paid by Japanese consumers. Heavy import duties may diminish the bulk of imports, and may give spurious encouragement to home industries, but it is the Japanese consumer, and the Japanese consumer alone, that pays duties. Instead of buying a lot of yarns or shirtings for 105 *yen* when the import duty is 5 per cent, he has to pay 110 *yen* for the same lot when the import duty is 10 per cent. If the Japanese people find that they are enabled to dress themselves and to live more economically by the aid of cheap foreign manufactured goods, and that they can thus devote a larger portion of their energy and industry to the production of articles for sale abroad, then it is distinctly to their advantage that import duties should be reduced to a minimum. Among all known devices for raising State revenue not one is so economically unsound and morally injurious as the levy of Customs duties, whether import or export. Mr. Taguchi is one of the leading Japanese economists of his day. We do not like to see him endeavouring to support a good cause on fallacious props.

### RAILWAYS.

ON the 19th instant a meeting was held at the Ise-kan, Tokyo, for the purpose of discussing the question of railway extension in Japan. A large number of members of Parliament attended, as well as civil engineers and other professional experts. The idea of the promoters, Messrs. Sato Satoji and Tanimoto Michiyuki, was to debate the proper steps to be taken in regard to railway construction, and to consider what districts ought to be selected as the first objective points of future lines, so that the problem might receive intelligent and thorough examination during the next session of the Diet. Nothing has yet been published as to the decisions arrived at.

### SUICIDE.

ON Monday afternoon about two o'clock Mr. W. Falck, a native of Norway, who only lately quitted the employment of Messrs. Langfeldt and Mayers after a term of service extending over ten years, shot himself with a pistol in his room at No. 52. Mr. Falck had been in low spirits for some time, and it is believed that his failure to obtain employment had preyed upon his mind. No one was in the room when the act was committed, but several persons residing at No. 52 were called by a

Digitized by Google

servant, the only one who heard the shot, and entered in time to see the unfortunate man breathe his last. The bullet, that of a heavy Smith and Wesson revolver, had entered the head at the left temple. Deceased was thirty-five years of age.

### THE RADICALS IN OSAKA.

THE great Radical (*Rikken Jiyu-to*) gathering commenced on the 19th instant in Osaka, but little is yet known in the capital. The place of assembly was the Senshin-kan, in Naka-no-Shima. A hundred and fifteen delegates were present, and the oldest among them, Mr. Nakanishi Mitsusaburo, of Wakayama Prefecture, was voted to the chair. A good deal of discussion is said to have taken place, and the first business transacted was been the passing of a resolution to drop the two first ideographs (*Rikken*) of the Party's name, and the election of a Committee consisting of one representative of each City and Prefecture. Subsequently the meeting decided that a Committee of eleven should be appointed for the purpose of investigating the question of Treaty Revision. The revised rules of the Party were then made the subject of discussion, and a vehement debate ensued as to whether five leaders should be elected, or whether one would suffice. Messrs. Hoshi Toru and Oi Kentaro supported the latter view, and finally succeeded in carrying their point. Votes were then taken, the result being that 72 were cast for Count Itagaki, and ten each for Messrs. Hoshi Toru and Oi Kentaro. It appears, therefore, that despite Count Itagaki's retirement, the great bulk of the Radical Party is still determined to recognise him as leader, and will not readily follow any other chief. The question now is, will Count Itagaki, in view of this renewed and emphatic vote of confidence, consent to resume the leadership of the Radicals. If he does, the Party must look forward to finding itself just as unfavourably circumstanced in the next session of the Diet as it was in the last, for Count Itagaki cannot sit in the Lower House, and the great trouble with the *Jiyu-to* in the session lately ended was the want of a strong and generally recognised leader.

### MR. HARRY RUTHERFORD PARKES.

THE Attorney-General moved yesterday, says the *Hongkong Daily Press* of the 18th instant, that Mr. Harry Rutherford Parkes, B.A., son of the late Sir Harry Parkes, be admitted a solicitor of the Supreme Court of Hongkong. The Chief Justice said, "I have looked through these papers and have found them in order. I have therefore much pleasure in admitting Mr. Parkes to practice in this Court. As you say, Mr. Attorney, Mr. Parkes bears an honourable name; it is a name universally respected in China and Japan. Mr. Parkes in his practice may confidently look forward to all consideration from all concerned in the law. I make the order that Mr. Parkes' name be added to the Roll of Solicitors of this Court." Mr. Parkes joins the firm of Messrs. Caldwell and Wilkinson.

### BANKRUPTCY IN JAPAN.

THE *Jiji Shimpo* publishes some interesting statistics of bankruptcy in Japan from 1879 to 1887. The figures are as follow:—

| Year. | Number of Bankruptcies. | Total Liabilities. Yen. | Total Assets. Yen. |
|---|---|---|---|
| 1879 | 9,935 | 1,666,575 | 347,617 |
| 1880 | 9,855 | 1,282,344 | 280,136 |
| 1881 | 7,789 | 1,049,948 | 239,624 |
| 1882 | 22,191 | 1,624,176 | 342,503 |
| 1883 | 22,492 | 3,452,386 | 735,952 |
| 1884 | 27,526 | 4,713,904 | 1,047,911 |
| 1885 | 12,483 | 2,874,007 | 635,919 |
| 1886 | 10,732 | 1,683,288 | 394,058 |
| 1887 | 8,756 | 2,190,367 | 410,537 |

The very exceptional numbers of bankruptcies in the three years 1882, 1883, and 1884 are attributed to the reductions then effected in the volume of the fiat currency, and its consequent appreciation.

### THE AGENT OF THE P.M. AND O. AND O. M. SERVICES.

MR. ALEXANDER CENTER, Agent of the Pacific Mail and Occidental and Oriental Mail Services at this port, has been appointed to the Agency of the same Services at San Francisco. During his many years of duty in Yokohama Mr. Center has gained the reputation of a first-rate man of business, and has been universally popular. His departure from Yokohama will be greatly regretted, but it will certainly be for the advantage of the two steamship companies that his capacities should be utilized in the wider sphere of his new post, which, for the rest, is the highest prize of the service.

### MR. G. GOWARD.

ON the 18th instant, Mr. Dun, the U.S. Chargé d'Affaires called at the Foreign Office upon H.E. Viscount Aoki, and presented to him Mr. G. Goward with his new credentials as Special Commissioner of the World's Columbian Exposition to the Empire of Japan. A subsequent interview with H.E. Mr. Mutsu at the Department of Agriculture and Commerce developed the fact that exposition matters are favourably progressing. It is understood that Mr. Goward will soon proceed to Korea for a short sojourn, having received a similar appointment to that kingdom.

### HANDKERCHIEFS.

WE read in the *Jiyu Shimbun* that from August, 1890 to February, 1891, the number of handkerchiefs of Japanese manufacture exported from Yokohama, was 378,890 dozens. The growth of the trade in this article is very remarkable. The returns for the past three years are as follow:—

EXPORT OF SILK HANDKERCHIEFS.

| Year. | Number of Dozens. | Value. Yen. |
|---|---|---|
| 1888 | 340,465 | 1,233,927 |
| 1889 | 641,671 | 2,104,459 |
| 1890 | 826,803 | 2,516,946 |

### THE INDUSTRIAL EXHIBITION LOTTERY.

SEVERAL times already there have been confident announcements as to the opening of the lottery for the articles remaining unsold from last year's Industrial Exhibition, but as yet all such fixtures have proved fallacious. The *Jiji Shimpo* now asserts that the delay has been due to difficulties in connection with the suit instituted against the projectors of the lottery, but that this question having been at length arranged, the drawing will commence on the 25th or 26th instant at the Koseikan in Kobikicho.

### THE DEPARTMENT OF AGRICULTURE AND COMMERCE.

A SWEEPING reduction of officials has been accomplished in the Department of Agriculture and Commerce. Fifteen *Sonin* officials and 63 employés are placed on the Retired List. It is fortunate for these officials that the change has been effected before the end of the present month, since they are thus enabled to receive, during the next three years, a retiring allowance equal to one-fourth of their pay. Had the reform been deferred until April, no retiring allowance could have been given.

### NOTICE TO MARINERS.

THE following Notice to Mariners, relating to the Silver Island Spit Buoy, in the Chinkiang district of the Yangtze River, has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—Notice is hereby given that a conical six-foot buoy, painted in red and black vertical stripes, and surmounted by a black diamond-shaped cage, has been moored in 20 feet at low water (average winter level), to mark the end of the spit which extends from the eastern end of Silver Island.

### A GENEROUS GIFT.

WE are informed that Mr. Alfred East, whose pictures of Japan have gained so wide a celebrity, kindly offered one of his smaller sketches to be sold privately for the benefit of S. Hilda's Hospital, and that the Hospital Fund has been thereby benefited to the amount of ten guineas.

### A SUCCESSOR TO BISHOP WILLIAMS.

THE American House of Bishops have elected the Rev. H. C. Swentzel as "Missionary Bishop of Yedo" having jurisdiction over the American Episcopal Mission in Japan. He is 40 years of age, a college graduate, and has been in the ministry for 16 years. It is supposed that he will accept, but some time must elapse before his consecration. Meanwhile Bishop Hare comes out to take provisional oversight of the Mission.

### RESULTS.

THE unhappy fate of the Turkish frigate seems to have proved the means of introducing Japan to Turkey's notice. We read in a home journal that "the arrival in Constantinople of two Japanese men of war bringing the survivors of the ill-fated *Ertougrou* has caused great interest. A book in Turkish, with a map, has been compiled by Mehemed Zekki Effendi, giving a copious account of Japan."

THE Nippon Yusen Kaisha's new steamer *Hiroshima Maru*, arrived at Hongkong on Thursday morning the 26th inst.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The proceedings at the recent general meeting of the (Constitutional) Liberal party, especially the appointment of Count Itagaki to the leadership of that party, form the principal topic of discussion in the vernacular press during the present week. The regular time for the spring general meeting of the party is in the month of April, but this year the rule has been departed from, partly to suit the convenience of the dispersing members of the Diet, and partly—according to rumour,—because the party was in a critical condition, requiring prompt action to secure its unity and re-assert its influence. The principal results of the meeting have been to nominate Count Itagaki to the leadership of the party, to strike out the word Constitutional (*Rikken*) from its name, and to appoint a Committee for the investigation of matters bearing on Treaty Revision.

* * *

Count Itagaki's consent to resume the leadership of the party, though he had but lately withdrawn his name, has caused no small surprise. Various stories are told as to the object of the politicians who prevailed upon the Liberals to re-elect their former chief. The most probable explanation is that the members of the party had become fully convinced of the folly of attempting to maintain their organization without a recognized leader. The Liberal organs welcome Count Itagaki's appointment, while the *Kaishin-to* papers are on the whole cold and indifferent. Journals not belonging to either of these parties, are inclined to regret his acceptance of the leadership, deeming the act injurious to his reputation. The *Nichi Nichi Shimbun* is particularly frank on this subject. It has always admired Count Itagaki, not for the brilliancy of his parts, but for his disinterested fidelity and constancy. But it avows that of late his conduct has caused it no small disappointment and doubt. It strongly criticises the vacillation recently shown by him in his relations with the Liberal party. The *Kokumin Shimbun*, generally conspicuous for its good disposition towards the Count, is not at all satisfied with his return to the leadership. Observing, however, that what is done cannot be undone, the *Kokumin* offers the radical chief two pieces of advice, namely, that he should henceforth remain constant to the party through evil report and good report, and that he should not show any partiality to the twenty-nine seceders (the old *Aikoku-to*). The *Yomiuri Shimbun*, though it welcomes Count Itagaki's appointment, is inclined to doubt whether he will be able to successfully accomplish the difficult task of controlling the heterogeneous elements that make up the Radical Party; the old *Jiyu-to*, the old *Daido Danketsu*, and the old *Kyushu Shimpo-to*. It is very conceivable that the party may again be divided into factions headed by Messrs. Kôno Hironaka, Oi Kentaro, and Hoshi Tôru. The disposition of the Count does not

Digitized by Google

suit him for the direction of a large body of men prone to mutual jealousies. Though honest and disinterested, he is not magnanimous enough, neither is he free from the weakness of setting the promptings of friendly emotion above the dictates of justice and policy. The *Yomiuri*, like the *Kokumin*, advises him to abstain from his tendency to show partiality to Tosa politicians, especially to the well-known 29 seceders, or as they are now more frequently called, the betrayers of the *Jiyu-to*.

* * *

Perhaps the most important feature of the proceedings at the Osaka meeting was the excision of the two initial ideographs of the Party's title, and the appointment of a Treaty Revision Committee. These transactions are significant, principally because they reveal the fact that the bulk of the party is not at all well disposed towards the *Kaishin-to*. The *Kokumin Shimbun* and the *Tokyo Shimpo* dwell upon this phase of the proceedings. At the time when negotiations were in progress for the amalgamation of all the progressive parties, the name *Rikken Jiyu-to* was adopted for the purpose of conciliating the members of the *Kaishin-to*. The dropping of the word *Rikken* is therefore to be regarded as a decided display of indifference to the susceptibilities of the Progressionists. That the Radicals assembled at Osaka were not particularly anxious to conciliate the members of the *Kaishin-to*, is further evidenced by the circumstance that the Treaty Revision Committee was charged, among other things, to contrive the revival of the celebrated "Five-party union." That Union is, in short, a confederation of parties whose opposition principally contributed to the failure of the Revision programme of the leader of the *Kaishin-to* in 1889. The revival of such an alliance is tantamount to a declaration of open hostility to the *Kaishin-to*. The proceedings at Osaka have consequently been regarded by the latter with no agreeable feelings. The Progressionist organs, however, do not entirely abandon their cherished hope of amalgamation with the Radicals, for they take pains as far possible to conceal their vexation at the present turn of events. It is a significant fact, as the *Tokyo Shimpo* observes, that most of the *Kaishin-to* papers have not even made an allusion to the dropping of the word *Rikken* and to the proposed revival of the union of five parties.

* * *

The amendments of the *Hishoku* Regulations, proclaimed on the 22nd instant, have been welcomed by the majority of the papers. According to the original regulations, officials on the *Hishoku* list were entitled to one-third of their former pay, but that privilege is to be hereafter withheld from officials transferred to the Retired List on and after the 1st of April next, while those already on the list will be allowed from that date only one-fourth of their pay. The advantages still left to officials on the Ritired list, are that they may receive appointments without examination, and that the time spent by them on the *Hishoku* list will be counted as active service, so that they may become entitled to receive pensions. The *Kaishin-to* papers are satisfied with the amendments, but the *Rikken Jiyu Shimbun* complains that the Government has not been courageous enough to entirely abolish the objectionable Regulations.

* * *

Next to the *Jiyu-to's* Osaka conference, the question of Treaty Revision has received the principal share of journalistic attention during the week. Owing to rumours that negotiations for revision have been resumed by the Minister of Foreign Affairs, political parties are beginning to take up this question. The *Jiyu-to's* conference at Osaka appointed a Treaty Revision Committee and charged it, among other things, to revive the former alliance of five parties which opposed Count Okuma's programme. It is not known whether such revival is possible; neither is it certain what course the union, if effected, would adopt in regard to the programme of the present Minister of Foreign Affairs. But this much is certain, that political parties are more than ever eager to make capital out of whatever objectionable points they may detect in Viscount Aoki's scheme of treaty revision.

* * *

Mr. Nakaye Tokusuke, who recently resigned his seat in the House of Representatives, writes in the *Rikken Jiyu Shimbun*, strongly urging the importance of excluding foreigners from the privilege of possessing real estate in Japan. He asserts that land, however small in extent, in the possession of foreigners, would be so much less of genuine Japanese soil, and he is of opinion that foreigners, in order to possess land in Japan, ought to be first naturalized in the country.

* * *

The *Mimpo*, under the editorship of men like Messrs. Ozaki and Inukai—staunch supporters of Count Okuma's programme—finds itself in a delicate position in respect to the Treaty question. It speaks more or less contemptuously of "those conservative advocates of equal treaties, whose real object is not equality but inequality in favour of their country," and who clamour for restrictions on mixed residence, and for the prohibition of foreign ownership of land. It assures these politicians that their apprehensions about the evil results of unrestricted mixed residence, and the ownership of land by foreigners, are entirely unfounded. Nevertheless, however unreasonable such fears may be, the *Mimpo* considers it the duty of practical statesmen to recognize their existence, and points out that, when even a perfectly equal treaty cannot satisfy a certain influential section of the community, it would be impolitic to conclude treaties that fall short of equality. It justifies this changed attitude by saying that time is a great reformer, and that since the failure of Count Okuma, many alterations have taken place in the political and social conditions of the country. Viscount Aoki, taking advantage of the difference, ought to revise the treaties on a basis of perfect equality. Should this be found impossible at present, the Minister is advised to wait until a favourable opportunity presents itself, rather than commit himself to a course that can never be supported by his nationals.

* * *

The *Tokyo Shimpo*, writing on the same subject, states that, according to a trustworthy report, the treaty programme of the present Cabinet has been subjected, by special command of His Majesty the Emperor, to the consideration of Counts Soejima, Terajima, Inouye, Ito, and Okuma; and declares that the present proposals will not be prejudicial to the national rights and interests of Japan. At any rate, our contemporary thinks it too early to assume any hostile attitude toward the Ministry on the question of Treaty Revision, and hopes that the leaders of political thought will use their influence to educate public opinion in the right direction, so that a solution of the problem may be effected without the interference of party jealousy and selfishness.

* * *

The *Chugai Shogyo Shimpo*, in a series of articles not yet concluded, undertakes to discuss the question from economic points of view. It observes that, although the primary causes of the failure of Japan's past efforts to effect revision, must be sought in the distrust with which foreigners regard her, and in their unwillingness to resign the selfish advantages which they enjoy under the present system, it is at the same time an undeniable fact that uncertainty on the part of Japanese public opinion contributed in no small degree to the abortive issue of the negotiations. It then goes on to reprove the narrow-mindedness of persons who confine their attention to the conservative side of the question, and attach undue importance to the exclusion of foreigners from the privileges of owning land, working mines, and so forth. There are also people desirous of seeing the customs duties raised to a prohibitive degree. As to the relative merits of protection and free trade, the *Shogyo Shimpo* observes that no country adheres to either policy entirely and absolutely. The United States' relations with the South American Republics, and England's treaties with Montenegro and Italy, are cited as showing the truth of this statement. The adoption of a protective policy in Japan, is denounced as suicidal. Reciprocity being now the recognized principle of international intercourse, an increase of duties on foreign goods would, in many cases, be followed by a corresponding increase of import duties on Japanese goods entering foreign countries. Instead, therefore, of resorting to a protective policy, the Tokyo journal thinks that it would be for the interest of Japan to endeavour to make special arrangements for the admission of Japanese goods into foreign countries on favourable conditions in respect of duties and other facilities. The extension of Japan's foreign trade should be placed above all other considerations in shaping the course of policy to be pursued in respect of Treaty Revision. Compared with this question of foreign commerce, all other considerations as to mixed residence, possession of real estate, and so forth, sink into utter insignificance. The future of the country lies, says our contemporary, in the development of commercial relations with foreign nations.

* * *

The Korean question still continues to receive attention from the metropolition press. There is a general agreement that the day is near when the Powers concerned in the independence of the penisular Kingdom will have to take decisive action. Some papers even hint that the denouement will be more or less hastened by the visit of the Russian Prince Imperial. The *Nippon* is almost entirely occupied with this question. A certain person, signing himself *Kyō-un-sei*, writes in its columns as to the advisability of an alliance with some foreign Powers. The writer is not at all enthusiastic for any alliance. Unless Japan is able to maintain her own ground, alliance with any strong Power would ultimately mean reliance on its protection, and no good could result from such an attitude. In another article, the same paper welcomes a rumour that the present Ministry is resolved on some decisive line of action about Korea. But, as usual, it strongly doubts the ability of the members of the present Cabinet to carry out any such policy.

* * *

The *Chusei Nippo*, writing on the same subject, uses language showing the extent to which the writer has been alarmed by the disquieting reports lately appearing in the press about the condition of things in Korea. He seems to think that Korea is about to be absorbed into Russian territory, and he urges his countrymen to be united and on the alert, so as to show a brave face in case of any emergency.

* * *

The *Rikken Jiyu Shimbun* alludes to a rumour that the Japanese Government is inclined to terminate the Tientsin Convention, on the ground that its provisions are mutually inconvenient to the high contracting parties. Our contemporary fears that the result of such a course of action would be very injurious to the maintenance of friendly relations between China and Japan, for the two Governments being then at liberty to send troops to Korea, collisions would inevitably occur.

* * *

The *Jiji Shimpo*, writing on the approaching visit of the Russian Prince Imperial, recalls the splendid treatment which His Imperial Highness Prince Arisugawa received in Russia some years ago, and finds it natural that special preparations are being made by the Court to welcome the Imperial visitor with great hospitality. It further observes that Japan is not at all partial in her manner of greeting foreign princely visitors. Such visitors, from whatever country they come, will invariably find the Court of Tokyo as hospitable as it now intends to be towards the Russian Prince Imperial. The *Jiji* draws attention to the increasing importance of Russia from a commercial point of view, and advises its countrymen to do full justice to their reputation for hospitality in the case of the august personage now on the eve of arrival.

## *WHITE WIVES IN THE EAST.*

THERE appeared in a recent number of the New York *Tribune* a long letter over the signature of "Ex-Diplomatist." Inspired avowedly by a desire to save American girls from marrying Japanese or Chinese men, the writer undertakes to describe the life awaiting a young lady who contracts such an alliance. His description is certainly one of the most remarkable productions ever penned by any person professing to speak the truth. That his pretended object had any connection, however remote, with his real purpose, is wholly incredible, for his letter teems with falsehoods so gross and so palpable that they cannot for a moment be regarded as misconceptions. We have hitherto taken no notice of the communication for two reasons: first, because we hoped that it would speedily elicit crushing contradiction in the American press; secondly, because we would fain consign to oblivion calumnies so painful to their objects, and so humiliating to all concerned in ventilating them. Not only however, has the letter been re-published, without comment or contradiction, by a Yokohama local journal, but from several quarters queries have reached us, accompanied by requests that, if the statements of the *Tribune's* correspondent are untrue, they should be publicly contradicted.

"Ex-Diplomatist" offers evidence of his credibility. He has made, he says, "several prolonged stays in China and Japan;" has "seen more of native life than it falls to the lot of most foreigners to see;" has "had important dealings with members of both the Chinese and the Japanese nationalites," and has "lived in direct contact with the Japanese, understanding their language." We quote these self-proclaimed qualifications because, if "Ex-Diplomatist's" account of himself be correct, the context in which it appears constitutes him one of the most unscrupulous romancers that ever obtained access to the columns of a newspaper. It does not concern us to identify him. The clues he furnishes make that task easy, but we shrink from fixing upon a former member of the United States Legation in Peking disgrace that would reffect upon the whole service which has had the misfortune to include him. Not the least striking feature of his communication to the *Tribune* is audacity. The astounding recklessness of his falsehoods gives them an air of reality well calculated to deceive uninformed readers. Did he confine himself to the assertion that "there are a number of poor, deluded white girls in both China and Japan living in material and mental misery as the wives of natives," the vagueness of the statement might save it from complete refutation. We could indeed say that during twenty-five years of residence in Japan and of close intimacy with all classes of Japanese, we have never met or heard of any such unfortunate wives. But there would still remain the possibility that "Ex-Diplomatist's" experience had been wider than our's, and wider also than that of any other foreigner with whom we are acquainted. The *Tribune's* correspondent, however, is not content with generalities. He has the courage to particularize, and unfortunately for himself he selects, as examples of "poor, deluded white girls living in material and mental misery," two ladies who are among the leaders of Society in Tokyo, who have the honour of being frequently received at the Emperor's Palace, whose dwellings, equipages, and general mode of life are according to luxurious Western standards. He has been in Tokyo. He has, presumably, moved in respectable foreign circles there. He must know perfectly well that every foreign lady married to a Japanese is treated by her countrymen and country-women precisely as though her husband were of their own nationality; that she receives all the respect, and even more than the respect, due to his rank, and that she enjoys a degree of social consideration much greater than she could hope for in any large Western city. Yet he ventures to say that "in every case the fate of foreign girls married to Japanese has been equally unhappy and disappointing"; that "on reaching the shores of their husbands' country, they have found that they were regarded as pariahs by the foreign residents;" and that, "mercilessly boycotted by every American and European woman in the place, they are treated with open contempt as creatures that have lost caste and every claim to respect by the men." These are gross falsehoods. They belong to the same category as "Ex-Diplomatist's" even blacker lies, namely, that "there is no Japanese synonym for the English word chastity," and that "such a thing as regard for the marriage vows, or indeed, for any sort of morality, is conspicuous only by its absence in Dai Nippon." There are men who in their progress through life, come in contact with vice alone. Virtue is repelled by them. They create about themselves an atmosphere of grossness not permeable by any ray of purity. The Orient is to such creatures what their own degraded morality makes it. The impressions they gather there are marred and distorted by the prurient medium through which they pass. "Ex-Diplomatist" is evidently such a person. He has moved, in circles suited to his moral calibre. It is impossible for him to conceive that anything can be innocent or virtuous unless it is surrounded by all the visible bulwarks which alone his gross perception is capable of appreciating. Absence of prudery becomes to him impudicity; natural artlessness he regards as obscenity. In petty outward forms and observances he looks for the essentials of civilization. If he fails to find bedsteads in a house, he concludes that its immates are semi-savages because they sleep on a pile of silk cushions; if he does not see Western chairs and tables, there is no meaning for him in richly lacquered utensils, choice porcelains, and appurtenances of the most artistic nature. "Our civilization," he declares, "is grounded upon Christanity and is the product of nineteen centuries of gradual development; that of Japan is solely attributable to imitation." In a word, he imagines that before PERRY'S ships came here, the Japanese were savages, and that over their savagery they have since then spread a thin veneer of Occidental civilization; whereas in truth they had already developed a civilization of the highest refinement; a civilization in some respects superior to anything that the West had to offer them. But it is idle discussing the theories of a man so careless of veracity, so incapable of reasoning as is "Ex-Diplomatist." To find such a person speaking of "the extraordinary talent of the Japanese for embroidery on facts" is exceedingly comical. Doubtless this country has its own due proportion of liars—if we may be pardoned for employing the ugly word—but "Ex-Diplomatist" could hold his own with any of them. The limits of his inventive powers are the sole boundaries of his assertions. After a column of falsehoods, each more startling than the other, he climbs the pinnacle by declaring that when he called on the President of the Japanese Senate, who "had recently returned from Europe, where he had spent three years as the MIKADO'S Ambassador to one of the grandest courts of Christendom," he "found the old man walking with his wife—a woman of great lineage—and his deputy wives in his garden, and arrayed in nothing but a parasol, a fan, and a breech-clout." The official to whom this clumsy libel refers is one of the proudest nobles in Japan. If he ever received "Ex-Diplomatist," it was with all the forms of perfect courtesy and all the observances of refined etiquette. His hospitality is well rewarded by this despicable slanderer. We shall not dwell upon the unfairness of classing Japanese and Chinese together for the purposes of this question. The Chinese doubtless have their own high qualities, but a European or American girl marrying a Japanese finds this great difference, that whereas she and her husband are received everywhere into foreign society, live, in ninety-nine cases out of every hundred, in Western style, and are surrounded by conditions acquiring daily a closer resemblance to those existing in the Occident, the same girl if married to a Chinese, would be virtually exiled from Western civilization. Her husband might possibly be one of those exceedingly rare Chinamen who live in foreign style, but even then he would be entirely out of touch with his compatriots, and their society would have nothing to offer her. There are, we freely admit, objections to mixed

Digitized by Google

marriages of the kind criticised by "Ex-Diplomatist." The *sans-gêne* of Japanese domestic habits is not unlikely to distress a delicately nurtured American or European lady, and complete separation from her relatives, ignorance of the Japanese language, as well as the strangeness of her surroundings may become elements of unhappiness. But it is pure romance to say, as "Ex-Diplomatist" says, that she "is not permitted to sit at table with her husband," and that "she is forced by etiquette to approach him in the same manner as the domestics, namely, on all fours." These mis-statements belong to the same category as the assertion that "thirty dollars a month is considered big pay for a Government official in Japan," whereas in truth an official drawing three or four times that amount still belongs to the lower ranks of the Administration. After all, facts are more eloquent than words. Not a few marriages have taken place between Western girls and Japanese, but up to the present there has been no instance of the terrible results indicated by "Ex-Diplomatist." The ladies are living in apparent comfort and happiness, have access to the best society, foreign and Japanese, and, so far from suffering in public esteem, are welcomed and made much of everywhere. Japan is not the first country that has been slandered by unscrupulous scribblers, and doubtless her people will find it very diverting that a man obviously without a scintilla of regard for truth should lay untruthfulness at their door as a cardinal sin.

## *RUMOURS ABOUT TREATY REVISION.*

PEOPLE have been wondering why the subject of Treaty Revision should have sprung into such sudden prominence after the closing of the Diet, and, above all, why programmes of Revision set forth by the vernacular press should differ materially from principles enunciated by the Minister of Foreign Affairs in his various speeches before the two Houses of Parliament. A long and somewhat laboured explanation is evolved by some critics out of the policy pursued in regard to Special Ports of Export, but as this theory applies only to the question of coastwise trade, and is moreover quite fanciful, we need not re-produce it. Our own conviction is that the rumours lately circulated with so much assiduity owe their origin, not to any actual knowledge of what is going on, or even to any notion that negotiations have been resumed, but simply to party politics. The problem of Treaty Revision is of such magnitude and its national importance is so manifest, that every political party wants to have the credit of solving it, and no party is willing that the laurels of success shall be worn by a rival. Thus the matter has been eagerly dragged into the light, and made the subject of discussion as premature as it is wild. Of course this greatly adds to the difficulty of devising a satisfactory solution. Just as Count OKUMA'S proposals encountered intenser opposition because of his association with the *Kaishin-to*, and because of the latter's somewhat injudicious assumption of credit in the days of early success, so any scheme elaborated by the present Cabinet will assuredly be condemned by the anti-Government party—the so-called "Extremists." The day is past when a compromise really satisfactory from the foreign point of view might have been effected. Japanese public opinion has become exacting in proportion to the development of its self-assertive capacity, and the least that can now content it is more than the conservative foreigner can contentedly concede. If any fail to recognise this it must be because they do not wish to recognise it. Many years ago, when we first began to advocate a speedy settlement of the knotty question, it seemed to us that every month suffered to elapse without an understanding removed the problem so much farther from the sphere of quiet discussion and liberal compromise, and brought it so much nearer to the realm of popular clamour and nationalistic intolerance. We can scarcely doubt that even the writers who opposed us most resolutely in those times, must now recognise how incomparably better it would be for all parties had this everlasting source of friction been finally dealt with when the conditions were so much more favourable than they can ever be again. If the narrow margin of concession and guarantee remaining to Japanese plenipotentiaries is to be whittled away by party politicians, the question must ultimately pass entirely beyond the reach of negotiation, and become an affair of absolute trust. Already, while all statements of the Cabinet's programme are of necessity purely conjectural, and while the question stands practically where it stood six months ago, men are busily attributing to the Government intentions not consistent with any known facts, but simply designed to suggest that popular wishes are disregarded. By this device the opposition hopes primarily to excite a general distrust of the present negotiators, and secondarily to gain the spurious credit of averting what was never imminent. Time, that unriddles so many mysteries, only adds to the perplexities of the Treaty Revision problem.

HORSFORD'S ACID PHOSPHATE. A HEALTHFUL TONIC.

Used in place of lemons or lime juice it will harmonise with such stimulants as are necessary to take.

## *FOREIGN IMPORT DUTIES.*

A VOLUME of very considerable interest to every one concerned in any way in trade has lately been issued by the British Board of Trade. It is a return of the rates of import duties levied in European countries and in the United States upon the produce and manufactures of the United Kingdom. The value of the return, besides its practical use to British exporters, is that in 1885 a similar volume was published, and a comparison of the two enables us to see how the world is travelling in this matter of tariffs. There is a general, and it now appears accurate, idea that the tendency is not towards freedom of trade; and here we have details, percentages, specific duties, and the like. In various European countries also the commercial treaties are expiring, and the volume shows us, apart from other indications, what may be anticipated under the new commercial régime. The book is incomplete in two important particulars, the first being in regard to the United States, and the second to Russia. It was not found possible to include the new American duties in the body of the return, as it was already near completion when the new Act was put in force, but full particulars as to the duties on all classes of goods have been printed as an Appendix. With regard to Russia, in accordance with an Imperial decree published on the 20th August (1st September) last, the duties leviable under the whole of the sections of the tariff of that country, with the exception of those relating to coal and to a few articles of small importance to British trade, have been augmented by 20 per cent.

The various changes that have taken place since the issue of the last volume in the rates of foreign import duties upon the produce and manufactures of the United Kingdom, are due to alterations made from time to time in the classification of, or duties on, articles under particular sections of the different tariffs; entire tariff revisions as in the case of Portugal, Italy, and Austria-Hungary; alterations in excise laws, affecting also the import duties leviable; direct negotiations between the United Kingdom and other countries, as in the case of the treaties, concluded with Spain, Greece, and Roumania; and commercial arrangements containing special tariff clauses made between foreign Powers of which the advantage has also been reaped by Great Britain under the most-favoured-nation articles in its treaties with those Powers. Among such arrangements are those which have been concluded between Germany and Switzerland, Spain and Italy, Italy and Austria-Hungary, Switzerland and Italy, Austria-Hungary and Switzerland, and Roumania and Germany. It will be observed upon comparing the two volumes with five years between them that the tendency in that

Digitized by Google

period has on the whole been toward an increase rather than a reduction in the duties chargeable upon British goods, and it may be interesting to quote a few of the more important differences. In Russia all the alterations made in the import duties have been in the nature of additions to the rates then levied. The principal of these alterations are the following:—On coal and coke the duties have been trebled, and then 40 per cent. placed again on top of that. In June and July, 1887, additions were made to the duties on iron and steel and various manufactures thereof, motive machinery, ships and boats, hops and tobacco; about the same time, also, an alteration was made in the method of assessing the duties on cotton thread for sewing or knitting, whereby they are now levied upon the *gross* weight instead of upon the *net* weight as formerly. In November, 1887, increases were made in the duties upon a variety of articles, among which were included agricultural machinery, dried and salted fish, sewing and knitting cotton, twisted cotton yarns, cabinet-makers' wares in the rough, lace of all kinds, buttons, glass beads, &c. A further alteration in regard to cotton yarns and sewing thread was made in June of 1890, the whole effect of the alterations in the cotton yarn duties since 1885 being that, whereas single and twisted yarns formerly paid the same rates, and were charged with duty according as they were above or below No. 45 English, three classes of single yarns are now tariffed instead of two, and separate classes have been opened for twisted yarns and sewing thread, and the duties generally increased by about 40 per cent. Over and above all other increases there is a uniform addition of 20 per cent. to the duties made according to an Imperial decree referring the change to the alteration which had taken place in the relative values of the gold and credit roubles. The changes made in the Swedish tariff are very much less both in extent and in amount than those in the Russian. They are mainly confined to increases on twisted yarns of cotton, linen, and jute, iron goods, and spirits. The Norwegian tariff has remained virtually unchanged, the only alterations being in regard to sugar, spirits, tobacco, and hops, and these being comparatively unimportant in amount, except as regards tobacco. The Danish import duties are identical with those of 1885: there has been no change in the tariff of this country for many years. The alterations in the German duties since 1885 are few in number, and are partly the result of the treaty concluded between that country and Switzerland in 1888. In consequence of this, reductions have been effected in the duties on silk yarns, cotton embroideries, watches, and watch works, and a few other articles; additions have, however, been made to the duties on raw sugar and spirits. There has been no alteration in the tariff of Holland since 1885, and the alterations in the Belgian import duties since 1886 are confined to vinegar and sugar. In France also the alterations since 1885 are few in number. Beyond increases on salt and sugar, the only alteration of importance has been the abolition of the excise duty on paper, which was previously charged on imports as well as on home-manufactured paper. A revised tariff for Portugal came into force in September, 1887. In this the general and conventional tariffs were amalgamated, and the additional duties for Custom House fees and for harbour works were combined with the rates of duty. Additional rates to the extent of 7 per cent. have been imposed upon all articles not subject to conventional duties; a charge is made on all goods free or otherwise, for porterage in the Custom House; all articles free of import duty are to pay the tax of 2 per cent. *ad valorem* for harbour works; and also articles comprised in the free list which are not made free by treaty are still to pay the "additional" duty of 6 per cent. established by the law of April, 1882. The considerable difference observable in the rates of customs duty leviable in Spain are due almost entirely to the operation of the Anglo-Spanish Commercial Treaty of 1886, which by according most-favoured-nation treatment to British goods placed them under the Spanish "Conventional" tariff instead of under the "General" tariff as formerly. A new customs tariff for Italy came into force on the 1st March, 1888, on the lapse of the Italian Commercial Treaties. In this tariff the classification of a number of articles was extended, and the rates of duty throughout were considerably increased. Some modifications in them have since been effected by the conclusion of new treaties between Italy and Austria-Hungary, Spain and Switzerland, but a comparison of the present rates with those existing in 1885 shows that on the whole the duties are now much larger than formerly. This is expecially the case in regard to cotton yarns and tissues, printed linen tissues, woollen yarns and tissues, the various descriptions of iron and steel wares, machinery, cutlery, &c. Considerable alterations in the Austro-Hungarian import duties have also been made since 1885, in consequence of the issue of a new tariff in 1887. Some modifications of a minor character in the duties leviable under this tariff were due to the conclusion of a new treaty with Italy in 1888, and further reductions were effected by the Austro-Swiss Treaty concluded early in 1889. Among the articles upon which duties have been increased are bleached and dyed cotton yarns, woollen and worsted yarns, all kinds of common cotton tissues, certain descriptions of sheet and plate iron, locomotive machinery, fine wares of copper, brass, lead, tin, and zinc, and several others. A revised tariff for Switzerland has also come into force since 1885, but in this case the alterations made are not nearly so numerous as those in the Italian and Austrian tariffs. But they are in the direction of increases, and in some cases this is very considerable indeed. On the other hand, the conclusion of treaties between Switzerland and Germany, Austria-Hungary and Italy, brought about some slight tariff reductions. A revised tariff for Greece came into force in November, 1886, but this has since been modified in several important particulars. The first of these modifications took place about the middle of 1887, and further changes were made by a law which came into force in February, 1889, and which affected the duties on a variety of articles. These alterations were followed by the Anglo-Greek Treaty of 1890, which brought about considerable reductions in the duties on some of the most important articles of British manufacture. The principal differences between 1890 and 1885 as regards Greece are the reductions caused by this treaty, viz., those on cotton yarns, and tissues of cotton, linen, hemp, jute, and wool. The most important articles upon which duties have been increased are common window glass, common glass wares, raw hides, certain shoemakers' wares, leather gloves, indiarubber wares, printing paper, sugar, molasses, bleaching materials, and tobacco. The provisional arrangement which was in force in 1885 and under which a duty of 8 per cent. *ad valorem* is levied on all imports into Turkey from Great Britain, is still in operation, pending the elaboration of a new tariff and the conclusion of a new Anglo-Turkish Treaty. As to the United States, it as unnecessary to speak of the McKinley Tariff Act, the general effect of which is known.

The return, a portly volume of nearly 400 pages, gives the duties on various classes of British goods in the different countries, both in native currency and in the British equivalents.

## *THE PROBLEM OF MORAL EDUCATION IN JAPAN.*

(By a Japanese.)

THE question of moral training is receiving serious attention at the hands of an ever widening circle of educators and statesmen in Japan. Broadly speaking, there are four schools of thought struggling to have their own particular ideas of morality adopted into the national system of education; namely, the Buddhistic, the Confucian, the Scientific, and the Christian schools. The Buddhists have perhaps the smallest number of sympathizers among the educated classes. It is true that Buddhism has of late revived much of its old evangelizing spirit, and that a number of able scholars—for example Mr. Nanjo Fumio and Mr. Inouye Enryo—are enthusiastically endeavouring to popularize

Digitized by Google

the essential doctrines of their religion. Possibly the study of Buddhism as a system of thought may thus come to attract a larger share of the attention of philosophically disposed men, and the religion itself may long continue to hold its ground among the masses. But there is little, if any, prospect of its ever extending its influence to the educated classes as a practical faith. Confucianism finds itself in a scarcely brighter position. With the fall of feudalism the Chinese system of philosophy fell from the important position occupied by it for centuries in the national system of education. Its sway over the minds of the educated classes having formerly been almost as despotic as the authority of the feudal chiefs themselves, the reaction against it has been correspondingly strong. As Mr. KATO, President of the Imperial University, recently remarked in an article published in the *Ten-Soku*, the younger generation, in their excessive and wilful indifference to whatever savours of Chinese philosophy, have almost forgotten the great debt they owe to the immortal sage of ancient China. At one time students would not even touch the works of the great master. It is true that, some years ago, there set in a reaction against this repellant mood, and the study of Chinese classics became once more quite popular. But the change has not apparently done much to revive national faith in the morality of this cult. The study of the works of Chinese philosophers has now given place to the more popular study of Japanese literature. It is true that the text books on practical ethics now in use in most of the elementary schools are written on the basis of the Chinese philosophy; but it is an indisputable fact that these books are used merely because nothing better is supposed to be at present procurable, and further, that they do not exercise much influence on the minds of the pupils. Whatever influence they may temporarily exert, is soon cast off when the boy or girl, beginning to associate with members of the elder generation, breathes an atmosphere charged with incurable distrust of Chinese philosophy.

The educated class is thus hopelessly alienated from both Buddhism and Confucianism. A section of this class, as more than once noticed in the columns of the *Mail*, advocates a system of morality called the *Rigaku-shû* (Scientific Ethics). The leaders of this school are Mr. SUGIURA JUZO, a member of the Diet, and Mr. KIKUCHI KUMATARO, editor of the *Kokuhon*. Their object is to apply the laws of physical science to the conduct of human beings. In reply to the objection that such a complicated system of ethics will be of little avail for the everyday uses of national education, they urge that for practical purposes it will be sufficient to teach simply the conclusions evolved from their theoretical reasoning, and that, with the spread of their ideas, there will arise a literature permeated with the spirit of the system they advocate; a literature appealing to the heart as well as to the understanding of the people. Despite their great zeal and scholarship, the originators of this school do not seem to have yet obtained any noteworthy addition to the ranks of their followers; nor is there, so far as we can see at present, any likelihood that their moral tenets will ever be accepted by a majority of the intelligent classes. In a word, not one of the systems of morality above described is deemed adequate to supply a want more and more keenly felt by the nation in the sphere of moral education. There only remains the Christian system. Many people hold that this will finally fill the gap. Eminent statesmen and educational authorities, though not professed converts to the doctrines of Christianity, are convinced, and do not hesitate to avow in public, that the only efficient and practicable system of morality which can be adopted into the educational programme of the country, is that furnished by the teachings of CHRIST. Among confessed adherents to this view, we may mention Mr. FUKUZAWA, Professor TOYAMA, and ex-Senator NAKAMURA MASANAO. The names of many other distinguished men of the rising generation mights be added. That persons in high station also take an active interest in the growth of the Christian system of education, is shown beyond all doubt by the handsome donations which statesmen like Counts OKUMA and INOUYE, and merchants like Messrs. HARA ROKURO and SHIBUSAWA EIICHI, subscribed for the founding of a University at Kyoto under the control of the late Rev. Mr. NIISHIMA.

While the attitude of the intelligent section of the public towards Christianity is steadily becoming more and more appreciative and favourable, it is somewhat incomprehensible that the propagandists of that religion do not seem to make very palpable progress in their crusade. It is the fashion to say that the Japanese are naturally devoid of religious instincts; and there are some superficial indications that seem to confirm this view. But in our opinion, there can be no more palpable misconception. Their national and psychological history proves that the Japanese are naturally as religious as any other people in the world. Without high religious instincts, how could tens of thousands of men and women of all sorts and conditions have been willing to die rather than forsake their trust in CHRIST, as did Japanese three centuries ago under the cruel persecution of the feudal Government of the day? The zeal and indomitable spirit with which the persecuted Christians withstood the civil as well as military authorities of the country, notably in the case of the famous Amakusa rebellion, led the ruling class, the *Samurai*, to regard Christianity with dread and deadly hatred. A few generations previously, Buddhism had likewise come into serious collision with the civil power, under the administration of ODA NOBUNAGA, and this circumstance, coupled with the recent case of the rebellion of Christians in the South-western parts of the country, induced the Tokugawa Government to encourage the adoption of the rigid secular morality of Confucianism, which is peculiarly well adopted to feudal purposes. Thus for three centuries the educated class lived under artificial moral conditions, and as a consequence, its members are now observed to be apparently indifferent to religious matters. But three centuries are insufficient to eradicate the original instincts of a race, and we have no doubt that, under proper management, Japanese youths of to-day can be converted into as zealous Christians as any missionary could desire.

The true cause of the tardy progress of Christianity among educated Japanese, is to be sought, not in their indifference to religious faith, but in the inability of propagandists to present their religion in the only aspect acceptable by genuine Japanese. Christianity, in order to be welcomed by true Japanese, must be stripped of the unintelligible and superfluous excrescences that have grown round the original stem in the course of sectarian dissensions and political alliances in Europe and America. In other words, Christianity must be presented to the Japanese in its orginal simplicity, without any of the dogmas of later theology. We are not the first to draw attention to these things. Indeed such considerations can hardly fail to occur to any intelligent observer of the contemporary history of Christian evangelization in Japan.

But of late, as repeatedly noticed in the *Mail*, there is, among Japanese Christian thinkers a strong movement in the direction indicated above. It is too early to predict what form the fermenting ideas of the new school of Christian thought will finally assume. But there is little room for doubt that the present movement is in the right direction. Whatever shape the new theology may take, it will be adapted to the national genius of the country. Perhaps we should add that the immediate exponents of this tendency are the Christians led by men like Messrs. YOKOI TOKIWO, KANAMORI TSURIN, KOSAKI HIROMICHI, and others. But what has often been urged as to the importance of casting aside the foreign dress in which Christianity came to this country, applies with equal force to American Unitarianism and German Universalism. Equally in the case of these rationalistic forms of Christianity, a movement for Japonization must sooner or later set in. Whether Unitarian or Orthodox in form, Christianity, we mean Christian theology, must first undergo thorough reconstruction at the hands of exceptionally capable Japanese. Then and then alone will it come to receive the attention of the

Digitized by Google

educated public. But the movement already commenced seems to indicate that the ultimate triumph of the Christian system of morality is now merely a question of time. How long the consummation will be deferred depends principally upon whether and to what extent the leading Christian propagandists practically recognise the importance of acknowledging the rationalistic and nationalistic tendency mentioned above.

## *CORRESPONDENCE.*

### THE "YOKOHAMA PUNCH."

To the Editor of the "Japan Mail."

Sir,—I see the editor of the *Japan Gazette* is reproducing extracts from *Punch*. What his object is I have not the remotest idea. *Punch* is doubtless new to him, but if he gave the subject one moment's thought it might occur to him that most Yokohama residents possess *Punch* in the original. But that is not what I started to write about. What I wish to remark is the impertinence of the editor of the *Japan Gazette* in last night's paper. In a foot-note to some extracts from *Punch* he says:—It may be necessary to call attention to the fact that the spelling, punctuation, and grammar of "Punch" are far from perfect." Great Scott! the idea of the editor of the *Japan Gazette* calling attention to a lapsus on the part of poor Wirgman. Those who knew "Punch" know that he wrote—and frequently spoke in his ordinary conversation—purposely in this way, and very often made his seeming errors sound exceedingly funny. Then the impertinence of the editor of the *Gazette* in making any reference to imperfections in "spelling, punctuation, or grammar"! There is never an issue of his paper that might not be held up to ridicule resulting from his sheer ignorance of these matters.

I enclose my card, Sir, and remain, one of the old friends of "Punch,"

Yours, &c., CRAYON ROUGE.

March 19th, 1890.

### AN EXPLANATION.

To the Editor of the "Japan Mail."

Sir,—My attention has been called to an expression "The cruelty of Universalism" in my late letter to the *Mail*. It is thought that it will not be understood, or will be misderstood as a declaration that the belief of universalism tends to make men cruel. That would be as untrue as it would be unkind. So far as my slender personal acquaintance or my reading justifies me in expressing an opinion, the believers of that doctrine are very kind-hearted and liberal-minded. In fact it is the opinion of some hard-headed thinkers, that a man's emotional nature must rise above and hypnotize the intellectual before he can believe that theory. So far as my heart is concerned I am an ultra universalist. I wish I could believe it, but my plaguey head and the old Bible are insuperable obstacles. I beg your indulgence while I try to show that I was justifiable in supposing that "the cruelty of universalism" would put it outside the sphere of mission comity. I respectfully submit that a man must imagine himself in my position in order to judge fairly whether I am justified in laying the charge of cruelty at the door of the system. Accepting the Bible as a revelation from God, and Jesus Christ as "God manifest in the flesh" who taught that God is love, I find that no other preacher in the New Testament spoke so much about hell and eternal punishment as Jesus. Limiting my examination to His utterances, I find that Universalism adds to or annuls His teaching everywhere on this subject. He knew more about it than any one else; He suffered more to keep men out of hell; he loved with a love to which ours is but a drop to the ocean; if He were a friend to humanity, then Universalism is not, for the teaching of the two form an antithesis. Universalism scouts at the idea of fear as a motive in religion; they say it is to scare people into heaven. Jesus knew human nature and the province of fear, so that He told His friends not to fear man. "But I will warn you whom ye shall fear; fear him who after he hath killed hath power to cast into hell; yes, I say unto you, fear him." Luke 12.5. There are two classes of men in the Bible and in Japan. A number of descriptive titles are given them in the Bible, the plainest distinction being: "the righteous" and "the wicked." Another term is "children." Some are children of God, others are children of the devil. Death cannot change character or state. Jesus says to men whom He had called children of the devil:—"Ye shall die in your sin; whither I go ye cannot come," John 8: 21. Jesus went to heaven. He thought they could not come there, but Universalism thinks differently. In Luke 16th, the Pharisees who were covetous derided Jesus; He told them that what was highly esteemed among men was abomination in the sight of God, but as God does not execute judgment speedily and, indeed, reserves the unjust until the day of judgment to be punished, that proposition is not very evident to men in the flesh. Therefore Jesus lifted the curtain and gave us a glimpse of the condition of two men five minutes after death: the rich man of this world, highly esteemed among men, was in torment a beggar; while the beggar here was in the acme of Jewish ideas of happiness, *i.e.* in Abraham's bosom. Between the two there is "a great gulf; one which neither mercy from heaven, nor repentance from hell can bridge" (Abbott). These two classes are separated in the resurrection also; there is a day coming when all that are in their graves shall hear the voice of the Son of God and shall come forth, they that have done good unto the resurrection of life, and they that have done evil unto the resurrection of judgment," John 5: 29. These two classes are divided in the day of judgment. Jesus says that when He comes in His glory, with all the angels, all nations shall be gathered before him, and He will separate them as a shepherd his sheep and goats. The righteous He will bid enter the Kingdom, the wicked He will command to depart into the eternal fire, prepared for the devil and his angels. These divisions remain eternal. "And these shall go away into eternal punishment; but the righteous into the eternal life, Matt. 25: 31-46. (Revised version.) Any attempt to break the force of this testimony of Jesus by showing that eternal does not mean eternal, terminates the blessedness of the redeemed at the same hour. How cruel Universalism represents Jesus to be when He knew that it was only a temporal punishment, and would not gild the future with a ray of hope. For His followers who obey him, and are blessed more in this life than the poor deluded slaves of sin who work harder and suffer more to go to hell than Christians do to seek heaven, for these Jesus had many words of cheer, but for those who are deprived of the peace which passeth understanding in this life, and then have to pass through a severe purgatory before they reach heaven, Jesus had not a word of consolation. This deficiency in His teaching, also that they would repent and that their repentance would avail unto salvation, was left for those who prophecy smooth things unto the people and assure them that the bitter will turn put sweet. Jesus said that there is a sin which has never forgiveness, neither in this world nor in the wold to come. "It would be impossible to employ language more definitely inconsistent with the idea that all men will be finally pardoned and restored to favour." (Abbott). In Matt. 13th, seven parables give a picture of the history of the Kingdom. Of two of these we have an exposition by the Master himself. The word of God as seed falling on some hearts brings forth no fruit. Jesus does not tell that in the next world He will sow some more seed in the hearts of those who rejected the gospel here and they will then bear fruit; how that was found out I do not know. In the exposition of the tares, Jesus says, "He that soweth the good seed is the Son of Man; the field is the world; the good seed, these are the sons of the Kingdom, the tares are the sons of the evil one; the enemy that sowed them is the devil; the harvest is the end of the world; the reapers are the angels. As therefore the tares are gathered up and burned with fire, so shall it be in the end of the world. The Son of Man shall send forth his angels and they shall gather out of his kingdom all things that cause stumbling, and them that do iniquity, and shall cast them into the furnace of fire; there shall be the weeping and gnashing of teeth. Then shall the righteous shine forth as the sun in the kingdom of their Father. He that hath ears and hear, let him hear." It would seem from this that repentance may come too late. Life is a tremendously earnest thing with the Son of Mary. In it are the issues of eternity. There is not the slightest hint in the teaching of the Nazarene that the man who neglects salvation here will have a chance hereafter, and a chance that he will accept. That seems to imply that God is not as good now as he will be hereafter, or that what the Redeemer's tears, entreaties, agonies and blood could not effect, will be brought about by the pain of punishment. Jesus had opportunity to teach universal salvation. He could have said "God so loved the world that he gave his only begotton son that all men might not perish but have everlasting life." He was asked once. "Are there few that be saved?" He could have used the one argument of Universalism and replied: "Could you, as a father, see one of your children suffer to all eternity, and do you not suppose that God is more loving than you are?" To which a man might have answered, "No I could not, nor could I have one of my children born blind, and another become a leper, and another blaspheme God, and his parents, but I see that God can. There must be reasons beyond my feeble reason. Love is not weakness and indulgence. God is truth as well as love. Are there few that be saved?" Jesus told that man to strive to enter the narrow door for many would try to enter and *should not be able*. Why not? Because they tried too late. When once the Lord has shut the door in vain will they strive to enter; He will say "Depart from me, all ye workers of iniquity" Luke 13: 23—30. It is impossible to put into language a more emphatic condemnation of the doctrine that all men will be saved. Universalism would say "But that is not broad or liberal." Perhaps Jesus was not seeking to be broad; He may have preferred depth. Perhaps He thought that the truth is God's and to give away what belongs to another is not liberality; while to teach contrary to the unchangeable truth is cruelty.

Reading the Bible with Universalist spectacles, we shall be agreeably surprised to learn that the chaff being burned turns to good wheat, the fruitless tree instead of being burned to ashes, springs up a good fruit tree; that the branches of the vine after being burned bear highly flavoured fruit. The tares which Jesus supposed would be destroyed, are by that marvelous fire, turned into good seed. The bad fish thrown away flop back again good fish; the house built on sand which Jesus left in impressive ruins, will be rebuilt. Body and soul destroyed in hell will turn up in heaven. The coward who saves his life by denying Christ will not lose it; though Christ may deny him before the Father, afterwards he will confess him before the Father. The man who had been warned that the broad way leads to destruction yet went that way because it was easy, will find that all roads eventually bring a man to heaven. The king who said that those invited guests who murdered the messengers should none of them partake of the supper, will repent and have then all come. The goats departing into eternal punishment will come skipping back as spring lambs. The foolish virgins will find the door open, while the wicked servant who was cut in twain will be healed and receive eternal life like the faithful servants. The slothful man who hid his Lord's money will have it given to him. The swine will admire pearls, and dogs that which is holy. All this and more must be read into the scriptures, in order to bring them into accord with this benign speculation. If I were to see men in a boat, asleep, floating rapidly toward the Niagara falls, and did not warn them, it would be cruelty. If a man dying in his sins cannot go to where Jesus and his people are, and I tell him that he can go there, that is cruelty. If I see a man entering a way from which he can never return alive, and do not warn him, I call that cruelty.

Unless I wrench my understanding, do violence to laws of language, put the Bible in a theological vice and twist it till it screeches out a different saying from the plain Word, and unless I part company with the Son of God, I must believe Universalism to be a false system, deluding men with a baseless hope and leading many to trust in the "larger hope" who will, deceived and self-deceived, descend to a remedyless and everlasting woe. It is not for those who hear the missionaries that I most fear. Those who hear will be faithfully taught that righteousness is the price of blessedness, and that those who put off their salvation here must repent in the next world, and they will have incorruptible Christian lives set before them as examples. But outside of that circle there will be a large number (as in the United States), who will merely hear that all men are to be saved, and they will decide to wait and take their chances in that world. The atrophy of the spiritual nature resulting from centuries of living on husks, the glare of modern civilization, the doubts raised by materialistic theories from the West, the force of national customs, the weight of the influence of society, the force of casual appetites, form a torrent against which a young man must struggle to live a Christian life in Japan. Conscience is the main ally of the preacher of the gospel. Those who would fain have an opiate for conscience may find it in Universalism. I think I know a few in the United States who, living dissolute or careless lives, trust to be saved at last. I could adduce a little proof that such a theory will lesson nerve tension in Japan.

From my position, then, is it not evident to the

Digitized by Google

reader that I am justified in saying that such teaching is cruel? Was it unkind for me to use that phrase when I believe that such teaching will soothe men in their cherished sins, and result in the poor men being forever separated from God and the happiness of the redeemed? With profound respect for the Christian grace and self-denial of those who advocate this theory, I am compelled to think that it misrepresents God and deludes man. It is not like an error of opinion merely: that is only a barnacle on the ship's bottom. This is vital. It is an error in the reckoning which will result in eternal shipwreck. In all tenderness and sorrow then I am driven to the conclusion that there is truth and justice in the phrase; "The cruelty of Universalism." I ought not to ask so much of your valuable space for an individual opinion. I intended to write only a note, but this much seemed necessary to set myself right.

GEO. T. SMITH.

Hongo, Tokyo, March 16th, 1891.

## "SCRUTATOR."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a recent issue of the *Japan Herald* appeared a letter bearing the *nom de plume* of "Scrutator" which for savage unjustness and brutal bluntness of expression has seldom been surpassed in the foreign prints—styled by courtesy newspapers—published in Yokohama.

Had this "Scrutator" paused to think for a moment how inexpressibly insulting and galling his utterances are to the Japanese, even he might have hesitated before sending letters such as he has for publication, unless his direct object is to stir up the bitterest animosity and hatred between the foreign residents and the natives of this country. But, not content with his first letter, this propagator of discord sends a second in which he substantially repeats and reiterates his former falsehoods, and adds till greater sting to his insults by raking up and quoting certain rules for admission to a certain college in India, which are a disgrace to humanity if they exist, and further, *nimpinin* 人非人 that he is, he now attempts to prove his words by reference to reverend gentleman whose very name is too worthy and excellent to be pronounced by the lips of "Scrutator."

The Very Reverend Bishop Bickersteth is not here to teach *morality* only to the Japanese—Buddhism did that ages ago! What the Bishop and other missionary pastors are doing is to propagate Christianity theologically:—they are evangelizing the country, and doing a great and noble work. But centuries before they came to Japan we had a sterling code of ethics to make men brave and good and women gentle and womanly, and to pretend anything to the contrary is simply to expose "Scrutator's" superficiality and crass ignorance.

"Scrutator" cunningly asks why, if Japan is so moral, does Bishop Bickersteth come here, and as he seems to need some enlightenment on the point. I would refer him to the Christian New Testament Mat. xxviii. 19th and 20th verses. Besides this, how about "Christian England," "Holy Russia" the United States of America, and other countries where, year in year out, an army of priests and prelates strive in main to create a terrestrial millennium although Europeans vaunt their "superior civilization" and call Orientals immoral?

Is it true that Japanese scholars have proved themselves less susceptible to instruction than European?—No!—emphatically no! Oxford and Cambridge and other Universities have given them well-earned degrees. The Church, the Bar, the Military and Naval, as well as Civil, Services in Japan can show a long roll of names illustrious and worthy to which we can point with pride; and as to our statesmen,—could any European Government have made greater and more radical progress than our Government has within the last quarter of a century?

Japanese women stand out in a brave phalanx throughout the ages of history, headed by the Empress Jingu, adorned by the presence of a host of talented authoresses, and given an additional charm and lustre by Her Gracious and Imperial Majesty the present Empress Haruko. To do as this poor "Scrutator" has done, to come to a free and independent country, and taking advantage of the ægis of extraterritoriality given by treaty and not by conquest (which unfortunately enables him to publish matter derogatory to the dignity of the Empire in which he has been *permitted* to reside), to flaunt his jibes and sneers in the face of a free and chivalrous people, is the very acme of bad taste and impertinence. But I feel confident that the majority of foreigners have too much good sense and tact to countenance this fellow's utterances or to share his miserable bias against race.

The only thing I can advise this superfine and pure-blooded creature "Scrutator" to do is to get out of this Empire as quickly as he can in order to avoid "contamination" by Japanese. We can do very well without such pestilential fellows here, who only set race against race and tend to make bad blood between foreigners and Japanese. There is no use staying here when steerage passages to Europe are so cheap.

A few ignorant libertines start the cry that Japan is immoral, and forthwith we are informed that the "standard of Japanese morality is low," and that the position of women is very inferior; and yet these *shaba-fusagi* know nothing about the average women of the country while pretending intimate knowledge on the subject.

It is true that our women do not aspire to take the place of the male sex; that they do not study the art of fascinating the other sex by the adjustment of busts; that they do not sport high-heeled and tight shoes, and that they do not entertain male callers in the absence of their husbands. But they are what God made them—natural, kind, and affectionate "helpmeets" to man, and in every way *womanly*.

What, may I ask, causes "Scrutator" to assume that either a Japanese or Eurasian child is an unfit companion for his superior offspring? What right has he to assume that a Japanese woman is inferior as a maid, a wife, or a mother as compared with her foreign sister? What right has he to insult Japanese womanhood, childhood, and manhood by his execrable and cursed distinctions when he has no true basis for his invidious classification outside the egotistical value he sets upon the fact of belonging to the Caucasian race? What right has he to insult and pain those Europeans who, rising superior to the meaness and pettiness displayed in the open ports, have married Japanese women and are living perfectly happy and contented in their domestic circle? Lastly, what right has he to pick out and hold up to scorn the many perfectly well-educated and well-bred Eurasian children who are now growing up in the various Settlements?

To all these questions there can only be one answer, and it is that "Scrutator" is so overwhelmed by his arrogance and self-conceit that he thanks God, as did the Pharisee of old, that he is not like unto other men, and therefore he puts a corresponding value on his family. It is that he has never met or known any of the pure and modest Japanese women who are the glory and flower of our country—virtuous, obedient, affectionate. It is that his researches and investigations have been confined to house-servants and low females; and to the painted courtesans and "hippari" inhabiting the dens of vice and dirty tea-houses surrounding the various open ports. It is that his experiences have been gained in the course of disgusting orgies, when, surrounded by panders and immoral characters composing a very pandemonium of Japanese social pariahs, he made a study, forsooth, of—our *women!* It is that a mind such as his can never rise to know the power that love has to soar above his pitiful race prejudices and little-mindedness. It is that his mind can never grasp the immeasurable span of that infinite mercy and kindness that the Eternal Buddha gave to the world and that the founder of Christianity preached and practised; although probably he ranks among those pious Englishmen who, Sunday after Sunday, pray with sanctimonious voices "Give peace in our time, oh Lord!" while doing their best to create war and strife!

On reading over the above I see passages which may lay me open to a charge of simply vilifying "Scrutator," but such is not my object at all. All I wish to do is to show that such words as his do not pass unnoticed, and to correct an impression which is perfectly false as regards Japanese morality.

There are generally two sides to every question, and after "Scrutator" pretends to be the mouthpiece of foreigners, it is only fair to let the World see a Japanese side also.

Thanking you for inserting this letter, and enclosing my card.

Yours respectfully,

A JAPANESE SHIZOKU.

Yokohama, Meiji 24th Year, 3rd Month 23rd Day.

---

A curious phenomenon was seen during the recent severe weather at Folkestone. A ship laden with oil sank in collision off Hythe, and the sea was covered with oil. This produced a strange effect upon the wild fowl, which is always plentiful in severe weather. Wild duck, teal, and other birds were easily caught, as they were quite unable to fly, their plumage being saturated with oil.

## *THE SPECIAL BUDGET.*

The financial estimates for the 24th fiscal year relating to expenditure and revenue of a special nature have been promulgated as follow:—

### HOME DEPARTMENT.

RAILWAYS OF THE GOVERNMENT.

REVENUE.

| | |
|---|---|
| 1. Receipts from Railways ..... | 6,420,515.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses for Railways..... | 3,970,515.000 |

### FINANCIAL DEPARTMENT.

MINT.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Mint ..... | 1,810,430.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses of the Mint ..... | 1,596,358.000 |

PRINTING BUREAU.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Printing Bureau ..... | 774,282.265 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses of the Printing Bureau ..... | 712,796.937 |

MINES OF HIROSHIMA.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Hiroshima Mines ..... | 159,300.241 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses of the Hiroshima Mines ..... | 153,947.228 |

FUND FOR CONSOLIDATING PUBLIC LOANS.

REVENUE.

| | |
|---|---|
| 1. Fund for consolidating Public Loans ..... | 15,000,000.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Repayment of Public Loans ... | 14,899,650.000 |
| 2. Amount transferred from Extraordinary Revenue ..... | 100,350.000 |
| Total ..... | 15,000,000.000 |

FUND FOR THE EXCHANGE OF PAPER MONEY.

REVENUE.

| | |
|---|---|
| 1. Fund for the exchange of Paper Money ..... | 1,000,000.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenditure from the fund for the exchange of Paper Money... | 1,000,000.000 |

CENTRAL FAMINE RELIEF FUND.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Central Famine Relief Fund ..... | 178,871.186 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenditure from the Central Famine Relief Fund ..... | 163,100.000 |

INTEREST ON DEPOSITS IN THE SAVINGS BUREAU.

REVENUE.

| | |
|---|---|
| 1. Receipts from interest of deposited money ..... | 1,444,080.376 |

EXPENDITURE.

| | |
|---|---|
| 1. Amount transferred to ordinary yearly expenditure ..... | 1,370,870.255 |

### WAR DEPARTMENT.

TOKYO ARSENAL.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Tokyo Arsenal. | 1,511,033.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses of the Tokyo Arsenal. | 1,511,033.000 |

OSAKA ARSENAL.

REVENUE.

| | |
|---|---|
| 1. Receipts from the Osaka Arsenal | 1,056,216.000 |

EXPENDITURE.

| | |
|---|---|
| 1. Expenses of the Osaka Arsenal. | 1,056,216.000 |

SENJU WOOLEN MILL.

REVENUE.

## *LAUNCH AT YOKOSUKA.*

On Tuesday, in presence of His Majesty the Emperor, the *Hashidate Kan*, a new vessel designed for purposes of coast defence, was launched at the Yokosuka Building Yard. The *Hashidate Kan* is a steel ship, the construction of which was begun in August, 1889; she is 90 metres in length, 15.540 in beam, and has a draught of 6.050 metres; her displacement being 4,277 tons. Her engines are compound horizontal, developing, under forced draught, 5,470 horse-power, steam being supplied from six cylindrical boilers working at a pressure of 175 lbs. Her speed will be about 16 knots; she has a coal bunker capacity of 405 tons, and her full complement will consist of 360 men. The *Hashidate* has a low turret forward for one big gun, and three sponsons on each side, probably for quick firing guns. She will be schooner-rigged, with two masts, and will be driven by twin screws. She is provided with tubes for the discharge of torpedoes.

The Emperor left Tokyo at 12.55 on Tuesday, the departure of the Imperial party from Shimbashi Station being marked by a salute from the ships of war at Shinagawa. Arriving at Yokohama about half-past one, His Majesty rested for a while and then resumed the journey by rail to Yokosuka, which was reached about half-past two, the Emperor driving in the Imperial carriage to the Chinjufu or Arsenal Offices. Thither a large number of invited guests, consisting of the officers of the *Hyacinth*, the *Alliance* (then in the port of Yokosuka) the *Volturno*, and of many Japanese vessels, with a contingent of other officials, had

Digitized by Google

repaired at an earlier hour. After a short rest, His Majesty gave audience to the chief officials present, and to several ladies.

Shortly before four o'clock all those invited by the Dockyard authorities proceeded to the building yard, where pavilions were erected, the stand for the Imperial party being exactly opposite the bows of the ship. The Emperor, who was accompanied by Marquis Tokudaiji, Grand Chamberlain, Prince Sadanaru, Viscount Hijikata, Minister of the Imperial Household, Dr. Ikeda, an Imperial Physician, Colonel Yoneda, Chamberlain, and other officials, arrived on the stand about four, and the ceremony was at once begun by the reading of an Imperial address sanctioning the launch of the *Hashidate Kan*. This was done by Viscount Kabayama, Minister of Marine, who then gave the signal to Mr. Saso, Chief of Construction in the Dockyard. A very few minutes sufficed to free the ship from the frame work that prevented her from slipping down the ways, and she glided with momentarily increasing speed into the water. The launch was watched with evident interest by His Majesty, who had risen to his feet while his address was being read, but resumed his seat while the shores were being knocked away. As the *Hashidate* began to move the usual paper globe containing pigeons and coloured scraps was burst, and its contents fluttered about for a brief space in the eddies of air left by the retreating vessel, while the whistles of all the launches in the port joined in the production of one sustained note, and the Imperial Marine Band contributed triumphant strains. Having witnessed the successful launch, His Majesty rose and, with a final look in the direction of the *Hashidate*, which still swayed with a gentle motion resulting from her plunge along the ways and into the waters of the basin, left the stand and returned to the Arsenal Office, whence he emerged some half an hour later, and drove to the station *en route* to Tokyo.

The weather was all that could be wished. The invited guests were for the most part conveyed to Yokosuka by the *Shinten-go*, a torpedo vessel of considerable accommodation attached to the Dockyard, and under the command of Mr. Kasama. The trip was a most enjoyable one, the slight sea being insufficent to cause any one inconvenience, the wind a bracing breeze, and the sun genially warm. The return was marked by a much lower temperature, the departure from the dock having being delayed, on account of the usual tardy souls, till a late hour.

Prince Arisugawa Taruhito was present and witnessed the launch, and Viscount Enomoto, Count Saigo, Count Oyama, and Admirals S. Ito, and Y. Ito, and Arichi were among the spectators.

Vice-Admiral Viscount Nirei and Capt. Shibayama, entertained their guests after the launch, at tiffin in one of the draughting lofts, where the usual hospitality of the Yokosuka officials was dispensed with a lavish hand. As we have already indicated, the foreign ships in port were represented by their officers, and among the few other foreigners present was Captain Ingles, R.N., of the Naval Department.

## *YOKOHAMA SAILING CLUB.*

The annual meeting of members of the Yokohama Sailing Club took place on Wednesday. Among those present were Messrs. J. F. Lowder, A. Owston, C. D. West, Unite, A. M. Forbes, W. N. Wright, H. G. Gorman, Archer, Schmidt, J. B. Gibbs, jun., Captain Owston, Messrs. C. S. Averill, Balk, Marshall, Beart, W. Young, S. C. Nash, &c.

On the motion of Professor WEST, seconded by Mr. OWSTON, Mr. Lowder took the chair.

The minutes of the previous meeting were read.

Mr. A. OWSTON said, in reference to an allusion in the minutes to the new Harbour Works, he had written to the Governor and had received the following reply:—

Kanagawa Kencho, April 8th, 1890.

SIR,—In reply to your letter of the 28th ult., with regard to the construction of a breakwater to form a suitable shelter and accommodation for yachts and boats belonging to the Yokohama Sailing Club and others, and the erection of a club-house on the end of the breakwater, I beg to state that inasmuch as the Harbour Works have only just been commenced, I can only say at the present moment that your proposal will be duly considered when the time arrives at some future date for the promulgation of the Harbour Regulations, &c.

I am, Sir, your obedient servant,

N. MITSUHASHI,
Secretary.

The CHAIRMAN said they had before them the report of the Committee, which as usual was as exhaustive as it was interesting. He thought perhaps it was rather a pity that they should take it as read, because of its great interest, but they had all perused it, and as they had other business before them he was afraid they would have to follow that course. Having described the business to come before the meeting, Mr. Lowder said he gathered from the report that the general business would be to consider certain suggestions brought forward by the committee in in their report, one passage of which read:—

Now that there is a sufficient number of craft in the 17 rating class or near that rating, it would perhaps be well to offer prizes for boats of some rating below 17, which might collect several craft too small to complete in the 17 rating class with any fair chance of success. It would also be a matter of convenience to divide the Club's fleet into Division A, containing the 30, 32, 26 and 21 Raters, and Division B, containing the 17 Raters and under. This will be a subject for discussion at the Annual General Meeting.

Another question would be that of the Club's Course, referred to in the report as follows:—

The operations of the Harbour Works will this year necessitate a change in the Club Course, and plans will be submitted for discussion at the annual meeting. The increase of yachting as a sport here is much hampered at present by the want of a proper anchorage and of landing facilities, but with the growth of the breakwaters now building and some suitable provision for yachts and pleasure craft within their shelter we look for a much increased interest in this sport.

That he thought would be the business before the meeting. Before sitting down, he suggested for the consideration of the Committee the advisability of giving prizes of a character somewhat different from those usually presented. While looking over an album of photographs the other day he saw some excellent views of yachts under full sail, and it occurred to him that it would be well if some enterprising artists were requested to take photographs of every boat in the Club's fleet, under full sail. An album containing such photographs would, he thought, form a most interesting and valuable prize, which he felt sure members of the Club would be glad to possess.

On the motion of Mr. FORBES, seconded by Professor WEST, the report was adopted.

A ballot for the Committee was then taken and resulted in the election of the old Committee—Messrs. W. W. Campbell, J. O. Averill, jun., A. Owston, E. Beart, and H. J. Gorman, the Chairman congratulating the members on the selection they had made.—(Applause.)

The CHAIRMAN said the first business was the discussion of the Committee's suggestion as to prizes for boats under 17 rating.

Mr. BEART pointed out that under the rules the present ratings and dimensions were fixed for three years, and therefore could not be altered. But though the classes could not be altered still a prize might be given to smaller boats.

In the course of the discussion which followed,

Mr. A. OWSTON said he was in favour of encouraging such craft. Such a class had been formed in Southampton, about equal to 15 rating, and they were considered very wholesome boats. With a harbour here there would be sport for such boats, in which the younger members of the community might join. The small boats would of course race with the 17 raters, and would have a chance of winning record points in that class, but would also have special prizes given now and then.

The question then dropped, the understanding being that the Committee should, if they saw fit, offer special prizes for such boats.

Mr. A OWSTON brought up the proposal that a prize, to be got up by special subscription, of from $100 to $150, should be given for an interport match. It was impossible in view of the long voyage to get up a match for large boats, but for such a prize as he suggested Kobe boat sailers might see their way to build small boats and send them up by steamer.

This point gave rise to some discussion, and the matter was eventually also left to the Committee.

The proposal in the report to class the boats as A and B divisions was approved of.

The question of changing the Club Course then came up,

The CHAIRMAN expressing the opinion that alteration of the sailing rules did not require a special meeting.

Mr. A. OWSTON suggested the following as a new Club Course, the old Home Course being impracticable in consequence of the Harbour Works:—Home Course.—From an imaginary line between the Bathing Barge and a flag-boat, around the E. end of E. breakwater, and a flag-boat off Tsurumi, then returning around a flag-boat off Mandarin Bluff, the E. end of E. breakwater and back to a winning line between the Bathing Barge and end of the French Hatoba—distance 8.50 miles.

On the motion of Mr. BEART, seconded by Mr. FORBES, it was decided, pending the completion of the Harbour Works, to leave to the Committee to adopt experimental courses with the view of determining on that which would be most suitable.

A vote of thanks, accorded to the Chairman on the motion of Captain OWSTON, terminated the proceedings.

## *THE BEAR HUNT ON FUJI-SAN.*

BY A.M.

Professor Wilson resolved to give a party to the bachelors,—that is to say he determined to invite all and sundry of his acquaintances who either did not have European helpmeets at all, or who did have, but who for the nonce were resignedly wrestling with a spell of the festive martrydom of grass-widowhood. So he opened the Directory and sat down to hammer out invitations to an "informal," or as his misspelling machine insisted on putting it, an "infernal" supper. For that type-writer of his, which he manipulates like a Morse telegraph or a Singer's sewing-machine, has its own peculiar ideas of orthography. It seems to have been originally built on lines purely phonetic; but the Professor has been trying to convert it from the error of its ways for the past two years and has only succeeded in hopelessly mixing the drink, and in making it turn out stuff that looks like a Japanese comp.'s first shot at setting up badly scribbled copy. However, on this occasion most of the *invités* understood what was meant, and most accepted. I didn't get a card because the Professor bailed me up in the compound, and asked me by word of mouth.

"Black-coat?" I inquired.

"Black-coat, or anything you like, from that up to a *fundoshi*, or both included and nothing besides," he blurted out at me over his shoulder, as he shambled off to his lecture with a cudgel as big as himself, and a pair of boots that once had had heels.

Dudishness is not Wilson's strong point. When he first came to Japan he *did* have a bell-topper and actually put it on once. That was the first time he went to meet his "boss," but he made the concession to propriety and Philistinism with much inward groaning and travailing of spirit. When he went home, he went outside to spoil the nests in his fowl-yard, and returned with their contents in the chimney pot. He put it down on the settee in his study, and then in a fit of absent mindedness he tried to seat himself on the top of it. Since that date, as a married Scotch Professor once plaintively and sombrely confided to me, there has been a steady sartorial decline going on visibly in Wilson. Japan, you see, is a Capua. But it acts differently on different natures. In some folks it is the intellectual grip that becomes feeble and flaccid. In other cases it is liver that is the matter. Some men have been known to start newspapers, collect all the subscriptions and the ads. for a year in advance and stop publication after the first issue. Others have been known to pocket the contents of the church plate and then skip off to 'Frisco for the welfare of their souls and the good of their health. Drink has done for another lot, while too much geisha and shamisen have often caused the folks at the Rokumei-kwan to shake their heads and gently murmur over their emptied glasses, "Another good man gone wrong." Others have blown out their brains, and still others have taken liberties with their jugulars. Some of my scientific friends say its electricity; I think it is original sin.

Anyhow, it is so in Wilson's case most undoubtedly. It was that fig-leaf apron business that was the first and fatal indication of pristine moral obliquity in human-kind, and it is in the matter of clothes that Wilson has gone all to the devil.

But that's neither here nor there, and has nothing to do with the supper. That was a grand affair and no mistake, for there's no meanness in Wilson. When he does take a thing in hand he is not the man to make two bites of a cherry. He set all his household to work, and made them work like so many niggers. He piled all his chairs and tables into his studio and sent out for more. He had in all the cook's sisters and cousins and female relatives to the fourth degree removed, and had them wait at table. They were all arrayed in the gorgeousness of brand new *kimono* and *obi*, and looked so fetching that you began to understand how it was that Cook-san was so beastly ugly himself. There had been so much beauty lavished on the other members of the family that there was none, not even a redeeming grain, left for him. For he was hideous, and when he did condescend to grin audibly, you couldn't help mistaking him for Satan in a good humour. He is a stout, squat-set individual, with a shock bullet-head glued on to his shoulders in much the same fashion as decapitated Japanese criminals' top-storeys used to be stuck on to the pillory. His eyes are always heavy and fish-like, wonderfully eloquent of low cunning and copious libations of sake. Sometimes it's sherry, Wilson says, and he should know, because he pays the bill. But the beast could *cook*, and he did cook that

Digitized by Google

evening and no mistake, and covered himself with gravy and glory all over.

It didn't take long to thaw the ice and to set the guests' tongue's a-wagging. It sounded like the ground-floor of the Tower of Babel. There was a feast of wit and flow of soul in five different languages, without counting dialects. *In primis* there were Doctors Horn and Egmont, who carry about locked up in the secret cupboards of their consciences all the fashionable maladies of Tokyo. They know all about this Ambassador's gouty toe, and all about the root of that Minister's chronic ill-temper, but that has nothing to do with the story. Although they're Deutsch they can both tell stories in English that make you fall off your seat with cackling. Then there was an Italian Count who was fully up to the form of the Apostles at Pentecost. He told *risqué* yarns and cracked jokes in all the languages of Europe and in several of those of Asia besides. He fell back upon the resources of Oriental philology when his subject matter became too indecent for artistic treatment in the languages of the West. I believe that was because he didn't know Latin. Latin of course is *the* tongue in which you can express all kinds of beastlinesses without a blush. Gibbon gives us chunks of high smelling indecency wrapped up in Latin foot-notes, and Professor Chamberlain ventures on some first-class realism with its aid in his translation of the *Kojiki*. Truly a glorious thing is Latin,—it is a high and lofty privilege to be acquainted with it.

There was Rossignol who had served his time in the French army in Tunis as a full-private. He too "had been a corporal wanst, but had been rejuiced." A Japanese Professor of economics who had also come out high in the Moral Science Tripos at Cambridge was in the Vice-chair, and made things hum in his own immediate neighbourhood. There were besides a stray Irishman or two with just "a broth av a brogue," two portly specimens of John Bull that might have stepped out of one of Punch's cartoons, and the ubiquitous and much travelled Scot. You can scarcely heave a brick in the streets of any Treaty-port in the East without hitting a "Sandy" and getting cursed in Doric for your kindness. The chances are, furthermore, that the anathema will be couched in the Aberdeen dialect. I like to hear the "twang" of it, even when it is speaking Japanese. Aberdeen Scotch and *Yedoko no kotoba* make a cross that effectually puts a set on Riyobu-shinto. Then there was a tall, lanky American, with a well shaped head on his shoulders, and a handsome dark Vandyke face that somehow in spite of its good looks gave you a misty notion of dyspepsia or unrequited affection. It was altogether a splendid and magnificient function, and we were soon all well on the way to sworn universal brotherhood.

When we had all got about half drunk Wilson proposed an adjournment to the drawing room for a "little entertainment" he had provided for us. We adjourned. It was a Japanese conjuror and ventriloquist, with his assistants that he let loose upon us. They were splendid and first-rate, and we were all hopelessly broken up! There was not a sound in the heavens above, or in the earth beneath, or in the waters under the earth that they did not reproduce for our edification and amusement. They gave us an imitation of the rooks and crows in parliament assembled, and all wanting to speak at once, like the legislators in the Japanese Diet who want to reduce every body's salary but their own. Then they gave us doves a-cooing and tom tits a-wooing, and you began to feel awkward, just as you are apt to do when connubial partners get kissing and hugging and sitting on each other's knees when you call in on an afternoon to leave your pasteboard. Next a dog that was being slowly tortured to death in the interests of science in the medical compound adjoining began to howl, as they docked another inch of his tail, and immediately the room was sobbing and moaning with a pathetic canine appeal to the Society for the Prevention of Cruelty to Animals. Anon we were treated to something that licked the chorus of the Batrachoi of Aristophanes into a cocked hat, and began involuntarily to prospect for the second Plague of Egypt in our boots and our breeches pockets. Next the place seemed turned into a saw-pit, and then into a fowl-yard. This was succeeded by the beauty in the bellow of the blast, and the grandeur in the growling of the gale, and the eloquent outpouring when the lion is a-roaring, and the tiger is a-lashing of his tail. But the final thing was the grizzly; it was the plantegrade bully of the Rockies to the life.

Rossy was sitting near to me while all this was going on. I noticed he had stopped laughing and was serious. That meant he had put on his thinking cap, and when Rossy puts on his thinking-cap you may lay heavy odds that there is some devilment or other getting hatched, and yet not lose your money.

"By Jingo!" he said at last, coming down on my thigh with a blow that might have been a wallop from a shark's tail, "I see the thin end of a thousand dollars sticking out there!"

I remarked that I'd much rather see his liberality exercised in parting with them than with his friendly caresses. For the brute hits like a twenty-five ton steam-hammer that's got neither conscience nor consideration for the feelings of what it comes down upon.

However, I got over my grumpiness and asked for further information. He said the thing wasn't for publication, and that besides he wouldn't trust any newspaper man out of jail. I knew it was no use trying to pump him just then, so I gave him up and turned my attention sole and undivided to the performance.

Well, the party broke up, and some of us went home, and some didn't. The last thing that I remember was a bleared and blurred vision of our host, balancing himself first on one foot and then on the other as he tried to mix a bucketful of whisky and soda for the ventriloquist. He did finally succeed in filling up all the infinity of vacuum in his seemingly sponge-like and bottomless stomach, and as I dropped off into a fuddled dose I fancied I saw the conjurer on the flat of his back, helplessly waggling his dumpy hands, and trying to crow like an impotent and superannuated rooster. Altogether the function was a howling success.

II.

Mr. Coolidge, of Boston—the man with the Vandyke face and the look of dyspepsia *cum* unrequited affection referred to above—was really in a bad way. He was in love; hopelessly over ears and far beyond the summit of his stuck-up collar, submerged in the mire of the tender passion. And the worst of it was that he was stuck, bogged, utterly "laired" as a Scotchman would say. He couldn't get back, though he did once try all he knew to make a masterly advance in that direction. No more could he get any forwarder. He simply struggled weltering there vainly trying perchance to find bottom in the slough of amorous despond.

It was a Miss Kitty Dawson that was the matter. She was neither English nor American; she was Canadian, a B.A. a Mus. B. and some folks enviously inclined declared a B.S., which in her case was short for Blue-stocking and not for Brandy and soda as it usually is. She could play, she could sing, she could compose oratorios. She could sketch, she could paint,—pictures I mean and not her face, for that never needed the laying on of artificial colours, her own natural one being always as fresh as any rose,—and she could talk philosophy and write books and newspaper articles. It was this last accomplishment of hers that accounted for her presence in Japan. She had come over by the C.P.S.S. to get impressions and to retail them at so much per column to a syndicate of wideawake journalists. I don't know whether she could cook or sew the buttons on her husband's shirts when she got one; but my idea is that in a case like hers it really doesn't much matter. You see there is such a thing as a division of labour, and it's outrageous to expect a female Admirable Crichton to excel in the hod-work of domestic drudgery.

Coolidge had heard of her and had contrived to get introduced. He next contrived to fall in love, as already delicately insinuated. He then tried to contrive to marry her, but that wasn't so easy. She didn't want to marry—at least just then. She said so, and as much as delicately hinted that HE—the right man, that is—had not yet come along. Now although that was bad, it was not utterly crushing. Anyhow it was a great deal less unsatisfactory than the Though I-cannot-be-yours-I-will-never-wed-another sort of thing.

There's something radically wrong with the moral make-up of a girl who is mean enough to come this high-falutin' sort of nonsense. It strikes one as being altogether too beastly selfish and dog-in-the-mangery. But Miss Kitty wasn't built that way; she was honest, and in spite of her fine head, had a first-class digestion and was altogether a healthy and well-balanced young woman, mentally morally, and physically.

Now Mr. Coolidge had a sister, and although sisters are usually only first-class nuisances, there are exceptions. The other fellow's sisters for example are likely to be exceptions. Now Coolidge found his sister useful and helpful. She was a bosom friend of Miss Kitty's, and the mill-dam in which the current of her confidence emptied itself. Therefore when she hinted to Coolidge that Miss Kitty had made up her mind to call no one lord and master who had not shown himself a hero, he was fully inclined to believe it, and felt hot and cold by turns all over. He wasn't a coward; no one could say that. But then opportunities of picking up a Humane Society's Medal don't offer themselves every morning, and it was no use going loafing round day after day in the wake of Kitty on the off-chance of a hoodlum insulting her, and giving a fellow a show of knocking him into immortal smash for his pains.

But at the same time Coolidge made a mem. of the thing, and waited. For he was no fool, was Coolidge. He didn't make himself too cheap by any means. He was in earnest and was bent on winning, and he saw pretty soon that Miss Dawson was not the sort of girl that one could afford to make an ass of oneself over, if she was really to be the means of making one foreswear bachelorhood for good. So he quietly dropped all protestations of the tender passion, and worked the friendship racket for all that it was worth. He made himself useful in a hundred ways, and all so unobtrusively that Miss Dawson took the whole thing quite *au naturel*.

When she got her commission from the syndicate to write up the East it was not surprising for her to learn that Mr. Coolidge had business in that quarter also. What did surprise her though was to learn just as she was starting that he was one of her employers, and that it was to his influence mainly that she owed her present trip. When she heard this she sat down and resting her pretty dimpled chin in the palm of her left hand—left elbow resting on left knee—indulged in the luxury of five minutes consecutive thought. On that speaking countenance of hers there was an irregular march of the scud of discontent, varied by detachments of pleasing thoughts. When she got up there was just the suspicion of tenderness in her looks, and of what one who did'nt know her would have called the love-light in her eyes. But it wasn't that, or at least if it was she would have indignantly denied it. But she did not, as she at first thought she intended to do, write to give up her commission. She was too sensible for that, and she had now been the best part of two months in Japan.

She hated the rush and the racket and the bustle of hotels and wanted a quiet place. A peripatetic journalist or artist has rough times of it in Japanese hotels, having as a rule to submit to being interviewed twice every twenty-four hours, and to being made to talk all sorts of nonsense in perpendicular columns of "chops" and the foot-prints of a fossil fowl-yard in the vernacular press of the day following. So she was wise and went to board with Rossy and his wife. Coolidge soon discovered her retreat, and as a natural thing of course quickly succeeded in making Rossy's acquaintance. It is not very difficult to do that—except perhaps for a bill-collector or a missionary. Coolidge and Rossy soon got beyond a mere nodding acquaintance, and the former made the latter a confident in his troubles. It was balm in Gilead for Coolidge to find a sympathetic listener as he unbosomed himself of his hopeless passion. Sixteenth century folks used to ease themselves of their despair by slashing out the initials of their flame on live oak-trees and so forth, but that sort of thing is now played out. It takes a lot of imagination to get much comfort out of a chunk of wood, even though there's sap in it. Rossy was much ahead of any piece of timber for purposes of this nature. For he had fellow-feeling and sensibility and—oh! lots of things that were very consoling in a case of this description.

Well, one day, Rossy startled Vandyke out of the bottomless pit of despair, by getting up and offering to lay even money with him that he'd be a Benedict within six months, the stakes to be handed over, either at the end of that period, in case Miss Kitty was still rushing around like Diana in petticoats and blue spectacles in the guise of a literary globe-trotter, or otherwise, on the day of the execution. Coolidge looked incredulous and then Rossy put it another way.

"Suppose the thing were fixed for you, would you be ready to part with a thousand dollars?"

"A thousand dollars! Two of them, and glad to make the bargain."

"All right!" returned Rossy. "The other 'thou' will do to cover expenses. Now you just put yourself in my hands and leave it entirely to me. And mind when I'm skipper, there's to be no back-talk on board *my* boat."

Next morning at breakfast, Miss Dawson suddenly asked Rossy where he had got that lovely bear-skin she had seen in the room downstairs. Rossy shifted uneasily on his seat and said she must be mistaken; there was no such thing in the house that he knew of. Now that was not altogether a lie, but it wasn't very far off one, for there was a splendid pelt of a defunct grizzly in the jinrikisha shed adjoining at that very moment. But it didn't suit him to say go.

"Why, talking of bears now, this *is* most interesting. But surely there must be a mistake. Just read that."

She handed over that morning's copy of the

Digitized by Google

*Snorter*, with her finger at a sensational heading of "Pilgrims Chased by a Grizzly on Fuji-san." If the heading was sensational it was well backed up by the text that followed. It was vivid and graphic and picturesque and dramatic,—all that it was, and more. It was really a fine piece of writing, although I say it that shouldn't, for it was myself that wrote it, and jolly well paid I was for doing it. I got 50 *yen* per column for it, five *yen* being ordinary *Snorter* rates, and the other 45 *yen* being for the skillful exercise of imagination.

"Well now," answered Rossy "that is strange! Of course there are no grizzlies in Japan, except those imported by the showman. Only now when I come to think of it, that's just where the mischief comes from. A week or so back, I saw in the *Yomiuri Shimbun* that a *shiroi-kuma* had escaped from a menagerie that was trying to cozen the heathen out of their cents in Shizuoka and that it had disappeared in the forest at the base of Fuji."

"Oh that's in Yoritomo's old hunting-park, is it not? How romantic," said Miss Kitty clapping her hands.

"Romantic, but not for the man or woman that meets his bearship I should say! And talking of that now, what about your trip to Fuji? Of course you can't go alone. That's all nonsense. Certainly there may be exaggeration in this bear-story, but it would be awkward for you to get chased. Of course I can't go with you on the 16th, because I have business that will keep me away from Tokyo all that week. But now that I think of it, I can fix the thing, for a good friend of mine, and a compatriot of yours is talking of doing the grind about the same date. Now I'll see him, and make certain. I'll get coolies for you and put you up to all the wrinkles, and do all I know to get you up and down without inconvenience. Shall we say settled?"

After some little tacking and beating—for Miss Dawson was a woman—it was agreed that Rossy should do as he proposed.

III.

The landlords of Subashiri, I was going to say, are the biggest and most voracious sharks out of the sea, but that would have been speaking altogether too fast. Where the globe-trother most doth congregate, there the land tends to become sharkiest. In Hakone it is bad, in Enoshima it is worse, and in Nikko it is simply awful. But all these plague spots are as flea-bites alongside of the Fuji district. There the tariff seems to rise in direct proportion to the elevation of the ground. At Gotemba you find they will charge you about twice as much as they would a fellow-countrymen of their own. But if you are not a consummate first-class ass, you won't think of raising ructions over that. The supposition is that you give extra trouble, or at least that if you don't, you ought to. Besides in the extra impost there is a nice little sop to your vanity: by implication the local Boniface sets you down as a citizen of a nation of millionaires, and up to a certain point it is not at all unpleasant to be mistaken for a peripatetic Vanderbilt. But the line has to be drawn somewhere, and when it comes, as it does come in the huts at the top of Fuji, to paying just six times as much as your Japanese friend for fare and accommodation a trifle inferior to his, you begin to fancy that it is possible after all to set too high a value upon the accident of being born white and upon the privilege of paying income-tax to Her Gracious and upon the other benefits and blessings of the British Constitution.

Well, these Subashiri folks, holding as they do an intermediate position as regards elevation, have also an intermediate tariff. They put it on stiff, very stiff to begin with, and then expect you to cover up the enormity with a top-dressing of *chadai*. That was what they tried with Mr. Coolidge and Miss Dawson's party at all events, and possibly too with others. For the good of the hotel treasury, it is to be hoped that the swindle was attended with more success in the case of "others" than it was when an attempt was made to play it off on Coolidge and Dawson.

The mischief happened in this wise. Rossy had said he would get a trustworthy coolie as guide for the party, and he had been as good as his word. The coolie had met them at Tokyo station and had been a veritable guardian angel ever since. So when the Subashiri landlord showed signs of a disposition to fleece, he met with vehement and outspoken opposition from a quarter totally unexpected. However, he fancied he saw what the matter was, and talked of a commission for the guide. To his astonishment this only made matters worse, and after a long and vigorous *yakamashii*, he had at last to sigh and content himself with submitting to the disgrace of presenting an honest and a reasonable bill. He then gave himself up to a profound consideration of the enormity of honesty being found in a guide for the Fuji district. He had just smoked and knocked out his sixteenth pipeful in coming to the conclusion that this coolie must be an outrageous *baka* not to have accepted his proferred tip for an open show of doing a squeeze, when the horse-hirer from up the street came in with a similar story about the hiring of ponies to go to Umagayeshi.

"It was simply disgraceful; such a simpleton as this ought to be taken in hand by his friends and locked up in a lunatic asylum. And then the rudeness of the fellow, too! The way he talked to one and the names he misnamed things were really too disgraceful. Certainly he must have been very highly bribed by the foreigner!"

Meanwhile Miss Dawson and her escort were well on their way towards Umagayeshi, which they reached at last without any startling adventure. There the horses were sent back and the party, consisting of the two Europeans, the coolie guide from Tokyo, and two of the *goriki* or mountain coolies of the locality addressed themselves to the ascent.

After entering on the bridle-track above Umagayeshi, the road gets steepish, in some pinches just steep enough to justify a man in placing a a strong right arm around a slender waist to help its owner along her onward and upward passage. In one or two very stiffish spots Mr. Coolidge had presumed to offer this attention without any unpleasant consequences following thereupon. Only Miss Dawson blushed furiously when her eye chanced to light upon the snigger that was breaking the Tokyo coolie's phiz all into fissures, like a landscape touched up by a baby earthquake. At the next semi-vertical she gently slid uphill out of Mr. Coolidge's forwarding embrace, and Mr. C. instantly fell to blessing the coolie *sotto voce*, in the style adopted by the Mt. Ebal division of the offspring of Jacob. The coolie must have caught or guessed the burden of certain of his remarks, for the grin on his features now began at one ear and ran right round to the other.

Miss Dawson, besides being a really clever girl had a good allowance of the indescribable gift that makes a good pressman. One ingredient in it is a power of quiet and unobtrusive observation, the knack of getting folks to set you down as a nobody or as a born idiot and of just taking them all to tiny little pieces and sizing them up so nicely when you've successfully lulled them into the notion that you aren't worth watching. Not that Miss Dawson could ever be taken for nobody, much less for a born fool,—the disguise would have been altogether beyond her capacity, great as that in some things undoubtedly was, yet she could observe without attracting attention, or rousing the suspicion of the individual she happened to honour with her attention. So when they reached the top of the flight of steps leading into the little temple of Ko-mitake, where the priest seems to drag out a sinful and miserable existence by branding cudgels with spidery legends for the pilgrims, she sat down with a flop and a catching of the breath, and inquired of Coolidge when she caught her wind if he hadn't noticed anything peculiar in that coolie.

"Only that he is deucedly impudent and forward! I have a good mind to ——"

"Now, now you are all wrong! I'm sure he is very nice. And do you know I think I must have seen somebody very like him before. And do you notice that he actually *walks* fair toe-and-heel work, not a hobble-hobble-jerky up-and-down forward motion like a man brought up on chop-sticks and Japanese *geta* from his tender childhood. Don't you notice also—Good Heavens! what is all this?"

She might well ask. A terrific babel of yells and shouts and terrified screams echoed down through the wood, and in an instant a long string of twenty or thirty white-robed pilgrims tore like a whirlwind in at one end of the little shrine and out at the other and down the steps in front of it, with the bells they had tied to their waists clashing and jangling as if the whole country side were in flames.

"*Kuma, kuma, shiroi kuma*," they shouted in mad fear as they rushed down the ricketty wooden steps in a herd like the devil-possessed Gadarene swine into the sea. The priest and the customer with whom he was chaffering about the price of a cudgel, cast one terrified glance over their shoulders and then joined in the general uproar, and made for the door as if a band of *soshi* had just got in by the window. For it was something even worse than *soshi* that was at the bottom of it all. Miss Dawson had just time to catch one glance of a huge, clumsy, unwieldy monster of the Rockies advancing upon her pawing and grunting, and to see Coolidge snap out a six-shooter and open fire, before she fell off in a dead faint into his arms.

* * * * * * * * *

About a fortnight after Rossy came into the office in such a guise that I could scarcely recognise him. For the glory of Rossy was his moustache, and alas his moustache had disappeared! Poor old Rossy! he did look very glum, and melancholy and generally cut-up and out-of-sorts. Now it is no good being hard upon a poor devil when you see he is so hopelessly foundered as he was. Anyhow, if you are mean enough to insist on chaffing him, at least give him a drink to begin with. So I gave him the best stuff I had in the house and then he allowed the cat to get out of the bag by the thousandth part of an inch at a time.

"Of course," he wound up, "when I saw that she was landed all right I made off after the bear, for as he turned round to make off and got Coolidge's third fire just right astern of him, the brute gave vent to a yell that could come from nothing short of a human hit in a tender place. I ran down and found him lying in a clump of bushes moaning and bleeding like a homicided porker. Of course the other business came off all right; I saw the execution—the wedding I mean at the American Legation this morning."

I remarked that there must have been money in the affair.

"Yes," said Rossy meditatively stroking the sprouts of his up-coming moustache, "yes, there *was* money in the affair, I admit, but there was also a deuced deal of real hard work. Now, just look here,—first there were fifty dollars for that bear-skin,—it was the only one to be got for love or money in Yokohama at the time. Then there was fifty dollars to you for writing that stuff about Pilgrims and Bears on Fuji,—it was just about fifty times as much as it was worth. Then there was the hire of that ventriloquist codger,—three days at ten *yen* a day which with his expenses, *sake*, and what not, just came to thirty-nine *yen* twenty-six *sen* four *rin*. And then that confounded fool Coolidge must needs forget to draw the bullet from the third cartridge he slapped into his six-shooter. That cost me just 500 *yen*! He hit the poor old chap in a soft spot behind, and there was the very devil to pay. He meant to have us all up for every offence from murder down to shooting out of Treaty limits, and of course that wouldn't have suited my own particular book at all. So after a deal of parleying and lying and general untruthfulness, we at last compromised the affair for the figure named. When the old fellow gave me a receipt he grinned and said he wouldn't at all mind making a target of himself at that rate once a month, because it wouldn't interfere with his other business! That old brute had me properly, and it takes a pretty good man to get the drop on Lucien Rossignol, let me tell you! Then there were my own expenses,—loss of time, mental anxiety, and so forth,—say another 100 *yen*. Now let me see," he went on taking out his pocket-book and jotting down figures. "There's fifty and fifty; that's a hundred, and thirty-nine, say forty—one hundred and forty—six hundred and forty; seven hundred and forty in all. That leaves something like a matter of twelve sixty to the good. But it has been dearly earned—confoundedly dearly earned. The peace and harmony of the Rossignol household have gone for ever since the day I scraped off my moustache to go playing the goat on the slopes of Fuji-san!"

## *AUDIENCE WITH THE EMPEROR OF CHINA.*

The *N.C. Daily News* of the 19th inst. has the following comments on the audience of the Foreign Ministers at Peking with his Imperial Majesty the Emperor Kuang Sü:—

In another column will be found a full report of the address of the *Doyen* of the Diplomatic Body to the Emperor, with the Emperor's reply, at the audience on the 5th of March instant, and the address of the *Doyen* with Prince Ching's reply at the banquet on the following day. They are, of course, formal addresses, and the terms in which they are couched must have been carefully considered, especially on the Chinese side. The foreign Ministers, after definitely refusing orally and in writing to be received in the Tze Kuang Ko, had given way. Diplomatists do not give their reasons to the common men above whom they are lifted, but we imagine that they gave way provisionally, on the understanding, as we have already mentioned, that this should positively be the last time they would be received in the "Hall of the Tributaries," and that a separate Hall should be built before the next occasion came round. The Ministers apparently concluded that it was better to recede from their protest, with this condition, than to refuse altogether the spontaneous offer of the Emperor. They waived their personal dignity and that of their sovereigns, "in the conviction,"

Digitized by Google

as they told the Emperor, "that the policy inaugurated by Your Majesty will greatly contribute to augment and to strengthen the bonds of friendship which exist already so happily between China and the countries and nations having treaty relations with it." We congratulate the Ministers on having the conviction, which it does not appear is entirely shared by the Emperor, unless indeed an Imperial wish is as good as a Ministerial conviction; for the Emperor's reply to it is: "We add the further wish that the relations between China and the other countries may in future take the friendliest form." These words came from the lips of a potentate who is described in the *Chinese Times* as "rather pale and dark, with a well-shaped forehead, long black arched eyebrows, large mournful dark eyes, a sensitive mouth, and an unusually long chin. The young Emperor," we are told, "together with an air of great gentleness and intelligence, wore an expression of melancholy, due, naturally enough, to the deprivation of nearly all the pleasures of his age, and to the strict life which the hard and complicated duties of his high position force him to lead." The recent death of his father might have been added to these causes.

There was a touch of the didactic in Mr. von Brandt's speech at the banquet. The whole diplomatic body are represented as delighting in the recent audience, but they also "fully trust and believe" that the policy of a good understanding with foreign Powers is to be maintained, and that China is anxious to enter freely and unconditionally into the comity of nations—not to keep aloof any more—into which she will be cordially welcomed. Prince Ching's reply is thoroughly sympathetic, and China is as anxious as the foreign Ministers can desire her to be to strengthen her good relations with the other countries. The foreign Ministers and those of the Tsung-li Yamên were all equally well satisfied with the Audience, we learn from our northern contemporary; the former recognised that the Imperial Court honestly desired to make the ceremony as conistent with their dignity, and as pleasant to their feelings, as possible; something they had to pardon to the inexperience of their hosts, and the difficulty of eradicating old traditions all at once; but those time will smooth away. It is always well to persuade ourselves if we can that the intentions of our entertainers are good, and this is the excuse of the Ministers for being received in the Tze Kuang Ko, after vowing that they would rather not be received at all. They are not the first who—

"whispering 'I will ne'er consent,'—consented."

### THE AUDIENCE AND THE BANQUET.

The following is the full text of the speeches and addresses made at the two ceremonies on the 5th instant:—

Address of the German Minister as *Doyen* at the General reception of the Diplomatic Body by His Majesty the Emperor of China on the 5th of March, 1891.

Sire,—The members of the Diplomatic Body resident at Peking have to-day for the first time the opportunity and the honour to be able to offer in person their respectful wishes to Your Majesty. They do so with the conviction that the policy inaugurated by Your Majesty will greatly contribute to augment and to strengthen the bonds of friendship which exist already now so happily between China and the countries and nations having treaty relations with it.

That such may be the case is the most fervent wish of all the persons assembled here to-day, and while they offer to Your Majesty their sincerest and most respectful felicitations on the occasion of the New Year just entered upon, they beg to be allowed to give expression to their hope and their conviction that under the enlightened rule of Your Majesty the blessings of peace and happiness will be granted to the Imperial Dynasty and the people of China.

Reply of His Majesty the Emperor to the address of the Diplomatic Body presented on the occasion of the audience on March 5th, 1891.

We have been greatly pleased by the felicitations offered to us by the honourable ministers and others (*kuei shih ch'ên téng*). We hope that Their Majesties the Sovereigns and the Rulers of countries which you represent will enjoy good health during the year just entered upon. We wish that the gentlemen here present may remain yet many years in China, that they may feel well in every respect, and that all their hopes may be fulfilled. We add to this the further wish that the relations between China and the other countries may in future take the friendliest form.

Speech read by Mr. von Brandt as Dean of the Diplomatic Body at the Banquet given by the Tsungli Yamên on March 6th, 1891.

Your Highness and Your Excellencies,—It gives me great pleasure to be able to be once more the mouthpiece of the diplomatic body in proposing the health of H.M. the Emperor.

Nearly two years have gone by since at the banquet given by order of H.M. the Empress Regent to the Representatives of the Treaty Powers I had the honour of paying our respectful tribute of admiration to the virtues and talents of Her Majesty, and to point out that the banquet then offered to the foreign Representatives and still more so the reasons which had been put forward in the Imperial edict for doing such an honour to them, might be considered as a new point of departure and as indicating that the joint work of the Tsung-li Yamên and the foreign Representatives had begun to bear its fruit. To-day another banquet unites my Colleagues and myself with Your Highness and Your Excellencies, and this time it is given not on the occasion of a ruler withdrawing from the work and the successes of many years, but of a young sovereign, full of promises and hope, having entered for the first time upon what may be properly called the international part of his great office.

And again the Imperial edict by which this banquet has been ordained, has mentioned the growing intimacy between China and the Treaty Powers and the part taken by the foreign Representatives in bringing about this satisfactory result.

My Colleagues and myself have been deeply moved by this Imperial acknowledgment of our endeavours to strengthen the friendly relations between China and the Treaty Powers; we gladly recognise in the audiences granted yesterday to the foreign Representatives and the whole Diplomatic Body and in those to take place in future a further advance in the direction indicated by the edict of Her Majesty the Empress Regent issued two years ago; we fully trust and believe in the will and the power of His Majesty the Emperor to continue in the line of policy announced by him in his edict of December last and to bring about that which we consider as His Majesty's ultimate aim, a perfect understanding between China and the Treaty Powers, and the free and unconditional entrance of China into the comity of nations, where we can assure Your Highness and Your Excellencies, she will receive a warm and friendly welcome.

My Colleagues and myself request Your Highness and Excellencies to place before His Majesty our profound and most respectful thanks for the honour done to us yesterday and to-day, as well as our wishes for the happiness and welfare of His Majesty, the Imperial Dynasty, and the people of China.

To the health of H.M. the Emperor.

Reply of H.H. Prince Ch'ing to the speech of the Dean of the Diplomatic Body at the banquet given at the Tsung-li Yamên on Mar. 6th, 1891.

The words of the Foreign Representatives in the speech just read contain a warm appreciation of the sincere intention of H.M. the Emperor to strengthen the existing friendly relations with the Treaty Powers; it will be a pleasant duty for us (the Prince and Ministers of the Yamên) to bring to the knowledge of His Majesty the thanks just offered by Your Excellencies. To-day's banquet, prepared by Imperial order, offers to us a welcome opportunity to converse with you in a joyous and cheerful spirit; we consider it as a loving omen for the future strengthening of the good relations between China and the other countries. It is in this sense that we drink to the long life and happiness of Their Majesties, the sovereigns, and of the Presidents of the countries represented by Your Excellencies; may they be blessed with constant peace and welfare. At the same time we add our best wishes for Your Excellencies.

## *BITS OF OLD CHINA.*

The origin of the ecclesiastical mission was curious. About 230 years ago, the Tartars defeated some Russian troops and carried them prisoners to Peking. Here they were formed into a regiment, and, gradually inter-marrying with Chinese, founded a small colony, still retaining the "orthodox" religion. The priests were allowed by the treaty to reside at the capital in order to act as religious instructors to the Russian colony. Upon the establishment of the Legation, the ecclesiastics moved to another part of the city, and being successful in retaining their library became the tutors of the young Russians sent thither to acquire the Tibetan and Mongolian languages. The old "colony" has long since become, in all except religion, an integral portion of the Chinese, or rather Tartar, population. The archimandrites have as a rule, been distinguished for ability, and their pupils have generally proved apt scholars. It used to be asserted that the Russians knew a good deal more Manchu, the nominally "court language" of the present dynasty, than any native-born Manchus themselves. As a matter of fact, Manchu is in Peking pretty much what Hebrew is in a European city—spoken by a few, read by less, and thoroughly known only to a very limited circle.

* * * * *

The respect paid to Russian wishes to whims just after the Anglo-French war with China was almost incredible; and it is quite certain that had any other Europeans attempt to imitate their bullying brutality they would have been exterminated. So vivid, however, was the belief that Russia would hesitate at nothing in the way of reprisals, that the Pekingese submitted to the grossest outrages in silence. As an illustration, I may cite the following story. A carter (the mule-cart is the hackney carriage of Peking) had taken a junior official of the Legation to some place in the city, and on his return was paid what he considered much less than his fare. Disputing the amount, the money was taken back, and he was bidden to begone. Now, it had been found that when any similar difference of opinion had arisen between the inmates of the British Legation and a native "cabby," an appeal to the higher officials had generally resulted in the payment of the full fare, it being their policy to insist on the strictest fair-dealing on the part of the juniors. Unaware of the difference between British and Russian views, the carter in question was foolish enough to go to the Russian Legation next day and demand to see the Secretary, for the purpose of lodging a complaint. This was duly heard, and the carter was informed that as he had dared to accuse a Russian official of fraud, he merited severe punishment. The sergeant of the Cossack Guard was called in, and ordered to tie up the unfortunate complainant and give him four dozen lashes! These were actually inflicted, and no carter ever complained again. But the Jehus of Peking loved the Russians thereafter with exceeding love.

* * * * *

On another occasion a carter driving two Lama priests passed a mounted Russian student interpreter in the street without dismounting. The Russian young gentleman got off his horse, pulled the carter from his seat, giving several blows with his whip, and then compelled both carter and priests to go down on their knees in about nine inches of filthy mud and "kotow" to him nine times. A crowd of Chinese, including several so-called police, surrounded the parties; but so great was the dread of a Russian that not a word was said in remonstrance. This and the foregoing were not isolated cases. Floggings also were frequently administered to native servants within the Legation. I think the Chinese officials rather admired this rough-and-ready way of enforcing obedience, as resembling their own; and yet we were told that if a British officer even struck a native once, he would be immediately suspended, and reported to the Secretary of State for dismissal from the service.

* * * * *

I have referred to the particular care taken to impress upon the minds of all residents in the Peking Legation that to assault a Chinaman was a serious offence. Apropos of this, an amusing incident occurred. One of our number having been "cheeked" by his servant, knocked him downstairs. No bones were broken, and the aggrieved domestic hurried to the eminent official in charge to lay a complaint. The occasion was deemed a favourable one for reading the whole of us a lesson, and we were desired to muster in the square next the students' quarters. After the peccant student had admitted his offence "under provocation," and been ordered to pay amends to the complainant, our chief addressed us in the most emphatic manner, winding up by saying, "If there is any similar complaint made, no matter what the provocation, I shall order the officer concerned to Hongkong to be at the disposal of the Secretary of State. And that, you know, young gentlemen," concluded our mentor, "is pretty sure to mean dismissal from the service."

* * * * *

We all murmured assent to this proposition, and were dismissed, walking away in groups of two or three towards our quarters. We had got about half way across the small square when the noise of a resounding smack made us turn our heads. It appeared that a coolie, naked to the waist, had passed the chief with a very insolent gesture, and had been promptly reminded of his mistake by the latter's open hand upon his yellow face. The situation was awkward for the chief, as our efforts to disguise the amusement we felt at this comment on his lecture were but too apparent. But, beckoning us towards him, he said, "Er—gentlemen, I should have added, *unless you are insulted beyond all bearing*. You may go."

* * * * *

One of the winter features of Peking is the influx of Mongolians, who flock thither to make their annual purchases with large camel caravans, laden for the most part with felting and camels' hair to

Digitized by Google

exchange for other articles. They are looked upon by the Chinese as the "Johnny Raws" of the capital, and a certain number of rascals attach themselves to the country boobies, and succeed, as a rule, in fleecing them considerably. The women, who ride their camels astride, are hardly to be distinguished from the men, nature having been particularly niggardly towards them in the matter of beauty. For sheer, downright, exasperating ugliness Mongolian females, indeed, are hard to beat, though they are slightly more quickwitted than their lords. Even these latter, however, at times get the better of the keen Chinese, and great is the wrath of the latter when this happens.

* * * * *

A Chinaman one day borrowed from a Mongolian an "oil-basket." It should be explained that Chinese basket-work can be made of such fineness that it will hold any viscid liquid without leaking, and an oil commonly used, made from a very small seed—probably linseed—is stored in these basket-jars. The Chinaman used the basket to measure out rice, and on being asked a short time later to return it, flatly denied that he had ever borrowed it, counting on the fact that the Mongolian "booby" would never dream of claiming so trifling an article in court. Being, however, deeply incensed at the way he had been treated, the latter appealed to the local prefect for justice. The Chinaman stuck to his story, and appealed to the dusty appearance of the wickerwork to show that it had been constantly used as a rice measure. "Well," said the mandarin, "each of you claims it, and neither has any witnesses. How can I decide?" "Ask the basket," said the Mongolian. The prefect was a very intelligent man, and took the hint at once. Calling forward the executioner, he ordered him to flog the basket with the bamboo, mouth downwards, to see if he could get an answer as to who really owned it—the onlookers gaping with astonishment at the apparently idiotic order. After about a dozen strokes had fallen, the prefect said: "Well, it doesn't seem inclined to answer, but I dare say it will show me what I want," and, stepping down from his seat, he closely examined the dust which had fallen from its interior. "That will do," he observed. "Give this fellow"—pointing to the Chinaman—"twenty-five strokes." The linseed which had fallen with the rice-dust showed at once that it had been used for oil.

* * * * *

I was staying at a temple outside the city when the Salt Commissioner and his three wives came to pass a few days there also. The temple in question had a remarkably fine wide marble staircase leading to the principal pagoda; and one morning the youngset and best-looking lady slipped, and cut her forehead severely. The husband became so alarmed that, believing, like many Asiatics, that all Europeans were medical men, he sent me an urgent message begging me to come and staunch the bleeding. It was evidently a great effort to consent to let me see the patient, but to follow my advice was a greater. I asked that her face might be washed, as it was covered with such a thick coat of cosmetics that it was difficult to see the exact extent of the wound. I was assured that this could not be thought of; "she had not washed her face for several weeks!" I could only decline to interfere, so a compromise was agreed to. Her forehead alone was washed, all below the eyebrows being left as before. A cold-cream bandage sufficed to dress the wound, and it speedily healed.

* * * * *

A good many readers familiar with the East will very probably say that the Chinese are a particulary clean race, and that the above must be an exaggeration. Those living in the subtropical latitudes are clean in their person. Those living farther north are much like the inhabitants of the colder European countries. Cleanliness is not a distinguishing virtue of the Tarter, neither is he remarkable for its contrary. The Cantonese, on the other hand, are exceptionally clean.

* * * * *

It is a curious fact that, although the Tartars are the governing race, a single Cantonese will use his whip freely upon a Peking crowd if anything occurs to put him out. The Pekingese, despite their mixed descent from the conquerors of China, are in effect far less brave or truculent than their Southern kinsmen, whom they politely term "Cantonese thieves," or "Amoy pirates."

* * * * *

A jaunt to the Great Wall of China is a certain incident in the life of all who stay at Peking, and I was greatly amused a few years since to see it gravely asserted in an American journal that the Great Wall existed only in the imagination of unveracious travellers. I further found in the *Graphic* of September 13, 1887, a statement that the Abbé Larrieu, a French Catholic missionary, had declared that he "had lived just where the wall should be had it existed, and that though the idea of such a monster defence was undoubtedly entertained by an early Chinese Emperor, it was never fully carried out." The *Graphic* published two photographs of the wall, forwarded by a correspondent in China, by way of contradicting the Abbé's assertion.

* * * * *

As one who has seen and measured the Great Wall at several points, I may be permitted to give some figures. There are, to begin with, two walls—an inner one, 500 miles in length, crossing the northern portion of the Chihli and Shansi provinces, first in a direction from N.N.E. to S.S.W., and thence west, northerly. This, built of limestone and granite, which many Chinese allege to be the "real" Great Wall, unites at its extremities with the outer and longer wall which extends from Shanhaj, on the coast of the Gulf of Peichili, for 1,500 miles westward. Both walls are constructed alike. In the level valleys they are about 15 to 20 feet wide, and about 32 feet high, decreasing to 10 or 12 feet when fronting a precipice, with towers at frequent intervals—not particularly imposing, but realising the idea usually entertained of them. I only saw the crenellated portion of the inner wall, but the outer wall, directly it begins to ascend the rocky hills, loses its square shape, and consists of a sort of stone mound of triangular section. The measurements I made varied from 15 to 25 feet from foot to apex, with an average base of 15 feet across—a barrier quite sufficient to check any cavalry in the world.

* * * * *

The material chiefly used is quartz-porphyry; and as the apex consists only of a single stone about eight inches wide, it was quite practicable to sit astride it—which, of course, I did—with "one foot in China and one foot in Mongolia." Theoretically the frontier is 300 miles north of the wall, but, practically, Chinese jurisdiction is not enforced outside it; and to say that a man comes from "beyond the Wall" implies that he is not Chinese-born. The old political frontier between the two countries is marked by a heap of mounds extending for an immense distance, but how far I could never accurately ascertain.

* * * * *

I travelled through Mongolia with the German and American friends before mentioned, and one night a Mongolian mandarin, who spoke Chinese fairly well (many do not), arrived at the inn. We became very good friends, dined together on fowl and lau-ping or "damper," and shared with him a bottle or two of our scanty stock of the Bass beer aforesaid. When about to take leave he said that he had a great favour to ask, which he hoped we would not take amiss. It took some time to find out what the favour was, so great was his desire not to give offence. At last it was formulated—he wanted the beer-bottle! As glass utensils were scarce in Mongolia, we readily gave him what we supposed he would find a useful flask for "koumis" or camel-milk wine. But to our astonishment he explained that he wanted it as a god! I had never made a present of that description before, and have not done so since. The experience is probably an uncommon one—out of Africa.

* * * * *

But, distant as Mongolia is from London or Parisian civilisation, two signs of its products are to be found even at the foot of the Great Wall—empty Bass's beer bottles and "striking on the box" match-boxes. Chinese and Japanese firms are now turning out very indifferent imitations of Bryant and May's and Swedish "Tändsticker," but my visit was prior to the Eastern imitations having been started. Bass has not yet been imitated, though often rivalled. In my younger days he held the Eastern markets, and is not quite unfamiliar there even now.

* * * * *

The "Lay-Osborne Affair" which caused no small sensation in Eastern and naval circles, took place while I resided at Peking; and at this distance of time—twenty-seven years since its occurrence—no confidences are violated in stating, what has not before appeared in print, what actually occurred. The principal actors have mostly "gone over to the majority," Mr. H. N. Lay, C.B., being, however, still in the flesh. He was at that time Inspector-General of the Chinese Customs, and had induced the Peking Government to fall in with his views as to establishing a small but effective fleet of vessels, foreign-officered. No ostensible objection was made by our authorities. The Admiralty permitted Captain Sherrard Osborne to take the chief command, and the fleet was duly brought out by him to China. But neither he nor Mr. Lay had any idea at the time of the forces working against them.

* * * * *

Mr. Lay was a most able man, but assumed so autocratic a position towards his employers that the Chinese became afraid of him. When the fleet arrived he stipulated that its officers should take orders only through him or his subordinates. The Chinese insisted that they should be directly responsible to one of the provincial viceroys. Each side stuck to its guns, and the British Minister was appealed to. Mr. Lay felt confident of his support, in view of the friendly interest he had ever shown in the matter. The Chinese pointed out that to comply with Mr. Lay's demands would be to make him virtually master of Chinese policy. Sir Frederick Bruce told both parties they were right, and referred the matter to the Foreign Office, which had all along viewed Mr. Lay's position with grave displeasure, as he had let it be seen he would advise the Chinese quite independently of what our Minister or Secretary of State might desire.

* * * * *

It was easy to foretell how this would end. Both Governments distrusted Mr. Lay—the Chinese fearing that he would become too powerful, and the Foreign Office fearing that he might encourage China in her resistance to British demands. Mr. Lay's sacrifice was determined on. For six weeks, however, after this understanding was arrived at, Mr. Lay was led by our Minister to believe that matters would be arranged. A final despatch was sent home announcing that it had been decided to disband the fleet and dismiss Mr. Lay from the post of Inspector-General, which was offered to, and accepted in strict confidence, by Mr., now Sir Robert, Hart. Mr. Lay breakfasted at the Legation about ten days or a fortnight after this, and was told that the matter would pobably be settled in his favour in a few days. His subsequent dismissal, coincident with an entire repudiation of the whole arrangement regarding the fleet, came on him like a thunderclap.

* * * * *

The Chinese behaved with fair liberality, but the loss of power and prestige was a sad blow to a man who had very nearly succeeded in making himself Dictator of China. He went over to Japan, and there opened negotiations regarding railways on behalf of a London syndicate. Everything seemed to promise well, but on his arrival in London he found all his arrangements repudiated, and legal actions even were threatened or commenced regarding commission or other moneys connected with the scheme. It was alleged he had exceeded his powers. However this might have been, it would appear that the same idea prevailed regarding his action in Japan as in China. He forgot that he was employed by others in both cases. But he was no doubt treated very badly both in China and Japan, because disavowal was preceded by apparently cordial approval.

* * * * *

Captain Sherrard Osborne was a most amusing travelling companion, and used to tell stories of the Crimean War with great effect. One of them related to some Jack-Tars who stole a camel, and, not knowing what to do with their prize, put him into an empty hut, bricking it up so that he could only put his lips out for food. Jack's efforts to provide the needful commissariat were detailed with comical effect, but, as the language used was more forcibly descriptive than polite, the story had better perhaps not be recorded in these columns.

* * * * *

Mr. Lay's successor had an abundance of what his predecessor lacked—tact, and though quite as autocratic in his way, managed to obtain and retain much greater influence over the Chinese. His splendid career—open, of course, to criticism at times, like that of every man a head and shoulders above his follows—sufficiently answers carping criticism. The best men of his enormous staff, amongst whom jealousies naturally existed as they do in all "services," admit that he has been wonderfully fair, all things taken into account. When it is considered that he is practically the sole dispenser of patronage in the way of appointments amounting to about 300,000 dols., or at least 50,000*l.* year, this is no slight praise.

* * * * *

It was curious to note the intense dislike with which our Gallic friends were regarded at Peking just after the Anglo-French occupation of the capital and the destruction of the Summer Palace. I have many valued French friends, but believe a Frenchman, as a rule, to be absolutely incapable of dealing with Asiatics so as ever to gain their confidence or business support. Hence the commercial failure of their colonies. They are the best military colonists in the world, but carry Paris into Asia with all its irritating bureaucracy, or, as we put it, "red tape." They were especially stingy, too, in the matter of tips to the gatekeepers, &c., of public buildings and to say that you were not French was, in the days I write of, a necessary preliminary to securing courteous treatment. The Tientsin massacre was simply the outcome of a

Digitized by Google

long existing feeling of hatred against every one of French nationality, and the gross mismanagement of the more recent Franco-Chinese War on the part of the Republican authorities has not, I fear, improved the position. This is to be regretted, inasmuch as all "devils," as they term Europeans, are much confused with each other throughout China. On the other had, France was, next to Russia, the most feared.

* * * * *

Apropos of "devils," or "foreign devils," as the phrase usually runs, a good deal of undeserved anger has been exhibited by foreigners. It is, of course, not intended to be complimentary, but in a vast number of cases is just as little intentionally insulting. It is a popular descriptive term, just as "nigger" was in preabolition days. You would hear a U.S. Southerner in the 'fifties say, "He's the best nigger I ever knew," without intending to in any way depreciate the said nigger's racial descent. The American world contained white men and niggers; that was all; and similarly the Chinese contains Sons of Han and devils. We always remonstrated, however, with the result that the remonstrance was taken in good part.

* * * * *

I am not sure either that *Kwei* is at all correctly translated by "devil," as "spirit" almost equally well renders it. The Scotch "kelpie," "warlock," more nearly express the meaning, which is "uncanny spirit." To show, however, how little the users sometimes intended to insult those whom they thus designated, I may remind readers of the anecdote related by the late Mr. Baber, or Margary—I am not quite sure which. A petition was presented to one of those distinguished civil servants, in which he was addressed as "The Honourable Devil"!

* * * * *

General Gordon's doings as chief of the "Ever Victorious Army" have long since passed into the domain of history; but as all his letters to the British Minister and the replies thereto, were seen by me, a few words about him may fitly find place in these desultory notes. His distress at the execution of the Taiping Wangs was very real, and he actually placed his resignation in the Minister's hands. It was only upon the most urgent representations that he would again plunge China into civil war if he resigned, that he consented to complete what he had begun—the suppression of the Taiping rebellion. All the same, scarcely a single British official then in China thought the part we took in that enterprise a wise one. A successful revolution is the only condition of China freely adopting either Western civilisation or Western religion—it is useless to call it "Christianity," when the two great sections declare each other to be heretics, and the Portestant churches have a dozen antagonistic schools of teaching. Apart from this, however, a revolution of some sort, bloody or bloodless as it may turn out, must take place before the innate conservatism of centuries can be induced to cease its present opposition.

* * * * *

The first thing wanted is roads—not even railroads, but good cart roads. The next is judicial reform; and the third is the abolition of universal bribery and consequent corruption. It is urged that as both sides bribe, and that no secrecy is even hinted at, the result in the long run is much the same as if no bribery existed. As a matter of fact, it costs an Englishman about as much to get justice as a Chinaman, only we call it solicitor's and counsel's fees. There are no lawyers or pleaders in China, which in this respect is perhaps to be envied by other less fortunate countries. All the same, the Chinese system works very badly for litigants.

* * * * *

Torture plays a conspicuous part in criminal proceedings. A certain specified number of tortures are "legal," but unfortunately, even these are often exceeded, and ghastly horrors are perpetrated in the name of law. As an illustration of a minor and "legal" application of the question, I may mention that while I was in Peking one of the Legation servants was charged with a petty theft and handed over to the native authorities for safe custody. Nothing was heard of him for some days, when the result of inquiries showed that the unfortunate wretch had been kept for several hours each day "kneeling upon chains." As this perhaps does not sound very terrible, let me recommend any sceptical reader to try it for one hour only. Kneeling upon broken glass, which is an unlawful refinement of the chain torture, has been more than once resorted to in the provinces to extort a confession. But most comprehensive works on China give full and hideous details of such matters. One saving consideration, however, must not be overlooked. When did we abolish judicial torture? For a Christian nation I think we kept it up to a tolerably late date.

Torture and trial naturally suggest executions, and these were sufficiently frequent during my stay at the Chinese capital. The actual death-penalty was inflicted in two ways: by simple decapitation, or by the "ling chih," conventionally and most inaccurately rendered by "cutting into ten thousand pieces." It would be too sickening to describe it in detail. Suffice it to say that in includes the cutting out of the principal muscles, the flaying of the face, and a final *coup de grâce*. The executioners are often bribed to inflict this latter at an early stage, and the prisoners' friends are mercifully allowed to drug them with opium, if they can afford it. Two women (one undoubtedly insane) were thus executed while I was in Peking, and in one case I received an invitation from a friendly mandarin to be present, he promising me "an excellentseat." He would not understand my declining the well-meant offer without thanks.

* * * * *

Ordinary decapitation is by means of a peculiarly shaped sword, very broad and heavy towards the point, the victim being made to kneel down with his hands tied behind him, and extend his head forwards. It has often been described, but the subsequent exhibition of the head in a bamboo cage has less seldom been noted. I saw the heads of some seven *décapites* in one cage, and was struck by the fact that not a single one exhibited any signs of violent death. The execution ground at Peking is a small open space formed by the meeting of three or four streets, and the actual spot where the sentence is carried out is usually occupied by a pork-seller's stall.

* * * * *

As decapitation carries with it most unpleasant consequences to the relations of the criminal—in some cases all of his family sharing the punishment of his crime, and in others the house in which he dwelt being razed to the ground—eminent officials sentenced to death are often "permitted" to hang themselves. A silken cord, *à la* Turkish bowstring, is sent to the condemned, who thereupon takes the hint. A curious instance of this—or rather of an objection raised by the victim—occurred within my own knowledge. A general, who had somewhat distinguished himself during the Taiping rebellion, was incautious enough to make some very uncomplimentary remarks about the then Dowager Empress—remarks, in fact which any woman would bitterly resent. Like all successful men in China he had unscrupulous enemies, and the Empress soon became aware of what had been said of her. He was, however, at that time in too high favour with the Emperor to be attacked. Meanwhile, our "little war" with China took place. The Emperor fled to Johol, and shortly afterwards died. Prince Kung was appointed regent, but the real power behind him was the Dowager Empress, to whom everything was referred. The time came when the erring general laid himself open to censure. Some few thousand *taels* had been misappropriated, and he was cited to Peking to answer the charge.

* * * * *

The matter was from a Chinese point of view so unimportant—a trifling bribe being all that was necessary to settle the matter quietly—that the general obeyed the summons rather because he thought it a good opportunity for visiting the capital than because he feared the displeasure of the Government if he ignored it. He was too powerful to be attacked at the head of his own troops; but, dreading no evil, came to Peking. Here he was put under nominal arrest—*i.e.* he was free to move about, could have his family to visit him, and, being rich, could eat and drink what he pleased. Six months passed away, during which time he had "squared" any possible accusers respecting the missing money; and desiring to return to his duties, he sent in a petition asking for immediate investigation.

* * * * *

He had forgotten that the woman whose character he had traduced—though, if the gossip of the day were true, the sting of the accusation lay in its truth—was now the virtual autocrat of China. The petition was duly carried to her with the other documents of the day's proceedings, when the Empress noticed the petitioner's name. With a mocking smile, she marked it with the fatal characters which meant "Direct him to hang himself." Within an hour or two the unhappy man had received the silken cord; and, either by accident or design, the bearer of the unpleasant gift was the general's former tutor. This was to a Chinaman like sending a father to execute his son; and the fact was much commented on in the Court circles.

* * * * *

While the general's friends objected to the channel of communication, the general objected much more strongly to the communication itself. In fact, he seemed to be destitute of ordinary feelings of decency, for he absolutely declined to avail of the kind permission accorded. His friends had great ado to persuade him that it was for the best, keenly alive to the inconveniences of being connections of a man executed in the ordinary way. He was persuaded with extreme difficulty to put his head in a noose attached to a convenient nail, and the stool upon which he stood was snatched away in hot haste lest he should repent and plunge his family into overwhelming misfortune. Shortly after he had ceased to breathe, his wives came as usual to dine with him, and were somewhat astonished to learn that dinner was for him a bygone luxury. They took it very philosophically, however, all things considered, and, having taken possession of the body, sent out the usual invitations to the funeral. In the next day's *Gazette* the gracious permission accorded to the deceased to commit suicide was set out at length, with a laudatory notice of the deceased officer's services.

* * * * *

In my early days missionary knowledge of Chinese had not reached the respectable stage which a few years' experience emabled many to acquire. As the various well-meaning societies which sent them out were invariably in a hurry for "results," the ignorance alluded to led sometimes to queer incidents—I hasten, *par parenthèse*, to say that some few were even then sound scholars; my remarks apply to "griffins" of similar standing to myself—and one of these I recall. Near Tientsin is, or was, a temple known to us as the "Treaty Temple," on account of the treaty of 1860 having been signed within its walls, and those resident at the port used frequently to ride out there for a chat with the priest in charge and his assistants. These gentlemen naturally became also the objects of missionary attention, and on calling one day we were informed that a member of one of the six-and-forty denominations, who seek to show the Chinese how united Protestant Christians are amongst themselves, had paid them a visit. He did not, they said, speak much Chinese (this was not to be wondered at, as he had only been in China a little under two months); but, they added, he seemed good-natured, and had told them a long story about a "heavenly pig." It took us some minutes to discover that by mistoning the word *chu*, or lord, the speaker had spoken of a pig, much to the mystification of the worthy Chinese, upon whom his Christian exhortations had fallen somewhat flatly in consequence.

* * * * *

Tientsin was at that time looked after by a Consul, who has long since passed away, but who, owing to the orbit of his eye being pierced by a spear in a brush with robbers, became for a time a source of wonder and perplexity to both his chiefs and subordinates. The serious nature of his wound was unknown at the time, while his conduct became stranger day by day. His eccentricity at last reached such a pass that in answer to a mild censure from the Minister at Peking, he drafted a letter stating that "the soul of any one who held such opinions (as the minister's) must have sunk to bottomless perdition." The assistant at the Consulate protested against this being sent, but was ordered to copy it for despatch. In place of doing this he locked it up in his desk and left the office for the day. Next morning he was horrified to find that his unfortunate superior officer had managed to open the desk, and having copied the letter verbatim, had despatched it per special courier to Peking. Needless to say that a medical examination into the Consul's mental state was ordered by return, and that his being invalided to England was only a matter thereafter of a few hours.

* * * * *

A few words about the much misdescribed *Peking Gazette* may fitly find a place in reminiscences of the Chinese capital. A popular idea prevails in Europe and America that it is a newspaper, whereas it is simply a sort of Court Circular, from the pages of which news of any sort is rigidly excluded. It is issued in three forms—the first being printed from wooden blocks, the second written in manscript, and the third struck off from hurriedly engraved wax. The first is tolerably well printed, and is legible; the second, which is much dearer, and is supplied to various Government departments, as also to the foreign legations, is well written on white paper; while the third, or wax plate edition, is often scarcely readable, and is proportionately cheaper in price.

* * * * *

An average copy of the first form would probably be supposed by an unsophisticated foreigner to be some advertising tract relating to patent pills or drugs. It is certainly the least imposing-looking official document produced throughout the world. It consists of from ten to twelve leaves, $7\frac{1}{2}$ by $3\frac{3}{4}$ inches, of brownish-coloured paper, enclosed by two covers of bright yellow ditto, stitched to the

Digitized by Google

former with paper twine. The inside leaves being folded double at the edges, give from twenty to twenty-four pages, each containing seven columns of matter, and each column giving space for fourteen characters. The first page records audiences, presentations, and a list of the palace officials for the day. This is followed by rescripts or decrees, the remainder being devoted to memorials. There is a very perfect organisation for supplying the necessary copy, transcribing, printing, and distributing this publication. One trifling drawback is connected with responsibility as to the *Peking Gazette*. A minor "error of the press" is followed by fine or flogging: a serious one is apt to lead to banishment or decapitation. It need hardly be said that the *Gazette* people are uncommonly careful proof-readers!

* * * * *

A good many expenses had to be incurred both at Peking and the various ports, for which it was hard to obtain the formal receipts called for by the Home Treasury Department; but the useless system in vogue survived numerous representations from the Legation and Consulates for a long while. It was obvious that in dealing with men who could not write—such as the majority of couriers, carters, coolies, &c.—it was impossible to obtain signed receipts. But the audit office objected to a series of vouchers bearing "his mark" only. It became, therefore, customary to employ a teacher, or "writer," to sign these precious receipts *en bloc* at the end of each month. This led to a fresh remonstrance from the authorities, who said that "all the signatures looked as if written by the same person"—which was true enough. The writer of the memo, from home, however, was incautious enough to add that "the system of signing receipts common amongst the Chinese themselves was to be adhered to in future." Whereat there was great joy and visions of a clerical revenge upon the over-particular Treasury minute-writer on the part of the Consular assistants.

* * * * *

The reason is easily given. When a proper receipt is exacted from a Chinaman who cannot write—an unusual proceeding—the party is required to place the tips of his thumb and fingers on a slab covered with Indian ink, and then transfer the impression to the document requiring signature. The vouchers which reached the Treasury and Audit Office for the ensuing month were probably the most novel in appearance ever forwarded to a British public office. But as the Chargé d'Affaires certified that they were in due form as directed by the instructions given, there was nothing for it on the part of my lords but to give in. Directions were instantly sent out that in future petty expenses were to be vouched for by the senior official at each port "upon honour." It was a very sore subject with the audit department for several years afterwards.

* * * * *

We were hard put to it in those days to secure the few prisoners whom fate or due process of law committed to the "Consular gaol." The said gaol was a small room about ten feet square, with paper-covered windows and door—*i.e.* that paper supplied the place of glass, while any moderately strong boy could have wrenched away the woodwork with the greatest ease. One day some ten Chinese were exceedingly noisy at the Consular gate, and the constable was ordered to arrest and lock them up—the latter direction being given in pure forgetfulness of the above facts. In a few minutes the officer returned to the court-room and reported the prisoners to be "all secured." Suddenly, bethinking himself of the gingerbread nature of the cell-the Consul anxiously inquired *how* they were secured. "Handcuffed round the flagstaff, sir," was the prompt reply. Sure enough, on going out to the court-yard to see, the ten men were as described, keeping up a "round the mulberry-bush" dance, having been threatened with a flogging if they once paused in their comical-looking performance.

* * * * *

It is a very curious, but nevertheless undoubted fact that the superabundant filth of Chinese cities does not seem to induce any extraordinary visitation of sickness. Tientsin and Peking were equally filthy, but were as free from epidemic or disease as most European cities. Our medical missionaries, in fact who do more good to foreign repute than any other body of men in the East, find that their principal work is surgical, not medical. The Chinaman, indeed, seems of all human beings to have greatest faculty for recovering from serious external injuries, but is powerless in the face of internal derangements requiring operations. I have known a native to survive after a cart-shaft had passed completely through him, and some very strange cures were made by our medical men of Chinese soldiers left for dead, after the engagements on our march to Peking.

* * * * *

Though terribly afraid of the knife, the Chinaman, if there is no help for it, submits to it with astonishing calmness. Apropos of this, a native who came to Edinburgh, and there took his degrees in surgery and medicine, once informed me that the Chinese nervous system was undoubtedly less sensitive to pain than that of Europeans. One curious difficulty encountered in cases of wounds and other injuries is that it is sometimes difficult to set up the moderate inflammation of the exposed surfaces, which is a necessary preliminary to granulation and subsequent healing. It is often much more dangerous to strike a Chinaman over the spleen than to inflict a frightful-looking wound. He is so tender in that organ—or perhaps enlarged spleen is so common a Chinese complaint—that he is apt to fall dead in the first case, while seeming to be only slightly inconvenienced in the other.

* * * * *

In the early 'sixties a good deal of what is termed "rough and ready" justice was meted out by Consular officers. One of the Consuls at a northern port was especially remarkable for the speed with which he disposed of mutinous, and that class of loafing foreigners who formed the chief bulk of those dealt with. Upon one occasion a sailor, who was a bit of a "sea-lawyer," exclaimed on being sentenced to three weeks "hard," "Well, if you call that justice, sir, I don't." "Justice be d——d," replied H.M. representative." "You came here for law, and you've got it. Take him away."

* * * * *

Very few people in Europe ever heard of a personage known in the North of China as the "living Buddha." He is supposed to be the veritable incarnation of that deity, and the fact of his existence at the present date has a romantic interest, when the conditions of his life are known. I saw the Buddha of that day some twenty-eight years ago. He was about twenty years of age, and had passed his short life, an absolute prisoner since childhood, within the small temple he occupied. According to popular belief, upon the disappearance of an existing representative, he is supposed to enter Nirvana direct, and neither dies nor is buried, the alleged fact being that he is quietly disposed of by the priesthood before reaching middle age. His soul is reincarnated in the person of a child, known to the priesthood by certain signs. This child at once takes the vacant place, and passes his days seated, like his predecessor, in doing nothing except mumbling a few occasional prayers. Of course he is fed in privacy, although the idea of his requiring nourishment is ridiculed. When the time comes he too mysteriously vanishes. And so from cycle to cycle.

* * * * *

To come of "a fine old family" is a matter many people are proud of. But it will have to be a very old family indeed to match that of a gentleman I once met. He can trace his descent back, without dispute or flaw, to 550 years before Christ. And his great ancestor Confucius came, according to undisputed records, of a "good old family" then. For 2,240 years has the Kung family—for Confucius is Latin, not Chinese, and the real name is Kung-fu-tsz—been revered in China for the sake of its illustrious scion—not founder, be it noted. A portrait of the great philosopher hangs in the Confucian temple at Peking. Whether it is authentic or not nobody knows, but the probabilities are in favour of its being a copy of some older picture. I do not myself think paper and canvas would last for two and a quarter thousand years, hung up and exposed to the air. Papyrus is found in mummy-cases of equal or greater age. Archæologists should endeavour to get the true story of this picture, which I saw while at the capital.

* * * * *

Some idea of the difficulties besetting the most advanced students of the Chinese language may be formed from a conversation I once overheard between Mr. T. Taylor Meadows and our then Chargé d'Affaires at Peking. The Chinese used jokingly to say that what those gentlemen didn't know about the language was certainly unknown to any native. The latter official having called on Mr. Meadows found an open Chinese work on his table, over which he naturally glanced. On his host entering the room, the visitor pointed to a character and asked what it meant. "That's what I left the book open for—to find out. I know you would look at it. and was curious to see if you could translate it. I never met a Chinaman who could," was Mr. Meadows's reply.

* * * * *

There used to be "an outward and visible sign" of an "inward" but by no means spiritual frame of mind on the part of the eminent official in question which acted as a storm-warning when anything was wrong. If a student had to be severely admonished, a "teacher" to be dismissed, or the Chinese authorities to be talked to in a paternal way, the chief invariably put on a pair of high yellow-leather riding-boots. "He's got his boots on" was the sentence then passed from one to the other, until even the coolies learned the news. Young gentlemen conscious of some error of judgment immediately found it convenient to go for a day's excursion, returning when the storm had blown over.

* * * * *

The signature of the Dutch treaty with China was the occasion of an outburst on the part of the able but quick-tempered official that its witnesses have never forgotten. Several copies were prepared, and at an early hour in the morning the Chargé d'Affaires, with some junior officials, proceeded to the Tsung-li Yamên to compare and sign them. As it happened, he was to depart that day for England on leave, and by the unaccountable ill-luck which so often makes things happen at just the most inconvenient time, the copyist of two of the copies had omitted some pages of the manuscript. The Chinese Prime Minister and his colleagues had, without doubt, seen the British representative in a passion before, but had never seen him in quite so stormy a mood as then. To say that he swore at the whole body politic of China is to gravely understate the fact. The curse of the Jackdaw of Rheims was not more exhaustive, and was infinitely more courteous.

* * * * *

One of the most ludicrous blunders ever committed by an over-zealous naval officer was a mistake made by the captain of a Spanish man-of-war in the Gulf of Taku. Fired with emulation at the success of our cruisers in hunting down pirates, he one morning ordered a small squadron of junks to heave to, and, on their refusing, fired into and eventually captured one or two, dispersing or sinking the rest. Very proud of the achievement, he brought his captures into Taku and reported proceedings to Señor de Mas, the Spanish Minister, then resident at Tientsin. To the horror of the latter he learned in a few hours that his naval friend had captured the treasure fleet of the Emperor.

* * * * *

Of course, there was tremendous indignation on the part of the Chinese Commissioner, and the despair of the Spanish Minister, who was just completing the negotiations for the Chino-Spanish treaty, was piteous to see. Finding he could not shake the former's resolution to at once report the matter to Peking, he came round to the British Consulate, and, with tears in his eyes, implored the Acting Consul to try and dissuade the Commissioner from doing so. That officer consented to undertake the task, and was successful. The Minister talked and wrote strongly of urging his Government to bestow some acknowledgment upon his British friend, but—as was usual with Spanish promises in those days—nothing ever came of it.

* * * * *

Life at the open ports—Shanghai excepted, as it was even then a place of some importance—was not very exciting. Contests with the provincial authorities were plentiful, and it required a good deal of "grit" to obtain satisfaction for constant evasions of the treaty provisions, the destruction of foreign property by mobs, &c. So far as punishing individuals went, however, the mandarins were rather over-complaisant. On one occasion some thieves stole a quantity of cotton from a cargo-boat in the harbour, and, being caught red-handed, were committed to native custody. The Consul accidentally learned late that night that it had been decided to execute them at 4 A.M. next morning without trial, and sent his assistants at 3 A.M.—they would not have obtained an interview between 8 P.M. and that hour—to see the Prefect and obtain an adjournment of the ghastly ceremony. They arrived, however, too late; at 3.30 the headless trunks, still warm, were lying on the execution ground in the dim light of an early summer morning. The Prefect seemed mightily astonished at our objecting to this rapid mode of vindicating the law, and subsequently observed "that there was no pleasing some people."

* * * * *

Apropos of this early rising business, it may astonish London readers to know that the work of the Grand Secretaries of the Chinese Government commences at 2 a.m. After the evening meal at five to seven o'clock nobody will transact any official business whatever, but you may appoint almost any hour between 2.30 a.m. and 5 p.m. to meet an official. The Chinese, in fact, turn night into day much as we do. But they turn the other end of the night, thus vindicating the claim to topsyturvydom characteristic of a nation which puts the candlestick into the candle in place of what we consider the more rational method.

* * * * *

I have before adverted to the bloodthirsty nature of the Chinese code, and the readiness to behead—above noticed—reminds me of a fact I have not seen before noted in the London press.

Digitized by Google

It is that the cannibal practice of eating the heart and kidneys of a defeated enemy is by no means unknown in very recent Chinese history. During the "Arrow" War the bodies of several Europeans were thus treated. The Arab travellers of the ninth century spoke of the Chinese soldiers as habitual cannibals; and in 1862 Mr. Cooper was told by a Roman Catholic missionary that he had seen men in Yünnan eating the blood and brains of a celebrated robber they had just captured. Pith-balls are, even at this day, steeped in the blood of criminals executed at Peking, and sold as a cure for consumption.

* * * * *

That children's eyes and blood were used for photographic purposes was a firmly founded belief when I was in China. Equally strong was the mob supersition that we used the corpses of kidnapped children to place under the foundations of our bridges and church at Shanghai. A rumour to the same effect was widely circulated some four years ago at Singapore, but any "body" took the place of children's corpses. So frightened were the native amahs or nurses that for some weeks none of them dared leaved their masters' houses after nightfall.

* * * * *

I had almost forgotten to notice a people whose "embassy" to Peking was an annual event, the Koreans. At the time of which I write no Englishman had ever penetrated their strangely-secluded country. In 1864, however, an English missionary, who evinced such remarkable linguistic faculty for acquiring Chinese that Sir Thomas Wade pronounced him to be a *rara avis* amongst students, took passage for Sŏul, the capital, in an American schooner. The vessel duly reached the city, but was fired upon and burned by the infuriated natives, and the missionary, with the captain and crew, perished in the flames.

* * * * *

The Korean embassy was a ramshackle building just inside the south wall, and its inhabitants found great pleasure in stoning us as we passed their abode—a practice we put an end to by administering a horse-whipping to an incautious Korean caught in the act. What would have happened had this come to the ears of the minister, I don't know. The "tribute" brought by these strangers from the north-east corner of the empire was paper, ginseng, cloth, and medicines. They were insatiably curious, and, after we had made acquaintance, we found them most undesirable guests, as when once seated in our quarters no hint whatever would make them move. Oddly enough, they were large purchasers of harmoniums, electrical apparatus, model engines, magic lanterns, and similar articles, obtained through Tientsin firms.

* * * * *

Opposite Amoy lies the island of Formosa, long famous in our literary annals as having suggested the famous imposture of George Psalmanazar. In later days it was the veritable scene of a very able diplomatic mission on the part of Mr. W. A. Pickering and General le Gendre, the then U.S. Consul at Amoy. The former gentleman, who at that time was the agent of an Amoy firm in this island, was a most accomplished linguist, and had acquired a good knowledge of the dialects used by the savage tribes inhabiting the island. As the only Englishman—in fact, his only rival of any nationality was a French missionary, who died some time ago—who ever possessed this knowledge, he was deservedly regarded as a linguistic prodigy.

* * * * *

The savages had a bad habit of killing, and, it was said, sometimes eating, the crews of any vessels wrecked on the southern coasts of the island. These wrecks were very numerous, especially during typhoon seasons, and it was felt that something should be done. The two gentlemen named were asked to undertake a mission to the savages with a view of convincing the latter that the British and American Governments could give them better presents than an occasional roast white man, or even the loot from a wrecked vessel, if they would only mend their ways. The two gentlemen did as requested, and met with gratifying success.

* * * * *

Foh-ke-tok, the savage chief, however, was not all smiles when the negotiations commenced, and to General Le Gendre belongs the credit of having, at Mr. Pickering's suggestion, worked off on him a physical defect, and so given rise to a class of stories told with varying detail of numerous other negotiators with savage tribes. The General had a glass eye, and, as arranged with his co-negotiator, pulled it out, when the latter adduced the ease of such an operation on the part of Europeans as a proof of our physical superiority. The treaty was signed then and there; and for a good many years roast white man *à la Formose* disappeared from the menu of the native feasts.

* * * * *

By a printer's error I was made in the last contribution of "Bits" to speak of Foh-ke-tok in place of Tau-ke-tok, the Formosan chief. And this reminds me that I also neglected to mention that the third official who accompanied Mr. Pickering and General le Gendre was Captain (now Colonel) Man, then Commissioner of Customs in Formosa, now commanding the third battalion Gordon Highlanders. It was entirely owing to his relations with the Chinese authorities that the expedition was able to start at all.

* * * * *

It was owing to Captain Man's influence with the Manchu General that an intended attack upon our people was prevented. He was taken prisoner by the Chinese pickets when attempting to get to their head-quarters, and would have been killed there and then, had he lost his head for an instant. As it was, he was subjected to somewhat severe handling.

* * * * *

A quarter of a century ago Hongkong, despite is recent origin, had become our most important Eastern colony. Sir John Bowring was its governor during a portion of the time (some eight years previously) when our relations with the Chinese Government were, to put it mildly, somewhat strained. A good many curious stories were in circulation as to the peculiar egotism of the governor regarding the Chinese language and the customs of the natives. As most people now know, Sir John was a really clever man, with such an itching for celebrity or notoriety that he prostituted his really great talents in endeavouring to persuade the world that he understood Chinese as well as other languages with which he had, at all events, a speaking acquaintance.

* * * * *

Several good stories were current of his thirst for celebrity as an "all-round" linguist. On one occasion, as the tale goes, he undertook to teach a newly arrived official the Chinese word for salt. This, pronounced in the "second tone," is "yen," nowadays expressed in Sir Thomas Wade's transliteration as "yen$^2$." He unfortunately pronounced it "yen$^1$" (*i.e.* "yen" in the first tone), and on being corrected by his pupil remarked with refreshing coolness, "Ah, yes, some Chinese say so; but then, you know, very few know their own language!"

* * * * *

Hongkong in the 'sixties was not a residence which offered temptations to nervous people. Some seventy-two piracies per annum within the waters of the colony was the average when I made its acquaintance, while the roads were so unsafe that ladies habitually carried revolvers if they had to go from the more distant residences into town for shopping or other purposes. Crimes of violence were rampant until Sir Richard Macdonnell became governor, and introduced, amongst other wise measures, an ordinance obliging all natives to carry a pass and lantern if abroad in the streets after dark. There was, of course, a terrible howl on the part of the curious section of humanity which always finds a client in the "downtrodden Asiatic." But as the leading Chinese strongly supported the measure, it remained law until the pestilent action of an Irish Home Ruler removed this salutary check upon the predatory instincts of the Chinese housebreaker and thief.

* * * * *

Sir Richard Macdonnell was succeeded by Sir Arthur Kennedy, who was one of the best governors the colony ever saw. He had much sense not to reverse the beneficent policy of his predecessor, and was probably the most popular governor the colony ever possessed. If less able, he was far more conciliatory in manner than Sir Richard, and his amiable wife and daughter seconded his efforts to be a pleasant host in the most admirable manner.

* * * * *

The Chief Justice of those days was a well-meaning but somewhat old-womanly official, who, albeit a fair lawyer, was by no means an ornament of the bench. Upon one occasion he sentenced a prisoner to death in the ordinary form, and told the court interpreter to convey his remarks to the prisoner. This the latter did, while the judge was still speaking, by saying, "You're to be hanged next Tuesday"—knowing full well that any further rendering of the "patient trial before the jury," or of the prayer that God would have mercy upon the murderer's soul, was simply a waste of breath. As the judge paused for his address to be rendered he was taken much aback by being informed that his remarks had already been translated. "A wonderfully expressive language, the Chinese," was, however, his only remark.

* * * * *

The magistrates of those days were not exactly of the stamp which now finds favour. An ex-convict was an occasional occupant of the bench, and it was no uncommon occurrence to find "his worship" of 9 a.m. very drunk and disorderly about midnight, and ready to tip a policeman a 5-dollar note to see him safely to his domicile.

* * * * *

High play, too, prevailed to an extent which would startle the present generation. I have known from 20,000 dols. change hands in one night, but nobody was particularly shocked. Money was made easily, and was as easily spent, much to the satisfaction of that useful class of men known as "compradores," who were virtually, though not ostensibly, the real masters of the mercantile world in the colony.

* * * * *

To illustrate the way in which operations were conducted before the advent of the telegraph, I may mention the following facts. One night the signal-station (1,760 feet above the sea) became aware that a steamer consigned to the then leading firm, from Calcutta, was in the offing. The firm was informed, and within a few minutes a gig was to be seen pulling out to sea to speak the steamer. The captain of the latter simply handed his visitor an ordinary letter, and shortly afterwards steamed away seaward. The profit made by the firm on the information thus communicated was 200,000 dols., or about 40,000*l*. It need scarcely be added that the deal was in opium.

* * * * *

Canton, situated about ninety miles distant from Hongkong, on the Pearl River, was the residence of a small European community, amongst whom the late Sir Brooke Robertson was the most conspicuous, in virtue of his position as British Consul and very decided diplomatic ability. He was rather a small man, but made up for his want of size by a very large amount of dignity. Counsel were not then permitted to appear as such in the Consular courts, but leave was sometimes given to a lawyer to act as the "friend" of a defendant or prisoner. Upon one occasion a young and particularly vulgar member of the Hongkong bar attempted to assert his right to appear for the defence. He was politely informed that he had no *locus standi*, but persisted in arguing the point. "Take that man away," thundered the little Consul, adding, "If you dare say another word, I'll commit you for contempt of court."

* * * * *

One of the most noteworthy characters of the small community was the worthy Archdeacon. He had been stroke oar of the Cambridge eight in his university days, and was still of remarkable physique. He was fond of alluding to "this poor miserable body of mine," striking himself on the chest as he did so, and as his muscular capabilities were well known, this allusion invariably excited a titter amongst the younger and less reverend portion of the congregation. He was good-nature personified, and never could shut his ears to a plausible tale of distress. One of the objects of his bounty was a Chinese opium-smoker, who returned his kindness by nearly burning down the house with his opium lamp. Sometimes the good man's hospitality verged on indiscretion, though no breath of scandal ever assailed his character. But when he put up a "lady" in distress whose character was of too public a nature to bear investigation, his friends felt that it was time to remonstrate.

* * * * *

Shortly after his first arrival at Canton he projected with some friends a tour to visit the Miaotzu, or aboriginal savages, inhabiting the mountainous country some days' journey to the westward of the provincial capital. Sir Brooke Robertson declined to grant them a passport on the ground that the journey was unsafe, and that the Chinese authorities could not be held responsible in case of outrage by the savages, over whom they had no effective control. However, the party determined to go, and they went. The next seen of the Archdeacon, a week or two afterwards, was the apparition of an elderly gentleman in a tall hat, *sans culottes*, and, in fact, devoid of all clothing except a piece of coarse matting, which a friendly Chinaman had given him on learning that the hat was the only single thing which the Miaotzu had disdained to rob him of.

* * * * *

The Archdeacon was very fond of showing visitors through Canton, and often unconsciously gave great offence to the natives by entering their houses unbidden and directing attention to any domestic arrangements in progress. On one occasion he was taking round a party of friends, including ladies, and came upon a man changing his coat: "Here you will observe," said the amateur cicerone, "a man changing his

Digitized by Google

coat. That which he is taking off is the short coat known as the *ma kua*;" and he was proceeding to further dilate when the native, in the most imperturbable manner, began to take off his trousers also. There was a shriek and a scuttle into the street, and when the Archdeacon could find breath to speak, all he could say was, "Dear me, how very inconsiderate!" But nothing could cure his blindness to the fact that even Chinese disliked intrusions on their privacy. It was the one fault of one of the gentlest of men.

* * * * *

Those who have had personal experience of the "Old Factories at Canton" are becoming lamentably fewer and fewer. The factories consisted of a number of closely packed buildings in which the foreign merchants resided, and between them and the river there was a public garden some four acres in extent. This garden was the only place where the foreign merchants could take their daily exercise, and their perambulations round and round this garden excited the wonder of the Chinese, who, anxious to account for such a strange proceeding, came to the conclusion that the "barbarians," not having learnt the use of the abacus, adopted this method to calculate their business accounts.

* * * * *

In 1854-55 the rivers around Canton were blockaded by a body of rebels, and the hills in the neighbourhood of the city were also in their hands. But, although they overran the whole province and captured many cities, they never got possession of Canton. Their blockade was, perhaps, rendered ineffective by the British naval authorities affording protection to lorchas of the same class as the *Arrow*, which afterwards formed a *casus belli* between England and China; these lorchas were enabled, under this protection, to convey provisions certainly, and munitions of war probably, into the beleaguered city.

* * * * *

At that time H.M. Vice-Consulate at Whampoa, the shipping port of Canton, was on board an old teak-built hulk which had served in the wars of the early part of the century as H.M.S. *Alligator*. One day a fleet of Imperial junks was anchored some distance from this hulk, when a fleet of rebel boats attacked them, some of the latter utilising the Vice-Consulate as a protection from the Imperial fire; the hulk therefore became a target for the latter, and though the shot made no impression in her sides, they effected considerable havoc by entering the port-holes; one of these shot took off a child's leg while the writer was leading him to a place of safety. The Imperial junks were of the ordinary sea-going type, but the rebel flotilla consisted of boats of all kinds cut down almost to the water's edge, affording no protection whatever to their crews. It was a grand sight to see thousands of athletic, well-formed young men, without any clothing but a loincloth and a red turban, standing to their oars in these open boats exposed to the fire of the enemy, with no protection save that of the *Alligator*, when they retired behind her in order to reload their guns.

* * * * *

The old factories were periodically burnt during riots, which, if not encouraged, were certainly not discouraged by the authorities, whose policy it was to foster an anti-foreign spirit among the masses, a policy not unknown in other countries besides China at the present day. The last burning took place in December, 1856, at the commencement of the hostilities brought on by the affair of the lorcha *Arrow*. The Chinese had surrounded the factories with combustibles, which were lighted simultaneously in several places. The destruction of the foreign buildings was admirably planned, and next morning only one was standing, and that one, strange to say, was situated in the middle of the row of buildings known as the English or Queen's factory. Chinese looters soon invaded the ruins, though the risk of being shot by the English sentries was very great. The English troops threw an entrenchment across the public garden, and the houseless and servantless foreign merchants cheerfully set to work as amateur cooks. The historical site of the old factories, founded centuries ago by the East India Company, is now covered with narrow streets of Chinese shops.

* * * * *

The first blood shed in Canton during the *Arrow* war was that of a street watchman. Previous to the destruction of the old factories the approaches thereto were barricaded with bales of cotton, behind which were guards of British soldiers. An armed Chinese patrol was seen approaching one of these barricades; the men forming the patrol halted and knelt on one knee; the English guard, assuming this movement to be preliminary to opening fire, fired at them, whereupon the street was left clear, except for the corpse of the watchman, whose head presented a ghastly illustration of the effect of a Minie rifle bullet. Afterwards the Chinese authorities explained that the patrol was not of a military character, but only a municipal guard for the protection of property against robbers, and that the kneeling attitude was intended to indicate a friendly intent towards the British troops.

* * * * *

During all the exciting scenes connected with the commencement of the war, with the four years' occupation of Canton by allied British and French troops, as well as with events in the North of China, Mr. (afterwards Sir Harry) Parkes was a prominent personage; he was clear-headed, active-minded, and indefatigable, a splendid type of a British official. He has been accused of diplomatic pugnacity, but there was no foundation for such a slur on his noble character. In the earlier days of the *Arrow* war, he acted loyally under direct daily instructions from Sir John Bowring, whose general policy towards China no doubt accorded with his instructions from the Government of the day.

* * * * *

"Bits of Old China" have come to a sudden close, the writer having been attacked by serious indisposition and ordered off on a sea voyage by his medical adviser.

## *THE NEW FOREIGN JURISDICTION ACT.*

In view of the importance of the new British Foreign Jurisdiction Act, on which we recently commented, we give here the full text of the statute from the volume of statutes for 1890 issued by the Queen's printers in London.

53 & 54 VICT.—CHAPTER 37.

An Act to Consolidate the Foreign Jurisdiction Acts.

(4th August, 1890.)

Whereas by treaty, capitulation, grant, usage, sufferance, and other lawful means, Her Majesty the Queen has jurisdiction within divers foreign countries, and it is expedient to consolidate the Acts relating to the exercise of Her Majesty's jurisdiction out of Her dominions, namely:—

Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same as follows, viz.:—

1. It is and shall be lawful for Her Majesty the Queen to hold, exercise, and enjoy any jurisdiction which Her Majesty now has or may at any time hereafter have within a foreign country in the same and as ample a manner as if Her Majesty had acquired that jurisdiction by the cession or conquest of territory.

2. Where a foreign country is not subject to any government from whom Her Majesty the Queen might obtain jurisdiction in the manner recited by this Act, Her Majesty shall by virtue of this Act have jurisdiction over Her Majesty's subjects for the time being resident in or resorting to that country, and that jurisdiction shall be jurisdiction of Her Majesty in a foreign country within the meaning of the other provisions of this Act.

3. Every act and thing done in pursuance of any jurisdiction of Her Majesty in a foreign country shall be as valid as if it had been done according to the local law then in force in that country.

4. If in any proceeding, civil or criminal, in a court in Her Majesty's dominions or held under the authority of Her Majesty any question arises as to the existence or extent of any jurisdiction of Her Majesty in a Foreign country, a Secretary of State shall, on the application of the court, send to the court within a reasonable time his decision on the question, and his decision shall for the purposes of the proceeding be final.

2. The court shall send to the Secretary of State, in a document under the seal of the court, or signed by a judge of the court, questions framed so as properly to raise the question, and sufficient answers to those questions shall be returned by the Secretary of State to the court, and those answers shall, on production thereof, be conclusive evidence of the matters therein contained.

5.—(1) It shall be lawful for Her Majesty the Queen in Council, if she thinks fit, by Order to direct that all or any of the enactments described in the First Schedule of this Act, or any enactments for the time being in force amending or substituted for the same, shall extend, with or without exceptions, adaptations, or modifications in the Order mentioned, to any foreign country in which for the time being Her Majesty has jurisdiction.

(2) Thereupon those enactments shall, to the extent of that jurisdiction, operate as if that country were a British possession, and as if Her Majesty in Council were the Legislature of that possession.

6.—(1) Where a person is charged with an offence recognizable by a British court in a foreign country, any person having authority derived from Her Majesty in that behalf may, by warrant, cause the person so charged to be sent for trial to any British possession for the time being appointed in that behalf by Order in Council, and upon the arrival of the person so charged in that British possession, such criminal court of that possession as is authorised in that behalf by Order in Council, or if no court is so authorised, the supreme criminal court in that possession, may cause him to be kept in safe and proper custody, and as soon as conveniently may be made inquire of, try, and determine the offence, and on conviction punish the offender according the laws in force in that behalf within that possession, in the same manner as if the offence had been committed within the jurisdiction of that criminal court.

Provided that—

(a) A person so charged may, before being so sent for trial, tender for examination to a British court in the foreign country where the offence is alleged to have been committed any competent witness whose evidence he deems material for his defence, and whom he alleges himself unable to produce at the trial in the British possession.

(b) In such case the British court in the foreign country shall proceed in the examination and cross-examination of the witness as though he had been tendered at a trial before that court, and shall cause the evidence so taken to be reduced into writing, and shall transmit to the criminal court of the British possession by which the person charged is to be tried a copy of the evidence, certified as correct under the seal of the court before which the evidence was taken, or the signature of a judge of that court.

(c) Thereupon the court of the British possession before which the trial takes place shall allow so much of the evidence so taken as would have been admissible according to the law and practice of that court, had the witness been produced and examined at the trial, to be read and received as legal evidence at the trial.

(d) The court of the British possession shall admit and give effect to the law by which the alleged offender would have been tried by the British court in the foreign country in which his offence is alleged to have been committed, so far as that law relates to the criminality of the act alleged to have been committed, or the nature or degree of the offence, or the punishment thereof, if the law differs in those respects from the law in force in that British possession.

(2) Nothing in this section shall alter or repeal any law, statute, or usage by virtue of which any offence committed out of Her Majesty's dominions may, irrespectively of this Act, be inquired of, tried, determined, and punished within Her Majesty's dominions, or of any part thereof.

7.—Where an offender convicted before a British court in a foreign country has been sentenced by that court to suffer death, penal servitude, imprisonment, or any other punishment, the sentence shall be carried into effect in such place as may be directed by Order in Council or be determined in accordance with directions given by Order in Council, and the conviction and sentence shall be of the same force in the place in which the sentence is so carried into effect as if the conviction had been made and the sentence passed by a competent court in that place.

8.—Where, by Order in Council made in pursuance of this Act, any British court in a foreign country is authorised to order the removal or deportation of any person from that country, that removal or deportation, and any detention for the purposes thereof, according to the provisions of the Order in Council, shall be as lawful as if the order of the court were to have effect wholly within that country.

9.—It shall be lawful for Her Majesty the Queen in Council, by Order, to assign to or confer on any court in any British possession, or held under the authority of Her Majesty, any jurisdiction, civil or criminal, original or appellate, which may lawfully by Order in Council be assigned to or conferred on any British court in any foreign country, and to make such provisions and regulations as to Her Majesty in Council seem meet respecting the exercise of the jurisdiction so assigned or conferred, and respecting the enforcement and execution of the judgments, decrees, orders, and sentences of any such Court, and respecting appeals therefrom.

10.—It shall be lawful for Her Majesty the

Digitized by Google

Queen in Council to revoke or vary any Order in Council made in pursuance of this Act.

11.—Every Order in Council made in pursuance of this Act shall be laid before both Houses of Parliament forthwith after it is made, if Parliament be then in session, and if not, forthwith after the commencement of the then next session of Parliament, and shall have effect as if it were enacted in this Act.

12.—(1) If any Order in Council made in pursuance of this Act as respects any foreign country is in respect repugnant to the provisions of any Act of Parliament extending to Her Majesty's subjects in that country, or repugnant to any order or regulation made under the authority of any such Act of Parliament, or having in that country the force and effect of any such Act, it shall be read subject to that Act, order, or regulation, and shall, to the extent of such repugnancy, but not otherwise, be void.

(2) An Order in Council made in pursuance of this Act shall not be, or be deemed to have been, void on the ground of repugnancy to the law of England unless it is repugnant to the provisions of some such Act of Parliament, order, or regulation aforesaid.

13.—(1) An action, suit, prosecution, or proceeding against any person for any act done in pursuance or execution or intended execution of this Act, or of any enactment repealed by this Act, or of any Order in Council made under this Act, or of any such jurisdiction of Her Majesty as is mentioned in this Act, or in respect of any alleged neglect or default in the execution of this Act, or of any such enactment, Order in Council, or jurisdiction as aforesaid, shall not lie or be instituted:—

(a) in any court within Her Majesty's dominions, unless it is commenced within six months next after the act, neglect, or default complained of, or, in case of a continuance of injury or damage, within six months next after the ceasing thereof, or where the cause of action arose out of Her Majesty's dominions within six months after the parties to the action, suit, prosecution, or proceeding have been within the jurisdiction of the court in which the same is instituted; nor

(b) in any of Her Majesty's courts without Her Majesty's dominions, unless the cause of action arose within the jurisdiction of that court, and the action is commenced within six months next after the act, neglect, or default complained of, or, in case of a continuance of injury or damage, within six months next after the ceasing thereof.

(2) In any such action, suit, or proceeding, tender of amends before the same was commenced may be pleaded in lieu of or in addition to any other plea. If the action, suit, or proceeding was commenced after such tender, or is proceeded with after payment into court of any money in satisfaction of the plaintiff's claim, and the plaintiff does not recover more than the sum tendered or paid, he shall not recover any costs incurred after such tender or payment, and the defendant shall be entitled to costs, to be taxed as between solicitor and client, as from the time of such tender or payment; but this provision shall not affect costs on any injunction in the action, suit, or proceeding.

14.—It shall be lawful for Her Majesty the Queen in Council to make any law that may seem meet for the government of Her Majesty's subjects being in any vessel at a distance of not more than one hundred miles from the coast of China or of Japan, as fully and effectually as any such law might be made by Her Majesty in Council for the Government of Her Majesty's subjects being in China or in Japan.

15.—Where any Order in Council made in pursuance of this Act extends to persons enjoying Her Majesty's protection, that expression shall include all subjects of the several princes and states of India.

16.—In this Act,—

The expression "foreign country" means any country or place out of Her Majesty's dominions.

The expression "British Court in a foreign country" means any British Court having jurisdiction out of Her Majesty's dominions in pursuance of an Order in Council whether made under any Act or otherwise.

The expression "jurisdiction" includes power.

17.—The Acts mentioned in the second schedule of this Act may be revoked or varied by Her Majesty by Order in Council.

18.—The Acts mentioned in the third schedule to this Act are hereby repealed to the extent in the third column of that schedule mentioned: Provided that,—

(1) Any Order in Council, commission, or instructions made or issued in pursuance of any enactment repealed by this Act, shall, if in force at the passing of this Act, continue in force, until altered or revoked by Her Majesty as if made in pursuance of this Act; and shall, for the purposes of this Act, be deemed to have been made or issued under and in pursuance of this Act; and.

(2) Any enactment, Order in Council, or document referring to any enactment repealed by this Act shall be construed to refer to the corresponding enactment of this Act.

19—(1) This Act may be cited as the Foreign Jurisdiction Act, 1890.

(2) The Acts whereof the short titles are given in the First Schedule to this Act may be cited by the respective short titles given in that schedule.

SCHEDULES.—FIRST SCHEDULE.

Session and Chapter.—12 and 13 Vict. c. 96.
Title.—An Act to provide for the Prosecution and Trial in Her Majesty's Colonies of Offences committed within the jurisdiction of the Admiralty.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—Admiralty Offences (Colonial) Act, 1849.
Session and Chapter.—14 and 15 Vict. c. 99.
Title.—An Act to amend the law of evidence.
Enactments which may be extended by Order in Council.—Sections seven and eleven.
Short Title.—Evidence Act, 1851.
Session and Chapter.—17 and 18 Vict. c. 104.
Title.—The Merchant Shipping Act, 1854.
Enactments which may be extended by Order in Council.—Part X.
Session and Chapter.—19 and 20 Vict. c. 113.
Title.—An Act to provide for taking evidence in Her Majesty's Dominions in relation to civil and commercial matters pending before Foreign tribunals.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—Foreign Tribunals Evidence Act, 1856.
Session and Chapter.—22 Vict. c. 20.
Title.—An Act to provide for taking evidence in Suits and Proceedings pending before Tribunals in Her Majesty's Dominions, in places out of the jurisdiction of such tribunals.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—Evidence by Commission Act, 1859.
Session and Chapter.—22 and 23 Vict. c. 63.
Title.—An Act to afford Facilities for the more certain Ascertainment of the Law administered in one Part of Her Majesty's Dominions, when pleaded in the Courts of another Part thereof.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—British Law Ascertainment Act, 1859.
Session and Chapter.—23 and 24 Vict. c. 122.
Title.—An Act to enable the Legislatures of Her Majesty's Possessions Abroad to make Enactments similar to the Enactment of the Act ninth George the Fourth, chapter thirty-one, section eight.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—Admiralty Offences (Colonial) Act, 1860.
Session and Chapter.—24 and 25 Vict. c. 11.
Title.—An Act to afford facilities for the better ascertainment of the Law of Foreign Countries when pleaded in Courts within Her Majesty's Dominions.
Enactments which may be extended by Order in Council.—The whole Act.
Short Title.—Foreign Law Ascertainment Act, 1861.
Session and Chapter.—30 and 31 Vict. c. 124.
Title.—The Merchant Shipping Act, 1867.
Enactments which may be extended by Order in Council.—Section eleven.
Session and Chapter.—37 and 38 Vict. c. 94.
Title.—The Conveyancing (Scotland) Act, 1874.
Enactments which may be extended by Order in Council.—Section fifty-one.
Session and Chapter.—44 and 45 Vict. c. 69.
Title.—The Fugitive Offenders Act, 1881.
Enactments which may be extended by Order in Council.—The whole Act.
Session and Chapter.—48 and 49 Vict. c. 74.
Title.—The Evidence by Commission Act, 1885.
Enactments which may be extended by Order in Council.—The whole Act.

SECOND SCHEDULE.—ACTS WHICH MAY BE REVOKED OR VARIED BY ORDER IN COUNCIL.

Session and Chapter.—24 and 25 Vict. c. 31.
Title.—An Act for the prevention and punishment of offences committed by Her Majesty's subjects within certain territories adjacent to the colony of Sierra Leone.
Extent of Repeal.—The whole Act.
Session and Chapter.—26 and 27 Vict. c. 35.
Title.—An Act for the prevention and punishment of offences committed by Her Majesty's subjects in South Africa.
Extent of Repeal.—The whole Act.

THIRD SCHEDULE.—ENACTMENTS REPEALED.

Session and Chapter.—6 and 7 Vict. c. 94.
Title or Short Title.—The Foreign Jurisdiction Act, 1843.
Extent of Repeal.—The whole Act.
Session and Chapter.—20 and 21 Vict. c. 75.
Title or Short Title.—An Act to confirm an Order in Council concerning the exercise of jurisdiction in matters arising within the kingdom of Siam.
Extent of Repeal.—The whole Act.
Session and Chapter.—28 and 29 Vict. c. 116.
Title or Short Title.—The Foreign Jurisdiction Act Amendment Act, 1865.
Extent of Repeal.—The whole Act.
Session and Chapter.—29 and 30 Vict. c. 87.
Title or Short Title.—The Foreign Jurisdiction Act Amendment Act, 1866.
Extent of Repeal.—The whole Act.
Session and Chapter.—33 and 34 Vict. c. 55.
Title or Short Title.—The Siam and Straits Settlements Jurisdiction Act, 1870.
Extent or Repeal.—The whole Act.
Session and Chapter.—38 and 39 Vict. c. 85.
Title or Short Title.—The Foreign Jurisdiction Act, 1875.
Extent of Repeal.—The whole Act.
Session and Chapter.—39 and 40 Vict. c. 46.
Title or Short Title.—An Acts for more effectually punishing offences against the laws relating to the slave trade.
Extent of Repeal.—Sections four and six.
Session and Chapter.—41 and 42 Vict. c. 67.
Title or Short Title.—The Foreign Jurisdiction Act, 1878.
Extent of Repeal.—The whole Act.

## *NEW BOOKS ON CHINA.*

*Notice sur la Chine.* Par Henri Cordier. (Paris, Lamirault & Co.)—China is so large a country, and the statistics connected with it are so difficult to obtain, that there is always an element of uncertainty about figures relating to it. Orientals have as little idea of the value of figures as they have of the value of time. The difference of a few hundred square miles in the area of a province, or of a few hundred thousands in the population of a city, appears to the unstatistical mind of a Chinaman so insignificant as not to be worth a thought. The Chinese delight in round numbers, and the larger they are the better. In this way the population has generally been spoken of as being about 400,000,000. This is so plainly an exaggeration that some foreign observers have been tempted into the other extreme, and have put down the grand total as not exceeding 250,000,000.. M. Cordier steers a middle course between these figures, and supposes that 380,000,000 approaches sufficiently near the truth. During the last hundred years there have been many causes at work which have made the number of the people a constantly varying quantity. Famine, pestilence, and the sword have from time to time carried off such numbers as would have left a small kingdon desolate; and then, again, the reproducing powers of Chinamen are so great that a few years suffice to fill up the spaces left empty by these powers of destruction. With regard to the superficial areas of the empire and its provinces the same uncertainty does not exist. At the desire of the Emperor Kang-hi, the Roman Catholic missionaries made in the seventeenth century a rough survey of the country, which has of late years been subjected to revision by the Customs officials, who, acting under the orders of the most energetic Inspector-General, Sir Robert Hart, have carefully estimated the areas of the various provinces. The result arrived at shows that the eighteen cover an area of 1,348,870 square miles. All those who are acquainted with M. Cordier's most accurate and detailed bibliograply of China will expect to find carefully prepared and exact statistics in the present work. Nor will they be disappointed. It is a mine of information on all subjects connected with China which can be expressed by figures, dates, and lists. History, language, literature, philosophy, geography, religion, and ethnography are all carefully summarized and tabulated, and thus make the volume an invaluable aid to all those who desire to acquaint themselves with facts and figures relating to far Cathay.

*Chinesische Studien.* Von Friedrich Hirth. (Munich and Leipzig, Hirth.)—It is a new and refreshing experience to meet with an invention of which the Chinese do not claim to have been the first discoverers. The late Marquis Tsêng used to

Digitized by Google

assert that Confucius was conversant with the elecric telegraph on the faith of an utterance by the sage infinitely less to the point than Puck's boast that he would "put a girdle round the earth in forty minutes." But even he could not say that his countrymen discovered the art of manufacturing glass; for on the first knowledge which the Chinese had of that material the dynastic histories speak plainly enough. According to the historian of the Han epoch (140-86 B.C.), agents were sent abroad to buy specimens of the glass of the period, which seems to have been opaque and much like the substance which is found in Egyptian tombs. The Chinese distinguish this kind, or *liu li*, from the clear glass, or *po-li*, which does not appear to have been known in China until some centuries later, when an embassy from Bokhara brought as a present to the Emperor a number of glass tumblers. Glass has never been generally used in China for the purposes common among ourselves. Except in some few houses at the treaty ports, windows are still covered with paper; and only in the case of luxurious individuals who are greedy of light is even talc used as a substitute. A Chinaman's wine bottle is made of porcelain, as are the cups out of which he drinks, and Chinese ladies still tire their hair and paint their cheeks by the aid of metal mirrors. Canton is as yet the principal seat of the native manufacture, and there broken glass used to be imported to be remelted. This, however, is no longer done, although flints are still carried from England for the use of the glassblowers. Hitherto the attempts of these artists to make glass mirrors have been dismal failures. Every object reflected in them is hideously distorted, and it is not surprising, therefore, that the Canton belles prefer to indulge their conservative instincts and to use bronze mirrors rather than to suffer the disfigurement of their almond-shaped eyes and willow-leaf eyebrows in native looking-glasses. The art of making metal mirrors was early brought to great perfection in China, and appears to have reached its zenith at the beginning of our era. Hirth gives in his "Chinesische Studien" two illustrations of these mirrors, and describes minutely the two kinds which the engravings represent; but he omits to make more than a passing mention of the magic mirrors which have so puzzled European men of science. These curious mirrors have "a double debt to pay," for not only do they show the object presented to them, but when held in the sun they reflect the raised characters or devices drawn on their backs. It is commonly reported that the art of making them was discovered by accident, although it was afterwards commonly practised, and was appropriated by the Japanese with that love of acquisition which has prompted them to adopt in succession the arts of China and of Europe. Of other products of Chinese skill Dr. Hirth speaks in a full and interesting manner. He deals also with the early trade of China with foreign countries, and shows how indefatigable the Chinamen of the first centuries were in seeking out new markets for their goods. Recent researches have demonstrated how successful they were in disseminating their manufactures. Chinese porcelain ornaments have even been discovered in Egyptian tombs, and not many years since some ancient Chinese seals were found in an Irish bog!—*Athenæum*.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, March 20th.

The captain of the steamer *Utopia*, which was in collision with H.M.S. *Rodney* off Gibraltar, has been arrested.

London, March 21st.

The Oxford and Cambridge University Boat-race was a very close affair, the "Dark Blues' winning by only a quarter of a length.

Distressing scenes occurred at Gibraltar afte the collision between H.M.S. *Rodney* and the steamer *Utopia*, in the identification of hundreds of corpses that have been recovered since the sinking of the latter vessel.

London, March 24th.

Ramiakatra, the Governor of Nosibé, has been executed on the same spot where he had massacred so many of his people.

The Portuguese have proclaimed a state of siege at Sofala, in Manicaland.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, March 23rd.

The steamer *Queen Elizabeth*, from Karatsu, coal laden, bound to Manila, has sunk off Ikishima. All hands saved.

(FROM THE "SINGAPORE FREE PRESS.")

London, March 6th.

In the House of Commons the Radicals have renewed their attack with reference to the occupation of Tokar. The Right Hon. Edward Stanhope, in reply, said the Government did not intend to reconquer the Soudan.

London, March 7th.

Portugal refuses the conditions put forward by England regarding the African boundary question. A settlement is therefore considered improbable.

The recent elections in Canada show that the Government majority has been reduced one half.

London, March 9th.

The Soudan force has dispersed, the Khedive having decreed a general amnesty.

The market on the Stock Exchange is depressed in consequence of forced sales on provincial account.

The Liberals in the Forest of Dean have nominated Sir Charles Dilke as a candidate at the next general election.

(FROM THE "PENANG GAZETTE.")

London, March 5th.

Sir William Gordon Cumming claims £5,000 from each of five defendants in the card scandal case.

The Governor of Nosibé (an island in possession of France formerly a dependency of Madagascar), furious at an appeal of his subjects to the Queen of Madagascar as to his cruelties, has massacred 280 men, women, and children.

### REPORTS.

The French steamer *Melbourne*, Captain Vimont, reports:—Left Marseilles the 8th February at 4.30 p.m.; called at Alexandria the 13th and the same day at Port Said. She entered the Suez Canal the 14th at 3.30 a.m. and left Suez the 15th at 4.30 a.m.; experienced in the second portion of the Red Sea strong southerly winds with very heavy sea. Arrived at Aden the 19th at 3.15 p.m. and left the 20th at 2 a.m.; immediately after departure, lost a blade of the propeller, which greatly shook the whole vessel. Arrived at Colombo harbour the 27th at 8 a.m. and left at 9.30 p.m.; thence light monsoon with smooth water, but strong southerly currents. Anchored near Sultan Shoal the 5th March at 2 a.m., and came along the pier at 7 a.m.; left Singapore at 4.30 p.m. Anchored at St. James's Cape the 7th at 5.30 p.m., proceeded at 8 p.m. to Saigon where arrived at midnight and left the 9th at noon; experienced fine weather with smooth water as far as Paracels Reefs; thence rough sea and overcast and rainy weather. Arrived at Hongkong the 12th at 4.30 p.m. and left the 13th at 4.15 p.m.; experienced strong monsoon and heavy sea; passed Lamocks the 14th at 10 a.m.; Dodd Island at 6.45 p.m.; passed the Seaon Channel the 15th at 9 a.m.; passed Pih-Ki-Shan at 4.30 p.m.; thence variable breezes and continual rain with short horizon; passed Video the 16th at 7.30 a.m. and anchored at Woosung at 4.15 p.m. Left the 17th at 4.15 p.m.; had clear weather, fair N.W. winds with swelling sea; passed Quelpart the 18th at 4.30 p.m.; thence light breeze and smooth water; passed Shimonoseki the 19th at 9 a.m. and came along the Kobe pier the 20th; left Kobe the 21st at 6 a.m.; had rainy weather; passed Tomangai at 8.15 a.m.; thence strong S.W. winds with heavy sea; glass at 29.8; passed Oshima at 3.30 p.m., wind slackening and rain stopping, glass rising and sky brightening; passed Rock Island the 22nd at 5 a.m.; thence overcast and rainy weather with N.W. winds. Arrived at Yokohama the 22nd at 11 a.m.

The Japanese steamer *Sagami Maru*, Captain Walter, reports:—Left Kobe the 21st March at noon; had very thick weather with heavy rain to Tomangoshima. Off Tomangoshima and to the southward had very heavy southerly swell, and on account of the suspicious look of the weather put into Manouchi for the night and left at 5.30 a.m.; passed Oshima at 11 a.m.; at 6 p.m. had fresh N.W. winds which Rock Island; passed Rock Island the 23rd at 2 a.m.; thence to port moderate to fresh northerly winds. Time of arrival at Yokohama 9 a.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Hakodate the 21st March at 2 p.m.; rounded Shiriya-saki at 6 p.m. Arrived at Oginohama the 22nd at 1 p.m.; had light southerly and north-westerly winds with overcast sky and misty weather. Left Oginohama the 23rd at 6 a.m.; had strong to moderate northerly winds and clear weather up to port. Time of arrival at Yokohama the 24th March at 5.30 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 23rd March at 2 p.m.; had fresh W.S.W. winds and overcast with snow weather, moderating at midnight and wind hauling to the southward; experienced light moderate variable winds and fine clear weather till arrival at Yokohama the 25th March at 10 a.m.

The German steamer *General Werder*, Captain Eichel, reports:—Left Hongkong the 20th March at 4 p.m.; had through the Formosa Channel foggy weather and strong N.E. winds with high head sea, for the first three days; thence to port mostly moderate northerly breeze and fine weather. Arrived at Yokohama the 26th March at 2.30 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 21st March at 8 a.m.; had cloudy weather with fresh northerly winds; the 22nd, wind freshened to moderate gale with heavy sea. Arrived at Nagasaki the 23rd at 4 a.m. and left at 5.45 p.m.; had light northerly winds and fine clear weather. Arrived at Shimonoseki the 24th at 6 a.m. and left at 9.30 a.m.; had fine clear weather and light north-westerly winds. Arrived at Kobe the 25th at 5 a.m. and left the 26th at noon; had fine clear weather with light S.E. winds to Oshima; passed there at 7.40 p.m.; thence to Rock Island moderate northerly winds and fine weather; passed Rock Island at 9.16 a.m.; thence to port moderate N.E. winds and fine weather. Arrived at Yokohama the 27th March at 3.20 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Honolulu the 14th March at 2.50 p.m.; crossed the meridian on the 19th in lat. 24.40 N. Arrived at Yokohama the 28th March at 2.30 a.m.; had moderate variable winds, smooth sea, and fine pleasant weather throughout the entire passage of 12 days, 15 hours, and 50 minutes.

## *LATEST COMMERCIAL.*

### IMPORTS.

The Import Market has continued very dull during the week. The easy feeling in English Yarns developed into a drop of 25 cents per picul owing to the weakness of one or two holders, but the downward track of Exchange has made sellers disinclined to accept low rates, and buyers will not pay higher prices. Bombay Yarns are quiet and slightly lower in sympathy with native spinnings. In Piece-goods and Fancies there is nothing doing. Sales for the week amount to 500 bales English Yarns, 100 bales Bombay Yarns, 3,000 pieces Shirtings, and 450 pieces Italians.

| | PER BALE. | | |
| No. 20s, Bombay | 70.00 | to | 79.50 |
| No. 16s, Bombay | 72.00 | to | 78.00 |
| Nos. 10/14, Bombay | — | | |

## METALS.

Market unchanged since last week. Exchange is receding daily, and holders try to advance prices for Iron in the same proportion. Quotations firm at last rates.

| | | | |
|---|---|---|---|
| | PER PICUL. | | |
| Flat Bars, ¼ inch | $2.80 | to | 2.85 |
| Flat Bars, ½ inch | 2.90 | to | 2.95 |
| Round and square up to ¾ inch | 2.85 | to | 2.95 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom. | | |
| Iron Plates, assorted | 2.90 | to | 3.00 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.40 | to | 4.70 |
| Tin Plates, per box | 5.70 | to | 6.00 |
| Pig Iron, No. 3 | 1.40 | to | 1.45 |

## KEROSENE.

Nothing fresh to note in this market. Buyers are apparently well supplied for the moment and trade is quiet. Holders strong on account of a declining exchange.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.65 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

## SUGAR.

No change to note in prices, and business about the same.

| | | | |
|---|---|---|---|
| | PER PICUL. | | |
| Brown Takao | $4.00 | to | 4.10 |
| Brown Daitong | 3.20 | to | 4.00 |
| Brown Canton | 5.25 | to | 6.25 |
| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 5.00 | to | 7.75 |

# EXPORTS.

## RAW SILK.

Our last issue was of the 20th instant; since that date settlements in this market amount to 1,900 piculs divided thus:—*Hanks*, 70; *Filatures*, 1,457; *Re-reels*, 257; *Kakeda*, 107; *Oshu*, 9. In addition to these figures direct shipments have been 106 bales, making the total export business of the week equal to 2,000 piculs.

A good current trade at easy prices, until two days back when a shipper for the American market who had apparently some "short sales" to fill, came with a rush and the market at once hardened. Quotations are back again to where they were a week ago, some holders refusing to sell for the moment in the hope of still higher rates.

Exchange, contrary to expectation, has continued to dribble down day by day until at the present moment we are at the lowest point touched for many months past. This also encourages holders to ask much higher prices for their silks, and at the present writing it is probable that we will have higher rates for Silk when the market re-opens after the Easter Holidays.

Arrivals from the interior are very small, and stock is now down to the neighbourhood of 6,000 piculs. Sellers feel that they have the game in their own hands for the time being, and nothing but a period of quiet combined with the approach of the new crop will have any effect upon them.

Purchases have been made both for Europe and America, those for the latter country preponderating, at the same time telegraphic intelligence from all consuming centres is by no means good, and orders from abroad still continue to come in at low limits. We leave our quotation list unchanged, although in some instances holders simply decline to sell for the moment at any price.

There have been two shipping opportunities since we last wrote: the English Mail steamer *Ancona* of the 22nd inst. took 369 bales for Europe, and the *City of Rio de Janeiro*, on the same date, had 1,295 bales for the New York trade. These departures bring the present export figures up to 24,680 piculs, against 34,748 last year and 37,675 to the same date in 1889.

*Hanks.*—Some few purchases have been made at late rates, but prime quality is very scarce, in fact the total stocks of *Hanks* do not exceed 80 piculs. These are held in strong hands, good silk especially being very scarce indeed. Ordinary 2½/3 have been done at $500, while for something really prime as much as $540 has been paid.

*Filatures.*—These touched bottom two days ago, when some large parcels were settled for the United States. The following prices were made: *Taiyosha*, $595; *Matsushiro*, $590; *Meijusha*, *Choshinsha*, *Tokushinsha*, $585; *Tenrusha*, $582½; *Matsumoto*, $575; *Shunmeisha* and *Tokosha*, $570. Holders now refuse to go on unless at $5 or $10 advance. Some of them will not sell at any price; looking for a rising market. In fine silks for Europe, best *Shinshus* were done at $615; *Uzen*, $600; *Mino*, $600; *Goshu*, $600; with second qualities at $590 and $580. Prices here are also $5 or $10 up, and since the above was written a parcel of fine *Shinshu* has been done at $620.

*Re-reels.*—There has not been very much business in this class; holders have for the last two months been strong, and have kept their silks at prices which were out of proportion to filatures. Now that the stock of Filatures has become much reduced it is probable that shippers may turn their attention more to re-reels; in which case, if holders are not impracticable, considerable business will doubtless be done. The principal sales of late have been *Koriyama*, second quality, at $560, with medium *Joshu* at $540; $570 has been offered for *Tengensha* and refused. Some very common *Bushu* has been done at $510.

*Kakeda.*—Stock in this department is small, and holders insist on prices which buyers as a rule cannot pay. The business done has been large, some good No. 1½ brought $565; No. 2 $540; No. 3 $520; No. 4 $500. But as a rule there is not much doing at these prices. Shippers generally want a reduction which holders are not willing to grant.

*Oshu* sorts.—Only one transaction in *Hamatsuki* at $520. In other sorts nothing done.

| Available supplies to date | 33,800 | 37,300 | 41,150 |

## WASTE SILK.

Transactions in this branch are 411 piculs, divided thus: *Noshi*, 172; *Kibiso*, 211; *Neri*, 28.

Stock shows a further slight reduction, and buyers say that they cannot find the quality which they require. *Noshi* especially is in very small supply, about two-thirds of the present stock is *Kibiso*, which for the moment no one seems anxious to buy.

The English Mail steamer *Ancona*, on the 22nd instant carried 191 bales of Waste for Europe, and the *Oopack*, which left yesterday, had 25 bales for the same destination. These departures bring the present export figures up to 26, 898 piculs, against 25,072 last year and 28,434 to the same date in 1889.

*Pierced Cocoons.*—Again no business, and no movement in any shape either in arrivals, deliveries, or rejections.

*Noshi.*—Some business has been done in *Joshu* assorted at from $65 to $85 per picul, according to quality. One parcel of common *Oshu* has been done at $90; one lot of fair *Hachoji* $135; with some medium *Shinshu* at $105.

*Kibiso.*—Nothing done in *Filatures*, some low quality *Oshu* passed the scales at $50, $46 and $43, according to grade. One or two parcels of *Zaguri* at $65, $50 and $45 complete the list.

*Sundries.*—Small lot of *Kusu-ito* at $80, with *Neri* at $12.

JOHN WATSON & Co., 117 and 118 Leadenhall Street, London, and Calcutta, are open to undertake Buying and Shipping Goods on Commission for respectable Firms not represented in London. Presently engaged in Indent business with other parts of the World.

March 21st, 1891. 3ins.

---

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

## STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

**SIMPSON, STRICKLAND & CO.**

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:

## KEATING'S COUGH LOZENGES.

COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

---

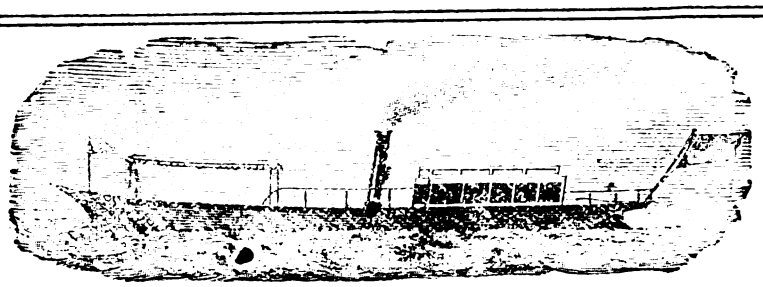
## THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!



## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

---

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

## *SUMMARY OF NEWS.*

THE PRINCE IMPERIAL visited the Fine Art Exhibition on the 29th ultimo.

MR. OGOSHI NARINORI was appointed on the 27th ult. Consul at London.

MR. SONODA YASUNOSUKE has been appointed Chief of the Metropolitan Police Bureau.

A SLIGHT shock of earthquake was felt in the capital on the 28th ultimo at 3h. 28m. 7s. p.m.

THE PRINCE IMPERIAL intends to proceed to Narashino, Chiba Prefecture, about the 10th ultimo.

MR. K. KUMAZAKI was appointed on the 27th ultimo Vice-Consul at Lyons, being raised to fifth class *sonin* rank.

H.I.M. EMPEROR will proceed on the 10th inst. to the residence of Count Kawamura, a Privy Councillor, at Azabu.

H.I.H. PRINCE ARISUGAWA TAKEHITO, who had been at Saseho for some time on official business, returned to the capital on the 27th ult.

THE *Yamashiro Maru* arrived in Yokohama from the Hawaiian Islands on the 28th ultimo. About eighty Japanese emigrants returned by her.

THEIR IMPERIAL HIGHNESSES Princes Komatsu Akihito and Kitashirakawa Yoshihisa, Counts Matsukata, Inouye, Goto, Okuma, Soyejima, Kawamura, and Sasaki, Viscounts Hijikata, Tanaka, and Inouye, and Mr. Ozaki had the honour of dining with the Emperor on the 30th ultimo in the Palace.

H.I.M. THE EMPEROR despatched Viscount Ayanokoji, a Chamberlain, with an Imperial present to the family of the late Mr. Matsudaira Kakudo, on the 28th ultimo.

THE remains of the late Mr. Kawakita, Minister-Resident at Sōul, arrived at Shinagawa on the 28th ultimo at 1 p.m., and were conveyed to his residence at Kojimachi.

TEN *hannin* officials and twelve employés were dismissed from the Hyogo Prefectural Government Office on the 27th ultimo. Other changes will, it is said, be carried out in a few days.

MR. SONODA KOKICHI has been re-elected Director of the Yokohama Specie Bank, Messrs. Koizumi Shinkichi and Yamakawa Yuki being elected Manager and Assistant Manager respectively.

H.I.H. PRINCE ARISUGAWA TAKEHITO, Lieutenant-General Kawakami, and Mr. Sannomiya, Vice-Grand Master of the Board of Ceremonies, will leave the capital for Nagasaki shortly to receive the Russian Prince Imperial.

DURING the week ended the 27th ultimo, 3,078 persons visited the Fine Art Exhibition at Uyeno, of whom 17 were distinguished, 313 special, and 2,478 ordinary visitors, the rest being students of the Fine Art School and members of the Fine Art Society.

H.I.H. THE EMPRESS, accompanied by Viscount Kagawa, Grand Master, and Mr. Sannomiya, Master of Services to the Empress, Dr. Takahashi, a Court Physician, and several other officials, proceeded to the Nobles' School for Girls on the 27th ultimo.

TWENTY-FOUR *hannin* officials were placed on the *hishoku* list on the 31st ultimo in the Cabinet Office, of whom 4 were in the Secretariat, 2 in the Board of Decorations, 4 in the Bureau of Statistics, 5 in the Accountants' Bureau, 5 in the Legislative Bureau, and 4 in the Bureau of Archives and the Pension Bureau.

AT a special general meeting of shareholders of the Kyoto Weaving Company held the other day, Messrs. Shibusawa Yeiichi (Chairman), Arakawa Shinichiro, Isono Koyemon, Nakai Saburobei, and Tsujikawa Shinzaburo were elected to form the Committee, Mr. Nishimura Torasaburo being appointed Superintendent.

A CHARTER has been granted by the Home Minister to the Shinkaku Tramway Company to lay a line between Ikutagawa and Mitamachi, Kobe (a distance of about 17 miles). Stations will be erected at Ikuta, Tanigami, Gosha, and Shirogoshi. The cost of the work is estimated at *yen* 120,000, of which *yen* 60,000 will be raised by the promoters, and the other half from the public.

MR. FURUSAWA, Director of the Postal Bureau in the Communications Department, received on the 31st ultimo the additional appointment of Director of the Bureau of Postal Money Orders and Saving Banks, being raised to first class *sonin* rank. Mr. Watanabe, Secretary of the Communications Department, was appointed the same day Director of the Nagasaki Postal and Telegraph Office.

MR. TANAKA SADAYOSHI, Director of the Despatch and Receipts Section in the Metropolitan Police Bureau, and twelve other officials of the Bureau, and seventeen other police inspectors, were dismissed on the 27th ultimo. Messrs. Yenjo, Chief of the Saruyacho Police Station; Tamba, Chief of the Izumibashi Police Station; Tateishi, Chief of the Kojimachi Police Station; Oyama, Chief of the Senju Police Station, and Mitsuhashi, Director of the Second Bureau, were released from their posts the same day at their own request.

THE following officials were decorated by the Emperor on the 30th ultimo with the first class Order of the Mirror:—Mr. Mitsukuri, Vice-Minister for Justice; Baron Makimura, President of the Administrative Court; Vicecount Kiyooka, late Senator, and Mr. Ozaki, Privy Councillor. The following gentlemen received the Second Class Order of the Mirror the same day:—Messrs. Wataru Masamoto, Ozaki Saburo, of the Legislative Bureau, Miyoshi Taizo, Chief Procurator, Judge Matsuoka, Judge Nambu, and Mr. Murata Yasushi. Besides these some thirty other officials received various decorations.

THE following higher officials of the Financial Department were placed on the retired list on the 27th ult.:—Messrs. Yokose Fumihiko, a councillor; Ro Takayoshi, a secretary; Shishido Sho, Chief Commissioner of the National Debt Bureau; Kobayashi Koai, Chief Commissioner of the Deposits Bureau; Saiki Ikei and Koyama Masatake, of the Revenue Bureau; Togano Masa-akira, Chief Commissioner of the Government Printing Office; Okamoto Kwa, Chief Commissioner of the Osaka Mint; Taga Yoshiyuki, Superintendent of the Niigata Custom House; Aoki Kanichi, Assistant Director of the Disbursments Bureau; and Nomoto Takayoshi and Nagao Yasutatsu, of the Accountants' Bureau.

DURING the month of January last the Oji Paper Mills, the Kukosha, the Kobe Paper Mills, the Fuji Paper Mills, and the Yokkaichi Paper Mills manufactured 1,097,036.50 *kin*, or about 1,462,715lbs. of paper, the sales during the same period amounting to 986,366.30 *kin*, or about 1,315,155lbs. Classifying the different varieties, we find that of ordinary printing paper 936,279.00 *kin* were manufactured and 838,612 30 *kin* sold; of superior printing paper 26,570.00 *kin* were manufactured and 10,152.00 *kin* sold; of coloured paper, 3,503.00 *kin* were manufactured and 2,017.00 *kin* sold; of wrapping paper 42,533.50 *kin* were manufactured and 57,829.00 *kin* sold; and of miscellaneous kinds, 88,151.00 *kin* were manufactured and 77,756.00 *kin* sold.

THERE is nothing in the form of improvement to be noted in the Import trade, Yarns, Shirtings, and other goods being slow of sale at low prices, and buyers appear to be indifferent. The Metal trade is dull, and there is but little enquiry for any description of goods. The Kerosene market is quiet and unchanged, and stocks are ample though there have been no fresh arrivals during the week. A steady business continues in Sugar, both White and Brown, and the latter having improved in value, sales "to arrive" have been effected at from $4 to $4.20 according to grade. A fair amount of Silk has been sold during the week, and business would have continued active had not holders checked buyers by an advance all round, and in some cases by retiring their Silk from the market. Transactions in Waste Silk have been small. A few sales of very Common Tea have been made. The weather has been most favourable to the new crop, which is rapidly coming on. Exchange has not fluctuated much, and has steadily risen for several days past.

## *EDITORIAL NOTES.*

### THE "NICHI NICHI SHIMBUN" AND MR. MASUJIMA.

THE *Nichi Nichi Shimbun*, speaking of the attitude of foreigners in Yokohama towards Treaty Revision, says that the statements embodied by Mr. R. Masujima in the paper read by him last year before the Asiatic Society furnished materials of which large use has been made by the anti-revisionists to support their case against the incompetence of Japanese tribunals. This assertion, as might have been anticipated, elicits one of the explosions of polite invective so familiar to readers of the English local press. The usual voluble babble about independence, hatred of flattery and sycophantism, and so forth is poured forth by men happily and conspicuously free from all the failings of their wretched and degraded opponents. However, without venturing to thrust ourselves into the paradise of these paragons, we desire to note a fact not unworthy of their attention. It is this:—An old paradoxical proverb says that nothing is so little hidden as that which is most concealed. Within the past few months an illustration has occurred in Yokohama. The Committee appointed by the foreign residents at the meeting of last September is commonly reported to have drawn up a memorandum setting forth the reasons of the resolutions then adopted. No reasons were given at the meeting, the mover of the principal resolution explicitly refraining from all explanation of the causes on which the resolution was based. But although an appeal to pure sentiment might succeed very well at a public meeting, the recipients of the resolutions in England were naturally anxious to learn something of the motives of their framers and supporters. Accordingly a document is said to have been compiled by the Committee and printed at the office of a local newspaper, setting forth the why and the wherefore of the anti-unconditional-revision agitation—we trust that this title, however cumbrous, is sufficiently comprehensive to cover the scruples of the promoters—and to have been forwarded to England. Rumour, also professing to be, in some degree, acquainted with the contents of the document, says that the arguments it contained as to the incompetence of Japanese legal tribunals consisted, in the main, of statements embodied in the paper read by Mr. R. Masujima before the Asiatic Society of Japan. The document, if indeed it was really prepared and printed, seems to have been carefully kept from the public, and very possibly the story about its contents may be erroneous. Nevertheless, the story circulates as we have stated it, and Mr. R. Masujima gets the credit of having involuntarily contributed materials for a case against his own country. Secrecy is not sound policy in these matters. The plain truth is never so bad as the caricature that rumour draws of it. A Committee publicly appointed for a public purpose by a majority of the residents of Yokohama cannot desire to draw a veil over its doings.

### HOKKAIDO.

STATISTICS about Hokkaido are always interesting, not only because of the resolute and expensive efforts made by the Government during so many years to colonize that region, but also because the public has never been able to make up its mind distinctly whether the northern island can be converted into a prosperous and wealth-producing portion of the empire, or whether it is doomed to remain a comparatively sterile and poor region. We read now, in the vernacular press, that the Hokkaido Administration, having expended a sum of thirty thousand *yen* for surveying purposes, has published some important statistics. Taking into consideration only the great plains that offer most inducements to cultivators, the total area of arable and pasture land in the island is given as 2,389,000 acres. Of this total the choicest portion lies in the Ishikari district, where there are 266,522 acres of arable land and 6,825 acres of pasturage, as well as 15,855 acres which only require drainage to become fit for cultivation. It is asserted that this Ishikari land is of very high quality, being superior, on the average, to the land of the main island now under cultivation. The Ishikari district is said to possess a total of 482,307 acres fit for colonization, but apparently a considerable portion requires clearing. The statistics of 1889 show, further, that the total quantity of land brought under cultivation, and not yet paying any tax, in Hokkaido, was 41,955 acres at the close of that year, of which 3,627 acres were actually producing rice, and 35,540 acres were under upland crops. During the same year the work of reclamation seems to have been carried on with exceptional energy, no less than 103,632 acres having been parcelled out for cultivation—or 16,912 acres more than the quantity placed to the credit of the preceding year. It will be observed that this figure—103,632 acres—is more than double of the total acreage returned as under cultivation at the close of the year, but in point of fact only a fraction of the area marked out for cultivation during any year is actually brought under crops by the end of the same year. If the statistics showed the total acreage of land hitherto assigned to colonists, and the portion of that total now actually cropped and pastured, we should be in a position to form a clearer estimate of the progress made. The number of families that emigrated from the island to Hokkaido during 1889 was 3,730, or 13,118 souls, namely, 7,242 men and 5,876 women. The number of families during 1888 had been 2,567, representing 8,536 souls. Nara Prefecture contributed the largest contingent of immigrants in 1889; namely, 600, families of 2,446 persons. Among the 13,118 immigrants of 1889, there were 7,069 farmers; 504 artizans; 1,337 merchants; 1,123 fishermen, and 3,085 miscellaneous bread-winners. In the Shiribetsn district there is large tract of 16,717 acres which has not yet been reclaimed. Ribetsu also has a fine level tract of 13,563 acres, well suited for colonization. The soil is rich and the vegetation abundant; there are some mineral deposits, and crops grow excellently. Roads, however, are wanting. Another tract mentioned as well suited for colonization is in Iburi. It measures 24,558 acres, and though more or less covered with volcanic ash, has a rich subsoil and is capable of successful cultivation. If these statistics are trustworthy, they show that the colonization of Hokkaido is still in its infancy.

### THE NOSIBÉ MASSACRE.

RAMIAKATRA, the Governor of Nosibé, has, according to Reuter's message in last issue, been executed on the spot at Nosibé, in the district of Belanona, where he had, in cold blood and without apparently the slightest justification, tortured aud slaughtered some ninety of his people, who are Malagasy of the Betsimisaraka tribe. It appears that for years past the people had been squeezed and ground down to a condition unbearable, when it was determined to appeal to the Queen for relief from the illegal exactions of Ramiakatra, and a deputation waited upon the Prime Minister, but without much effect. They then assembled with the idea of addressing the Governor himself. The latter, becoming aware of their intention, sent troops against them as they approached the town, and those captured were brought in, and under direction of Rasamuel, the Governor's brother, were brutally hacked to pieces, men, women, and children alike being subject to terrible torture and indignities before being finally despatched and their bodies thrown to the dogs. The number massacred, as given in a telegram taken from a Straits paper was 280, but this is evidently an exaggeration, "about ninety" being the number according to a trustworthy authority.

### ONCE MORE.

ONE unvarying experience is the result of all controversies in this Settlement when the volunteer champions of Occidental superiority take the lists. At a very early stage of the proceedings these noble Pharisees write down their own record in letters blacker than any used by their opponents. "Scrutator," whose comely creed bids him ostracize even the little children of Japan, holding them sources of contamination until the fatal strain of Orientalism shall have faded into the person of a solitary grandparent—"Scrutator," that fine exponent of Christian charity and Western honesty, incontinently makes an *auto-da-fé* of his own moral reputation when he tells his opponents that they are "paid to flatter Japanese vanity." To such a man the jingle of the guinea seems the one sweet tune to the music of which all human action dances. The miserable motives that he ascribes to others are a reflection of the mind that suggests them. So, too, of that other champion who holds "Scrutator's" shield. Honesty he cannot possibly believe in. He detects some devious device in the plainest occurrence, unconscious that, like his confederate, the suspicion he utters is in truth a confession. He deems it, apparently, an everyday incident that a newspaper editor should indite letters to himself and publish them in his own journal! "A Japanese Shizoku" who addressed a communication to these columns in answer to "Scrutator," must be diverted by the whole affair. "Are these the men," he may well ask, "who claim that their offspring would be contaminated by association with Japanese children? Is their's the moral code that stands on such a pinnacle of incomparable superiority?"

### THE CORRESPONDENT OF THE "NEW YORK HERALD."

THE correspondent of the *New York Herald*, whose wonderful letter to that journal we reproduced in our issue of the 23rd ultimo, has had the temerity to attempt a defence of his position. He blusters a good deal at the outset of his pleading, and indulges in some heroic suggestions as to what the editor of the *Mail* might have to endure were it not for "the security of his Tokyo retreat" and "the incognito of the journalistic we;" whereby we conclude that, having already figured as a Munchausen, he now wishes to pose as a *soshi*. But as for his defence, it is a comical collection of evasions. Not one of the falsehoods contained in his letter to the American paper is even touched upon in his rejoinder to our comments. It would seem that his object is to avoid losing caste with the journal which he so grossly misleads, and that, with this hope, he has induced a local newspaper to print nearly two columns of extracts proving that such of his facts as no one denies, were correct, and leaving entirely untouched the false assertions which he ventilated in the *New York Herald*. A brief list of these assertions will serve to show his flagrant inaccuracy, as well as the clumsy subterfuges behind which he now takes refuge. Here is his first falsehood:—

> That the regulation for candidature had not been sufficiently stringent to keep the House purged from characters not above the temptations of filthy lucre, also became evident, as the very first action the Diet took was a strenuous effort to wrest a brother member from the clutch of the law on account of misplaced attentions on his part being bestowed on funds committed to his care.

It would scarcely have been possible to pen a grosser and more groundless slander. The action taken by the Lower House in respect to the detention of one its members by the Legislature turned entirely on a point of privilege, and had not the most shadowy connection with the nature of the man's offence. The House claimed that its permission should have been asked for the enforced absence of one of its members, even though his arrest had taken place before the session began. A vicious perverter of the truth was needed to twist this perfectly legitimate assertion of an important parliamentary privilege into a proof that the House of Representatives contained "characters not above the temptations of filthy lucre." And how does the slanderer now seek to wriggle out of his falsehood? By quoting four extracts from English and Japanese local journals, which set forth nothing beyond the bare fact that the House did apply for the release of its imprisoned member! As if that simple fact were questioned by any one! Undoubtedly the House applied for Mori's release, but it did so in defence of what it

Digitized by Google

believed to be a constitutional principle, not because, as the correspondent of the *New York Herald* asserts, the low morality of its members led them to sympathise with, and try to save, an embezzler of funds committed to his care. Had Mori Tokinosuke been a parricide or an incendiary the attitude of the House towards him must have been exactly the same. The second falsehood of the correspondent is the following:—

> Now, it is always pleasant to see a well balanced detestation of reckless waste, and no one would feel inclined to quarrel with a Diet prompted in its actions by motives of practical economy; but in reducing a national expenditure it is customary, if not arbitrary, to specify under what particular headings the reductions were to be made. This happened to be exactly what the Diet did not seem inclined to do. Whether this little matter of detail appeared to the House to savour of lowering its dignity has not been given to the common herd to know, but certain it is they did not enter into detail, but merely expounded a theory that $10,000,000 of the annual expenditure ought to be dropped. Even when pressed to unbosom themselves more full on this point, the only item they condescended to enumerate as requiring curtailment was the salary of the President.

What can we call this but a tissue of malicious lies? The epithet is not pleasant, but truly we fail to see that anything less blunt meets the case. The correspondent asserts that the Diet simply voted a sweeping reduction of ten million *yen* and declined to specify under what headings economy was to effected, "only condescending to enumerate, as requiring curtailment, the salary of the President." Now the fact is, as every one knows, that the Budget Committee drew up an accurate report setting forth, item by item, the reductions which they recommended, and expounding an elaborate scheme of administrative reform by which the official *personnel* was to be largely diminished in each Department of State. The House, after much debate, adopted this report, and discussed it clause by clause, disregarding the remonstrances of the Cabinet that such a scheme of economy encroached upon the Imperial Prerogatives, and was distinctly unconstitutional. In the face of these facts the correspondent of the *New York Herald* affirms that the Diet declined to enter into any particulars and simply voted a reduction of ten millions *en bloc*. Yet he has now the audacity to pretend that he spoke the truth! There is no occasion to follow him into his minor errors. To be obliged to notice him at all is bad enough. But before concluding we are constrained to add a word about the conduct of the *Japan Gazette* in opening its columns to a man of whose flagrant falsehold it must be perfectly cognisant. The *Gazette* allows this slanderer to fill a very large space in its issue of the 25th instant with extracts and explanations which do not bear at all upon the original falsehoods, and which are obviously intended to throw dust in the eyes of the public. This, forsooth, is "honest" journalism. If the *Japan Gazette* does not know well that the correspondent of the *New York Herald* erred in a gross and wholesale fashion, it must be ignorant of the whole history of the Diet's proceedings as published day by day in its own columns. If it does know that he erred—and undoubtedly it knows it—why has it deliberately assisted him to make a defence as evasive and dishonest as the correspondence in the New York paper was false and slanderous? Newspapers take a noble view of their functions when they band themselves with any miserable traducer, provided only that he be opposed to those whom they regard as journalistic rivals.

### COUNT ITAGAKI.

THE attitude of Count Itagaki towards the Radical Party during the past year has betrayed so much apparent vacillation that comments not at all favourable to his reputation as a political leader are freely made. Two years ago his efforts to amalgamate the various sections of the Party having proved unsuccessful, he organized a separate branch under the name of the *Aikokuko-to*, but subsequently a union of Radical bodies in all parts of the empire was effected, and Count Itagaki received tacit recognition as its head. We say "tacit" recognition because, although his popularity and political status plainly indicated him as the chief of any Radical confederation, younger and more ambitious leaders seemed to challenge his supremacy by a display of qualities essential to all political leaders but never conspicuously shown by Count Itagaki. The Count is not a great speaker, and moreover there are in his character many elements ill suited to the part of a Radical agitator. When he broke up the *Jiyu* association some years ago, and withdrew into long retirement, it was understood that he had been perturbed by the growth of forces which owed their existence indirectly to his own initiative, but which he did not yet recognise as inevitable concomitants of every political movement owing its impetus to the masses. Another circumstance militating against the Count's competence as a Radical leader was his patent of nobility. He could not sit among his followers in the Lower House, and neither there nor at their diurnal meetings was his voice heard in the rostrum or on the platform. That he should have retained his eminent position despite these disqualifications, testifies eloquently to the strength of the esteem and regard inspired by his long career of upright disinterestedness. Shortly after the Diet met, however, he turned his back upon his party under circumstances that seemed to indicate a serious difference of opinion, and no little surprise was caused by the discovery that, within a very few days, he had consented to draw the sponge through this incident. A brief interval of apparent concord then ensued, when suddenly the secession of the *Aikokuko-to* from the Radical ranks at the final stage of the Budget debate was followed by a manifesto from Count Itagaki, complaining, in effect, that he had ceased to be treated with the consideration due to a leader, and announcing his fixed resolve to stand aside altogether from the field of politics for an indefinite time. Within a month of the publication of this intention, an overwhelming majority of his former followers, at the Osaka general meeting, re-voted him to the post of leader, and once more he surprised the public by consenting to be placated. It is, of course, extremely probable that, before the voting in Osaka, Count Itagaki's sentiments had been accurately sounded, but that hypothesis tended rather to increase than to diminish the wonder of his remarkably yielding mood. The only thing to be said, however, is that he does not resume the leadership of his Party unconditionally. He is understood to have made his consent contingent on their acceptance of a document embodying various demands. We have as yet no accurate information about the contents of the document, but it is reported to contain five conditions: first, as to the central organization of the Party; secondly as to the local organizations; thirdly, as to the relations between the centre and the localities; fourthly, as to the relations between electors and candidates, and fifthly as to party movements. It is understood that the Count strongly objects to the tendency recently displayed to control the Party's representatives in the Diet by pressure from the side of the Party, his view being that the members of Parliament should be the leaders and moulders of policy.

### IWASA MATAHEI.

IN a recent number of the *Kok-kwa* (Art Journal), there appeared an interesting essay on the life of Iwasa Matahei, the well known founder of the style of painting called *Ukiyo-ye*. His career is wrapped in such obscurity that most contradictory stories are told about him. There have even been critics who maintained that the great artist had no existence, but was a purely imaginary person. The writer of the essay lying before us supports the general belief that there really existed an artist of that name. He quotes from a book called *Ukiyo-ye Rin-ko*, and states that Iwasa Matahei was the son of the celebrated warrior Araki Murashige, Lord of Settsu, who was ordered to commit *harakiri* in 1579, in consequence of having disregarded the directions of his liege lord Oda Nobunaga. At that time Matahei was two years old, so that his birth took place in 1578. On the death of his father, his mother took refuge in a Buddhist temple. He adopted his mother's family name, Iwasa, and on reaching manhood entered the service of Oda Nobuo, the son of Nobunaga, as official artist. He was fond of painting *genre* pictures, and hence came to be popularly called *Ukiyo* Matahei (*Ukiyo* meaning society or fashion). Little is known about his student life, but, on the authority of Santô Kyôden, a famous scholar of the Tokugawa period, the writer in the *Kokkwa* mentions that Matahei at first received instruction in art from one of the former retainers of his father. Afterwards he became a disciple of the Tosa School, but was finally disowned by that school on account of his proclivity to seek motives in the figures and objects of everyday life. Some writers assert that he actually worked in the atelier of Tosa Mitsu-nobu. But this is an evident mistake, for Mitsu-nobu had been dead fifty-two years when Matahei was born. Even in the present day, the Tosa School refuses to recognize an *Ukiyo* picture as an object of art. Very seldom do Matahei's pictures bear either his signature or seals. In some pictures of courtesans, his seals are stamped with black ink. The word Matahei is generally written 又平, but that form is not correct, the proper characters being 又兵衛. He is sometimes called Tosa Matahei, or Yuasa Matahei. It is plain that Yuasa is a corruption of Iwasa. As to the date or manner of his death, nothing is known definitely.

* * *

Dr. W. Anderson, in his excellent work on Japanese pictorial art, fixes Matahei's parentage and period correctly, according to the researches of the writer in the *Kok-kwa*, but gives him a notice altogether too brief in comparison with his genius and the influence he exercised upon the art of his country. Only one re-production from Matahei appears in the book. Taken from a picture in the possession of Mr. Ernest Hart, it represents a *Samurai* standing, with a branch of blossoming plum in his hand. The figure is somewhat stiff and graceless, showing nothing of the extraordinary power of line which made Matahei one of the most admirable painters of dancing girls and youths ever known in any country. He created a type of figure which was copied again and again by subsequent artists, but none ever attained to the skill shown by the master himself in this particular line. Not a few of his works have survived, and are immensely valued by their fortunate possessors.

### AN INCORRIGIBLE.

JOHN HEYWOOD, who deserted from a ship in harbour as long ago as June last year, and has spent a great part of his time since in H.B.M. jail and in the hospital, was brought up on Saturday before Judge Hannen, in H.B.M. Court for Japan, charged with having been drunk and disorderly on Good Friday. From the evidence given it appeared that he was found asleep by a policeman, whose attempts at rousing him he strongly resented, with the result that he was ultimately taken into custody. Heywood, it seems, at first stated that his ship had left him in the port, but he was ultimately sent to jail for desertion. Put on board a P. & O. steamer, he left her at Kobe, and after a period of gutter existence was sentenced to a term of imprisonment, to serve which he was sent back to Yokohama. He had only been released a few hours when he again got drunk, and thus reappeared in H.B.M. Court. He urged, with tears in his eyes, that he was willing to go on board an American ship, if only he could get away from the place. The Judge fined him $5, with the option of a week's imprisoment, with the understanding that he should be put on board any ship that could be got for him before the expiry of the term.

### THE WRECK OF THE "QUEEN ELIZABETH."

WE publish in this issue a telegram giving the result of the Court of Enquiry at Nagasaki into the loss of this steamer, but particulars of the accident do not appear in the latest issue of the *Rising Sun*, which says:—"On Sunday morn-

Digitized by Google

ing last, news was received here of the loss of the British steamer *Queen Elizabeth*, in the vicinity of Ikishima, about seventy miles distant from this port. Full particulars are not yet to hand, but from what we can learn, the ill-fated vessel left Kobe on the 14th inst., bound to Karatsu, a non-treaty port, for a cargo of coal, for Manila. She is reported to have left Karatsu, for Manila direct, on the 20th, and shortly afterwards, experiencing bad weather and thick fog, she ran ashore off Isabuse-mura, Ikishima, the same day, and sank. Very fortunately no lives were lost, we believe. The circumstance was reported to Governor Nakano while witnessing the *Shokonsha Matsuri*, in company with Admiral Amamatsu. The latter at once telegraphed to Saseho, for a man-of-war to proceed to the scene of the wreck, and we understand that the *Nishin Kan* went to Ikishima on Sunday, and was followed by the *Iwaki Kan* on Monday. The Mitsu Bishi Co.'s tow-boat *Yugao* endeavoured to go there on Sunday night, but had to turn back in consequence of the heavy sea outside. The *Queen Elizabeth* is a British steamer, of 1,628 tons register, and was commanded by Captain Wilson. The captain, officers, and crew were expected here last night, in the *Nishin-kan*, but had not arrived when we went to press."

### THE LATE CAPTAIN OF THE "MUTINE."

THE death of Captain J. Harrington Martin, on board the *Mutine*, at Suda Bay, says the *Broad Arrow*, besides being a loss to the Service will be widely felt. The deceased officer bore a high reputation in all ranks through which he passed. There is something peculiarly sad in the death of an officer just promoted, and drawing towards home to enjoy it. Captain Martin was always a very delicate man, constantly suffering from an acute form of dyspepsia. It is believed that he caught a chill in the Canal, which aggravated a previous attack of dysentery, and was seriously ill when the *Mutine* quitted Port Said. The ship met very bad weather, and the motion increased the dangerous symptoms so much that smooth water was sought in Suda Bay. It was too late, however, and he passed from unconsciousness into death at 6.15 a.m. on Jan. 17. The *Mutine* under his command had been noted for her good order and discipline, and possessed all the characteristics of a happy ship.

* * *

The sloop *Mutine* arrived at Plymouth on the morning of the 13th ult. from the China Station, in charge of her first Lieutenant, Edward Bradford, Commander Martin having died on the voyage. *The Times* adds:—The vessel was taken outside for the usual one hour's trial of engines, preparatory to being put out of commission. A report is to be forwarded to the Admiralty on the condition of her boilers, and, unless this should prove more satisfactory than is anticipated, the vessel will be passed into the third-class reserve.

### A DISTINGUISHED ADDITION TO THE JAPANESE SERVICE.

THE *Jiyu Shimbun* says that a telegram has been despatched by the Goverenment to the Japanese Representative in London, desiring him to make arrangements for the engagement of Mr. Thomas Erskine Holland as Legal Adviser to the Cabinet. Mr. T. E. Holland, D.C.L., is Professor of International Law at Oxford, and Assessor of the Chancellor's Court He is a writer of distinction, and his services would doubtless be very valuable to Japan. The Tokyo journal adds that his emoluments would be 7,200 *yen* annually, with travelling allowance and a house, and that the project of his coming to Japan was mooted by Count Yamagata during the latter's visit to Europe in 1889. We trust that the statement may prove correct.

### ARMY AND NAVY.

AN absurd rumour was recently circulated to the effect that a dispute had arisen between officers of the Army and officers of the Navy, one side claiming that projectiles made in Japan could not pierce foreign armour plates, and the other maintaining the opposite proposition. Even the thickness of armour was mentioned, and full details of every kind were given. The story scarcely deserved a second thought, for every one knows that excellent iron can be obtained in Japan, the only trouble about it being costliness, and that no difficulty whatever exists in piercing armour of the thickness mentioned—7 to 10 inches. Nevertheless, the rumour found credence, and when people heard that a series of trials of guns *versus* armour had taken place at the Kannon-saki Forts from the 18th to the 22nd instant, they were quite prepared to be assured by the press that the dispute had been decided by practical experiment. The *Mimpo* now laughs at the whole affair. No doubt, it says, Japanese projectiles were used in the trials, but that any such controversy between the two services was the cause of the experiments, is a complete misconception.

### THE SPECIE BANK.

THE shares of the Yokohama Specie Bank, of a hundred *yen* face value, which were quoted at 195.50 *yen* on the 1st ultimo, fell to 180 *yen* on the 26th. No catastrophe of similar magnitude having previously overtaken the scrip of the Bank, public interest has been very strongly excited. By some it is stated that the cause of the fall is a plot on the part of the bears, who have succeeded in creating distrust of the Bank's condition by circulating and exaggerating the fact that the Reserve was drawn upon to pay a dividend of 16 per cent. for the second half of 1890. But inasmuch as that step was openly taken with the approval of the shareholders at a general meeting, and for the purpose of sustaining the market value of the scrip, it is scarcely conceivable that any such device can have been successfully employed to shake the Bank's credit. A wider and less fanciful explanation is that the action of the United States in respect of silver has greatly perturbed the shareholders, who feel that the future of a Bank limiting its transactions to foreign trade—a sphere into which great instability has been introduced by the financial policy of America—invites no confidence. But it is scarcely conceivable that the present disturbance can be due to a factor which came into operation many months ago, and the severest effects of which were experienced during 1890. Between March and August of last year the fluctuation in the gold value of silver amounted to no less than 23 per cent., and during September, October, and November a fluctuation of 13 per cent. occurred in the opposite direction. Such stupendous irregularities in the gold value of the medium of exchange might well have produced disastrous results, but by skilful and prudent management the Bank was steered through these dangers, and found itself, at the close of the year, in a condition somewhat less prosperous, it is true, than it had been at the corresponding period of 1889, but sufficiently sound and flourishing. Why then should troubles that now belong to the past, suddenly exercise an injurious effect on the Bank's credit? Yet another method of accounting for the disturbance has reference to the action of the Diet. The Bank holds ten million *yen* of Government money, upon which it pays no interest, and in view of the extremely economical tendency displayed by the House of Representatives, it is feared that exception to this advantage may be taken and allowed during the next session. Such an apprehension, if seriously entertained, might well have the effect of depressing the shares of the Bank. Whatever be the true explanation, it is undoubtedly a serious thing that shares of the second Bank in the empire should suffer a depression of nearly 8 per cent. within a month. The present President of the Bank, Mr. Sonoda Kokichi, is a man of very exceptional ability and prudence. It is certain that, in his hands, the management will be conducted in a thoroughly satisfactory manner. But the Bank owed its remarkable success in former years chiefly to the fact that it found itself steadily confronted by a depreciation of silver, so that the sterling bills purchased by it at this side were always more valuable, in terms of the white metal, at the time of their sale than at the time of their purchase. Called upon suddenly to deal with radically altered conditions, the Bank could scarcely have avoided some inconvenience. Moreover, it was considerably embarrassed by the block in the silk market during the latter half of last year. It had advanced very heavily against silk which, under ordinary circumstances, ought to have left the country, and for a time the Directors must have felt great anxiety. These things are virtually past, however, and there is no apparent reason why the credit of the Bank should not stand high to-day.

* * *

There has been an earthquake in the Specie Bank. The piping times of big dividends when every specie bill purchased here realized a greater number of pieces of white metal than it had cost, and when the Government's transactions in connection with the accumulation of a hard-money reserve for currency resumption purposes opened to the Bank a field of perpetual and certain profit—those fine old days are past, and the Bank has been suddenly called on to deal with conditions altogether different and particularly embarrassing. Mr. Sonoda Kokichi, formerly Consul-General in London, accepted the position of manager on the eve of the changed era, and it is immensely to his credit as an able financier that the Bank finds itself still prosperous. But Mr. Sonoda has had difficulties to overcome within as well as without. Nominally Director of the Bank's affairs, he appears to have found himself in reality powerless to control its business. A striking case ocurred at the time of the last semi-annual settlement of accounts, when the actual profit and loss statement justified a dividend of only 14 per cent., whereas, despite Mr. Sonoda's objections, the Board voted a dividend of 16 per cent., and decided that the reserve fund should be drawn upon to make up the difference. Mr. Sonoda thereupon resigned, but after much negotiation he has been induced to withdraw his resignation and resume charge of the Bank's affairs, on condition, however, that veritable control shall be placed in his hands. On the 30th ultimo various changes were effected in the staff of the Bank, the most important being the replacement of Mr. Kimura Riyemon, Vice-President, by Mr. Koizumi Shinkichi, of the Nippon Ginko, and of Mr. Sakurai Tsunejiro, Sub-Manager, by Mr. Yamakawa Yuki, formerly Manager of the Bank's London branch, a man of whose business capacities Mr. Sonoda doubtless has intimate knowledge. Mr. Kimura Riyemon, the outgoing Vice-President, is the gentleman who, in conjunction with the absconding and defaulting Mr. Uyeno, appealed to the Japanese Traders' Guild against the conditions imposed by Messrs. Thomas and Company. It was doubtless a mere coincidence that placed the two dealers simultaneously in the same position, but the incident has injured Mr. Kimura's reputation in the eyes of the foreign community at all events, and we deem his resignation of the Vice-Presidency a distinctly wise measure. Under any circumstances it seems most undesirable that a prominent official of the Specie Bank should engage in trade on his own account. Several other changes of a minor character have been effected in the Bank's staff, and Mr. Sonoda doubtless has the whole machine now well in hand. If he has, and if he meets with no further opposition from his assistants, the Bank is pretty sure to prosper. We observe that a proposal is mooted with reference to the shares held by the Imperial Household. There are 15,100 of these shares, of which 10,025 are old shares, having a face value of 100 *yen* and a market value of 180 *yen*, and 5,075 are new shares, their face value 50 *yen*, and their market value 90 *yen*. The idea is that these shares should be handed over to the Bank at their face value, which would mean a clear gain of 802,000 *yen* on the old shares, and 203,000 *yen* on the new; a total of 1,005,000 *yen*. Of course such a generous operation would be extremely pleasant for the Bank, and would send up its scrip at once, but there are many points to be considered. The Imperial Household is virtually precluded from selling its shares in the open market. They are held

Digitized by Google

purely as an investment, and not at all for speculative purposes. Their transfer to the Bank would not involve any loss to the Household, supposing them to have been purchased at their face values. Still it is plain from what passed in the Lower House with reference to the Imperial Household's shares of the Nippon Yusen Kaisha, that the public strongly objects to all these special operations, and if the Bank can get on—as it certainly can—without recourse to such favours, it will be wise to abstain from them. The shares held by the Imperial House are not without their effect on the credit of the Bank, and moreover, they help distinctly to appreciate the scrip, for it is well understood that they cannot be placed on the open market, and are consequently withdrawn from the bulk of negotiable shares.

## GERMAN UNIVERSITIES.

"GERMAN UNIVERSITIES," the subject of a German lecture delivered by Prof. Y. Terada, Councillor in the Department of Education, attracted a comparatively large audience to the University Lecture Hall at Hitotsu-bashi, Tokyo, on the 23rd ult. The cold that had so unexpectedly set in on that day, and its greatly increased severity, owing to a strong north wind, towards evening, kept many at home that would otherwise have attended. But despite these drawbacks, when the lecturer had ascended the platform and begun his address, his words were followed by a large and attentive audience, among whom His Excellency the German Minister, Baron von Holleben, and professors and teachers of the Imperial University and other institutions of learning were the most prominent. The lecturer, who last year visited Europe with Mr. Kubota's mission and returned some months ago, set out by designating the university, and the German university more particularly, as the highest elevation discernible to the eye of the educationalist, corresponding in a measure to the proud position of Mount Fuji as seen from the hills in and about the capital of Japan. He then passed on to interesting details about university life in Berlin, and its probable cost to students intending to go there, a part of his discourse of special value to his Japanese hearers, many of whom being students and as a matter of course desirous of visiting Europe, will find, in details and data given by the lecturer ample food for reflection as well as a basis for sound calculations as to their probable expenses when abroad. Then followed the body and substance of the address, a long, thorough and carefully prepared description of the Berlin University, its organization, its *Privatdozenten*, extraordinary and ordinary professors, and their remuneration, its government and disciplinary powers over the students, its various faculties, departments, its plans of work and study, as well as those of its allied institutions, such as the Oriental Seminary, with the training it affords in Japanese, Chinese, Suaheli, etc. In concluding, the speaker regretted that the advanced hour and a strict interpretation of the limits assigned to his lecture did not permit him to enter into the details of the life and experience of his countrymen abroad, or to make a comparison between the German Universities and the Imperial University in Tokyo, a comparison which while showing many similarities, would show also striking differences, most of which he thought were chiefly due to the different circumstances that confront Japanese educationalists and to the working of the national mind that assimilates, transforms, and turns to its own use whatever seems best for the progress and development of the country. Speaking, in conclusion, of the duty of promoting the nation's educational interests, the lecturer emphasized the necessity of sympathy and coöperation on the part of all engaged and concerned in a cause so noble in itself and so far-reaching in its final consequences and results. The applause that followed the closing words of the speaker showed how highly his lecture had been appreciated. For the sake of those who did not understand German sufficiently well to grasp the meaning of everything said, the address was after a short pause given in Japanese also. Professor Terada's lecture was one of a series of addresses that are being given at the University Lecture Hall this winter. The next in order, to be delivered by Dr. Grasmann of the Imperial University, will be on the 27th of April at the usual hour, 6 p.m., and will deal with "The Forest, in its Historical Legal, and Economic Aspects," a subject as interesting as it is important in its bearing on the welfare of modern States.

## CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for February, showing the foreign trade of Japan for the month :—

EXPORTS AND IMPORTS.

| | 1890. SILVER YEN. | 1891. SILVER YEN. |
|---|---|---|
| Exports | 4,476,677.280 | 5,245,299.970 |
| Imports | 5,964,563.850 | 4,478,358 900 |
| Total exports and imports | | 9,723 658.870 |
| Excess of exports | | 766,941.070 |

| CUSTOMS DUTIES. | SILVER YEN. |

| Imported by Government | | 53.129.410 |

## CHINA'S FOREIGN TRADE.

THE usual annual Returns have now been issued by the Imperial Maritime Customs of China, showing the foreign trade of that empire for 1890. The figures for Imports and Exports during the past three years are as follow :—

| | 1888. Hk. Taels. | 1889. Hk. Taels. | 1890. Hk. Taels. |
|---|---|---|---|
| Imports | 124,784,893 | 110,884,355 | 127,093,481 |
| Exports | 92,401,067 | 96,974,832 | 87,144,480 |
| Totals | 217,183,960 | 207,832,187 | 214,237,961 |

The large increase—17 million taels approximately—in the value of imports during 1890 as compared with 1889, and the decrease—over ten millions—in exports are chiefly attributable to disturbances of exchange. The Statistical Secretary says :—Without giving minute details, I may record that the telegraphic transfer price of the Shanghai Tael on London rose, by fitful movements, from 4s. 3½d. on 28th February to 5s. 3½d. on 5th September, a difference of 23 per cent., and thereafter fell to 4s. 6¼d. on 28th November, or 13 per cent." That the sales of imports were materially facilitated and those of exports seriously retarded by these great fluctuations—fluctuations far exceeding any margin of legitimate profit or loss contemplated in the ordinary course of commercial affairs—there cannot be the smallest doubt. Import merchants in Shanghai and the other open ports of China found themselves, in the spring and summer of last year, most happily situated, since the prices obtainable for their goods in the Chinese markets represented an increase of about ten per cent. in gold, as compared with the invoiced prices. Of course this golden harvest did not last long, and when the reaction ensued in the autumn, corresponding embarrassment must have been felt. But for a time the import men enjoyed good fortune of a very rare character. Exports, on the other hand, suffered from the same cause, and their bulk was further diminished by the competition of tea from India and Ceylon, and by the terrible floods that devastated such a large area of country in the plain of Chihli. This calamity helped to swell the bulk of the imports also, since it led to an increased import of rice, to the extent of 5 million taels, compared with the record for 1889. The following extract from the Report prepared by the Statistical Secretary, gives a clear idea of the detailed course of the import and export trades :—

Opium increased in quantity by 600 piculs, or barely 1 per cent., and decreased in cost by 1⅓ million taels, or about 5 per cent. Cotton Goods bounded upwards in value from 36 million taels in 1889 to 45 million taels in 1890, an increase of 25 per cent. In these I find woven Cotton Goods of nearly every texture infected with the general contagion of increase and expanding in quantity and in value; while Cotton Yarn, and more particularly that from India, poured into China in higher ratio of increase than over heretofore, having risen from 678,558 piculs in 1889 to 1,081,495 piculs in 1890, the latter quantity representing 19⅓ millions of taels of money's worth and an increase of 6 millions of taels, or 50 per cent., over that of 1889. The spreading in China of a liking for Cotton Yarn, whose import has grown from 108,360 piculs in 1878 to 228,005 piculs in 1883 and to 683,468 piculs in 1888—doubling itself every few years—and has now attained the magnitude of over 1,000,000 piculs, is full of happy augury for the success of the mills of China now beginning to turn Chinese Cotton into Yarn. Of Metals I find that Iron of all kinds maintained a steady consumption of 1,100,000 piculs, and its congener, Steel, rose from 39,000 to 56,000 piculs, an increase of 43 per cent.; but it is noticeable with Steel that the import is very variable, its weight in piculs having been 50,000 in 1886, 27,000 in 1887, 51,000 in 1888, 39,000 in 1889, and now 56,000 in 1890. A few items in Sundries attract attention, namely, Coal, Raw Cotton, Dyes, Ginseng, Window Glass, Matches, Needles, Kerosene Oil, Rice, and Sugar. Coal fell off in quantity by 64,000 tons, or 17 per cent., and yet more Coal was burned in 1890 than in 1889—a fact which may point to the increasing out-put from China's own coal-fields. The Foreign Raw Cotton imported was 36,000 piculs, or 30 per cent., over that of 1889, and yet in China the 1890 harvest of Cotton was splendid, and the Foreign export of it 200,000 piculs less than it had been in 1889, when the harvest was a failure: such facts defy ready comprehension. The quantity of Dyes increased by 30 per cent.; of Ginseng, by 26 per cent.; of Window Glass, by 58 per cent.; of Matches, by 23 per cent.; of Needles, by 20 per cent.; and of Kerosene Oil, by 50 per cent. and these increases indicate the acquiring by the masses of increased comforts. Of the other items, one—Rice—was taken almost all by the Kwangtung province and through the Kowloon Customs. It speaks marvels for the resources of that province that it can pay out 11½ million taels for food products without any unusual scarcity being heralded abroad or indications of distress being brought to the notice of the outer world. And it is probable that had there been a free export of Rice from Wuhu, Chinkiang, and Shanghai in the early part of the year, and in the latter part no need to send large supplies to the province of Chihli to combat the distress there brought on by the floods, much of this large payment of the Southern people for Foreign Rice would have been made to the people of the central provinces for home grown Rice. The increase in the Foreign Sugar import may be illusory rather than real, as the refineries in Hongkong work

Digitized by Google

upon Sugar which is accounted Foreign when imported even though of Chinese origin.

(*b.*) EXPORTS.—The Exports from China fell off in 1890, as compared with 1889, by a value of 9½ million taels, or 10 per cent., and the estimated Duty paid on them by Hk. Tls. 759,392, or 12 per cent., of which the falling off in Tea Duty represents Hk. Tls. 500,000; of Silk Duty, Hk. Tls. 190,000; and of Raw Cotton Duty, Hk. Tls. 70,000. Thus, Tea fell from 1,877,331 piculs, valued at Hk. Tls. 28,251,314, in 1889, to 1,665,396 piculs, valued at Hk. Tls. 26,663,450, or by 212,000 piculs and Hk. Tls. 1,600,000 respectively, or in value 5½ per cent. This falling away of the Tea industry is a terrible loss to the people of China to whom it has been a source of wealth in the past, and one cannot but hope that the means may be found of building it up again to its old dimensions of Hk. Tls. 35,500,000 in 1886. Silk also fell off from a value of Hk. Tls. 36,401,967 in 1889 to Hk. Tls. 30,255,905 in 1890, say 6 million taels, or 16 per cent. This loss fell principally on White Raw Silk, of which 15,000 piculs less went away in 1890 than in 1889, representing a value of 4 million taels, and on Silk Piece Goods, which dropped from 12,780 piculs, to 9,858 piculs, or 2,900 piculs, equal in value to Hk. Tls. 1,750,000. Not only was the season's yield of Silk in the Chêkiang and Kiangsu provinces short of the average, but the rise in the value of silver seems to have checked sales, and, by compelling buyers to offer lower prices, had the effect of making holders of this article—which does not suffer by being kept—wait in hopes of a better market. There will be, perhaps, a large export in this present year, either because silver will fall again or because holders of Silk will accept lower prices. One other promising staple of the Export trade, namely Raw Cotton, which went to Japan in ever-increasing quantity of late years, fell off by 200,000 piculs, or in money's worth 2 million taels, equal to 40 per cent. of the 1889 export to that country. I am told that this backward movement, now ended, was the consequence of a temporary cessation of demand for this Cotton in Japan, where a bad harvest, on the one hand, disabled the people from buying as usual, and Indian Yarn, on the other hand, strove to oust all other competitors.

* * *

To show in what measure and proportions the foreign trade of China has increased during the past 13 years, we have the following table :—

ANNUAL VALUE OF THE FORRION TRADE OF CHINA 1878 TO 1890.

| Year. | Net Imports.* Hk. Taels. | Exports, Hk. Taels. | Total, Hk. Taels. |
|---|---|---|---|
| 1878 | 70,804,027 | 67,172,179 | 137,976,206 |
| 1879 | 82,227,424 | 72,281,262 | 154,508,686 |
| 1880 | 79,293,452 | 77,883,587 | 157,177,039 |
| 1881 | 91,910,877 | 71,452,974 | 163,303,851 |
| 1882 | 77,715,228 | 67,336,846 | 145,052,074 |
| 1883 | 73,567,702 | 70,197,693 | 143,765,395 |
| 1884 | 72,760,758 | 67,147,680 | 139,908,438 |
| 1885 | 88,200,018 | 65,005,721 | 153,205,729 |
| 1886 | 87,479,323 | 77,206,568 | 164,685,891 |
| 1887 | 102,263,669 | 85,860,208 | 188,123,877 |
| 1888 | 124,782,893 | 92,401,067 | 217,183,960 |
| 1889 | 110,894,355 | 96,947,832 | 207,832,187 |
| 1890 | 127,093,481 | 87,144,480 | 214,237,961 |

* Net Imports, *i.e.*, the value of the Foreign Goods imported direct from Foreign Countries, *less* the value of the Foreign Goods re-exported to Foreign Countries during the year.

It is interesting to note in this context that the total value of the foreign trade of Japan in 1878 was only 50 million *yen*, whereas in 1890 it reached 138 millions. Thus while the increase in China's case, during the thirteen years under consideration, was 56 per cent. the increase in Japan's case was 176 per cent. Of course percentages are not a perfectly trustworthy test where the figures to which they apply differ very largely in value. The actual increase in China's trade, between 1878 and 1890, was 115½ million dollars (taking the Haikwan Tael as equivalent to 1.5 Mexican dollars), whereas the actual increase in Japan's trade, according to the Customs Returns, was only 88 millions. If, however, it be desired to make an accurate comparison of the trade of the two countries, certain corrections must be applied. The value of the imports shown in the Chinese returns is based on the prices in the markets of the ports of entry, whereas the value in the Japanese returns is based on the prices in the markets of the ports of shipment. The Japanese figure must therefore be increased by the cost of carriage, insurance, and other charges. We have generally made a total allowance of 18 per cent. on this account, but taking a slightly lower figure—16 per cent.—we find that the foreign trade of Japan was 54 million Mexican dollars in 1878 and 151 dollars in 1890, an increase of 180 per cent. in round numbers. Comparing the bulks of the Chinese and Japanese trades in 1890, it will be seen that the former (311 million Mexican dollars) was more than double of the latter (151 millions). But although the difference is so great, the rapid advances made by Japanese trade during the past few years justify us in looking forward to a not very distant time when it will stand on nearly the same plane as the Chinese. Even now if the two trades be compared with the populations, it appears that while the Japanese trade amounts to 4.50 *yen* per head (taking the population at 35 millions), the Chinese trade is only 1 30 *yen* per head (taking the population at 240 millions).

### MR. ERNEST HART.

MR. AND MRS. ERNEST HART were entertained at dinner on the evening of 27th ult. by Mr. Okakura, Director of the Fine Art School in Uyeno Park. Nearly all the principal artists of Tokyo were present, and during the course of the evening Mr. Hashimoto Gaho, whose picture of an autumn scene gained the first prize at the Industrial Exhibition of last year, made three Indian ink sketches which he presented to Mr. Hart. The following evening Mr. and Mrs. Hart dined with Dr. Nagayo Sensai and the officers of the Sanitary Bureau at the villa of Mr. Okura, at Mukojima. An exceptional treat had been prepared for the visitors, choice examples of painting and lacquer having been selected from the collections of many of the best known amateurs in Tokyo and entrusted to Mr. Wakai, who displayed them one by one before the favoured guests. On Monday evening Mr. Hart is to be entertained at the Koyokan, Shiba, by the medical faculty of the capital.

### GOLD MINE IN IWATE PREFECTURE.

THE *Mimpo* says that gold has been discovered at Naganoyama, of Kotomo-mura, in Iwate Prefecture. The vein is said to be about four miles in length, and an analysis of the ore gives 0.4 per cent. of pure gold. Permission to work the mine has been applied for. If this story be true, a deposit of very exceptional value has been found. An analysis in the laboratory would, of course, give a greater percentage of gold than the quantity obtainable by ordinary mining machinery. But a yield of a quarter of an ounce per ton—or one part in every one hundred and forty thousand, approximately—is considered sufficient now-a-days to justify the working of a gold mine, and, compared with this, four parts, or even one part, in a thousand is something altogether out of the common. It will be interesting to learn some further particulars about the Iwate vein, if, indeed, it has any existence in fact.

### THE BLIND MEN OF TOKYO.

THE first lecture meeting ever held by blind people in Japan, is said to have taken place on Sunday in the Matsuoka-ro, Shinagawa. The occasion was the formation of a society to promote a system of self-government among the blind, and the promoters were Messrs. Hirano Bannosuke, Shirakawa Masaki, and Odaki Doshin. Hitherto the chief occupations of the blind in Japan have been music and shampooing. Nearly all the great performers on the *koto*, the *shichiriki*, the flute, and the violin are men or women who have lost their sight or been born blind. As for the shampooers, that race of professionals who probably contribute more than any other class of experts to the comfort and health of the nation, ninety-nine out of every hundred are blind, and in some respects their infirmity renders them better fit for their work. Presumably the idea now mooted is to form a huge association of all the blind in Japan, and to draw up a system of control and direction applicable to them only, and applied by themselves.

### EXPORT DUTIES.

THE discussion raised by Mr. Taguchi, editor of the *Keizai Zasshi*, as to the advisability of abolishing export duties, has elicited some singular sentiments. Mr. Taguchi himself appears to think that duties levied upon Japanese products and manufactures sent out of the country, are paid by the Japanese themselves. Such, at least, is the impression conveyed by his speeches and writings, though we can scarcely believe that so clear a thinker and sound economist would fall into the misconception of imagining that charges or taxes upon any class of goods ultimately come out of any pocket except that of the consumer. Probably Mr. Taguchi's intention has hitherto been to direct attention only to the history of exports before they leave the country, but even from that point of view he should have noted that as the foreign resident merchant is the channel through which the great bulk of Japan's productions and manufactures pass on their Westward path, export duties must in the first place be defrayed by the foreign local merchants, who afterwards recover them from consumers in Europe and America. His seeming misconception, however, is a trifle compared with another doctrine now advanced, namely, that the *whole* benefit of a reduction of export duties would be reaped by foreigners, and that writers advocating such a reduction are mere theorists, with no sound knowledge of practical details. We have examined the process of reasoning by which this remarkable conclusion is reached, but we remain as much in the dark as ever. It is true, indeed, that the foreign consumer and the foreign export merchant would be saved from the necessity of paying the duties, but that does not appear to be the point of the Japanese argument. What the new school of objectors claim is that by abolishing export dues the European and American merchants engaged in the trade would be the sole gainers, no advantage accruing to Japan herself. They might as well pretend that if Japan could produce her tea and silk at materially diminished cost, and place these staples in Western markets at figures much below what she is obliged to charge at present, no advantage would result to her in competition with the tea and silk produced by other countries. No one, we presume, would be foolish enough to advance such a proposition as that. The object of Mr. Taguchi's suggestion is beyond all question. He seeks to lighten the charges on Japanese manufactures and products in Japan, so as to enable them to be offered to foreign consumers at more tempting rates. The natural result of such a policy would be to increase the demand for these article. The principles of protection seem to be gaining ground in Japan at present, a fact at which we cannot be surprised, though we greatly regret it. Protectionists, however, should be the last to deny the advantage of reducing or abolishing export duties, since it is by precisely the converse process that they seek to exclude foreign staples from the home markets.

### THE "KOKU-HON" ON THE FIRST SESSION OF THE DIET.

THE *Koku-Hon* echoes the sentiment of the public in general, when it expresses satisfaction with the first session of the Diet. The Diet, especially the House of Representatives, is certainly open to a charge of having occasionally betrayed a marked lack of wisdom and dignity, but nothing can be less just than criticisms condemning the Legislature, as if it had perpetrated blunders and errors only. If it was unable to achieve much in the way of legislation, there is at any rate the consolation that the contests between the Moderates and the Extremists induced the Executive to agree to a reduction of as much as 6½ million *yen*. The former Senate represented the legislative section of the Government, but despite its struggles to be independent, it could not stand against the power of the Cabinet. The Diet, however, has fully established its position as an independent legislative machine. Apart, too, from the merely pecuniary aspect, the reductions effected, are the earnest of very important reforms, since they may be regarded as an effective step towards the achievement of an end which has baffled the efforts of successive ministries during the last ten years, namely the dismissal of incapable and superfluous functionaries. Last, but not least, the first session of the Diet has been useful in dispelling illusory notions entertained by the present Cabinet as to its policy of *chô-zen shugi* (keeping aloof from parties). Thus the Tokyo periodical is on the

Digitized by Google

whole satisfied with the result of the first experiment of constitutional Government in Japan. But, in common with the *Jiji Shimpo* and some other leading papers, the *Koku-Hon* regrets that the members of the Diet showed unpardonable indifference to the interests of the business section of the community, and hopes that hereafter they will direct their attention more to the development of the national resources, the growth of industries, the encouragement of trade and commerce, and the promotion of emigration and colonization.

### RUDYARD KIPLING.

RUDYARD KIPLING'S new book, "The Light that Failed," will be a sore disappointment to his admirers. The critics compared his genius to that of Bret Harte, and the comparison was apparently not unjust. Both succeeded in a marvellous manner with the short story which pointed certain phases of life in out-of-the-way situations, and both have shown their inability to cope with longer themes requiring more sustained effort. But whereas even in the latter we always find gleams of the peculiar power that brought Bret Harte into notice, "The Light that Failed" is utterly devoid of the humour, pathos, and satire which charmed the reader in Rudyard Kipling's earlier works. Perhaps the following is the only sentence in the book that betrays the writer of "The Drums of the Fore and Aft," and "The Gadsbys." "There is more joy in England over one soldier who insubordinately steps out of a square to rescue a comrade than over twenty generals slaving, even to baldness, over the gross details of transport and commissariat." The tale throughout is sordid to a degree. The hero is an insufferable prig, and worse. And the great calamity that ultimately falls upon him, instead of evoking sympathy, only engenders a feeling of relief that his capacity for evil is cut short. The heroine is an impossible woman, while the other characters possess neither individuality nor interest. Had Rudyard Kipling deliberately set about the blasting of his own reputation, he could not have succeeded more effectually than by attaching his name to "The Light that Failed." It is an incomprehensible fiasco.

### A JAPANESE DISCOVERY.

WE take this from a San Francisco journal, where it appears under the date of March 6th, at Chicago:—"The Takamine Ferment Company, organized by the Whisky Trust to exploit the new process of whisky-making invented by the Japanese chemist, Takamine, has increased its capital stock to $10,000,000. The salient point in the process is the microbe or ferment cell of superior power produced from the fungous growth on rice. Its use permits the completion of fermentation in forty-two hours, as against seventy-two heretofore, besides greatly cheapening it and enlarging the volume of the production from a like quantity of grain. The calculation, based on the output of maltsters, brewers, distillers, and others using ferments, makes the yearly value of the discovery equivalent to $23,000,000." The fortunate adapter of this process, Mr. Takamine, is a well known resident of Tokyo. He is married to an American lady, and has always been a zealous expert.

### FISH IN LAKE CHIUSENJI, NIKKO.

FIGURES have been published showing the attempts to populate the waters of Nikko's beautiful lake of Chiuzenji with food fishes. From these we learn that in 1873, mountain trout (*iwana*) to the number of 2,200 were introduced; in 1874, 20,000 carp (*koi*); 2,000 *funa*. 150 eels (*unagi*), and 500 lamprey (*dojo*) were set free. The subsequent additions to these numbers were:—1876, trout (*akahara uo*) 300; 1882, prawns (*yebi*) 15,000; salmon spawn 83,000; salmon trout (*amé masu*) spawn, 80,000; in 1883, salmon spawn 40,000, and salmon trout 80,000; in 1884, salmon spawn 60,000, and salmon trout spawn 152,000; in 1887, mountain trout spawn 30,000, salmon spawn 50,000, salmon trout (*masu* and *ame masu*) spawn 20,000, American salmon trout 8,000; in 1888, salmon spawn 50,000; salmon trout (*masu* and *ame masu*) spawn 20,000, mountain trout 35,000, and trout (*yamame*) 300; in 1889, salmon trout (*masu* and *ame masu*) spawn 120,000; in 1890, salmon trout (*masu* and *ame masu*) spawn 30,000, and mountain trout spawn 70,000. The quantities caught within recent years were:—1886, 26 salmon weighing 47½ lbs.; 1,022 salmon trout (*masu* and *ame masu*) weighing 1,533 lbs.; 5,916 mountain trout, weighing 9,637¾ lbs., and one carp weighing 3 lbs., an annual catch of 6,965 fish, weighing 11,221½ lbs.; 1887, 1,068 salmon trout (*masu* and *ame masu*) weighing 1,424 lbs.; 34 salmon, weighing 65½ lbs.; 10,950 mountain trout, weighing 19,318 5/12 lbs.; 905 *akahara uo*, weighing 91 lbs.; and 62 carp, weighing 298½ lbs., or an annual catch of 13,019 fish, scaling 21,197¾ lbs.; 1888, 68 salmon, weighing 124⅔ lbs.; 866 *masu* and *ame masu*, weighing 2,020⅔ lbs.; 8,939 mountain trout, weighing 13,305½ lbs.; 12,718 *akahara uo*, weighing 2,031⅓ lbs.; 24 *koi* and *funa*, weighing 110 lbs.; in all a catch for the year of 22,615 fish, weighing 17,592½ lbs.; 1889, 21 salmon, weighing 39⅓ lbs.; 515 *masu*, weighing 856¼ lbs.; 198 *ame masu*, weighing 1,500⅚ lbs.; 9 carp (*koi*), weighing 30⅚ lbs.; 62 *funa*, weighing 11 1/12 lbs.; 5,678 mountain trout, weighing 7,373¼ lbs.; 27,079 *akahara uo*, weighing 422⅙ lbs.; showing a total take for 1889 of 33,562 fish, and a total weight of 13,384 7/12 lbs.

### MR. BRADLAUGH.

THE day before the last mail left London, Mr. Charles Bradlaugh, M.P., died at his well-known rooms over the music shop in Circus Road, St. John's Wood, and it appears to be the opinion of English newspapers of all political shades of opinion that his death leaves English public life considerably poorer. Just ten years ago he was fighting his great battle with the House of Commons similar to that which Wilkes had fought a hundred years before. His name was pronounced with execration by a large and respectable section of the British people. In the end he triumphed over the House of Commons as Wilkes did; only three days before his death the resolution expelling him from the House was unanimously expunged from the records, and men of both political parties vied with each other in expressing their sense of the services which Mr. Bradlaugh had rendered since he took his seat. Like many other combative men, the violent hostility which he aroused by his writings and speeches disappeared on personal contact. It is now more than twenty years since the present writer first saw Mr. Bradlaugh. It was on a bitterly cold Sunday evening in the Hall of Science in Old-street St. Lukes, where the then famous secularist was in the habit of lecturing every Sunday. There was to be a discussion between Mr. Bradlaugh and a young clergyman with more zeal than discretion. The subject of the discussion has long passed from memory. The room was thronged with those curious weedy youths with pinched, sharp, intelligent faces who are always ready to speak at a moment's notice, and who seem to form the bulk of the militant secularists of London. In physical as in mental characteristics Mr. Bradlaugh was the antipodes of his followers. He was about 6 feet 2 inches high and broad in proportion, and his fine figure was well set off by the black frock coat which he always wore (he invariably wore black). With his powerful looking well set head, the clean shaven face and the protruding upper lip, he was the picture of energy, fight, and tenacity. His enemies, seizing on the curious projection of his upper lip, constantly characterized him as a sort of bull dog; and perhaps, after all, it would be difficult to find a more apt comparison in the animal world. It was this dogged tenacity of his that carried him through a long succession of litigations; that helped him to live down, in large part, hatred of which he was the object; that bore him into parliament; enabled him to beat the House of Commons, and finally gained him the position which he held in public esteem when he died. To his other gifts he added perhaps the most powerful voice for platform speaking of any man in England. When Mr. Gladstone rises to some of his highest flights and when his voice is tinged with emotion, it sounds clear and sweet like a soft bell and can be heard all over the largest room; but much of this is due to the hushed expectant state of his audience. Mr. Bradlaugh's resonant voice, with its complication of h's, and his total elimination of final g in words ending in *ing*, could be heard above a storm. It was not a coarse, strident voice that grated on the ears like the tuning of a violin; but a strong manly voice coming evidently from capacious lungs and a healthy throat. Years afterwards the present writer saw him addressing one of his monster meetings in Trafalgar Square. There was less hair on his head than in the old days of the Hall of Science, and what was there was whiter, but he had the same energetic gestures, powerful, far-reaching voice, and fighting attitude. In his later days it was his fortune to be denounced as a Tory because he did not believe in the Socialist nostrums of recent times, and because he steadily inculcated the doctrine that a working man must better his own lot by his own right hand for governments could do nothing for him. He was as staunch a believer in freedom of contract, in the right of man to settle for himself how many hours he will work, as the older school of whigs. He would have nothing to do with the attempt to limit the hours of labour of adult men by legislation, and only two years ago he went to a Trades Union Congress, which was permeated with modern socialistic ideals, and told the members that they should have no help of his in their pursuit of what he regarded as an *ignis fatuus*. Readers of Edna Lyall's Broad Church novels, and especially of "We Two," will remember Luke Raeburn, the Secularist lecturer, who is, in fact, Mr. Bradlaugh idealized by the novelist. Mr. Bradlaugh was not an attractive personality in any sense of the term; he was eager and aggressive. In his younger days he assailed the cherished faith of millions in a manner which was both brutal and blasphemous, but he possessed *mens æqua in arduis* in a very high degree. He was ready to fight and suffer for his opinions, and he is entitled to all the credit due to courage and consistency. Just as he was beginning to enjoy a little of the sunshine of peace, his life of struggle and turmoil terminates.

### AN EXPLODED CANARD.

A SHORT time ago we reproduced from a San Francisco journal a marvellous story, purporting to be told by an eye-witness of the events described. Its gist was that batches of young Japanese girls are constantly brought to San Francisco, and being there put up to auction, are sold to the highest bidder. We now find the following in the *Washington Post* of March 3rd:—"Some two weeks ago, a statement was published to the effect that a number of Japanese women were recently sold at auction in San Francisco, presumably for immoral purposes. The Japanese Minister here at once directed the Consul at San Francisco to make a thorough investigation of the matter. A report has just been received by the Minister that the story is absolutely without foundation in fact."

### POLITICS AND TREATY REVISION.

THE attitude of the various political parties towards Treaty Revision is summed up in an interesting article published by the *Jiyu Shimbun*. It will be remembered that when Count Okuma's programme had been before the country for some time, public opinion divided itself with regard to it on very definite lines, which were clearly indicated in the columns of the vernacular press. We are inclined to think that, even at this early date, a similarly distinct division has taken place, and that the *Jiyu Shimbun's* statement furnishes a tolerably clear idea of the situation. Our contemporary founds its analysis on the various items of the programme of Revision, as it is now generally surmised. We follow the Tokyo journal in this respect, premising, however, that we by no means desire to be understood as endorsing its account of the bases of Revision. With regard to Consular Jurisdiction, in the first place, it says that the Go-

Digitized by Google

vernment's proposals point to the abolition of this after five years, during which period it would remain as before within the Settlements. Of this scheme the National Radicals (*Kokumin Jiyu-to*) and the *Kyodo* Club are said to approve, but our contemporary seems to suggest that the Radicals (*Jiyu-to*), Progressionists (*Kaishin-to*), Conservatives and National Economists (*Kokka Keizai-kai*) advocate the immediate and complete restoration of Japan's Judicial Autonomy. We venture to doubt this, however, for it seems to us incredible that such an attitude should be taken by the *Kaishinto*, considering the policy followed by their leader and emphatically endorsed by them in 1889. The second point is the employment of foreigners in a judicial capacity. This guarantee the Government is said to have withdrawn *in toto*, and of course all the parties support the withdrawal. Thirdly, we have the Naturalization Law, which the Authorities are represented as entrusting altogether to the Legislature. The only section of politicians opposed to this are the Conservatives, who claim that foreigners should not be allowed to become naturalized in Japan under any circumstances. The fourth item is mixed residence, which the Government permits, simultaneously with the abolition of Consular Jurisdiction. The official intention is approved by the National Radicals, a section of the Radicals, the Independents, and the Progressionists; while arrayed on the other side are the National Economists, a section of the Radicals, and the Independent Conservatives. With regard to the ownership of real estate, which constitutes the fifth item, the Government's programme is said to withhold this privilege, except in respect of the lands now occupied by foreigners within the Settlements, concerning which a final decision has not yet been arrived at. All the parties are said to approve of withholding the privilege in the case of property outside the Settlements, but as to property within the Settlements, great differences of opinion exist. Customs duties come next on the list. The Government's proposals are said to contemplate a maximum impost of eleven per cent. ad valorem, the duties on *saké*, tobacco, and soy, however, to be the same as the internal taxes imposed on the same articles. Here the Progressionists and the Radicals are united in opposition, both parties claiming that the Diet should have power to impose whatever duties it pleases. As for the other parties, their attitude is said to be still unsettled. The seventh item is the coastwise trade, which is to be closed against foreign vessels. In regard to this point, also, political opinion is not fixed. Finally, we have the question of the Codes, in relation to which the Government's proposals are said to embody no engagement whatever. What this analysis shows, in the main, is that the day is past when any scheme of Revision, short of the complete abolition of all Japan's national disabilities, can obtain the general approval of the Japanese people.

---

### THE INDO EUROPEAN TELEGRAPH DEPARTMENT.

THE Indo-European telegraphs are of the utmost importance to all Europeans in the East, as they form the real connecting link between the European and Asiatic systems. The Administration report for last year hardly shows so favourable a record as usual, expenditure having increased by Rs. 94,345 to Rs. 10,97,568, and receipts having declined by Rs. 69,910 to Rs. 10,97,332, of which Rs. 10,60,400 constitute the message revenue. This, however, is less a falling off from the normal business of the Department than a return to average proportions, there being no diversions of traffic this year on account of breakdowns on other systems; while the increased expenditure is due almost entirely to extensive renewal of cables. The net revenue for the year was Rs. 49,764, or a dividend on capital of 0.44 per cent. This is a small return; but Colonel Mallock points out that while the traffic remains normal, a more satisfactory result cannot be expected until the extensive renewals of the cable now in progress are completed and until the reinsulation of the lines in Persia has also been accomplished. "Unlike the Indian Telegraph Department, the operations of the Indo-European Telegraph Department are necessarily mainly confined to carrying the traffic tendered at the termini, and this work the Department, although not at present a financial success, has done admirably." The interruptions to traffic on the Turkish route during the year were much below the average, being under thirty-two days, as against 51¾ days last year, 59¾ days the year before, and 109½ and 129½ days in 1887 and 1886 respectiveiy. The total interruptions on the Company's line between Lowestoft and Teheran aggregated under nine days. The number of messages transmitted was 106,702, containing a total of 1,558,695 words, and producing a revenue of Rs. 11,24,014. The number of press-messages transmitted by the Indo-European cable during 1889-90 was 3,104, a total of 123,893 words, as against 2,384 messages and 105,587 words last year, and 1,079 messages and 52,572 words in 1887-88, a noteworthy illustration of the increasing importance of news between Europe and the East. Of this total 120 messages, consisting of 72,630 words, were sent last year to *The Times* alone, as against 126 messages of 78,454 words last year, and 97 messages of 73,282 the year before. The average length of commercial and private messages is 12.6 words, an increase of 0.1 since the previous year. The average speed of transmission from England to Calcutta *vid* Teheran was 1 hour 5 minutes, and *vid* Suez 2 hours 21 minutes. From England to Kurrachee the average speed *vid* Teheran was 59 minutes. and *vid* Turkey 12 hours 14 minutes. This latter is a great improvement on last year's record, when the speed was 19 hours 28 minutes. Accuracy of transmission counts 99.402 per cent.

### THE FUKUZAWA UNIVERSITY.

THE Tokyo News Agency reports that the second year students in the Political Economy Section of the Mita University have applied to Mr. Obata, the President, for a new foreign lecturer, claiming that the present occupant of the post is not satisfactory. Being answered that no change could be made until the college was in a more flourishing condition, they are said to have intimated that unless their demand were complied with they should retire *en masse*. Our own information is different from the above. Even as told by the Japanese newspapers the story seems inconsequential, since it attributes to Mr. Obata the reply that no such application could be entertained until the resources of the College should have grown sufficiently to warrant increased expenditure, whereas evidently no additional expenditure would have been incurred in a mere change of Professors. The fact is that the students applied, not for a change of their Professor, but for an additional Professor qualified to deliver a course of lectures on the practical phases of Japanese taxation and finance. It is obvious that no foreigner could undertake to speak authoritatively on the special problems presenting themselves in a country with which foreigners have only a rudimentary acquaintance. Possibly the students' request was to some degree prompted by a feeling of rivalry, the other departments of the University being more liberally supplied with Professors than their own. But even without recourse to any such hypothesis, their application explains itself, since there must be a natural desire on the part of all intelligent Japanese youths to learn exactly what is going on in their own country, and to hear what are the actual facts of its fiscal condition. The President of the University, finding himself unable to make the desired addition to the staff, answered the students in that sense. They, however, not disposed to abandon their project lightly, insisted that the proposed step must be taken, the alternative being their own withdrawal from the college. By this time, in fact, they had organized one of those combinations only too frequent during recent years at Japanese educational institutions, where a matter originally more or less trivial is ultimately perverted into a romantic test of the young men's independence and individuality. They begin by fighting for a concrete aim and end by doing battle for an abstract principle. The President, of course, had no choice but to remain firm, and the students, on their side, deeming that their honour was at stake, undertook to demonstrate their obduracy by absenting themselves from the lectures on finance, a course of which had just been announced for commencement by the foreign Professor. This method of procedure involved the foreigner also in the trouble, though in point of fact he had no real connection with it. Ultimately the students, nineteen in number, left the college, and there the affair seemed to have ended. But in a few days the seceders appreciated the thoughtlessness of their conduct and applied for re-admission, all except the two ringleaders, who had the grace to refrain from condemning the President to the unpleasant necessity of refusing to receive them. We believe that no further notice will be taken of the matter. It has probably taught the students a wholesome lesson. There is far too much disposition among Japanese youths to dictate to their elders. The causes of the tendency are not difficult to explain, but they are decidedly difficult to eradicate.

---

### THEATRICALS IN TOKYO.

THE Amateur Theatrical Representation in behalf of the Orphan Asylum at Kanda, took place on Wednesday evening in the Rokumei-kan, Tokyo, and was a signal success. No one room suited for such a performance is to be found in the building. It was necessary to use a suite of three chambers in the upper story, and though by this arrangement sufficient space became available, a portion of the audience had to be seated in positions very inconvenient for both seeing and hearing. This drawback was rendered more palpable by the dimensions of the audience, which far exceeded any assemblage previously witnessed in Tokyo on a similar occasion, a large number of Japanese being present, in addition to all the principal foreign residents of Tokyo and Yokohama. The stage occupied the eastern end of the room. It was simply but tastefully arranged, the decoration being almost entirely floral. At a few minutes before 8 o'clock, the Imperial Band played—excellently as usual—the Wiener-Blut valse, and the curtain then rose upon one of those admirable little pieces so essentially French in the perfect art of their conception. Simply a dialogue between two young people who would have loved each other had they not imagined that they were intended to do so, and who immediately did so when they discovered that they were not intended, it delighted the audience. *Germaine's* part was taken by a lady who acted as charmingly as she looked, and as for *Gaston*, his performance belonged to quite a high order of histrionic art. "Women's Rights," a farce of much humour, came second on the programme. In this the chief performer, *Mr. Carberry*, who had to play a trying and lengthy rôle, showed remarkable talent. His perplexity on finding himself suddenly introduced to the topsy-turveydom of a society where men and women have changed places; his frenzied and fitful attempts to rebel against the tyrannical exactions of *Mrs. Badger;* his transformation from a bluff, independent Bostonian, coming home after years of Oriental residence with money in his pocket and the world at his feet, to a tremulous, timid victim of bewildering and embarrassing circumstances; the genuineness of his love for a most loveable and delightfully natural little lady, *Miss Victorine Wigfall*—all these were very finished efforts, quite above the amateur level. *Miss Victorine*, indeed, might have contributed inspiration to any company. Her part suited her exactly. From first to last every gesture and every tone, a plaintive protest against the unsexing doctrines and processes of the time, was exquisitely genuine and artless. We have seldom seen a prettier bit of acting. *Mrs. Wigfall*, her mother, also succeeded admirably as a prim, pompous Judge, wearing her ermine and her equally superficial dignity even in the domestic circle, but retaining all the while

Digitized by Google

a dash of feminine petulance and perversity that made her sacrifice the majesty of the law to the malicious delight of thwarting her husband. The scene where the superlatively hen-pecked *Mr. Wigfall* constitutes himself a gallery of one to turn his wigged and gowned wife from her stern purposes by sheer force of applauding them, merited and received great praise. *Mr. Wigfall's* rôle was of a minor character, but he managed to throw much force into it, his by-play especially being irresistibly comic. *Miss Wolterine Griffin* had to take one of the most difficult parts, and took it with wonderful spirit, figuring at one moment as a ranting, demonstrative and repellant pedant, the next, a lady of thoroughly feminine foibles, fancies, and proclivities. And to no one, perhaps, is more praise due than to *Mrs. Badger*. The exigencies of the piece do not suffer her to betray any traces whatsoever of femininity. She has to remain throughout an overbearing, despotic, scheming caricature of a female, more terrible to *Carberry* than even the husband-hungry *Wolterine*. Into this most uncongenial part she threw herself with self-sacrificing courage, achieving an artistic result at the cost of an appalling costume and a menacingly masculine manner. All these ladies were word perfect, and as a consequence the piece swung along without a check. The French vaudeville of "La Grammaire" concluded the programme. Of this we cannot speak too highly. *Caboussat* was truly a treat. His talents are altogether exceptional. Nothing could have been more exquisitely comical than his rendering of the witless ex-rustic, elevated by vapid ambition, depressed by a sense of orthographical deficiencies, aiming at high offices yet saved from perpetual humiliation by the watchful aid of his lovely daughter, *Blanche*, who also played her part with charming artlessness. The soft-brained antiquary, *Poitrinas* solemn, pedantic, and silly, found an able exponent, as did the minor rôles of *Machut* and *Jean*. The whole performance, even to the preparation of the stage furniture and shifting of the scenes, showed the greatest care, was marked throughout by talent recalling professionals, and gave memorable pleasure to the communities of Tokyo and Yokohama.

### THE "JAPAN FOR CHRIST."

THE energetic band of workers connected with the Central Tabernacle, in Haruki-machi, Tokyo, have commenced the publication of a periodical called *Japan For Christ*. It is an unpretending little paper of eight pages, neatly printed and altogether attractive in appearance. We can find no announcement showing whether it is circulated privately or whether it is offered for sale after the fashion of every-day journals, but inasmuch as it contains secular advertisements, we presume that subscriptions will not be out of place. Doubtless the chief writer and editor is the Rev. Dr. Eby, whose untiring hand cannot know many moments of idleness from year's end to year's end. The number now before us—the second of the series—opens with a brief account of the Central Tabernacle, showing how and for what objects it was built, and what indebtedness has still to be discharged on its account. Indeed the periodical contains more than one appeal on behalf of the Tabernacle, a thousand *yen* being greatly needed to complete the furnishing and pay off the liabilities unavoidably incurred in finishing the work. Urgently as funds are required for these purposes, the request for them is accompanied by an intimation, couched in an admirable spirit, to the effect that the projectors and present supporters of the Tabernacle distinctly disclaim any desire to divert into their own direction funds which would otherwise find their way into ordinary missionary channels. The articles and notes are, we need scarcely say, almost entirely of a religious character, and doubtless the little periodical will gradually develop into a faithful record of the progress of Christian propagandism in this country. The times are not encouraging for Christian Missionaries. The rapid advance for which they looked a few years ago has received a check due partly to the fact that the superstitious aspects of Christianity have come to be scanned too closely for their wide acceptance, partly to the general reaction against wholesale denationalization, and partly to the strong discredit into which the nations professing Christianity and the secular representatives of the creed have fallen in their intercourse with Japan. It is scarcely possible, we think, to doubt that the nation will gradually, though perhaps slowly, turn its face to the moral light of the West, as it has already turned it towards the material, but for the moment Christian Missionaries have to encounter difficulties of a discouraging character. They are confronted in this country not by uncivilized and ignorant people to whom any teaching is instructive, but by a refined, intelligent, and strongly patriotic nation, the best educated portion of which long ago revolted against the supernatural and miraculous elements of religion, while the masses will not, without evident reason, agree to exchange the superstitions of Buddhism for the to them not more credible superstitions of an alien faith. There is a pause to-day, but there is not, and cannot be, permanent retrogression. The Missionaries understand the situation, and it may well be that from them will eventually come the impulse to renew the forward movement. In *Japan for Christ* we find an interesting article on the subject:—

> In a small gathering of Christian ministers, one of the most talented and clear-sighted Japanese Pastors in the city of Tokyo, made some interesting remarks on this subject which are so true to facts that we produce them here, for we believe that a knowledge of the truth is much better than the delusion of a false impression. There is no doubt that there is a complete change from the enthusiasm of two or three years ago, and that the Christian Church in Japan is in the midst of a trying period of semi-stagnation. There are indeed many instances of undoubted progress and success, but on the whole it is a period distressing to any who are looking for the speedy evangelization of Japan.
>
> The cause he traces to two different streams of influences, the external and the internal. Externally, the whole Empire is passing through a crisis; the spirit of the age is full of reaction against foreign importations, whether in politics, literature, ethics, or religion; the effort being made by certain societies to revive a reverence for everything Japanese is meeting with a hearty response and more or less encouragement among all classes of people. The time was when it seemed generally accepted that there could be no genuine civilization adapted to the present age, that would bring this country shoulder to shoulder with the lands of the West, without the Christian religion. But the flood of educational influences from other quarters has almost swamped those of missionary teachers, who have also been gradually removed from among the schools and their places taken by anti-Christians. Aside from this Buddhist hierarchy has awakened to a new era of activity, not so much on the line of former antagonism to Christianity, as on that of borrowing Christian methods and even to a certain extent its teaching, blending it with their own and putting forth colossal efforts for the upbuilding of their threatened cause.
>
> The High Priests meet with success and enthusiasm amongst noble and titled ladies; lectures both numerous and erudite appeal to the philosophical and popular tendencies of the people, while the lowest orders are urged by the simple *bozu* to be true to their country and empire by remaining good Buddhists. The third element is in the political furore aroused by the granting of the Constitution and the opening of the Parliament, which has awakened universally in the breasts of young men an unquenchable political ambition. Young men now desire to become schooled in literature, political economy and law, so as to mingle in the new political life of the nation. This is the reason why the Theological schools are depleted, and very few Christian young men are desirous of entering the ministry.
>
> On the other hand, internally the Church has been affected by the reaction without; men who a few years ago were prominent and influential, have now got largely in the background. A great proportion of the churches are left without stated pastors; in one of the Presbyteries it was stated that "out of twelve churches, eight were without pastors, many being supplied with incompetent young men, while many had done without pastors altogether."
>
> Another thing is that the ordinary preaching of the native Christian pulpit does not suit the minds of the young men of Japan; there is altogether too much of an apology for Christianity rather than the direct preaching of Christian truth on a level with the awakened intellect of the day. The result is that when the citadel of orthodoxy is assailed by so-called Liberal Christianity and other forms of antagonism which aim at undermining the faith of the church, the leaders are simply thrown on the defensive with very little of aggressive energy to lead to success. Finally, the fact was that too many of those who have thus far undertaken the preaching of the Gospel, have themselves been more Christian in intellect than in heart, have preached their own intellectual ideas of Christianity and have been themselves without the experimental knowledge of its spiritual power, so that they could not make known to others the deeper truths and hidden spiritual depths of the Christianity of the Lord Jesus Christ, through which alone true and permanent success could be expected.

### ARMOURED TURRETS FOR LAND BATTERIES.

THE *Temps* of Feb. 4 has the following in reference to turrets for land batteries, which are being adopted in new defences now in course of construction at several places on the Continent: "The Belgian Government has just given orders to Messrs. Schneider & Co. for armoured turrets of the same pattern as the one which was tested last October on the Creusot's Polygon before the Belgian Commission and a great many officers of other countries. We are not surprised at the decision arrived at, after what has been written by our special correspondent, who was present at the trials and therefore able to verify the superior arrangement and working of the machinery and the accuracy of the fire. Before deciding upon the pattern of armoured turret to be placed in the new forts, the Belgian Government waited for the completion of the trials made by German and French competing manufactories, with the result stated above, and this decision has brought the Creusot turret very prominently to the front."

### AMERICAN OFFICIALS IN JAPAN.

ACCORDING to news received by the last mail, the post of United States Consul-General at Kanagawa has been conferred on Mr. W. D. Tillotson. We have no information about Mr. Tillotson's antecedents. It is thought probable in well informed circles that Mr. Blair, who was recently appointed United States Representative in China, may be transferred to Japan. Another politician regarded as a possible candidate for the Legation in Tokyo is Mr. Estee of California, who is now seeking election to the Senate. Should he fail to reach the Senate—and his chances of success look decidedly problematical at present—he may wish to come to Japan. His influence is certainly sufficient to secure the latter post for him, should he seek it earnestly.

### MR. F. A. SATOW.

H.E. COUNT YAMADA, Minister of State for Justice, and the officials of the Judicial Department, gave a farewell banquet at the Ountai (hall of cherries and clouds) in Uyeno Park, on the evening of the 31st ultimo, to Mr. F. A. Satow, who is about to leave Japan. Among the guests were Messrs. Boissonade de Fontarabie, Kirkwood, and Lönholm. The banquet was furnished by the celebrated restaurant Yaozen, and a large number of the most skilled *danseuses* of Tokyo delighted the party by their charming performances. Few foreigners have made so many and so close friends in Japan, among all nationalities, as Mr. Satow. His personal qualities have endeared him to all, and his high abilities have added to the lustre of the name which his cousin, Mr. Ernest Satow, placed at the head of all sinologues and zealous students in the East.

### A MOMUMENT TO COMMEMORATE THE FIRST DIET.

IT has been decided to erect a monument in Uyeno Park, on the high plateau called Sakuragaoka, to commemorate the opening of the first Japanese Diet. In Japan, when people think of setting up monoliths, the character and shape of the stone to be employed receive the greatest attention. It is counted but a poor performance to erect a square block of granite, unless indeed its dimensions be exceptionally imposing. A stone so prepared by Nature as to suit the purpose exactly, and at the same time so comely in proportions as to constitute a striking object, is the ideal. Two such stones are said to exist in Inai-mura, Rikuzen province. They have long been celebrated in that locality as the chrysanthemum stones (*kikumei-seki*), but for what reason this name attaches to them, we do not know. The problem is, however, how to get them to Tokyo. In other times great feudal chiefs and men of wealth thought nothing of transporting huge rocks by sea and river from distant parts of the country to adorn their gardens. There is not in Tokyo a park or pleasure ground where one may not find *akami-seki*, brought all the way from Sado; *mikage* that came from Osaka; *ao-ishi*, with blue and white dappling and veining, that journeyed to the capital from Izu; *iso-ishi*, deeply pitted and gnarled by the waves of the Odawara sea; *kuro-boku* from the base of some volcanic mountain; huge, flat blocks of *nebukawa* quarried a hundred miles away, and many another rock never placed by nature in the plains of Musashi. But men have become unaccustomed to this kind of extravagance; or perhaps it would be more correct to say that the great supplies of garden rocks accumulated in the capital by the nobles who, under the Tokugawa régime, were compelled to spend every alternate year in Yedo themselves and to leave their families there at other times, have hitherto been found sufficient for the needs of the present generation. At all events people talk now-a-days when a big stone

Digitized by Google

has to be transported from a distance, whereas formerly they transported it and said nothing. The "chrysanthemum" stones of Rikuzen will probably require a special boat to be built for them, it is said, and possibly their transit to Tokyo may involve as many difficulties and as much delay as befel the great bronze *torii* at the Shokonsha Shrine. Each stone is 33 feet in height, and when raised upon the group of fifty rocks piled together to form their pedestal, they will tower 71 feet above the ground. On one stone are to be inscribed the Emperor's name, and the names and titles of the members of both Houses of Parliament. H.I.H. Prince Arisugawa is to write the ideographs for the carvers to copy. The other stone is to carry on both faces inscriptions composed by Count Ito, the caligraphical task being entrusted to a celebrated penman, Mr. Miya-no-koji Yasubumi, a native of Dazaifu in Chikuzen. The monument will thus be noble in proportions, aristocratic in associations, and classical as to its legends.

### THE TROUBLES OF THE "JIYU SHIMBUN."

THE *Jiyu Shimbun* is the organ of the Radical Party. It was started by Count Itagaki, and when retiring from the leadership of the Party in February, he announced that he should henceforth devote himself to the newspaper and its concerns. The public therefore learns with some surprise that the *Jiyu Shimbun* has just been made the *corpus vile* of proceedings recalling recent incidents in the history of *United Ireland*. The details, which we take from the *Jiji Shimpo*, are these:—Owing to some causes not yet fully explained, differences lately occurred between the shareholders and the editorial staff of the paper, and on the 29th ultimo one of the principal shareholders, Mr. Mogi Torajiro, addressed a letter to the editor, Mr. Kurihara Ryoichi, and to some others of the editorial staff, informing them that their services would not be required after the 1st instant. It appears that the communication to Mr. Kurihara was sent to his residence during his absence, and opened by his wife. Immediately on receiving it, she proceeded to Count Itagaki to seek an explanation. The Count, not less startled than she had been, declared himself unable to comprehend the affair, and set out to seek Mr. Mogi. The latter took high ground. Without entering into particulars, he simply said that, having acted with the concurrence of the other shareholders, he saw no reason to account for what he had done. Count Itagaki was greatly annoyed. Whatever veiws the shareholders might entertain, he said, they had no business to take any conclusive step without consulting him, the founder of the paper, to whom they had pledged themselves to entrust everything connected with the editorship; and they were acting altogether in excess of their legitimate power when they went to the length of dismissing the chief editor. Mr. Mogi does not appear to have made any resolute attempt to controvert Count Itagaki's views. He took his departure quietly, having doubtless arranged beforehand as to his future course, for early the following morning, in company with Mr. Yagiwara Hanshi, of the National Radicals, and some thirty others, he proceeded to the office of the *Jiyu Shimbun*, and, taking possession of the premises, set about the work of editing and composition. Of course an animated colloquy soon ensued between the old and the new staffs. The former proposed that the publication of the paper should be suspended for a day in order to arrive at a settlement, but Mr. Yagiwara would not hear of this. It was next suggested that if the publication must proceed, the copy should pass through the hands of the old staff, but this idea also was rejected. Mr. Kurihara, the former editor, and his collaborateurs then declared that since their moderate proposals met with no response, they must insist upon the intruders vacating the office, but of course this solution did not command assent, and by degrees the two parties proceeded to such extremities that it became necessary to summon the police, who with difficulty restored calm. Each side asserted its right of ownership with equal pertinacity, and retired from the field in possession at any rate of an unabated resolve to oppose the other's claim. It has been arranged that the publication of the paper shall be suspended for a week, in order to evolve some understanding. So far as we can judge, the complication is simply an attempt to obtain control of the paper in the interests of a section of the Radicals opposed to Count Itagaki's leadership. The Party cuts a very poor figure at present, but we presume that these internal ebullitions are a more or less unavoidable preliminary to strong and permanent solidarity.

### NEWS FROM CHINA.

THE port of Chung-king has at length been declared officially open to foreign trade, though the measure is somewhat limited in its effects by the provision prohibiting steamers and sailing ships other than those of "Chinese type" from ascending above Ichang. The interpretation of the restriction imposed on sailing vessels may, however, in the opinion of the *Chinese Times* "prove sufficiently elastic to admit of some improvements being made, for the Mother of Invention would doubtless find some way of reducing the casualties in the navigation of the river, if the trade should prove to be worth it." * * * Some trouble appears to have taken place in Tientsin over the levy of wharfage dues. All Chinese importations for some years past, that is to say nineteen-twentieths of the import trade of the port, have, we learn from our Tientsin contemporary, been subjected to a small tax, which is collected at the Foreign Custom House for account of the local Board of Works, an institution charged with the making and up-keep of the city and suburban roads. Recently, however, an ingenious foreign firm came to an arrangement with certain Chinese importers to pass their goods for them, evade the wharfage dues, and, we suppose, divide the spoil. This was naturally felt as a grievance by the body of native merchants, who paid the wharfage dues and who were thereby placed at an unfair disadvantage, and a general protest was made to the Hai Kwan Taotai and the Commissioner of Customs, the merchants demanding that in either collecting or not collecting the dues, all should be at least placed on an equal footing. As a result of the dispute the aggrieved importers refused to remove their goods from the Bund, and that locality was for some days crowded by cargo, which overflowed into the side streets. The foreign firm, on perceiving the bad consequences of their action, very properly withdrew from the position taken up, and the whole matter was at length arranged. * * * The silting up of the Peiho is a circumstance fraught with deep anxiety to residents of Tientsin, and many theories as to the cause, and propositions for remedy, have been brought forward from time to time. The latest contribution to the discussion is from a nautical correspondent, who advances the view—not by any means a novel one we fancy—that the silting arises from the absence of a regular supply of head waters, and suggests as a scheme of prevention the cutting of a canal from some point in the lower river to Tientsin. * * * The Prefect of Tientsin, acting on the advice of the Provincial Chief Examiner, has taken a very laudable step: he has issued a proclamation against "cribbing" in an approaching examination for the first degree. Many wealthy scholars, says the worthy prefect, have been known to hire others to represent them in their examinations, and he has determined to discourage the practice, for if literary degrees are to be procured by wealth, poor scholars will be shut out, the *literati* ruined, and the nation dishonoured. Every candidate therefore for the examination must have some one to vouch for his ability and integrity, and if notwithstanding this precaution any scholar is able to indulge in dishonest conduct he will be debarred from all future examinations. * * * * The Tartar soldiery forming the garrison at Chinkiang do not appear to hit it off with the local Chinese officials and their motley attendants. Knowing how perilous would be their position in the event of a faction fight, the foreign residents feel far from happy and in consequence of a request from H.B.M. Consul, the *Linnet* was despatched from Shanghai on the 20th ultimo to reassure British and other nationals. Later news report a quieter state of affairs. * * * English residents of Shanghai have resolved in public meeting to hold a St. George's Ball on the 23rd ultimo. * * * The lines of the Shanghai Tugboat Company (Ld.) do not appear to have fallen in very pleasant places during the year 1890. At the annual meeting held on the 24th ultimo, it was stated that the net earnings for the year were Tls. 14,453, against Tls. 5,964 in 1889 and Tls. 16,825 in 1888, the first complete year after the incorporation of the company. The first mentioned sum, representing 14½ per cent on the capital, would have shown a very handsome profit on the year's working, but the shareholders were not fated to participate in it. Inheriting from their predecessors the dreadful legacy of a law suit, the directors found themselves mulcted in the sum of Tls. 12,453, and the remainder of the total amount at their disposal (swelled to Tls. 19,625 by the addition of a sum brought over from the previous year) was accounted for by depreciation and legal expenses. As if this were not bad enough, two of the company's tug-boats, the *Fuhlee* and the *Fairy* must needs run up against each other in the end of 1890, the *Fairy*, which the directors had been desirous of selling for a couple of years on account of her unsuitability for their service, proving the justice of their views by going to the bottom—a loss of Tls. 15,000, for it does not seem likely that she can be raised. * * * The accounts of the Shanghai Gas Company show a net profit for the year to 31st December last of Tls. 40,947, of which Tls. 12,000 was paid as dividend for the half year to June 30th and a similar sum for the period to 31st Dec., Tls. 10,018 written off for depreciation, and Tls. 5,500 carried to the reserve fund, now amounting to Tls. 100,000. * * * The arbitrators' award in the *Kobe Maru-Telemachus* collision case has been given, and both steamers are declared to blame, which means that the total cost of the repairs will be borne equally by both sides. * * * Applications for shares in the Bank of China, &c., are said to be very considerably in excess of the number held on the Shanghai register. * * * From a report by the Director of Mines, translated in the *N.-C. Daily News*, it appears that the Company engaged in working the Yünnan Copper Mines has had to appeal to the Government for assistance, work having been stopped for two months in consequence of incessant rain, which visitation was followed by an epidemic among the workmen. To avoid shutting up the mines altogether and throwing the five or six thousand miners idle, the company gave them food and shelter on the premises, and now appeals for a loan of Tls. 300,000. As Tls. 700,000 have already been sunk in the undertaking, the Director of Mines has advanced the amount asked, on condition that it be repaid in yearly instalments.

### COMBINATION AMONG FOREIGN FIRMS.

IT seems a pity that people should not take the trouble to ascertain the facts of a case before they set about discussing it in the local press. What could be more opposed to the truth, for example, than the following assertion, made apparently with complete conviction, by a correspondent of a local English contemporary:—"If merchants unite strongly on this, or any other, question, they are so thwarted, and perhaps reviled, by the *Japan Mail*, whose office compels him to draw the sword for the people of his adoption, that not a few of the Hongs prefer to suffer in silence." Truly such a statement suggests the idea that some people in this Settlement have *Japan Mail* on the brain, and are determined to imagine themselves opposed where in reality they are supported. The subject discussed by the correspondent from whom we have quoted is the failure of Japanese dealers to take delivery of goods imported to their order by foreign firms, and he recommends a combination among the latter for the purpose of checking the laxity

Digitized by Google

of the Japanese. Now it happens that exactly the same recommendation has been made over and over again by us. "Recommendation" is perhaps, a misleading term to employ. Merchants know their own business too well to need advice from journalists, and we have confined ourselves to expressing regret that no possibility of effective combination seemed to exist. The very day before this correspondent's accusation appeared, we said, in a leading article:—"It is distinctly regrettable that foreigners on their side, cannot enter into some agreement, pledging themselves to insist upon certain conditions in their dealings with Japanese;" and we concluded with the words:—"We venture to hope that the occasion may be seized by foreign merchants to counteract the decidedly baleful influence of such ill-judged interference" as that of the Japanese Guild. In that we are entirely at one with the correspondent who expects to be "thwarted and reviled" by us, and though he seems so anxious to have us for opponents, we really cannot gratify him on the present occasion. As for Hongs "suffering in silence" rather than brave the thwarting and perhaps reviling of the *Japan Mail*, the notion is extremely comical.

### A DEFAULTER.

LAST Thursday Mr. Uyeno, a Japanese merchant of whom we spoke when referring to the trouble between Messrs. Thomas and Company and the local Japanese Guild, took delivery of parcels of goods from several foreign firms in this Settlement, paying for them by cheque. The amounts, fortunately were not large—from one to two thousand *yen*, we believe. The following day being Good Friday, the cheques were not presented for payment until Monday, and it was then found that no assets were forthcoming to pay them, and that Mr. Uyeno had disappeared. The whole proceeding looks very like a deliberate fraud. With what feelings, we wonder, does the Guild now regard the action taken by it in behalf of Mr. Uyeno, who deemed it a hardship that such an one as he should be required to submit to written conditions providing against the contingency of a broken contract? The Guild, of course, is not responsible for this last disgraceful performance, but we cannot help thinking that if it employed its influence and strength to prevent irregularities, rather than to support their perpetrators, men of Mr. Uyeno's stamp would be scarcer.

### ANTI-NEWSPAPER MEN IN NEMURO.

IT was hoped that further particulars would have been received on Thursday of a disturbance in Nemuro, telegraphically reported in Tokyo on the 1st instant, but up to last evening nothing further had been learned. The telegram said that, on the 31st instant, a number of the *Tonden-hei*, or militia settlers, broke into the office of the *Nemuro Shimbun*, and set themselves to destroy the type and machinery. Being opposed by the editor, Mr. Watanabe, and several others of the staff, a fight ensued, with the result that not a few wounds were inflicted. A number of the rioters are under arrest, but nothing is said as to the origin of this outburst against the newspaper.

### THE METROPOLITAN POLICE BUREAU.

MR. SONODA YASUKATA, hitherto Assistant-chief of the Tokyo Metropolitan Police, was on Thursday appointed Chief, in succession to Viscount Tanaka. Mr. Sonoda has also been raised to the rank of a second-class *chokunin*. The post is considered important, and its occupants have almost invariably been officials of Satsuma extraction, a rule confirmed in the case of Mr. Sonoda. The salary attached to it is 4,000 *yen* annually. Mr. Sonoda comes into office simultaneously with extensive reorganizations of the Bureau. These were officially announced the day before Thursday, and we shall describe their leading features in a future issue.

### DEPARTURES.

IN the German steamer *General Werder*, which sailed on Wednesday from Yokohama, two very old residents of Japan, Mr. and Mrs. Knipping, left a country where nearly two decades of their life had been passed. Mr. Knipping worked chiefly in the meteorological line. He organized the Japanese meteorological system, and rendered immense service by thoroughness and ingenuity very far above the average. The same steamer carried off the Rev. W. Spinner, a German missionary, who during five years of the most zealous labour won an exceptional measure of love and respect from all classes. We may hope, perhaps, to see Mr. Spinner return in the course of a year, but to Mr. and Mrs. Knipping Japan has probably said goodbye forever.

### BARON DORNBERG.

MUCH pain has been caused in Tokyo by the news that Baron Dornberg, formerly Secretary of the Imperial German Legation in Japan, died at the German Embassy in St. Petersburg on the 15th of February. The circumstances of his untimely decease—he was only 37 years of age—are not known. Baron Dornberg had made many warm friends during his stay in the Japanese capital, and when he was transferred to another post less than three years ago, the hope of his return at some future date was entertained by numbers of all nationalities. It is sad that a career so full of promise should terminate so prematurely.

### JAPANESE REPRESENTATIVE IN PARIS.

VISCOUNT NOMURA YASUSHI, a Privy Councillor, is gazetted to be Envoy Extraordinary and Minister Plenipotentiary to France. Viscount Nomura is well know to many of the Foreign residents of this Settlement, having been Prefect of Kanagawa prior to Mr. Oki Morikata. The Japanese Legation in Paris has been vacant since the return of Viscount Tanaka last year to Japan.

### VICTORIA PUBLIC SCHOOL.

WE understand that Mr. Fenton has been engaged as assistant master for the Victoria Public School. Mr. Fenton is said to be a certificated teacher of considerable experience and ability, having very successfully managed a school at Kobe for about twelve months, and has been several years engaged at Mr. Fukuzawa's School in Tokyo.

### DR. KOCH'S LYMPH.

A SMALL quantity of Dr. Koch's lymph having been received in Japan, experiments are now being made with it by Dr. Nakahama. It is said that the announcement of the discovery has caused much excitement in the country districts, and that constant applications for lymph, and for information as to the results of the experiments, are received in Tokyo.

### ADMINISTRATIVE REFORM.

IT is confidently stated that, in addition to the large reductions just made in the staff of the various Departments of State, an important measure of administrative reform will be promulgated and carried out within a few days. This is the reform which the Government pledged itself to make in deference to the wishes of the Diet.

### ELECTION IN SHIGA PREFECTURE.

THE election of a member to fill the vacancy in the representation of Shiga Prefecture, caused by the resignation of Mr. Sugiura Choko, has resulted in the return of Mr. Kawashima Uichiro, who obtained 1,225 votes, against 471 cast for his rival, Mr. Tanizawa Ryozo.

### MR. P. MAYET.

WE regret to learn that, in connection with the economies dictated by the Diet, Japan is likely to deprive herself of the services of Mr. P. Mayet. Mr. Mayet has spent many years in this country, and has given valuable advice to the Administration on many occasions.

### MR. ERNEST HART AND THE TOKYO MEDICAL FACULTY.

ON Monday afternoon Mr. Ernest Hart delivered a lecture before the medical men of Tokyo at the Koyokan, Shiba. The lecturer's object was chiefly to describe the aims and working of the British Medical Association and the Medical Providence Society, but the address also dealt with a few of the results of Mr. Hart's observations in the capital. Surgeon-General Takagi occupied the chair and interpreted Mr. Hart's speech into Japanese. Mr. and Mrs. Hart were afterwards entertained at a banquet. They start for Nikko following day.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The Radical Party (*Jiyu-to*) is now at a critical period of its existence. The election of Count Itagaki to the leadership, instead of restoring union and harmony, seems to have been the means of creating fresh discontent and ill-feeling between the various factions composing the party. The districts said to be dissatisfied with the new arrangement are the North-East, the Kwan-to, and the Kyushu regions, especially the first and the last. The representatives of the Kyushu section will hold a general meeting at Nagasaki in May next, when they propose to finally determine their attitude towards the new leader and his party. The principal ground of the dissatisfaction felt by their section lies, not in the personal qualifications of the newly re-appointed chief, but in a belief that Count Itagaki's return to the leadership will inevitably lead to an undue preponderance of Tosa influence, and that the ascendancy of the Tosa folks would be prejudical to the ultimate amalgamation of all the progressive parties. The *Rikken Jiyu Shimbun* denies that there is any general discontent in the party, and asserts that the majority of the Kyushu section are not ill affected towards the new organization. But Mr. Kajiki, writing in the *Hochi Shimbun*, strongly traverses the allegations of Count Itagaki's organ. He is of opinion that until the time arrives for the amalgamation of all the progressive parties, the best policy is to unite the various sections of the *Jiyu-to* on the principle of federation, leaving each section free to manage its own local affairs. He, consequently, holds it unwise to appoint a leader with almost despotic powers, as was recently done at the Osaka meeting. He advises the dissatisfied sections to sever their connection with the *Jiyu-to*, if they find themselves unable to change the organization of the party. The *Mimpo* offers similar advice to the Kyushu and the North-East sections. It is evident from these circumstances that the *Kaishin-to* desires to draw away from the *Jiyu-to* whatever local bodies are in favour of amalgamating the progressive parties, and that its wishes are not at all unlikely to be gratified, according to the present aspect of affairs. The *Kaishinto-to*, in short, concluding that it can never work with the mass of the *Jiyu-to*, wants to attract to itself a considerable portion of the latter.

* * *

The question of Treaty Revision continues to occupy the attention of the vernacular press. As stated in our last weekly summary, there are indications that the parties opposed to the Ministry will adopt a more or less hostile attitude. The *Yomiuri Shimbun*, after giving a summary of the alleged proposals of Viscount Aoki, observes that the Opposition will not be in favour of these proposals; the Conservatives disliking mixed residence and the Liberals insisting on the immediate abolition of extra-territoriality. Thus our contemporary thinks that the Minister for Foreign Affairs will have to face the opposition of certain foreign Powers as well as of a large section of his own countrymen. To suspend the negotiations once more would be to add to the humiliations which the country has repeatedly sustained in connection with the question. The *Yomiuri* therefore advises Viscount Aoki to obtain the approbation of the Diet, and then to approach the Treaty Powers with the whole weight of the country behind him. The *Kokumin Shimbun* offers similar counsel. The plea of secrecy, observes that paper, ought not to apply in the case of treaties which directly

Digitized by Google

affect the economic concerns of the country. Should Viscount Aoki comply with the general demand of the people and ascertain the views of the Diet, he will be in a fair position to attain his objects, for then he will have the support of the whole nation. The *Jiji Shimpo*, writing on this subject, deplores the fact that public opinion on Treaty Revision is disfigured by unreasonable conservatism. Long centuries of seclusion have accustomed the Japanese to be conservative and suspicious in their relations with foreign nations. The old spirit still remains active in certain quarters, and never fails to influence public opinion at every opportunity. The *Jiji* recommends its countrymen to be more tolerant and courageous in their foreign policy. It writes in a general manner, but is plainly in favour of giving large rights and liberties to foreigners in Japan on the revision of the treaties.

* * *

The *Tokyo Shimpo* ridicules the unreasonable position taken by certain advocates of equal treaties. They clamour for perfect equality, and yet they do not seem at all prepared to support the only policy that can insure the attainment of their demands, namely, the policy of blood and iron. Without courage and means to adopt such a policy, our contemporary thinks it inpossible to revise the treaties on a basis of perfect equality. On the other hand, give and take being the common practice all over the world, it will not be derogatory for Japan to recover her natural rights by making adequate concessions to foreign Powers. The *Tokyo Shimpo* hopes that its countrymen will essay all means to effect the solution of the problem in a peaceful manner.

* * *

The *Shogyo Shimpo*, continuing its articles on the subject of Treaty Revision, strongly rebukes Conservatives opposed to the opening of the country for mixed residence. There are, the *Shogyo* says, certain general conditions universally recognized as essential for the commercial intercourse of nations. The more important of these conditions are stated to be as follows. The nationals of either of the contracting parties should have, in the territory of the other, (1) liberty to come and live, and own property, real and movable; (2) liberty to engage in commerce and industry; (3) the right to be treated in the same way as people of the country in matters of taxation; and (4) a title to enjoy the same privileges and facilities as natives in respect of legal tribunals or public offices. The *Shogyo* declares it utterly impossible to conclude a commercial treaty with any foreign country without recognizing these conditions. Still it recommends that certain restrictions be imposed on the ownership of land, and would exclude all foreigners from the coasting trade and the fisheries. It further claims that Japan ought to give special advantages to countries that are the chief purchasers of her products, namely, the United States, France and China. Fortunately for Japan, she has little or no occasion to apprehend competition on the part of those countries in industry and commerce. Next on the list come Korea and the South Sea Islands. With these Japan should endeavour to arrange a conventional tariff, so that Japanese goods may enter their ports as cheaply and conveniently as their goods enter the ports of Japan. The United States may not agree to such an arrangement; so, in the case of that country and of all other Powers similarly situated, Japan should fix a general tariff imposing higher rates than those stipulated for in the conventional tariff. In short, the whole contention of the *Shogyo Shimpo* resolves into this, that the Treaties should be revised in whatever manner seems most beneficial to the development of the country's foreign trade.

* * *

The Korean question still engages the attention of the Metropolitan papers. The *Mimpo* disagrees with some other journals which think that China, and not Russia, is the originator of the present crisis, if, indeed, there be a crisis, in the affairs of Korea. No indication exists that Russia has in any way become aggressive or threatening towards the peninsula. Yet the *Mimpo* strongly doubts whether China is really resolved on taking decisive steps for the annexation of the Korean Kingdom. The Chinese Ministers of State are the last persons in the world to agree on any definite policy. And even if they have come to an agreement, China would be reluctant to take such a bold step without consulting England. But the *Mimpo* doubts whether England would consent to give China any material help for the consummation of such an object. Did any Ministry in England promise help to China, it would at once expose itself to violent attacks from the opposition and might even be obliged to resign. It is thus extremely unlikely that China will be able to obtain the co-operation of England in any aggressive designs on Korea. But supposing that China decided to carry out her long cherished policy of aggrandizement in Korea, and supposing that Japan resolved to prevent anything of the kind, even at the point of the bayonet, the *Mimpo* doubts whether China could accomplish her object in defiance of the just protests of Japan. The maintenance of the independence of Korea being essential for the peace of the East, our contemporary advises the Japanese Government to pursue a firm and unyielding policy towards Korea, which advice, we (*Japan Mail*), have been reading in Japanese newspapers for the past nine years.

* * *

The *Jiji Shimpo* alludes to a rumour that the Chinese Government has sent a despatch to Korea, demanding the abdication of the King in favour of his son, China's object being to appoint the Tai Won-kung Regent of the Kingdom, and thus to control its internal affairs. The *Jiji* hopes that the rumour may prove groundless, but says that if it be true, such a proceeding cannot be disregarded by Japan, since it would be tantamount to an unequivocal declaration of sovereignty over the peninsular kingdom. China, continues the *Jiji*, cannot support any such claim, as she has recognized the independence of Korea by suffering her to conclude treaties with foreign countries. China must, therefore, be called to severe account, if she has really taken the step attributed to her by rumour.

* * *

The approaching visit of the Russian Prince Imperial receives increasing attention from the press. Popular interest in the visit has been heightened by a rumour that Saigo Takamori and a few of his confidential generals are coming back in company with the Prince. For some inexplicable reason this incredible story seems to be believed by a large number of people.

* * *

The *Choya Shimbun* tells its countrymen not to regard the approaching visit of the Russian Prince Imperial with any uneasiness or suspicion. Such an attitude would be highly disrespectful to the august visitor and to the Throne of Russia. The *Choya* advises that he be received with all possible marks of respect and good will. In another article, the *Choya* recommends the Japan Tea Company to show special hospitality to the Russian Crown Prince, as Russia is likely to become a most important customer of Japanese tea.

* * *

The *Jiji Shimpo*, writing on the same subject, calls upon the members of the Municipal Council of Tokyo to appoint a committee for the entertainment of the Russian Crown Prince. As on the occasion of the visit of General Grant, the Prince and his party might be invited to witness the performances at the *Kabuki-za* or *Shintomi-za*, or they might be entertained at a grand ball. At any rate the *Jiji* urges the municipal authorities of the capital to take up the matter speedily, for their example will certainly be followed by other towns throughout the country.

* * *

Depression of trade in Tokyo, according to the vernacular press, is becoming very great. The *Toyo Shimpo* publishes a conversation which its editor had with a wealthy clothier in Nihon-bashi, who told him that the present depression in Tokyo has no parallel in modern times, except the depression at the time of the Restoration. The same merchant assured the editor that among his own acquaintances there are seven or eight *ton-ya* who have suffered severe losses on account of the inability of their customers to make payments, and that nearly seven hundred dealers in rice were declared bankrupt towards the close of last year. Suffering among petty tradesmen, artisans, and day labourers, is said to be extreme. Carpenters, who usually receive from forty to fifty *sen* a day, are willing to work for from fifteen to twenty *sen*. The immediate and principal cause of this depression is to be sought in the panic caused among officials by the Diet's reduction of the number and salaries of public servants. The *Tokyo Shimpo* mentions three other causes; first, recent failures of companies, the majority of the shareholders of which are inhabitants of the capital; secondly, the long continued rise in the price of rice; and thirdly, the withdrawal of a large amount of capital from Tokyo in recent years, owing to the purchase of land in the provinces by wealthy merchants and noblemen of Tokyo. An instance is given of one man buying cultivated land in Echigo amounting in value to about 400,000 *yen*. In order to give relief to the distressed people of Tokyo our contemporary recommends the suspension of the work of city improvement. The inhabitants of the capital are yearly taxed to the extent of more than 400,000 *yen* for the prosecution of these works. They are advised to urge upon the municipal authorities the advisability of a temporary suspension of the undertaking.

* * *

The *Kokkwai* observes that a period of political activity has always been followed by a period of business depression in Japan. According to that journal, the present depression is attributable to the excessive political agitation of last year, and also to the withdrawal of more than six million *yen*, now in the Treasury vaults, from circulation in the country.

* * *

The *Mainichi Shimbun* remarks that business depression prevails more or less throughout the country, but nowhere is it so acute as in Tokyo. The price of rice cannot account for this, since rice was far dearer last year than at present. The cause must be sought in the fact that Tokyo is on the eve of an important change in its business arrangements. Hitherto tradesmen depended for custom upon the official class, but owing to the reductions voted by the Diet, the official class has become far more chary of expenses. A large number of dismissed officials intend to withdraw to their native provinces, while those still remaining in Tokyo can no longer afford to maintain their former standard of living. Our contemporary advises tradesmen of the capital to seek customers in quarters other than official.

* * *

The *Kokkwai* writes on the necessity of paying more attention to nautical education. The *Mimpo* draws attention to the importance of infusing the spirit of the old *samurai* into the business men of the present day. The *Kokkwai* speaks highly of the character of English merchants, who, it says, have many noble qualities similar to those possessed by the old *samurai*. The *Choya Shimbun* urges the expediency of protecting the fishing interest off the coast of Chishima (the Kurile Islands). The *Nichi Nichi Shimbun* is still engaged in reviewing the history of the first session of the Diet. The *Nippon* has commenced a series of articles on the question of currency under the *Meiji* Government. The *Kokumin Shimbun* regrets that the rising generation among Choshu men do not seriously enter into the popular movement of the present day, while the young men of Satsuma are very active in acquiring influence outside the Government. The *Jiyu Shimbun* has temporarily stopped publication, owing to difficulties that have arisen among the proprietors of the paper.

Digitized by Google

## *MR. MAYEJIMA.*

A VERY characteristic incident has just occurred in Yokohama. On the 20th ultimo the *Mainichi Shimbun* published an editorial note, lauding the services of the retiring Vice-Minister of Communications, Mr. MAYEJIMA, and converting his retirement into a weapon for attacking the Communications Department directly, and the Government indirectly. The special charge preferred by the *Mainichi* was a rumour that about a hundred thousand *yen* had unlawfully come into the pockets of high officials of the Department —contracts to the amount of half a million *yen* having been placed with their relatives—and that Mr. MAYEJIMA'S resignation was in consequence of his having disclosed these transactions so that they became the subject of questions in the Diet. This rumour was eagerly snapped up by a local English journal—the *Japan Gazette* —which, under its present management, appears to have deliberately chosen for itself the rôle of seeking out every scrap of anti-Governmental scandal or pro-Opposition abuse appearing in the columns of the vernacular press, and reproducing these malicious items with strong asseverations of its own faith in their truth, and mysterious references to confirmatory testimony of the vaguest character. In the case of Mr. MAYEJIMA, the *Gazette*, writing on the same day of the *Mainichi's* publication, and with only that journal's "rumour" before it, did not hesitate to speak of news having reached it that the Department's "unrestrained corruption was the cause of the resignation of a man who might be said to be the father of postal and telegraphic communication in this country;" adding its "belief that no foreigner had any conception of the amount of corruption allowed in the Communications Department," and its conviction that "publicity was the only cure for the hoard of corrupt practices which the present Government had inherited." Now, unlike many stories circulated with a special object, this slander carried its own refutation. Mr. MAYEJIMA appeared as Government Delegate for the Communications Department in the House of Representatives. His nomination to that office took place some time previous to the meeting of the Diet, so as to enable him to acquaint himself thoroughly with every detail of the Department's affairs, and be in a position to answer any questions put by the Representatives in connection with its expenditures. Long before his turn arrived to discharge the function of Delegate, it had become perfectly plain that there existed in the House a strong party determined, if possible, to fix some stigma upon the Government, and that every Delegate would be subjected to a cross-examination of the most searching, if not vexatious, nature. Mr. MAYEJIMA deliberately faced this ordeal, and endured it with conspicuous ability. His Department was not singular in being made the subject of injurious insinuations and damaging suggestions in the House, but these, one and all, he met boldly and repelled with scorn, leaving on the minds of the Diet and the public an impression not only that he understood every detail of his business, but that he had, with convincing directness and talent, guaranteed the integrity of all his Department's transactions. We are writing plain history—facts prominently recorded in past issues of the very journals now fanning the slander, and, most stange to say, actually recalled by them in the context of the slander itself. See, then, what the public is asked to believe. It is asked to believe that Mr. MAYEJIMA, knowing his Department to be disgracefully corrupt, knowing that its transactions would not endure honest inquiry, nevertheless deliberately undertook to stand sponsor before Parliament for the integrity of that Department and the honesty of those transactions; nay more, that he presented himself before his inquisitors, having previously made revelations which should furnish materials for breaking down his own defence, and convicting him of false advocacy. This is the kind of folly dished up for the edification of the Yokohama community. An official, lauded to the skies for ability and probity, is declared to have fled from the corrupt practices of his Department, immediately after having vindicated its reputation before the world against every imputation of crooked dealing; and is, moreover, said to have privately denounced its corruption to those before whom he was on the eve of appearing at its earnest guarantor.

Let us pass for a moment to the subsequent history of the incident. The morning after the publication of the *Mainichi's* slander, there appeared in the columns of the same paper an official communication from a Secretary of the Department of Communications, declaring the story to be "groundless" and calling for its withdrawal. The *Mainichi* complied by withdrawing it. But the *Japan Gazette* took not the slightest notice of the official contradiction or of the withdrawal. It suffered its orginal article to stand on the basis of a solitary rumour which had elicited official denial. Two days' silence having demonstrated its resolve to maintain this unscrupulous reserve, a letter was addressed to it, categorically denying the abuses attributed to the Department of Communications, and emphatically declaring that the reason alleged for Mr. MAYEJIMA'S resignation was not the true reason. To this the *Gazette* replied that "the contradiction having proceeded from the parties accused, and not from the accusers, in the eyes of the public, both Japanese and foreign, it possesed not an iota of value as moral evidence." Such was the delirious bias of this extraordinary journal that it thrust out of Court, as utterly unworthy of credence, any and every testimony about the Government's affairs unless that testimony was supplied by the Government's enemies. The *Mainichi Shimbun* is the organ of the *Kaishin-to*. Mr. MAYEJIMA is a prominent member of the *Kaishin-to*. Last December, when the Budget was submitted to the Diet, the *Kaishin-to* members in the Lower House organised and headed a combination the proximate purpose of which was the rejection of the Budget, and the ultimate object the overthrow of the Cabinet. The attempt failed just when it had been carried within sight of success. Mr. MAYEJIMA resigned; the *Mainichi Shimbun* published its rumour, and the next day inserted a distinct official contradiction. Thereupon the *Japan Gazette*, crassly ignorant of Japanese politics, except in so far as its gleanings of scandalous scraps instruct it, and entirely without access to any but tainted sources of information, steps into the breach and magniloquently announces that "the testimony of the overwhelming majority of disinterested persons pronounces the cause of the resignation of Count (*sic*) MAYEJIMA to be corruption in the Department which he left." It is impossible not to admire the splendid imagination that converts a contradicted rumour into "the testimony of the overwhelming majority of disinterested persons." As for Mr. MAYEJIMA'S reputation, never could it be more foully besmirched than by the giddy folks who depict him standing in Parliament for two days to defend, against all assailants, the reputation of a Department which he knew to be "unrestrainedly corrupt."

## *OWNERSHIP OF REAL ESTATE BY FOREIGNERS.*

THE question of Treaty Revision having been again brought forward by the vernacular press, various rumours are circulated about the ownership of real estate by foreigners. It appears to be now pretty generally understood that the Japanese Government is disposed to withhold this privilege, in deference to the clearly expressed wishes of the people. Of course the manner of dealing with the lands now held by foreigners within the Settlements demands and will receive special consideration, it being pretty certain that the Japanese Authorities have not the least desire to enforce, or the Foreign Representatives the smallest disposition to accept, any arrangement unfair or illiberal towards the foreign land-renters. But what interests the far-seeing section of the public is the problem whether, by withholding from foreigners the privilege of owning real estate in the interior, the development of the country may not be checked. The removal of existing restrictions upon trade, travel, and residence is not likely to be quickly followed by any radi-

Digitized by Google

cal change in the manner of conducting the empire's foreign commerce. It may indeed be reasonably hoped that when the foreign settlements cease to be an entirely distinct part of Japan, the rings of monopolists now said to environ them will be broken, and Western merchants will find greater freedom of action. What the merchants themselves wish, there is some difficulty in determining. At one time, as when the memorial of 1884 was presented, they aver that they suffer considerably owing to present restrictions; at another, as when the protest of 1886 was forwarded, they profess themselves very well satisfied with the old groove. Perhaps the truth lies between the two statements. Thirty years have crystallized into tolerable usages methods not intrinsically perfect, and three decades of familiarity have reconciled foreigners to agents whom they cannot regard with abstract satisfaction. Thus, were the interior thrown open and the boundaries of the settlements abolished, many people might still go on doing just as they have hitherto done. Others, again, might endeavour to establish more direct relations with consumers and producers, or with leading Japanese merchants of old standing, not one of whom—and the fact is very significant—has yet attempted to penetrate the fortresses of the Settlements. We do not pretend to forecast these issues. Nor, indeed, does there appear to be the smallest occasion to forecast them. As plain folks we are content to note the plain fact that restrictions cannot fail to be more or less injurious to commercial growth, and that, whether the degree of benefit to be derived from removing restrictions be easy or difficult to estimate, their removal is the obvious duty of wise statesmen. But though the present channels of trade might not be greatly altered, at all events for several years, the opening of the country would certainly encourage one result, namely, combinations of foreigners and Japanese for purposes of industrial enterprise. There are folks who deny that anything of the kind would happen. They may be right, but for our own part we are unable to entertain any doubt on the subject. Noting the great dividends paid by all the banks throughout the empire, we draw the obvious deduction that money commands here a price far in excess of anything obtainable for it in Great Britain, and are convinced that there must be openings for foreign capital and foreign enterprise under such circumstances. To take advantage of such openings partnerships between foreigners and Japanese are essential, and the question arises, would partnerships be practicable were the privilege of owning real estate denied to the foreign partner. Count OKUMA, a thorough believer in the wisdom of offering every inducement to foreign capital, foreign enterprise, and foreign organizing talent, sought to place foreigners on precisely the same footing as Japanese in the matter of real estate, and the commercial aspect of this liberal policy was so strongly urged in reply to its opponents, that undue importance probably came to be attached to it. Fully as we applaud Count OKUMA'S view, and unable as we are to discover any tangible reason for the prejudice entertained by the Japanese people against the ownership of real estate by foreigners, we fail to see that the prospects of commercial development would be much, if at all, marred by withholding the privilege. Long leases are not inferior, practically, to titles in fee-simple for purposes of industrial enterprise. If a foreigner may hold lands and houses for, say, fifty years, it does not materially matter to him, as a partner in a business, whether his name is entered in the Great Ledger as actual owner. Such leases would, presumably, be legal, and under them shrewd foreigners would experience no difficulty in investing their money and finding outlets for their enterprise.

## *ANOTHER THREATENED BOYCOTT.*

UNDER the heading "Unjust Demands of a Foreign Merchant," we find the following paragraph in the *Tokyo Shimpo*: "A dispute having arisen between the firm of Messrs. THOMAS & Co., No. 49, Yokohama, and the firms of Messrs. KIMURA and UYENO, in consequence of difficulties connected with transactions in yarns, Mr. OKAMURA TERUHIKO was employed as a go-between to settle the matter, but the demands advanced by Messrs. THOMAS & CO. were so unjust that, on the 24th inst., Messrs. HIRANUMA SENZO, SATSUMA JIMBEI, and four others, acting as representatives of the Japanese merchants (*torihikisho*), held an investigation at the rooms of the Guild of Traders (*Boeki kumiai Kaikan*), and decided that if these unjust demands were insisted upon, there would be nothing for it but that the Japanese merchants should stop all transactions with the firm in question. The principal demands of the firm are, first, that if delivery of goods be not taken at the time agreed upon, a forfeit of one-third per cent. per diem must be paid; secondly, that godown rent must be paid; thirdly, that insurance must be effected; and fourthly, that the firm will not be responsible for any damage or shortage. There are various other points entirely at variance with previous custom."

Such is the *Tokyo Shimpo's* account. In one respect it bears out what we have often written about transactions between foreign and Japanese merchants in the settlements, namely, that the Japanese trader, being in a position to tell his own story to his countrymen, absolutely without contradiction, naturally establishes his case to their satisfaction, and is guaranteed against losing face under any circumstances. To be thus relieved from the restraint of public opinion is to be freed from one of the strongest checks upon chicanery. Even taking the *Tokyo Shimpo's* case as it stands, however, we are astonished that it can be gravely put forward as a Japanese grievance. For it will be observed that the conditions said to have been imposed by Messrs. THOMAS and Company, apply solely to the contingency of a Japanese merchant's failing to fulfil his contract. If delivery be not taken within the time orginally agreed upon, then, and then only, the Japanese who ordered the goods becomes liable for interest and other charges. We may mention here that the Tokyo journal's statement of conditions, is incorrect. A printed copy of the foreign firm's announcement lies before us, and from it we learn that the rate of interest to be charged upon goods of which delivery has not been taken in due time is, not one-third per cent. daily, but one per cent. monthly. What Messrs. THOMAS & CO. have done is simply to try and introduce a healthier tone into business transactions between foreign importers and Japanese dealers. What the Guild appears to be doing, according to the *Tokyo Shimpo's* story, is to interfere in the interests of men who fail to observe their engagements. The two Japanese merchants with whom difficulties are said to have occurred, Messrs. KIMURA and UYENO, entered into contracts of considerable magnitude last year with Messrs. THOMAS & CO., but suffered intervals of from three to twelve months to elapse before taking delivery. From what we have been able to learn, the transactions were only recently brought to a conclusion, the foreign firm obtaining no consideration whatever on account of interest, warehousing, insurance, and other costs which would not have been incurred had the procedure of the Japanese merchants been in accordance with agreement. It is plainly impossible to conduct business on such terms. The conditions that Messrs. THOMAS & CO. now propose are intended to afford legitimate protection against irregularities with which no upright trader can sympathise for a moment. They are not new conditions. Similar terms have always been understood to apply to every contract, though probably it has not been the custom to reduce them to writing. Neither is it sought to give them any retrospective effect: their operation is to be purely prospective. In other words, a Japanese merchant entering into a contract with a foreign firm, will be asked to subscribe to the perfectly fair and proper stipulation that, in the event of failure to take due delivery of goods contracted for, the expenses inevitably resulting from breach of contract will be borne by the person breaking it. If a merchant fears to pledge himself to such an engagement—that is to say, if he cannot look forward with reasonable certainty to fulfilling his promise—then he is not the sort of person

Digitized by Google

with whom sound foreign traders desire to deal, and Messrs. THOMAS & CO. politely intimate to him that he may carry his custom elsewhere. Why the Japanese Guild should think of interfering in such a matter we are quite unable to conceive. There are Japanese merchants in Yokohama who carry out their engagements with scrupulous regularity, and who deserve and receive trust. To these men the proposed conditions will suggest no terror, and it is to men of this stamp that the Guild should give its support. But if we must judge from present appearances, the Guild is offering itself to be the tool of merchants who deserve no consideration. What we should hope from the action of an association of leading Japanese local merchants is that it would assist to differentiate the upright trader from the unscrupulous, and thus not only to raise the general standard of commercial morality, but also to place trade upon a sound, and therefore a progressive, footing. Precisely the opposite result seems likely to ensue, if the *Tokyo Shimpo's* account be correct. The Guild steps in and threatens to boycott the foreign merchant if he seeks to append to an agreement conditions entailing no manner of inconvenience unless the agreement be violated. Briefly speaking, the Guild, instead of espousing the cause of upright and scrupulous dealing, is converting itself into an instrument for the use of men who have already brought discredit on their country. Of course in speaking thus, we do not allude to Messrs. KIMURA and UYENO. Our reference is to the general consequences that must ensue when combinations are formed to preclude the enforcement of conditions imposed in the interests of good faith. It is distinctly regrettable that foreigners, on their side, cannot enter into some agreement pledging themselves to insist upon certain stipulations in their dealings with Japanese. The invariable answer to such suggestions is that competition is too keen. Instead of resenting the irregularties of Japanese traders, the foreigner, as we have been publicly told by competent authorities, shuts his eyes to all improprieties of which he has not himself been the victim. Every encouragement is thus given and every opportunity offered to the unscrupulous class of Japanese traders, whereas the object should be to weed these out, and to confine the business to men—of whom happily not a few exist—conscious of the sacredness of an engagement and desirous of fulfilling their pledges to the letter. Neither in the case of Messrs. TUSKA and Company nor in that of Messrs. THOMAS and Company does the Guild appear to have exercised its influence in the cause of integrity and sound commerce. Honest buyers would not be placed at any kind of disadvantage by subscribing to the conditions proposed by Messrs. THOMAS & Co. The only inference deducible from the objections urged against reducing these conditions to writing is that the absence of a documentary engagement is preferred as promising greater latitude for evasion and irregularity. The position taken by the Guild seems to us quite indefensible, and we venture to hope that the occasion may be seized by foreign merchants to counteract the decidely baleful influence of such ill-judged interference.

## *SIR JOHN POPE HENNESSY, K.C.M.G., M.P.*

IN whatever part of the world Sir JOHN POPE HENNESSY has been he has left some staunch and faithful friends and many enemies. The mass of mankind who are neither friendly nor inimical, and who always are satisfied with half-judgments, and with what is called taking things in the rough, would probably sum up their views of Sir JOHN compendiously by describing him as too clever by half. We believe it is correct to say that the prevailing impression of those who know nothing of the brilliant governor, who are too lazy or careless or indifferent to form their views at first hand, is one of distrust; not a reasoning distrust, for they can give no grounds whatever for the faith that is in them, but the feeling is none the less deeply rooted on that account. "POPE HENNESSY," they will say on hearing his name, "rum sort of fellow is'nt he? Made a frightful row in Australia or somewhere, did'nt he? Of course they never again will give him an appointment; he is so quarrelsome." This is the judgment of the average man whom the late MATTHEW ARNOLD has dubbed "the man in the street." But neither friends, nor enemies, nor "the man in the street" will deny that Sir JOHN POPE HENNESSY is always interesting. He may be an angel from heaven, or he may have come in the opposite direction. His policy may be divinely inspired, or it may be an emanation from the pit. He may be as true as steel, or utterly untrustworthy. But he is, at least, always interesting. Apart from his extremely brilliant gifts and his almost superhuman cleverness in getting out of what might appear a deadly scrape, there is about him that keen interest that always attaches to the unknown and unguessable. No one can tell what he will be up to next. He is like the DAVENPORT Brothers; there is the box on the stage; there is the performer tied up with all manner of apparently secure knots; there is the door shut and locked; but the audience knows that the performer will get out, and then there is the fearful pleasure of wondering where he is going to turn up; will he shout from the gallery, or will it be in the pit? Will he pop his head from out of one of the boxes? Or will he make his bow from the orchestra? No one knows; all that is certain is that he will turn up somewhere, and the most likely place for him to do so is where he is least expected. To ordinary men Sir JOHN POPE HENNESSY is a paradox, and has been so all his life. He entered Parliament at a time when Irish members with popular leanings were Whigs, and had been since the days of O'CONNELL. But the young Civil Service Clerk from London boldly proclaimed himself a Tory and a Nationalist as well. He defended his position by quoting the saying of Mr. DISRAELI that the POPE was the head of the conservatives of Europe. He persuaded the priests of King's County that he was right, and thereafter sat in parliament as a nationalist, but a follower of Lord DERBY and Mr. DISRAELI, while every other member from Ireland with a trace of Nationalism sat on the opposite side of the House. He was a Nationalist member and a nominee of the priests, but he distinguished himself in the House as the friend of the EMPEROR of the French, and of the Poles, about whom the Irish priests cared as little as they did for Kamschatka. Indeed, there is some reason to believe that at one time he undertook a very delicate and dangerous mission on behalf of the EMPEROR through the Polish provinces of Austria, Prussia, and Russia. In 1865 he had to stand the brunt of an election petition on the ground of clerical intimidation. In those days election petitions involved an expenditure of tens of thousands of pounds. POPE HENNESSY'S purse would not run to it. The Carlton did not appear desirous of coming to his assistance, and accordingly he retired. Provision had to be made for him, and at this point occurred what he has always regarded as one of the misfortunes of his life. The Governorship of Bombay was vacant, and in accordance with the usual practice three names were submitted to HER MAJESTY, Sir SEYMOUR FITZGERALD being the first and Mr. POPE HENNESSY the second. Sir SEYMOUR was at the time travelling for his health in out-of-the-way parts of Spain, and communication with him was exceedingly difficult. Weeks passed by, and nothing was heard of the Governor elect. It was urgent that somebody should be sent to Bombay, and Mr. POPE HENNESSY was directed to hold himself ready to go, when, at the last moment, Sir SEYMOUR turned up, and, nothing else being vacant but Labuan, Mr. POPE HENNESSY was sent there to try and get the finances in order, and to prepare the way for the withdrawal of the Imperial troops.

Of his colonial career it is unnecessary to speak. Labuan was followed by the West coast of Africa immediately prior to the Ashantee war, and we are unable to say how he got on with his countrymen there. Certain it is that the negroes to this day have a feast in their Calendar which they call the HENNESSY festival. Then fol-

Digitized by Google

lowed Barbaboes, where the series of squabbles commenced which ended in Mauritius. The Governor himself is accustomed to say that the confederation question out of which all the difficulties arose was forced on him against his will by Lord CARNARVON, and that he suggested over and over again that it was desirable to wait until the minds of the people were prepared for this measure. But from Barbadoes he was promoted to Hongkong. Of the hostility which his measures excited there, and which he appears to have taken very little pains to assuage, it is unnecessary to speak. His policy was carried out in all important respects, in spite of an opposition which, save for the high character and position of those who led it, might reasonably be called virulent. On his return home the whole face of affairs was altered. In place of animosity and bitter criticism, he was received by deputations congratulating him on his policy. Various sections of Exeter Hall, or of those philanthropic movements which are compendiously described as Exeter Hall, turned out to greet him and to congratulate him as if he were a conquering hero. Then came Mauritius. We all know what took place there. An outcry of the usual kind, an investigation by the Senior Governor of the Colonial Service specially dispatched for the purpose in one of HER MAJESTY'S vessels of war, and the deposition and disgrace of the Governor. Here, if ever, it might have been thought that his official career was ended. But the event was very much otherwise. He went to London, overturned speedily the whole proceedings of Sir HERCULES ROBINSON, returned to the Colony, and was received with acclamation by tens of thousands. We have still a very vivid recollection of the accounts given by the Mauritius papers of his reception. Such a day was never known in Port Louis. The people who came from a distance had, many of them, to sleep the night in the open. The Chinese had their dragon hundreds of feet long. The Arab merchants, their gaily decorated dhows. In the Cathedral the Archbishop and Clergy sang the *Te Deum Laudamus*, as if they were greeting the hero of a hundred fights. A few months later Sir HERCULES ROBINSON gave up his Government of the Cape, delivered a furious speech against HER MAJESTY'S Government, has sulked ever since, and is even said to have become a Home Ruler out of opposition to the Government who treated him so badly in the Mauritius affair. In the fulness of time Sir JOHN POPE HENNESSY returns home, obtains the pension which he would have received had he been the mildest and most peaceable of Governors, and lays himself out once more for politics. And then, mark his extraordinary luck! If he had been elected in the ordinary way in Ireland on Mr. PARNELL'S "ticket" he would, for a time at any rate, have been a "mere item" like the other items that composed Mr. PARNELL'S host. He would have been on exactly the same level as the TANNERS, and the HEALIES, and the REDMONDS. But fate had other things in store for him. There came the proceedings in the Divorce Court against Mr. PARNELL, and the series of extraordinary events which followed. No man, scarcely even Mr. PARNELL himself, or Mr. GLADSTONE, was more profoundly affected by these than the ex-Governor. At first, those who knew him believed that he was in a tight place. Then the Irish hierarchy pronounced against Mr. PARNELL, and no one could doubt what Sir JOHN'S course would be. But when he threw in his lot with his old friends the priests, it was generally supposed in England that he had committed political suicide. He suddenly became the most talked-of man in the United Kingdom. The eyes of the civilized world were fixed on him, and on the contest in which be was engaged in a hitherto obscure corner of Ireland. Since the election of O'CONNELL for Clare proclaimed the dawn of a new era in Irish politics, no election in that country has attracted a tithe of the attention bestowed on that for North Kilkenny. Sir JOHN came in, as we know, at the top of the poll by an enormous majority, and sprang at once thereby into a foremost position in the Irish party. The wrangles and internecine quarrels now going on are all playing into his hands. The possible leaders of the Irish Party are being used up. Mr. PARNELL says that a large portion of the party is impossible; Mr. MCCARTHY and Mr. SEXTON say that Mr. PARNELL and his following are impossible; and meantime Sir JOHN, like Brer Fox in the story of the "Tar Baby," "lays low and says nuffin." Well, as to all that, we shall see what we shall see, but it is very clear, so far as the indications go now, that the HENNESSY star is in the ascendant. He is a man of great experience. He is on good terms with the leading members of both political parties, and is not, like so many other Irish members, a social outcast. He was an Irish Nationalist when many of his fellow-members were in their cradles, and, above all, he has the staunch support of the Irish bishops and priests. We shall not be surprised to find him one of these days taking a leading position in the Irish party. He seems to us marked out for it by his own qualifications, not less than by the strange circumstances of the time.

The brilliant *flâneur* who delights London every Sunday morning during the parliamentary session by his parliamentary sketches from the cross benches in the *Observer*, hits off Sir JOHN POPE HENNESSY as RIP VAN WINKLE. He tries to picture what the new member thought when he first walked up the floor of the House to renew his oath. There was much externally to remind him of the House as it was when he had walked out of it nearly a quarter of a century ago. There were the gas-illumined roof, the same benches on either side, with men old and young lounging about. Before him was the same table with its brass-bound boxes, the same recumbent mace, and the same deadly volumes of *Hansard*. Three clerks in wig and gown, diligently writing, were at it as before. The canopied chair was there, and in it sat the usual stately gentleman in wig and gown. Everything was these save the old familiar faces, and of these there was only one to bid him good evening and wonder where he had been all these years. The new member for Kilkenny, says Mr. LUCY, in spite of his manfold services to mankind, has preserved unto this last a certain air of mature youthfulness. He has acquired for state occasions a certain dignity of mien worthy of the traditions of our Proconsuls. It is an ordeal for a new member to enter the House of Commons, and new members do it in many more or less awkward ways. But Sir JOHN fell into no errors. It fault were to be found with his manner, it might be objected that it was a little haughty. He made his way between the introducing members with head erect and shoulders squared as if he were approaching the cannon's mouth. He was not unmindful of the dignity of the House, or of what was due to the Speaker. But long habit learned in Labuan, fostered in the Bahamas, developed in the Windward Islands, cultivated at Hongkong, and, finally, matured in the Mauritius, had thrust its fibres deep. The Imperial Mantle was not at a moment's notice to be lightly cast aside like an old cloak. Much was due to the Speaker, but something to the Governor of a succession of Colonies; and the Proconsul whose dignity is now merged in the Membership for Kilkenny disdained to lower his crest even in the presence of the mace. And then the writer goes on in his light way to say that when Mr. POPE HENNESSY represented the King's County *he* was the Irish party. Since that date there have been several editions of the same great work. Mr. BUTT is ancient history, and he was seven or eight years after Mr. POPE HENNESSY. The last time the member for Kilkenny had approached the Treasury Bench he found Lord PALMERSTON sitting there, with Mr. GLADSTONE, Chancellor of the Exchequer, Lord JOHN RUSSELL looking after Foreign Affairs, Sir CHARLES WOOD at the India Office, and Sir ROBERT PEEL as Irish Secretary, meditating his resignation because he found the post a sinecure. And then Mr. LUCY gossips pleasantly about Sir JOHN'S old cronies who, with him, formed the original Fourth Party, Mr. FREDERICK LYGON, now Earl BEAUCHAMP (whom the American lady lately congratulated on the character of his pills!) and Mr. CAVENDISH BENTINCK. "RIP VAN WINKLE, coming back to the old scene and looking on the furrowed brows

Digitized by Google

and the strangely scanty hair of his old companions, feels that his sleep must indeed have been prolonged." However, the main point is that the old Parliamentary hand is back again at Westminster, that he is once more a member of the Mother of Parliaments. The question now is what will he do with it. Who can say?—we cannot.

## *SHANGHAI INFORMATION.*

IT must be presumed that the Shanghai community takes some interest in Treaty Revision since the leading journal of that settlement devotes an editorial column to the subject. If this hypothesis be correct, there is room to regret that the "Model Settlement's" sense of curiosity is not satisfied more accurately. The *North-China Daily News*, a year or two ago, was misled into declaring that Treaty Revision did not receive any consideration from the bulk of the Japanese nation, being simply a sensational hobby of the official class. The Shanghai journal borrowed this very ill-considered statement from a Yokohama contemporary, which knew as much about the sentiments of the bulk of the Japanese nation as it knows about the other side of the moon. Now, however, the *N.-C. Daily News* abandons the rôle of copyist and starts upon an original route. The result is disastrous. Reading fragments of the proceedings of the Diet, the Shanghai journal discovers that since the Session ended without any promise about Treaty Revision being extorted from the Government, or any irreducible minimum of demands imposed upon it, the nation is evidently indifferent on the subject. Unacquainted with the fact that, by the Constitution of Japan, the treaty-making power is vested entirely in the EMPEROR, the *North-China Daily News* fails to perceive that any such action as it suggests would have been distinctly *ultra vires* on the part of the Diet. It is, perhaps, a little exacting to require that an English journal published in China should study the Japanese Constitution before discussing parliamentary procedure taken under it. But since the whole question turns on the doings of the Diet, to consult these briefly might, at any rate, have been considered an essential preliminary. Plainly the Shanghai journal gave itself no such trouble. "So little interest," it gravely tells us, "is really felt in Treaty Revision that Viscount AOKI, the Minister for Foreign Affairs, did not reply until the 5th of March to the questions addressed to him on the subject by Mr. MISAKI KAMENOSUKE and others on the 24th of December." The writer of this paragraph was obviously ignorant of six facts which greatly effect the value of his comments. He was ignorant, first, that the Diet adjourned the day after Mr. MISAKI'S questions were formulated and did not reassemble until January 8th; secondly, that immediately on re-assembly the Budget Committee's Report was submitted, and that the debate on the Budget, then and there commenced, did not come to a close until the end of February; thirdly, that Mr. MISAKI'S questions were the sequel of a debate on Treaty Revision on December 17th; fourthly, that on December the 19th, *i.e.* four days after the Diet had commenced business, a series of questions on the same subject were addressed to the Government by a section of the House of Representatives; fifthly, that these questions were answered by the Minister of Foreign Affairs in a long speech on December 17th; and sixthly, that the House of Peers, after an animated debate, submitted to the Government a Representation about Treaty Revision on December the 19th. If all this indicates that either the Peers or the Representatives of the people showed any indifference with regard to Treaty Revision, it would be interesting to know what steps should have been taken to demonstrate a zealous mood. Critics who claim that the nation is apathetic in this matter probably attach no value to anything short of popular tumult; but statesmen of quicker intelligence will doubtless conclude that the problem of Treaty Revision had better be solved before its discussion is carried into the sphere of vulgar agitation and ignorant prejudice.

Turning to discuss the terms of Revision indicated by the speeches of the Minister of Foreign Affairs, the *North-China Daily News* is even less fortunate. It finds in the columns of the *Hyogo News* a *resumé* of these terms, taken nominally from the *Osaka Asahi Shimbun*. This *resumé* indicates that foreigners will only be permitted to trade at certain ports, whereas the speech on which the *resumé* is founded did not, as reported in the *Japan Mail*, point to any such restriction. What conclusion does the Shanghai journal draw from this discrepancy? "We are obliged to think," it says, "that the report of the *Osaka Asahi Shimbun* was cooked up for the benefit of the country folk, to show them what a very patriotic and determined person Viscount AOKI is." Here again the comprehensive ignorance of the *North-China Daily News* invites detailed exposure. It does not know that Viscount AOKI'S speeches in the Diet were delivered in Japanese, and reported in all the leading Japanese journals. It does not know that there is an *Official Gazette* in Japan which published verbatim reports of the speeches the morning after their delivery. It does not know that the proceedings of the Diet were public, in so far that a certain number of reporters from the whole vernacular press of Japan had seats in the gallery. It does not know that the *Osaka Asahi Shimbun* was represented in the reporters' gallery. It does not know that the English versions printed in Yokohama papers were translations of the versions given by the Japanese press, to which the whole nation had access. And it does not know that the *Osaka Asahi Shimbun* is among the most violent of the anti-Government newspapers. "We are obliged to think that the speech was cooked up," says the shrewd Shanghai journal. Why is this irksome obligation imposed on it? Why should it be obliged to imagine that the Japanese Government is so extremely silly as to try and throw dust in the eyes of the "country folk" by "cooking up" in the columns of an Osaka journal a speech differently reported in all the other journals of Japan? Why should it be obliged to imagine that a very uncompromising opposition journal would lend itself to such a ridiculous device? And why should it be obliged to imagine that the Japanese Government is so clumsily unprincipled? Instead of submitting to this disagreeable necessity, the *North China Dily News* might have apprehended the very palpable alternative that the telegraphic summary published in the Osaka journal was not perfectly accurate, and might also have detected the quaint mistake made by the *Hyogo News* which imagined that exclusion from the coasting trade meant exclusion from the privilege of trading at places along the coast other than those already fixed. If the Japanese nation draws a natural and obvious inference from the alacrity shown by foreign journals to discover trickery and dishonesty in everything lying beyond the the range of their own knowledge or intelligence, foreigners will have to thank themselves for the character ultimately attributed to them. But we cannot greatly blame the Shanghai newspaper. Its English contemporaries in Japan, with incomparably fuller opportunities to obtain information, and incomparably more cogent reasons to publish it, display even less regard for accuracy and fairness.

## *THE BRIDGE.*

VISCOUNT AOKI'S "bridge" to cross the channel that separates Japan from judicial and tariff autonomy has provoked some comment. The *North China Daily News*, for example, writes in a tone distinctly laudatory of the fact that such a structure is to be provided. The recognition of the necessity for a bridge is said to indicate "a feeling of responsibility that becomes a Minister" and a sense that certain "proper procedure has to be gone through to effect such a great work" as Treaty Revision. These conclusions are very just and satisfactory. It is true that they might have been reached long ago, but they are none the less welcome as an indication that the truth is beginning to dawn upon some horizons. There are various ways of recognising one's error. There is the frank, ingenuous acknowledgment, and there is the more comfortable

Digitized by Google

device of occupying your opponents' camp, and endeavouring to prove that you have been there all the while. The latter fashion is incomparably the commoner of the two. How often it has been practised in connection with the subject of Treaty Revision, we should be afraid to estimate. Since that problem entered the field of practical politics, ten years ago, our general position with regard to it has been unvarying. We have steadily advocated Revision with conditions. In the days when we began to write in that sense, the idea of Revision on any terms was denounced by our opponents. They claimed that nothing could be gained and that much might be lost by any change of existing arrangements. Little by little, however, they recognised, first, that Revision was dictated by justice; secondly, that it was demanded by expediency. But as they found themselves thus coming over to our views, they covered their retreat from ultra-conservatism by misrepresenting our position so as to exaggerate the distance that still separated them from it. At one time we were accused of advocating the complete and immediate abolition of Consular Jurisdiction. At another, it was charged against us that our aim was to procure the unconditional surrender of the exclusive privileges enjoyed by foreigners under the present treaties. Over and over again we denied both allegations, and quoted passage after passage from our writings proving that we had invariably recommended compromise and deliberation. But what mattered facts? The other side continued to caricature our views in order that their resemblance to its own altered mood might not be detected. We cannot wonder that people at a distance should be perplexed to discover the truth amid so much misrepresentation. Thus the *North China Daily News*, referring to Viscount AOKI'S "bridge," writes:—"The anti-unconditional-revisionists in Yokohama will see with pleasure that the Japanese Government does recognise the necessity for this bridge, for the great meeting of last year was called because its promoters had learnt that the British Government was about to agree to revision without any bridge; and it was because they insisted that a bridge was necessary that the *Japan Mail* attacked Mr. LOWDER and his fellow-promoters of the meeting so mercilessly." Now there can be no doubt that our Shanghai contemporary desires to place facts not fiction before its readers. We invite its attention, therefore, to the following extracts from two articles published in the *Japan Mail* last September, immediately after the celebrated meeting:—

> The first resolution consisted of two parts, to one of which the meeting's unanimous consent was natural and proper—namely, that "the time has not arrived when questions in regard to rights, whether of property or person, arising between subjects and citizens of Foreign Powers in the dominions of His Majesty the Emperor of Japan, can be unconditionally and safely subjected to the jurisdiction of Japanese tribunals." This decision, we say, is precisely what any body of Englishmen might have been expected to formulate. * * * Anybody, even Mr. Lowder, the proposer of the resolution, can claim that Treaty Revision without guarantees may not inconsistently be opposed by advocates of Treaty Revision with guarantees. * * * * If the first resolution—which, after all, is the only one that has any bearing on the general question—had been confined to a declaration that, in the opinion of the meeting, the time had not arrived when the persons and properties of British subjects residing in Japan could with safety be placed unconditionally under the jurisdiction of Japanese tribunals, Her Majesty's Secretary of State might have accepted it as a reasonable and proper protest, and could have promised to give it favourable consideration. It is true that the resolution would have been superfluous, Lord Salisbury's opinion, and indeed the opinion of everyone engaged in the negotiations, being already emphatic as to the prematureness of unconditionally abolishing consular jurisdiction. Still the resolution in that form would have been a moderate plea for due caution, and would have strengthened the hands of the Secretary of State for Foreign Affairs without embarrassing him.

Such were the opinions we expressed when commenting on the proceedings of the meeting. Nothing could have been more explicit than our declaration of absolute agreement that unconditional Revision would be premature and unwise. In so far as concerned that part of the meeting's protest, we were entirely and avowedly at one with it. Yet we are now accused of having mercilessly attacked the promoters of the meeting because they insisted that a "bridge" was necessary. In short, having ourselves declared the peril and prematureness of Revision without conditions, it is pretended that we denied the necessity of conditions. However, this is an old story. We long ago learned the futility of expecting to be credited with the opinions which we ourselves express, rather than with the opinions attributed to us by our opponents. Had the resolution submitted to the meeting of last September been confined to a protest against unconditional Revision, it would have been simply a repetition of the sentiments unvaryingly declared by this journal during the past ten years. But it went a great deal farther. Its second clause embodied a declaration which, if interpreted according to the plain sense of its language, signified that, in the opinion of the meeting, negotiations for Treaty Revision must be postponed *sine die*. The framer of the resolution subsequently declared that he had not intended it to bear any such signification, and he and his friends have since steadily alleged their sense of the justice and expediency of revising the Treaties conditionally as soon as possible. But they unfortunately betrayed the meeting into voting a resolution involving an attitude of uncompromising hostility to Revision. This error was the main point criticised by us.

There is, however, a more important consideration connected with Viscount AOKI'S "bridge"—a consideration which we ourselves have not hitherto advanced, preferring to let it come from the other side. The *North China Herald* now notices it, and since the Shanghai journal's article has been reproduced without comment by the organ of the promoters of the meeting, we presume that they are in accord with its sentiments. "The anti-unconditional-revisionists," we read," "will see with pleasure that the Japanese Government does recognise the necessity for this bridge, for the great meeting last year was called because its promoters had learnt that the British Government was about to agree to revision without any bridge." Now a very remarkable feature of the "great meeting" was the fact that no one who attended it could give any definite explanation of its proximate cause. The only reason forthcoming was a vague announcement that information, obtained from a nameless quarter, pointed to the British Government's immediate intention of "conceding the demand of the Japanese Government that British subjects should come under the jurisdiction of the Japanese Courts without any of the safeguards that had hitherto been considered necessary to their protection." Was this information correct? Then, as now, Viscount AOKI held the portfolio of Foreign Affairs, and his amended proposals for Treaty Revision, formulated some months previously, have never undergone any change. Did he put forward the "demand" referred to in the manifesto calling the meeting? If he did not, then how came any such demand to be advanced by the Japanese Government? But if it was not advanced, how could HER MAJESTY'S Principal Secretary of State for Foreign Affairs have been induced to concede it?" One of three things must be true: either the apprehension that prompted the convening of the Meeting was unfounded; or the British Government had volunteered to do for Japan a great deal more than Japan herself had proposed; or else Viscount AOKI'S "bridge" did not exist last year. The promoters of the Meeting, owing to some unexplained and inexplicable cause, refrained from the simple and natural course of placing themselves, at the outset, in communication with HER MAJESTY'S Representative in Tokyo. Had they done so, they would have learned that they were about to do battle with a mere chimera, since the danger they apprehended did not exist in fact. But without full information, and acting upon the strength of what now appears to have been an unauthenticated rumour, they organised a demonstration that will hereafter be found to have contributed more than anything else to bring about the very consummation they desired to avert. No occurrence since the opening of the ports has so seriously interfered with the chances of a satisfactory compromise in the matter of Treaty Revision as the meeting of last September. It divided the two sides at once into hostile camps; withdrew the problem from the region of calm discussion and mutual concession into the arena of popular agitation and international jealousy; and roused among the people of

Digitized by Google

Japan a force of sentiment by which any Cabinet seeking to satisfy foreign scruples, must find itself seriously hampered. Our uncompromising condemnation of the whole affair earned for us much local animosity, but time, so far from weakening, has steadily strengthened the convictions that prompted our criticism. Accepting, in full, the subsequent explanations of the promoters, and crediting them with the most liberal desire to see the Treaties promptly revised on reasonable bases—a desire shared by all the better class of British subjects—we still say that never did well-intentioned men work a greater mischief than they accomplished last September.

## *CORRESPONDENCE.*

### "MISSION COMITY."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR:—I have read the recent letter from Rev. Geo. T. Smith on "Mission Comity." Also his "Explanation" in to-day's *Mail*. As the representative of the Universalist Church in Japan, I might be expected to take some notice of his references to Universalism. This, however, I shall decline to do, until I shall find that his spirit is shared by some ***representative*** man among the missionaries. While it seems pitiable that even *one* narrow minded man who cares more for sectarianism than for human salvation should be sent to Japan, yet it would seem still more pitiable to violate the sweet spirit of the circular recently received on "Mission Comity" by entering into theological controversy with such an one.

Yours respectfully, G. L. PERIN.

Azabu, Tokyo March 23rd, 1891.

### A MARE'S NEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My attention has just been called to a funny paragraph in the *Japan Herald* of Wednesday, the 18th inst., wherein an attempt is made to correct perfectly good English. I never knew before that it was not permissible in English to "*reason with* extravagance." Shakspeare asks us to "reason with life," and to "reason with the worst that may befall." And the simple-minded editor actually supposes that *de educated* was carelessly used in place of *uneducated!*—a word which would have conveyed quite a different meaning. How fastidious, too, daily papers in the Settlement are becoming, when they object to *whose* being employed with an impersonal antecedent. I must confess to doing this on all occasions when need arises, and fail to see the sin of it.

I am, yours, etc.,

THE WRITER OF THE ARTICLE.

### GENERAL SHERMAN AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Was General Sherman a Roman Catholic, and yet too much of a presidential candidate to acknowledge it? Your San Francisco correspondent says he was. Writing of General Sherman's funeral his words are as follows:—

"The only curious feature of the occurrence was the announcement by the General's son, the Rev. Father Sherman, that his father died, as he had lived, a good Catholic. *The secret had been faithfully kept in view of the possibility that at some time or other General Sherman might become an available candidate for the Presidency.*"

General Sherman's son may have made this statement, but the word of your correspondent is not sufficient proof of it. Even if the statement was made it would still be a question whether a formal connection with the Church was intended or not. It is known that a Roman Catholic priest was called to minister to General Sherman just before his death. Concerning this act, and the General's religious views, his brother, Senator Sherman has written:—

Your reporter intimates that advantage was taken of my temporary absence to introduce a Catholic priest into General Sherman's chamber to administer the rite of extreme unction to the sick man in the nature of a claim that he was a Catholic. It is well known that his family had been reared by their mother, a devoted Catholic, in her faith, and now cling to it. It is equally well known that General Sherman and myself, as well as all my mother's children, are, by inheritance, education and connection, Christians but not Catholics, and this has been openly avowed on all proper occasions by General Sherman, but he is too good a Christian and too humane a man to deny to his children the consolation of their religion. He was insensible at the time, and apparently at the verge of death, but if he had been well and in the full exercise of faculties, he would not have denied to them the consolation of the prayers and religious observances for their father of any class or denomination of Christian priests or preachers. Certainly if I had been present, I would, at the request of the family, have assented to and reverently shared in an appeal to the Almighty for the life here and hereafter of my brother, whether in a prayer or extreme unction, and whether uttered by a priest or a preacher, or any other good man, who believed what he spoke, and had an honest faith in his creed.

But what shall we say of the sentence in your correspondent's letter that I have italicized? What shall we say of the man who follows to the grave an old and honoured soldier—one of whom President Harrison has said, "No living American was so loved and venerated as he"—with the utterly gratuitous assertion that he concealed his life-long religious beliefs lest they should injure his candidacy for the presidency?

As an American citizen, and as one who followed his country's flag for more than three years during the late Civil War, I cannot but protest against these statements of this nameless and reckless defamer of American public men and American Society.

Yours faithfully, M. L. GORDON.

Kyoto, March 23rd, 1891.

### JAPAN "BACK TO BARBARISM."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Last evening I noticed in your daily issue of the 19th inst. an extract from an American paper of Denver, Colorado, under the above caption.

You suggest to the missionaries that it devolves upon them to answer the exceedingly untruthful statements in that purported cablegram to the Denver journal. Fortunately a friend sent me by the last mail a complete refutation, made by a gentleman there on the ground, four days after the unjust article appeared in the *Rocky Mountain News*. Enclosed please find this reply, taken from the *Daily Republican* of February 14th,—the official paper of the city, and quite universally read by the educated and religious classes of Denver.

Hoping this reply will find a prominent place in your columns, even at this late date, and that the vernacular press will kindly print this answer by "Philojapanicus," if they have published the previous article.

I am Sir, yours sincerely,

FREDERICK J. STANLEY.

Tokyo, March 25th, 1891.

### THE JAPANESE.

A GENTLEMAN WHO KNOWS THEM DEFENDS THEM.

TO THE "REPUBLICAN."

Two days ago your morning contemporary published a sensational half column respecting Japan and the Japanese. Allow me a few lines of criticism.

First as to the astonishing head lines: "Back to Barbarism," etc., etc. The Japanese are not and were not barbarians. This is a cruel and ignorant insult to fling upon a sensitive proud people, such as no American should be guilty of promulgating.

Secondly, that half column is said to be a special cablegram and is dated Yokohama, February 10 (the day of publication in Denver). I reply that there are no cables direct from the Japan to San Francisco; that messages have to travel through Europe, and that it is a physical impossibility for the *News* to obtain a telegram from Yokohama within the time. Further, I am positive that this article is not a cablegram, but a hash-up of some letter sent from Japan a month or more ago. To call it a cablegram is a bare-faced imposture.

Thirdly—The Christians in Japan are not in danger. The one grain of truth lying at the heart of this monstrous fabrication is that the people of Japan are just now reasserting their national genius against the recent tendency to slavishly imitate the customs of the West. If they conserve their own civilization they will be happy. One fears, however, that the protest comes too late. Whether tardy or not, this nationalist movement does not affect Christian missions. There are thoughtful and highly educated men among the native pastors, and some of these are anxious to have a New Testament type of Christianity rather than the ecclesiastical type to which our churches are too closely attached. There will be a distinctively Japanese Christianity; but surely we ought not to regret so healthy a movement. It will not be a state religion, but it will be more and more the national religion.

I do not criticise the exquisite English of the *News'* correspondent, or "cablegrammist," as when he beautifully says: "And now they (the missionaries) are not even to have the gratification of seeing the religion they have planted grow into a mustard tree;" but I do venture to protest against the transparent sham of the so-called cablegram, against the insult offered to the Japanese, against the assertion that Christianity is in danger, and against the slur cast upon the work of the missionary. This is the second time lately that the same paper has published as a cablegram undigested scraps of letters a month or six weeks old; but I should think that game hardly worth the candle.

Yours truly. PHILOJAPONICUS.

Denver, Colo., Feb. 12.

### "THE LIGHT OF THE WORLD."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have just finished reading the "Light of the World." It seems to me that Sir Edwin Arnold is more at home in Hindoo philosophy than in Christian theology. This is apparent from the whole tenor of the poem. Whenever he can get an opportunity, he turns his eyes longingly towards the meat-pots and onions of India:—

The Buddh again
Appeareth, or some Buddhisat of might.
Arising from the West, who shall set right.
And serve and reconcile.*

I quote this because it is the first line in the book indicating the predilections of the author. It is surprising, to me at least, why an author who has such a divine personality for a theme still should make digressions which reflect unfavourably on and minimize the awe-inspiring majesty of the person. Sir Edwin Arnold's present poem is a great work of art; but unfortunately it reminds me of the famous painting of the Scotch artist of the "Last Supper," who, instead of directing attention to the person of the Master, created so many other points of equal attraction that the real ideal was not realized in the painting. What became of the painting? I take it for granted that the reader knows.

From a literary standpoint it seems to me to be a consummate work of art; and by no means a work of genius. It has a large abundance of lines flat and common-place; but it has also places where he soars high, almost approaching the high soaring eagle of genius. No genius in the history of humanity has kept soaring perpetually. The summit is reached from the valley, and Sir Edwin is not an exception to the universal law. The hand which has introduced so many prosy and tedious lines into the poem, the same hand has also penned:—

But, then, ah, then!
I faltered, paltered, yielded, Claudia!
Yea,
I played worse traitor to my Roman soul,
Than aught e'er done to Cæsar.

These lines and many following pages are sublime. Still the poem as a whole is far inferior to the "Purgatorio," "Paradise Lost," and "Faust."

The theology of the poem, as expected or rather anticipated, is less dogmatical than humanitarian. I cannot help quoting the following lines, which I wish Sir Edwin had clothed in still stronger language:—

When He sate saying: 'Blessed the peace makers!'
In rage and hatred host with host has clashed,
Then when He taught 'Love ye your enemies!'
Banners which bore His cross, have mocked His cross.
Scattering His land with slain; till now, at last,
Truly the sword, not peace, is what He brought!

I wish every blind sectarian under whatever shade of thought, would ponder and digest these lines; especially those who claim to being His disciples in advancing His Kingdom in this country.

Finally, as a matter of course, the two "Lights" will be compared together from a literary standpoint. It is more than five years now since I looked into the "Light of Asia," but from what I remember it seems to me the "Light of Asia" is very much like the physical light of Japan, piercing whenever it is at its glory. Now darkened by the impenetrable clouds of pessimism, now again peeping with a smiling, childish face through the clouds which threaten to destroy it instantly. While the "Light of World" is like a uniform climate where the sun of righteousness shines with untarnished brightness. Instead of self-destroying and suicidal Buddhism, here we have:—

Peace beginning to be.
Deep as the sleep of the Sea.
* * * * * *
Love which is sunlight of peace,
Age by age to increase,
Till Anger and Hatred are dead
And Sorrow and Death shall cease:
Peace on Earth and Good-will!
Souls that are gentle and still
Hear the first music of this
Far off, infinite, Bliss.

It has not been from a presumptuous spirit of criticism that I have penned these few lines. I confess my inability to praise or censure the productions of great minds, while my own mind hitherto has been sterile. To criticise other's works is not a very hard task. But I advise adversely criticised authors to reply to their critics as Mohammed replied to his: "If you don't believe in my Koran, *then produce one like it!*" A critic who cannot produce anything better than the object which he criticises, had better remain dumb. I hope I shall always follow this rule faithfully.

ISAAC DOOMAN.

Nara Eiwa Gakko, March 24th, 1891.

## REITERATED MISREPRESENTATION.

To the Editor of the "Japan Mail."

Sir,—Your San Francisco correspondent has been called to account a number of times recently for his injustice to certain public men in America. I have been looking for some word to be said in defence of the American people. I refer to the constant and reiterated misrepresentation of the social life of America which is pictured in your San Francisco correspondent's letters. If that life were such a pool of filth and horror as he depicts it, it is hard to see how any decent man could be content to remain in it. Yet your San Francisco correspondent gives no sign that he wishes to move out. One is forced to the conclusion that the following words are as applicable to him as to the person to whom they were applied in a recent editorial of yours. I beg leave to quote from the current number of the *Mail*:—"There are men who in their progress through life come in contact with vice alone. Virtue is repelled by them. They create about themselves an atmosphere of grossness not permeable by any ray of purity. * * * The impressions they gather are marred and distorted by the prurient medium through which they pass. * * * is evidently such a person; he has moved in circles suited to his moral calibre." This could not have been said better. Your San Francisco correspondent would better beware of his own reputation.

No one who knows American life doubts for an instant that acts as vile and dastardly as your San Francisco correspondent reports, happen in America, but the object of the foreign correspondence of a respectable journal is to convey a correct idea of the country from which it comes. These letters of which I speak do *not* convey a correct idea of American social life. The slightest attempt to note any of the signs of improvement in American social life would call for much leniency, but with all your San Francisco correspondent's political sagacity, he seems to have no sense of any movement in moral lines.

It is especially unfortunate and unfitting that such letters should appear in a journal which is notable for its high tone and its fairness in recognising the good side of men and things.

I remain, yours most respectfully,

WILLIAM H. NOYES.

Maebashi, Joshu, March 29th, 1891.

[The letters referred to will not appear any longer in these columns.—Ed. *J.M.*]

## THE PROBLEM OF MORAL EDUCATION IN JAPAN.

To the Editor of the "Japan Mail."

Sir,—I notice in the *Japan Gazette* of the 28th ultimo a criticism of an article which I recently contributed to your columns on the above subject. I feel much reluctance to notice the criticism, for its whole tone is so violent and hostile that I doubt very much whether there is any possibility of conducting a controversy with the critic in a calm and friendly manner. But the subject being one of considerable importance, I beg your permission to say a few words by way of reply.

Before proceeding to particulars, let me draw attention to the fact that the editor of the *Gazette* seems to confuse entirely distinct ideas. He apparently confounds Christian dogmas with the Christian system of ethics, and considers that missionary education is synonymous with foreign education. He states that my article "represents the whole situation of moral education in Japan in precisely an opposite way to what I know to be the truth," and that "the anti-Christian spirit throughout the country is stronger in the 24th year of Meiji that it has been for ten or fifteen years." Is there such an "anti-Christian spirit throughout the country"? It cannot be denied that there is at present a general cry of "Japan for the Japanese" and that in some respects the cry takes an anti-foreign tone—a state of things brought about by Japan's successive failures to receive justice at the hands of the Western nations; by the over-bearing attitude of foreign residents towards the Japanese; and in a more general manner by the gradual dawn of a constructive period in the history of Japanese progress, a period strongly marked by a desire to develop a purely Japanese civilization and to assert the natural rights of the country. Simultaneously with the rise of the new nationalistic spirit, Buddhism began to recover something of its old energy and power, and Christian propagandists now find themselves confronted by a large body of active rivals, the rank and file of the original priesthood of the country. Recent instances of open hostility to foreign missionaries are all traceable to Buddhist priests, and it is further remarkable that such occurrences have been almost always connected with foreign missionaries; the Japanese pastors being suffered to continue their preaching of the gospel without molestation. The truth is that little hostility exists towards Christianity itself among any class of the people, except the Buddhist priesthood.

Whether Mr. Sugiura still is or is not a member of the Diet is immaterial. My reference to him was in his representative character; a character not foreited by his resignation. If there ever was a "minor point," this surely is one.

As to the attitude of Mr. Fukuzawa, Professor Toyama and ex-Senator Nakamura, the *Gazette* writes:—"Mr. Toyama's latest utterances on Christianity, an epitome of which will be found in an article we published in January last, are in deadly opposition to Christian education." Now Professor Toyama's so-called "utterances on Christianity" refer to an essay which he contributed in January last to several of the Tokyo papers to show the unwisdom of abolishing the Higher Middle Schools, a measure then advocated by a powerful section of the members of the Diet. The Professor did not say a word about either Christianity or Christian education. What he did say was that he "could never approve the entire abandoning of the education of Japanese youths to institutions supported by foreigners, however good such institutions might be." He objects to the present missionary schools, not because they inculcate the Christian system of morality, but because, being under the sole control and almost sole support of foreigners, they cannot be expected to give the Japanese a thoroughly national education. It is not Christianity, but the method of instruction and the system of management, that have turned away so many Japanese students from these schools to institutions under Japanese control. Professor Toyama is not alone in his opinion about missionary schools. Not a few Japanese Christians entertain similar views.

"Mr. Fukuzawa and Mr. Nakamura," continues the *Gazette*, "have both repeatedly asserted that no system of morality founded on miracles can succeed in the schools." Precisely. Have I, or has any one else, ever made a contrary assertion. Have I said that these eminent men believe in the feasibility of Christian superstitions being sustituted for Japanese in Japanese schools? What I said was that Mr. Nakamura and Mr. Fukuzawa are of opinion that a system of ethics founded on the teachings of Christ is superior to any other system that can be adopted in Japanese schools. My whole article was directed to deny precisely what the *Japan Gazette* accuses me of asserting. Translator of Smiles' "Self Help," Mr. Nakamura is eminent among those who have most aided to introduce to the notice of Young Japan the noble traits of character developed under the influence of Christian teaching. His attitude towards Christianity has been so free from prejudice and so favourable, that he was at one time believed to be a convert to that religion. Further, Mr. Fukuzawa's views about Christianity are well known to be anything but unfavourable. Although the public understands that there is no direct relation between Unitarianism and Mr. Fukuzawa's University, where the foreign instructors are almost entirely Unitarian, the public also perceives clearly that no prejudice exists on the part of the head of that institution towards the Christian influence of his foreign teachers. The whole writing of the distinguished educationalist of Mita during the past ten years amply bears this out.

As to the significance of Japanese subscriptions to Christian educational institutions, surely it is inconceivable that men of intelligence and high standing should subscribe thousands of *yen* to an institution in the prosperity of which they take no interest? The *Gazette* asserts that to infer sympathy with the aims of an educational institution on the part of men who subscribe to its support, is as though one should attribute belief in Roman Catholic doctrines to the sceptics who subscribe to Roman Catholic charities. I think, Sir, that I am not required to deal with such logic as that. It is more comical than convincing.

I shall not occupy your valuable space with any notice of the contemptuous manner in which the editor of the *Gazette* regards the efforts of Japanese Christians to think for themselves. I do not seek to quarrel with anybody. If the editor of the *Japan Gazette* thinks it one of his Christian duties to indulge in scorn and abuse of the Japanese, with whom he once associated intimately, and who were formerly glad to regard him as a friend, he is free to do so to his heart's content. With us Japanese, there is a motto that he who abuses another brings disgrace on himself only.

I am, Sir, your obedient servant,

The Japanese who contributed the Article on the Problem of Moral Education in Japan.

Tokyo, March 31st, 1891.

## *ON KIGENSETSU.*

Our conspicuous country stands stately on the eastern ocean; the mountains and waters were never stained by foreign insults. The inhabitants upon it are loyal, filial, brave, and manly. And he who governs them is the Emperor of the only one line for ever.

I solemnly reflect that, since Jimmu Tenno took the crown, it is two thousand five hundred and fifty-one years to the present. During this interval, once a traitor intended to seize the throne; some soldiers privately took possession of the real power of the country. To speak the worst, there was a day in which His Majesty incurred disgrace, and another when a dense war cloud covered the royal palace. All such things ought to stir up the high blood, the fierce lamentation and severe indignation of patriots. Thus he who killed the traitor himself; he who engraved his sincere words upon the white cherry-tree; he who offered his whole family to the mercilessness of sword and arrow; he who met his death without complaint; all these throw uneffaceable light on our history.

O, the sky clouds and then clears! So, in the world, prosperity and ruin follow each other. When the sun is closely enveloped by thick clouds, how can the people see its light? Under such circumstances, notwithstanding the ruins of his walls, and the lack of the necessities of every-day life, His Majesty owed to himself only all the misconduct of his subjects: and for his cause so many patriots in all ages bent their utmost energies. Then the clouds, however dense, must scatter; the sun, spotless, must shine; then it is a matter of course, that the sacredness of the crown remains the same through eternity.

Who founded the Empire? I solemnly look at the history. When Jimmu Tenno succeeded to the great line, consulted with his chief officers, and was marching eastward with his honourable army; and when his great undertaking was almost done, great chiefs and villain gods declined to obey his commands and made war against. Thereby his older brother sunk to earth by a stray arrow, and his whole army lay senseless on the ground from poisonous exhalations. In this hard and desperate moment, it was, indeed, beyond the power of an ordinary sovereign to lead his and only his army forward amid foes; to have every man make an effort for him; to extend his bounty, to show his authority; to have his powerful opponents, laying down their weapons, obey him heartily; and then to lay the foundation of the Imperial Capital, and to extend farther his sovereignty: although he was aided by Daijin's mysterious energy, and by the loyalty and bravery of his subjects. Thus he founded the Empire; and, once founded, it never shook again. It is obvious then, that the virtues and authority of His Majesty influenced every man's mind, and could never be uprooted. Then it is, indeed, not accidental that the sacredness and sublimity of the Crown remain the same through eternity, and that the Empire did never submit to a foreign yoke.

See the beautiful mountains and waters which His Majesty trod and examined, the conspicuous country which he planned and established! So difficult was its founding, and so sacred is the Crown! Yea, all under the bounty of the Crown ought to think night and day about the cause of their peace and joy. And why can our Empire stand stately on the eastern ocean to-day? Because the Emperor of only line for ever keeps sway upon it, and a loyal, filial, brave, and manly people dwell there.

[The above composition was written by a school teacher, first in Japanese, and then translated into English. Only the flagrant errors have been corrected: many of the queer expressions have been permitted to remain. It stands now as an example, not merely of Japonicized English, but also of the tenacity with which some well-educated Japanese cling to their mythology. *Yamato-damashii!*—C.]

March 23rd, 1891.

## *THE TRUST AND LOAN COMPANY OF CHINA, JAPAN, AND THE STRAITS.*

### A PROFITABLE YEAR'S WORK—THE CAPITAL OF THE COMPANY TO BE INCREASED.

The shareholders of the Trust and Loan Company of China, Japan and the Straits, Limited, held their first annual general meeting at Cannon-street Hotel, E.C., Mr. William Keswick (the chairman) presiding.

The Secretary (Mr. Charles H. Campbell) having read the notice convening the meeting.

The Chairman said—In moving the adoption of the report, which, if you approve, we shall take as read, I have not much to add to it, but a few

Digitized by Google

words of reference are necessary in connection with some of the subjects mentioned in it, and in consideration of this being our first annual meeting, and the report and statement of accounts being the first that have been submitted to you. In the first place, I may mention that it was on December 6th, 1889, that the company was registered, and that the allotment of shares took place a fortnight later. The instalment of 25s. in all per share and the premium of 10s. per share were in every case promptly paid. The expenses, preliminary, in forming the company were, fortunately, very moderate, and out of the £50,000 received as premium the board have been able to carry £45,000 to reserve fund. You will understand that in establishing our head office with a competent staff, in opening branches at Hongkong and Shanghai, and supplying them with suitable managers, in appointing agents elsewhere, and in generally preparing for the proper conduct of the business, a considerable time was necessarily occupied, and that consequently, the working period of the company covered by the accounts falls considerably short of 12 months. You will notice that that in order to be in a position to place before you as early in the year as possible a statement of the position of the company, it was necessary to close accounts in the East on October 31—a date which will be adhered to in future, but which will then, of course, imply twelve months' working in the East, so that, as on this occasion, you may be informed early in February every year how business prospers. Under the circumstances, therefore, that I have mentioned, the directors feel confident you will share with them the satisfaction that the accounts presented to you to-day show such profitable results, and so emphatically confirm the opinion we have held of the promising character of the business the company was organised to undertake. The net profits slightly exceed £87,000; and out of this sum the directors recommend that £55,000 should be carried to reserve fund, an appropriation which, with the £45,000 previously mentioned, will bring that fund up in the first year of the company's existence to the respectable figure of £100,000—(cheers)—and I need not point out the importance of the fund being strengthened continuously, when it is borne in mind that the shares of the company are not fully paid up. In mentioning the result of last year's operations, I should not omit to tell you, gentlemen, that, in realising the profits we have made, circumstances favoured us not a little at the time the company was established, and that the dearness of money for a considerable period of last year, and also the fluctuations in silver, enabled the board to make good disposition of the capital and of other funds at their disposal in carrying out operations and in making investments in India and the Straits, and in China and Japan, where, on mortgages on real estate and advances on solid securities, we have been able to find satisfactory employment for money. It is in the last almost exclusively that we have found a field for our operations, and it may interest you to know that we have not a penny piece invested in any shape or form in South American securities.—(Hear, hear.) Our advances are so arranged that, as assets, we can count upon them becoming liquid in a certain order, in a manner that will enable us to enforce the margin we may deem it essential should be maintained. I come now to an important recommendation which your directors have made in favour of an increase to our subscribed capital. They regard it as necessary, in order that the company may be strong enough to take full advantage of the business they have reason to believe it can command, that a new issue of 100,000 shares of £10 each should be made. This would make the subscribed capital £2,000,000, and, by calling up 25s. per share, as on the first issue, a paid-up capital of £250,000 would be obtained, and with a premium of 25s. per share £125,000 would be added to our reserve fund. With these elements of strength our deposits, already very satisfactorily large, will greatly increase, and with the way prepared for the company by recent events, your directors have confidence in recommending you to make the company a powerful financial institution, capable of occupying, to the advantage of all concerned, the great and expanding sphere of its operations. To give effect to these recommendations an extraordinary general meeting will be held at the conclusion of the present ordinary meeting, and at it the necessary resolution will be submitted to you. At the same time a resolution will be proposed to change the name of the company into that of the Bank of China, Japan, and the Straits, Limited, a change of designation that will more appropriately indicate the financial character and general scope of the objects of the company. As mentioned in our report, the change of name does not imply a change in the intended business of the company, and no alteration in the articles is necessary on that account. It is not the object and it is not the intention of the company to interfere with the business of banking establishments in the East, with which the board have worked in most friendly accord, and your directors will continue to aim at working in perfect harmony with existing institutions. The resolution which I have to propose is: "That the report and annual statement of accounts and balance-sheet be, and are hereby, received and adopted." When this is seconded, and before it is put to the meeting, if there are any questions to be asked or any information desired, I shall be happy, as far as I can, to satisfy inquirers.

Mr. DAVID MCLEAN seconded the resolution, which was carried unanimously.

The CHAIRMAN—I have now to propose: "That a dividend on the ordinary shares be declared at the rate of 16 per cent., and a dividend on the founders' shares be declared of £8 per share, payable respectively on the 13th inst."

Mr. H. D. STEWART seconded the motion.

Mr. BARROW—May I ask if that is free of income-tax?

The CHAIRMAN—Yes; free of income-tax.

The motion was then agreed to.

Dr. JOHNSON proposed that Messrs. Turquand, Youngs, Weise, Bishop, and Clarks be re-elected as auditors of the company for the current year, and that their remuneration be fixed at £105.

The resolution was seconded by Mr. HARDCASTLE, and carried.

The meeting was then made special, when

The CHAIRMAN said—From the remarks I have already made, gentlemen, you will understand the object with which these resolutions are submitted to you in extraordinary general meeting, and it will be unnecessary for me, after what I have said, to make any further remarks on the subject. I will, therefore, read the resolutions, which I now beg to propose:—(1) "That the capital of the Trust and Loan Company of China, Japan, and the Straits, Limited, be increased from £1,000,000 to £2,000,000 by the creation of 100,000 new ordinary shares of £10 each, upon which £1 5s. per share is to be called up during the year 1891, and which shares are to be issued at the premium of £1 5s. per share." (2) "That the said new ordinary shares shall, in the first instance, be offered in such manner as the directors shall prescribe for that purpose to the members, in the proportion of one new ordinary share for every ordinary share of which on March 9th they shall respectively be the registered holders, and that any new ordinary shares not accepted by the members within the time named by the directors for that purpose be disposed of, and allotted by the directors in such manner, and at such price, as in their discretion they shall think best in the interests of the company." (3) "That payment of the sum of £1 5s. per share, and of £1 5s. for premium per share, making together £2 10s. per share for each of the said new ordinary shares, shall be made as follows, namely, 10s. on application, including 5s. premium; 15s. on allotment, including 7s. 6d. premium; and £1 5s. on June 30, including 12s. 6d. per share premium." (4) "That the holders of new ordinary shares shall, from the respective dates of the payment of of such instalments, rank as regards dividends subsequently declared in proportion to the amount of capital paid up on such shares with the holders of the other ordinary shares of the company." (5) "That all moneys received from premiums on such new ordinary shares be, after deducting the expenses of the new issue, added to the reserve fund." These, gentlemen, are the resolutions I have the pleasure to propose.

Mr. S. WYLLYS POMEROY seconded the resolutions, which were agreed to without discussion.

The CHAIRMAN—The next resolution I have to propose has reference to the name of the company, and is: "That the name of the company be changed to 'The Bank of China, Japan, and the Straits, Limited.'"

Mr. ADOLF VON ANDRÉ having seconded the resolution, it was carried nem. con.

The CHAIRMAN—The next resolution relates to Articles 56 to 59 in the present Articles of Association. These articles have reference only to the issue of debentures by the company, and as the company has no intention whatever of issuing debentures, it is thought desirable that these articles should be cancelled. I, therefore, beg to move: "That the Articles of Association be altered in manner following: Articles 56 to 59, both inclusive, shall be cancelled."

Mr. EGBERT IVESON seconded the resolution, and it was agreed to unanimously.

Mr. KING—I beg to propose a vote of thanks to the chairman and directors. This is the most silent meeting I ever attended in my life. We are assembled at the end of the first year's operations, and the accounts disclose the splendid result of about 75 per cent. profit on the year's operations. I think the chairman and directors are to be congratulated upon this splendid achievement, and I hope the meeting will not pass off entirely as a Quakers' meeting, but that we shall at least show them that we are sensible of the obligations we are under to them of the great success with which they have made their début, and I, for one, hope they will continue to maintain that position for many years to come.—(Applause.)

Mr. DAVID REID—I have the greatest possible pleasure in seconding the resolution. The results of the company since its inception are simply marvellous, and almost unparalleled, and the best thanks this meeting are due to the directors for the great tact and ability they have displayed in conducting our affairs. It is said, "There is a tide in the affairs of men which, taken at the flood, leads on to fortune;" and our directors have taken advantage of that tide. There were, no doubt, circumstances very much in their favour, to commence with, when they began business, but they have displayed singular tact and judgment in dealing with them. Knowing, as I do, all the directors—that they are gentlemen of large experience of business connected with the East, and that they have all resided in China, the Straits, and Japan—I think we may rest perfectly satisfied that the ability they have shown in the past will still go on, and continue for the future.—(Applause.)

The resolution was then put and carried unanimously.

The CHAIRMAN—There is some difficulty in knowing how to express adequately the thanks which I feel are due to you, and which I am sure my brother directors equally feel are due, for the kind manner in which you have spoken, and the meeting has received the words of the gentlemen who proposed and seconded this resolution. It is for the work we have done, and for the result we have obtained, and which, I assure you, is very welcome, and which we receive with very great pleasure. Naturally, in the conduct of a business such as we have had under our care, there have been matters which required very serious consideration, and which involved taking some responsibility; but, knowing our course, and seeing what was before us, we have endeavoured to the best of our judgment to utilise the funds, the capital, the credit, and the responsibility of the shareholders to their very best advantage; and it is a matter of great satisfaction to us that we have been able to place before you the results which to-day we have submitted.—(Applause.) I think that the prospects before the company justify the words that I have already used in my introductory remarks, and I am very hopeful that when we meet again to pass accounts and to receive the report of the directors, we may be favoured with an equally unanimous vote of thanks; for I can assure you that the efforts of the board of directors, equally with the efforts of every-one, and we must not forget our able manager and our agents throughout the East—(applause)—I am sure that their efforts, as well as ours, will be to merit a continuance of your satisfaction.—(Applause.) I would mention, just before we separate, that on March 2nd there will be a meeting here at 3 o'clock. It will be a formal meeting, but it is necessary to confirm the resolutions which to-day have been unanimously passed.

The proceedings then terminated.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, March 28th.

Many members of the Newfoundland Assembly, as a protest against Imperial harsh treatment, have refused the Governor's summons to attend the House.

The Queen has arrived at Grasse, where she was received with extraordinary enthusiasm.

[The place referred to in this telegram is probably the prefectural town of Grasse, in the province of Var, France, about twenty miles south-west of Nice.—ED. *J.M.*]

London, March 29th.

The influenza is raging in Chicago, where there are not less than 10,000 cases, and the Pittsburg hospitals are crowded. There is great mortality attending the epidemic.

A conspiracy has been discovered among the Police at Buenos Ayres, and a quantity of rifles have been seized. Several arrests have been made.

# *LATEST COMMERCIAL.*

## IMPORTS.

The past week has been much disturbed by a defaulting dealer who paid a number of cheques without having the necessary funds at the bank to meet them, and this has taken by surprise a number of foreign firms who had shown confidence in the defaulter's integrity. Apart, however, from that, business has not undergone any improvement and transactions have not only been few, but small, and at low prices. Yarn sales for the week amount to about 400 bales only, being almost entirely composed of English Spinnings. Shirting sales only amount to about 1,500 pieces, whilst of Fancies, Italians, and other Piece-goods there have been no sales worthy of record.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼ lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |

### METALS.

The Easter holidays were the excuse for a slack market at the beginning of the present week; and even now buyers do not seem to be at all lively. Quotations as before.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ¼ inch | $2.80 | to | 2.85 |
| Flat Bars, ½ inch | 2.90 | to | 2.95 |
| Round and square up to ¾ inch | 2.85 | to | 2.95 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom. | | |
| Iron Plates, assorted | 2.90 | to | 3.00 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.40 | to | 4.70 |
| Tin Plates, per box | 5.70 | to | 6.00 |
| Pig Iron, No. 3 | 1.40 | to | 1.45 |

### KEROSENE.

Market quiet and unchanged. There are no fresh arrivals from the States, but our stock both of American and Russian Oil is ample for all purposes.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.65 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

### SUGAR.

A steady business both in White and Brown, the latter having given rise to some sales "to arrive" at from $4 to $4.20 according to quality.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $4.00 | to | 4.20 |
| Brown Daitong | 3.20 | to | 4.00 |
| Brown Canton | 5.25 | to | 6.25 |
| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 5.00 | to | 7.75 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 27th March; since that date settlements in this Market amount to 1,778 piculs, divided thus: *Hanks*, 20; *Filatures*, 1,389; *Re-reels*, 342; *Kakeda*, 27. In addition to these figures Japanese have shipped 99 bales, making the total export business of the week equal to 1,878 piculs.

The great activity noted in our last continued for a few days, and prices were still further advanced. The rush was only checked by holders retiring from the Market and refusing to offer their wares. The consequence of this has been that during the last three days the daily settlements have much diminished, although prices are considered strong at our quotations given below.

Exchange, as well as Silk, is also advancing, and for the moment this has a discouraging effect upon shippers.

Arrivals from the interior are very small and our stock is now down to 4,500 piculs. Even with the restrictive business of the last few days settlements exceed arrivals, and there is every prospect that from now onwards stock will steadily diminish.

The recent business has been fairly well divided between Europe and America, the latter country having the larger share. At the same time the amount of silk going to Europe is noteworthy, especially as it is continually reported that the Markets for Italian silk are underselling Japans. For extra *Filatures* of fine size some very high prices have just recently been paid.

It will be noticed that our stock of *Filatures* is very much reduced, while *Hanks*, *Kakedas* and *Oshu* sorts are very scarce indeed; in fact more than half of the total stock consists of *Re-reels*, which holders refuse to sell except at prohibitive prices.

There have been two shipping opportunities, the American and German Mails both taking silk; the former, *Belgic*, had 1,039 bales for the States; the latter, *General Werder*, had 40 bales for Zurich. These departures bring the present export figures up to 26,833 piculs, against 34,953 last year and 37,687 to the same date in 1889.

*Hanks.*—Only two small sales, consisting of extra *Shinshu* at $540 for Europe.

*Filatures.*—After our last was written the large business continued at steadily advancing prices, and $15 over last week's rates was freely paid. In coarse sizes one parcel of *Matsushiro* silk was booked at $610; but this seems to have been the top notch, for prices are now easier without being quotably lower. In fine sizes $635 has been paid for very best *Oshu* and *Uzen* sorts for Europe.

*Re-reels.*—Small amount of business in these owing to the firmness of holders, who insist on keeping their good brands at prices which are out of all proportion to Filatures. Ordinary good *Joshu* have been done at $580, while a lot of inferior and coarse silks have passed the scales at prices ranging from $550 to $500.

*Kakedas.*—Very small trade in these; present stock is small and undesirable, and anything pretending to be good quality commands a good price.

*Oshu.*—Nothing done either in *Sendai* or *Hamatsuki*, and the stock is down to very small dimensions.

| Available supplies to date | 34,000 | 37,300 | 41,100 |

### WASTE SILK.

Transactions in this branch are 268 piculs, divided thus: *Noshi*, 153; *Kibiso*, 107; *Neri*, 8.

Arrivals during the week have just kept pace with sales, and the quantity of stock remains unchanged. Quotations are steady at late rates, and may even be called strong, for shippers would gladly pay the prices asked if they could find good quality.

There have been two shipping opportunities, the French and German mails both taking waste; the former, *Melbourne*, had 171 bales for Marseilles, and the *General Werder* 125 bales for Genoa and beyond, these departures making the present export figures 27,802 piculs, against 25,143 last year and 28,441 at the same date in 1889.

*Pierced Cocoons.*—No movement of any kind, and nothing to say.

*Noshi.*—Small dealings in *Joshu* at $85 for best and $70 for common. Small parcel of *Bushu* was weighed up at $125 with *Shinshu* at $106.

*Kibiso.*—A few bales of *Filatures* done at $100; ordinary *Oshu* $46½, with *Low Curlies* at $34. Beyond these no sales have been made.

*Sundries.*—*Tama-ito* has again been done at $210, with some small parcels of *Neri* at from $12 to $14 according to quality.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

## STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

**SIMPSDN, STRICKLAND & CO.**

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).

## KEATING'S COUGH LOZENGES.

COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

---

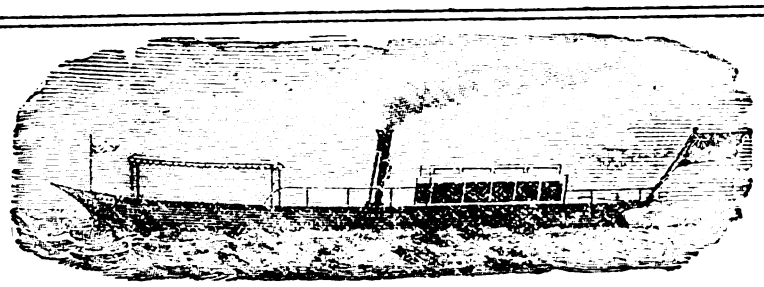
## THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!



## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

---

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 11, 1891.

MARRIAGE.

On the 8th instant, at Christ Church, Yokohama, by Rev. E. Champneys Irwine, M.A., EDWARD CHARLES, second son of Benjamin Hannen, 4, Pembridge Place, London, W., and of Ouseleys Wargrave, Esq., to MARY FANNY, younger daughter of Nicholas John Hannen, Judge of H.B.M.'s Court for Japan.

DEATH.

On the evening of the 10th instant, at No. 239 Bluff, Yokohama, HELEN GEORGINA, relict of the late James Martin. The funeral will take place from the late residence at 10 a.m. on Sunday, the 12th inst. Friends will please accept this notice.

## *SUMMARY OF NEWS.*

A TELEGRAM from Fukui reports that snow fell there on the 7th instant.

H.I.H. PRINCE KOMATSU AKIHITO left the capital, on the 4th instant, for Shizuoka Prefecture.

DURING the week ended the 3rd inst. 8,606 persons visited the Fine Art Exhibition at Uyeno.

COUNT YOSHII, a Privy Councillor, who had been suffering from illness for some time, has improved considerably.

THE PRINCE IMPERIAL paid his respects to Their Majesties the Emperor and Empress on the afternoon of the 6th instant.

THE grand festival of the Toshogu Shrine in Shiba Park, Tokyo, will be held for three days, commencing on the 16th instant.

THE receipts of the Tokyo Tramway Company during last month were *yen* 17,392.16, which shows a decrease of *yen* 6,083.93 against the same period of last year. During the latter half of last year the number of passengers carried by the Company was 3,649,408, from whom *yen* 78,574 was realized by the sale of tickets.

DR. KOCH'S lymph has been injected into a number of patients in the Daigaku Byoin, a hospital attached to the College of Medicine in the Imperial University at Hongo.

RESIDENTS of Kofu, Yamanashi Prefecture, have under consideration the erection of a monument at Naritayama, Kofu, in memory of the late Prince Sanjo.

MR. NISHI, President of the Supreme Court, who expired on the 6th instant, was raised on the same day to third class, first grade, by special order of the Emperor.

MR. KIYOURA KEIGO, Chief Commissioner of the Police Bureau in the Home Department, who proceeds on a foreign tour shortly, sent in his resignation of his post on the 5th instant.

THE total number of cases of matches exported from Kobe to foreign countries during last month was 14,226, showing an increase of 6,061 as compared with the previous month.

A MEETING of members of the Central Sanitary Association will be held on the 8th instant in the Home Department to discuss the proposed Regulations for the application of Dr. Koch's lymph.

THE buildings for the hospital of the Japan Red Cross Society at Shibuya, Minami-Toshimagori, Tokyo, have been completed, and the occupation of the new premises by the staff will take place shortly.

THE total number of public elementary schools in the Bonin Islands is at present 21, in which 1,360 boys and 175 girls are educated, the number of teachers being 52 (including 31 assistant teachers).

PRINCES MORI MOTONORI and TOKUGAWA IYESATO, with other noblemen, attendants of the *Jakonoma* and *Kinkeinoma*, had the honour of dining with the Emperor on the 7th instant at the Akasaka Detached Palace.

A DOCK, which for some time past has been in course of construction at the naval port of Kure, has been completed, and the opening ceremony will take place shortly. H.I.H. the Prince Imperial will be present on the occasion.

THE ceremony of presenting certificates to graduates of the Seiritsu Female School took place on the 3rd instant at the Oyu-kan, Asakusa. More than five hundred persons attended the ceremony, among whom were Count Nambu and Professor Shigeno. In the course of the proceedings Professor Shigeno gave a congratulatory address, to which Miss Koide Tei replied on behalf of the graduates.

THE ceremony of erecting a monument at the Tomoye Castle, Tawaragori, Mikawa, Aichi Prefecture, to the memory of Watanabe Kazan took place on the 3rd instant. A large number of persons attended the ceremony. Among those present were Viscount Miyake, Lieutenant-General Baron Kurokawa, Commander of the Third Division (Nagoya), Colonel Kojima, and a number of military and civil officials.

AN ordinary meeting of the Cabinet was held on the 7th instant, and was attended by Counts Yamagata, Saigo, Yamada, and Oyama, Viscount Kabayama, and Mr. Yoshikawa, the proceedings lasting from ten in the forenoon till four in the afternoon. Mr. Shirane, Vice-Minister for Home Affairs, Baron Makimura, President of the Administrative Court, Viscount Nomura, Count Toda, Mr. Kiyoura, Chief Commissioner of the Police Bureau in the Home Department, and Mr. Hamao, Director of the Bureau of Special School Affairs, were also present.

AN aëronaut named Suzuki Magoichiro, will give a performance on the 17th instant in Uyeno Park, and has notified the Authorities of his desire of exhibiting his skill before the Russian Prince Imperial, who is expected in the capital about the end of next month. He also intends to give his performance in Yokohama, Aichi, Osaka, and Nagasaki, and proposes to proceed afterwards to Shanghai.

A MEETING of the Standing Committee of the Japan Seamen's Aid Society was held on the 4th instant, and was attended by Viscount Fujinami Kototada, and Messrs Seki Yoshiomi, Kimotsuki Kaneyuki, Fujikura Kentatsu, Murakami Keijiro, Fukuya Yasusada, Matsuda Cho, Kanzaki Katsumi and others. Marquis Nabeshima, Vice-President, and Counts Date and Hayashi Kiyoyasu, Advisers, were also present at the meeting.

FIRE broke out on the night of the 31st ultimo in a house at Imamachi, Minami-kambaragori, Niigata Prefecuture, and destroyed 53 dwellings, 13 godowns, and 4 shrines, 3 houses being partly damaged. On the same night an outbreak of fire took place in a house at Oshinomura, Ishikawagori, Ishikawa Prefecture, and destroyed 57 houses and 4 godowns, eight persons being burned to death, and 2 women severely injured.

THE small change in the aspect of the Import trade is in the right direction, though nothing like a revival is even indicated. Dealers are making enquiries, and from what can be gathered in regard to the trade in the interior there is doubtless a slow improvement going on, which may, in view of the present crop prospects, ultimately result in future prosperity. English Yarns have been taken to the extent of 1,000 bales, though prices show a further slight decline; Bombays, however, owing to competition with the productions of Japanese mills, are slow of sale and difficult to move. Shirtings have been sold in small quantities, as have also T.-Cloths and Victoria Lawns, but Fancy Goods and Woollens have been entirely neglected. The Metal market has improved somewhat, and a fair amount of transactions have been put through at late rates. There have only been small sales of Kerosene, but the market is steady. Fresh arrivals keep up the large stock, which is now close upon 700,000 cases of all kinds. The Sugar trade is quiet, and Brown sorts are rather lower in value, though holders all by no means weak. The Silk trade has again been active, and the stock has been further reduced by nearly 2,000 piculs. Prices continue to advance as the best chops get scarcer, and unless there are arrivals to come in the stock here will be about cleared off before the new season has commenced. The prospects for a heavy growth of mulberry are good throughout the Silk districts generally, and there will probably be food enough and to spare for all the *kaiko* that will be hatched. Waste Silk has been in fair demand. Stocks are much reduced in desirable fibre, and full prices are paid for suitable parcels. The result of the Tea trade is that over 30,000 piculs more have been exported this season than last. The weather continues suitable to the coming crop, and new Tea will probably be shipped in sample quantities a fortnight hence. Exchange has been steady, but closes weak with indications of a decline.

## *EDITORIAL NOTES.*

### THE FINE ARTS EXHIBITION AT UYENO.

THE usual spring exhibition of fine art objects in the gallery of the Bijutsu-kai, Uyeno Park, is gradually becoming more and more a display of modern manufactures, and less and less an occasion for bringing together representative specimens of the work of former eras. For many reasons this is doubtless inevitable, principal among them being the fact that private collectors shrink from sending their treasures to be ranged side by side with specimens furnished from the rooms of dealers or the work-shops of artizans. This is emphatically a regrettable prejudice, because juxtaposition of the old and the new in such a gallery seems better calculated than anything else to fulfil the purpose of the Society, namely, to afford artists and art manufacturers an opportunity of comparing the achievements of the great masters of former times with the efforts of their successors in the present age. However, collectors are, on the whole, a selfish class. They prefer to think that their own treasures are inimitable, and will not readily lend themselves to the idea that any progress can bring modern artists within comparable reach of the old. They have especial reason to exclude this hypothesis in Japan, for it is beyond all question that many of the objects now produced in the domains of lacquer, carving in wood and ivory, porcelain, metal work, textile fabrics, and so forth, are not greatly eclipsed by the *chefs-d'œuvre* of other generations. Collectors may well hesitate to expose their treasures to a comparison the issue of which is often doubtful.

* * *

The Exhibition is entered through the picture gallery. A fairly large collection of pictures by celebrated masters has been brought together, but not many among them merit notice. Three paintings of female figures by Shosai Settei, an artist of the present century, are the first to attract attention. Fairly representative of the *Ukiyo-ye* school, they show grace of outline and delicate management of colours, but the figures are as flat as though they had been cut out of cardboard. Near them on the same line are two exquisite little paintings of monkeys by Mori Sosen, hanging side by side with an interesting pair of the same kind, one by Mori Sosen himself, the other by Mori Shuhô, his brother. Mr. Iwasaki Yanosuke sends from his extensive collection two fine pictures, the first a landscape, in Chinese style, by the renowned but ill-fated Watanabe Kazan; the other a study in subdued tints by Gyokuraku, a pupil of the celebrated Kano Kohogen. A heron and a plum-tree by Joki, and a landscape by Tanyu, the former from the collection of Count Matsudaira Naoaki, the latter from that of Marquis Mayeda Toshitsugu, are worthy examples of the two masters. So, too, is a painting of a cock by Tanyu, which Count Matsukata sends. Tanyu's pictures never seem to fail, rare as genuine specimens ought to be. One of the most beautiful and evidently authentic efforts of his brush we have ever seen, is a collection of small sketches of the goddess Kwannon, bound into an album and exhibited by Mr. Isobe Tarobei. The delicacy and firmness of Tanyu's touch are eminently displayed in these little pictures. Another contribution of a cognate character is sent by Mr. Yasuta Katsutomo. It consists of a number of miniature designs by Hokusai, intended to be copied in metal work, as on the hilts of swords or the clasps of tobacco pouches. It is interesting to compare with these a scroll by a Chinese artist of the Ming dynasty, which is also an exceptionally fine example. Another scroll that attracts much attention is a series of pictures depicting scenes from the Mongol invasion of Japan nearly six centuries ago. Takezaki Gorobei, one of the Japanese Generals who took a leading part in expelling the invasion, commissioned two artists of the Tosa School, Nagataka and Nagaakira, to make these paintings, and they did so, probably spending several years over the task, and executing it in faithful observance of all the traditions of the Tosa Academy. The scroll came into the market last summer, and was acquired by the Imperial Household Department.

* * *

Fortunately for the modern artists, the rooms where their productions hang are separated by the longest possible interval from the gallery of ancient masters. Even thus softened, however, the contrast is painfully striking. The men who exhibit on these occasions seem, with very rare exceptions, to have lost all the spirit and retained only the conventionalities of the genuine Japanese school. Their works show no redeeming feature, being at once hopelessly out of touch with the time, and mere caricatures of former fashions and motives. The very few pictures to which this criticism does not apply in its full severity, scarcely rise above the level of uninteresting mediocrity. Of course the display is not truly representative of modern Japanese pictorial art. The best men seldom send to these periodical exhibitions. Baison, one of the most promising young painters of the day, does indeed contribute a picture illustrating his power of brush, but so infelicitous in the management of the subject as to be altogether unpleasing. Artists like Gaho, Watanabe, Giyokusho, Kasan, Tambi, and so forth are conspicuous by their absence. The pure Japanese school has fallen upon hard times, and is probably approaching its final demise.

* * *

Of lacquered wares some beautiful old specimens are exhibited. In this branch fine examples never fail, for in every Japanese family of the upper classes a certain number of good pieces are preserved. Marquis Mayeda sends several grand specimens, notably a box with the *ishida-tami* pattern in gold on a black ground, the decoration being carried over every part of the piece, both inside and outside. Another beautiful example is a writing-box by Yasuchika, with the *hashigui* pattern, also in gold on black. Equally noteworthy are two boxes of very old lac, the one having butterfly decoration, the other an *uguisu* with a verse of poetry. But the modern lacquerers succeed, on this occasion, in holding their own fairly well, or at any rate in showing that their capabilities need only encouragement to reach the old level.

* * *

In the same section with the lacquerers are a few tolerably fine wood-carvings, a full and valuable collection of sword-furniture—*menuki*, *kogai*, and *kozuka*—by the various generations of the Goto family, and several interesting porcelains. Chief among the last is a noble pair of old Imari jars with covers, contributed by Mr. F. S. James of Yokohama. Such grand specimens of this type are scarcely ever to be found in Japan. This particular pair was doubtless made to order, and exported by the Dutch from Deshima—for the fortunate possessor acquired them, we believe, in Europe. The Museum of Antiquities sends some excellent pieces, notably a bowl of middle period *Ao-Kutani*, and an *Ao-Bizen* censer. In the same case are a beautiful dish of enamelled Nabeshima ware, one or two rich examples of Awata faience, and some charming blue and white plates from the Arita kilns. A plaque of *Hirado* porcelain forming a tiny screen, exhibited by Marquis Kuroda, is also very fine. As usual, however, this section is disfigured by the admission of several spurious specimens, the descriptions appended to which are in comical contrast with the truth. Scarcely one of the numerous pieces labelled "Old Satsuma" is genuine; Nomura Ninsei is insulted by having attributed to him a flower-vase of worthless, modern manufacture, and other travesties are gravely paraded before the eyes of an astonished public. Unless it be intended to convert the whole affair into a burlesque, we are unable to comprehend the reason for giving a place to such specimens.

* * *

Among the modern exhibits a considerable space is devoted to articles of jewelry, including combs, hair-pins, and so forth, and to the *kamiire* and tobacco pouches which constitute such an important item of a Japanese lady's outfit. Some of these are very beautiful, showing that the old taste of the designer and skill of the worker in metals remain unimpared. An admirable display is also made of flower-baskets and artificial flowers, in the manufacture of both of which the Japanese excel. The most interesting articles in this section, however, are the porcelains. Makuzu of Yokohama and Seifu of Kyoto are the chief exhibitors. Two or three pieces by the former, with finely incised surfaces and rich red under the glaze, are really first-rate productions, but in every case the prices are absolutely prohibitive. It is difficult to fathom the design of Makuzu in asking for his work prices that no sane person can be expected to pay. If his keramic achievements were unique, there might be some excuse for such suicidal exorbitancy. But they are not unique. Seifu is an even greater artist, and Seifu's prices, when compared with those of Makuzu, look ludicrously small. Among the contributions of the Kyoto master to the present exhibition are two vases—one a coral red monochrome, the other a canary yellow with reserved medallions in blue under the glaze—that might have come from the hands of the Chin-te-cheng potters. Seifu is unquestionably a genuis. Whether his mantle will fall upon his son or pupils, we cannot yet know, but if not, every piece manufactured by him now will have a high value hereafter.

### HOKKAIDO.

THE following figures show the agricultural productions of Hokkaido, with the areas under cultivation and the increases or decreases in each case, for the year 1889, which appears to be the latest included in the detailed statistics:—

| Crop. | Area in *cho* (1 *cho*=2½ acres). *cho.* *tan.* | Produce in *koku* (1 *koku* =5.13 bushels). *koku.* | Increase or Decrease as compared with 1888. |
|---|---|---|---|
| Barley ..... | 315 2 | ... 25,666 | +66 *cho* 5 *tan* −5,224 *koku.* |
| Millet ..... | 1,484 1 | ... 11,890 | +65 *cho* 1 *tan* +619 *koku.* |
| Buckwheat ... | 2,538 6 | ... 14,733 | |
| Rape ..... | 248 2 | ... 2,443 | |
| White beans (*daizu*) ... | 3,527 7 | ... 26,159 | +444 *cho* 6 *tan* +92 *koku.* |
| Beans (*shosu*) | 3,480 8 | ... 20,877 | +513 *cho* 9 *tan* −3,081 *koku.* |
| Indian corn... | 678 3 | ... 11,407 | +92 *cho* 6 *tan* +1,628 *koku.* |
| Rice ..... | 1,988 1 | ... 9,280 | +84 *cho* 8 *tan* −5,096 *koku.* |

From these figures it appears that the total area under cultivation in 1888 was 14,261 *cho*, or 35,652 acres, approximately; and that the total produce was 122,375 *koku*, or 627,783 bushels; also, that whereas the area under cultivation increased by 1,267½ *cho*, as compared with the preceding year, the produce diminished by 12,493 *koku*, this last fact being attributed to exceptionally unfavourable climatic conditions. We recently published statistics showing that the total extent of arable and pasture land in the northern island is estimated, according to surveys just concluded, at 2,389,000 acres, and that the area under cultivation at the close of 1889 was 41,955 acres, from which it would appear that the increase of the cultivated area during 1889 was 6,303 acres, against 3,168 acres in the preceding year. Thus the success achieved up to the present in respect of land cultivation is altogether insignificant, only one fifty-seventh part of the available area having been placed under crops up to the present.

* * *

These figures go to confirm the justice of the remarks contained in a recent issue of the *Choya Shimbun*, namely, that the wealth of Hokkaido lies in the sea rather than in the land, and that persons emigrating thither should turn their attention to the former in preference to the latter. We are well aware, writes the *Choya*, that Hokkaido is extensive enough to produce an abundance of crops, and that it also possesses large deposits of coal. But after all, looked at on the map of the world, it is a very tiny spot, and though its land may be fit for tillage, its climate is too rigorous to encourage agricultural effort in the interior. But in respect of marine products, the island may safely be said to have no rival in proportion to its size. Situated between the Arctic and the Pacific oceans, and having

Digitized by Google

a coast line exceptionally indented, the place offers a pleasant home to fish of all kinds. Western folks are thoroughly acquainted with the sources of wealth offered by the seas about Hokkaido, but the Japanese themselves seem comparatively indifferent to them, eagerly and industriously as they fish the waters nearer home. A number of foreign vessels—we still quote the *Choya*—engage in the business of hunting seals and otters in the seas adjacent to Hokkaido. It was stated that, in order to put a stop to these unlawful proceedings, the Government intended to despatch war ships to Hokkaido, but the duty of protection would have been exceedingly difficult, if not impossible, owing to the prevalence of heavy fogs and stormy weather, which enable vessels to elude pursuit and expose guard-ships to constant danger. The *Choya* concludes by recommending that instead of spending money on the extension of agriculture and the reclamation of land, the Government should seek to develop the marine industries of Hokkaido.

### SAIGO TAKAMORI.

An extraordinary story has recently been circulated to the effect that Saigo Takamori was not killed before Kagoshima in 1876, but escaped to Russia, whence he had just returned, or was on the point of returning. It seemed unnecessary to repeat the tale, for those who were in Japan at that unhappy time remember well that no doubt existed, or could possibly exist, about the death of the great *Samurai*. Saigo, having carried resistance to the extreme limits of courage and endurance, fell by his own hand, and his head was hidden by his followers so that it might not come into the possession of the Imperialists. Very soon, however, it was discovered and identified by a number of men who knew the Satsuma leader well, among them being Counts Yamagata and Kawamura, Saigo's beloved comrades. There was not the smallest room for uncertainty in the matter. Count Kawamura himself washed the head of his old friend and sometime teacher, and to this day cannot allude to the incident without strong emotion. Yet there are people foolish enough to credit the rumour of Saigo's escape to Russia, and several Tokyo journals think it necessary to enter into detailed contradictions. The rumour, as before stated, doubtless had its origin in the unexpected return of Mr. Ogata Fuman, a member of Saigo's staff, who was believed to have perished in the rebellion, but who has now come home to Kagoshima, safe and sound. The circumstances connected with Mr. Ogata's escape, and with his absence during fifteen years, are not yet known.

### FINE ART EXHIBITION IN YOKOHAMA.

A treat was afforded to lovers of Fine Art on Saturday and Sunday by the well-known Yokohama firm of Matsuishiya, through whose instrumentality a number of high class *kakemono* and screens, the work of famous artists and now in the possession of various connoisseurs, were collected and exhibited at the Chitose-ro in Sumiyoshicho, Yokohama. Owing to the limited space available only some hundred and thirty of the objects contributed could be accorded a place, and in all probability a supplementary exhibition will take place later on. Among the gentlemen whose collections have been drawn upon on the present occasion are Count Matsukata, Mesrs. Go Junzo, Ono Mitsukage, Mogi Yasushige, Mogi Sobei, Hara Rokuro, Hara Zenzaburo, and Yoshida Kobe, H.E. Mr. Asada, Governor of Kanagawa, Messrs. Yamada Matsusaburo, Komatsu (President of the Yokohama Law Courts), &c. Among the *chefs d'œuvre* of the exhibition are four *kakemono* from the brush of Okiyo; one, a beautiful specimen, showing masterly treatment of the famous Arashiyama at Kyoto (contributed by Mr. Yamada); another, subject "Stork and Young," sent by Mr. Hara Rokuro; a third, the figure of a tiger, shown by Mr. Ono; and the fourth contributed by Mr. Yamada Matsusaburo. A small gold screen, by Korin, was sent by Mr. Minota Chojiro; two volumes of studies of flower sprays and of the praying mantis and other insects, by Chinzan, came from Mr. Kimura Riyemon; Mr. Asada sent two fine *kakemono*, of *Take* and *Ume* by Goshun; Mr. Komatsu contributed a couple of masterly sketches by Kazan, and a *kakemono* of *Kamo* by the same master; two of Chinzan's large works —*sansui* scenes—came from Mr. Minota; Yosai was represented by three beautifully executed *kakemono* from Mr. Go, and a pair of magnificent screens all ablaze with colour, from the collection of Mr. Mogi Sobei; and a pair of *kakemono* by Toyohiko, *sansui* studies in pale and subdued tints, were contributed by Mr. Ono Mitsukage. The exhibition was visited by many art lovers, both Japanese and foreign, during the two days that it remained open.

### THE OSAKA CHAMBER OF COMMERCE.

The new Chamber of Commerce at Osaka has been officially opened. Mr. Mutsu, Minister of State for Agriculture and Commerce, attended at the opening ceremony, and delivered the following address, which we translate from the *Choya Shimbun*:—"Gentlemen—It gives me sincere pleasure to join with you to-day in opening this Chamber. Osaka is one of the most important tradal centres in Japan, and its citizens, taking the lead of all others, established a Chamber of Commerce in order to increase the profits on trade and industry, and have for many years contributed materially to improve the economical condition of the country. And now I cannot but admire the enterprise displayed in erecting this structure, and re-organizing the Chamber. In the administration of affairs relating to agriculture, commerce, and industry, progress is made by competition between practical men, but it is essential that competition should not be carried to such lengths as to inflict injury on the competitors. To avert this evil, and to discharge administrative functions properly, the Authorities, apart from the use they make of the machinery of local government, look to Chambers of Commerce and Agricultural Societies, where the representatives of practical experts form associations, and consult as to the methods of profitable competition, in due accord with the objects of each enterprise; and where, with regard to undertakings to be hereafter carried out, ideas may be collected and formulated which shall receive the utmost possible consideration from the Government. This Chamber of Commerce is most necessary, therefore, because of its bearing on national economic functions, and I venture to express the earnest hope that you, gentlemen, by the aid of your knowledge and experience, will devise enterprises of practical profit, and assist to improve the economic condition of the country."

### KOBE LIGHTERAGE AND DRAYAGE COMPANY, LIMITED.

The first ordinary general meeting of the Kobe Lighterage and Drayage Company was held at the Municipal Hall, Kobe, on the 5th instant, when the following report was taken as read:—"The Directors have now to submit to you a general statement of the affairs of the company, and balance sheet for the four months ending 31st December last. The net profits for that period amount to $938.38 for appropriation. From this sum the Directors recommend writing off the amount at credit of preliminary expenses, which will extinguish the account and absorb $921.50. The balance of $16.88 to be carried to new profit and loss account. Contracts have been signed with the Yokohama Engine and Iron Works Co., Ld., for the construction of a steam tug and three cargo lighters, and with Messrs. E. H. Hunter & C. for three cargo lighters, and work thereon is proceeding satisfactorily, under the supervision of Mr. J. Ellerton, to whom the specification and tenders were submitted for approval. In accordance with Clause 61 of the Articles of Association Messrs. R. Hughes and Alf. Woolley retire by rotation, but being eligible, offer themselves for re-election. The accounts have been audited by Messrs. J. S. Ralston and L. D. Abraham, who retire, and offer themselves for re-election. The remuneration of Auditors will have to be fixed for the current year." Commenting on the report, the *Hyogo News* says:—"Shareholders in the Kobe Lighterage and Drayage Co. have every reason to be satisfied with the result of the first four months' working. There is no doubt that the company has had great difficulties to contend with both in its initial stages and in its later development. Fortunately these have all been overcome, and if its prospects are to be relied upon it is on a fair way to commercial prosperity. Few companies can show such progress in so short a period, and this progress has been due, in a great measure, to the energy displayed by the Chairman, Mr. A. Woolley."

### MARRIAGE OF MISS M. F. HANNEN.

On Wednesday the marriage of Miss Mary Fanny Hannen, second daughter of Mr. Justice Hannen, to Mr. Edward Charles Hannen of London, took place at Christ Church, Yokohama. The Church, profusely decorated with snow-white blossoms of various kinds, never received a larger or more representative assemblage of the Yokohama and Tokyo communities, the affectionate interest felt in Miss Hannen and the sincere esteem and regard in which her parents are universally held, attracting residents of all nationalities from the Capital and the Settlement alike. The bride's elder sister acted as bridesmaid, assisted by two beautiful children, Miss James and Miss Fraser, and the service was performed by the Rev. E. C. Irwine. A reception subsequently held at the residence of the bride's parents was numerously attended, among these present being nearly the whole of the Foreign Corps Diplomatique. Mr. J. A. Fraser, in a graceful speech, wished all happiness to the newly married couple in the name of the British Community, assuring the bride that the kindest and most loving sentiments should never cease to follow her from the countless friends whose lives she had brightened by her presence in Yokohama.

### THE KEIOGIJIKU UNIVERSITY.

We have received the following unsigned letter, which we nevertheless publish, having reason to know that it is a *bond fide* communication. In justice to ourselves, however, we must note that the statement referred to was explicitly given on the authority of the Tokyo News Agency, that we were in no respect responsible for it, and further that the correct facts were subsequently published in these columns:—

To the Editor of the "Japan Mail."

Sir,—I herewith beg to correct the statement in your issue of the 31st ultimo with regard to the disorderly behaviour of the students in one of the departments of this University.

I greatly regret that such a mistaken report should have found access to your columns, and beg to say that the students have never had any cause for complaint whatever, their foreign teachers having invariably shown great kindness to them, and the students have never expressed a wish to the faculty that any of their teachers should be dismissed.

Hoping that you will kindly insert this correction in your paper,

I remain, Sir, yours respectfully.

### EXPORT DUES AND THEIR INCIDENCE.

In a recent issue we alluded to the campaign against export duties, inaugurated by the editor of the *Keizai Zasshi*, and said that while fully sympathising with the objects of the crusade, we must nevertheless take exception to the doctrine enunciated by the editor, namely, that such taxes come out of the pocket of the Japanese producer or manufacturerer, whereas in truth they come out of the pocket of the foreign consumer. The *Keizai Zasshi* now claims that we misinterpreted the lecturer's statements, and explains that his reference was to the evil effect of these duties when imposed upon articles competing with similar staples in foreign markets. In offering this explanation our financial contemporary is so kind as to teach us a very simple object lesson. Suppose, it says, that the *Japan Mail* had to pay a tax of so much per sheet, while its competing contemporaries were not exposed to any such impost, could the *Mail* recover the tax from its subscrib-

Digitized by Google

ers? We answer, with equal simplicity, that if the *Mail* could not recover the tax from its subscribers, then the only course left would be to cease publication, when the payment of the tax would also cease. But of course the *Keisai Zasshi's* ultimate meaning is precisely the same as our own. The only difference is that while we spoke of direct results, the Tokyo periodical discusses indirect. If Japanese silk has to pay an export duty on its way to the market where it comes into competition with Italian silk, then although the purchaser of the silk actually pays the tax, the producer may be the greater sufferer, seeing that the burden of the tax may drive his staple out of the market altogether. There is no occasion to devote space to these discussions. Everyone is practically agreed about them. We, assuredly, are entirely at one with the editor of the *Keisai Zasshi* in his crusade against export duties. Bad as all customs dues are, export dues are the worst, for while protection furnishes a lame plea for taxes on imports, not the most shadowy defence can be set up for a tax on exports. In the former case a nation offers costly encouragement to the development of its own industries; in the latter, it endeavours to keep the products of its own industries out of foreign markets. Therefore we sincerely hope that Mr. Taguchi and his fellow-thinkers will succeed in their campaign.

### MORTALITY CAUSED BY WILD BEASTS AND SNAKES IN INDIA.

A RETURN in a recent issue of the official *Gazette of India* deals with the number of wild animals and venomous snakes destroyed throughout India during 1890, and with the destruction of human beings and cattle by wild beasts and snakes in the same period. The total number of persons killed by animals in India during the past year was 2,724; by snakes, 22,480. The number of cattle killed by animals was 65,757, and by snakes 3,793. The number of tigers killed was 1,312; the number of leopards 4,179; the number of wolves, 4,930; of "other animals," 2,542; and of snakes 577,770. The rewards paid for killing animals during the past year amounted to Rs. 1,19541, and for snakes Rs. 23,321. These figures show that one person in every 72,882 of the population of British India was killed by wild animals during the past year. The aggregate mortality recorded from snake-bite during the past eleven years is 219,367, that is, about 20,000 a year. The mortality from snake-bite tends to increase, and this is most serious in Bengal and in the north-western provinces. This is an awful story, and we are not surprised that it has caused much searching of heart amongst official persons. The Government of India, in consultation with Local Governments and Administrations, has recently had under examination the question whether it might not be possible to organize some better means for the destruction of wild animals and snakes, and has considered whether the establishment of a public organization for the purpose of destroying wild beasts would be likely to be advantageous. An experiment of this kind was attempted in Madras some years ago, but was found to involve great expenditure, and the results achieved did not justify any trial of the plan elsewhere. Moreover, the larger carnivora are not gregarious, nor are they very numerous, and the adoption of any such system would inevitably end in causing the existing agency for destroying them to disappear. The Viceroy has therefore, according to the official resolution on the subject, determined to maintain the system now generally in force of granting rewards for the destruction of wild animals. He desires that particular attention should be paid to the following points, viz.—(1) all possible facilities, consistent with due precautions against fraud, should be afforded to those who kill wild animals for obtaining the authorized rewards: (2) shooting parties, which engage to submit to the required precautions against injury to the forests, should be encouraged, for the destruction of tigers and other dangerous carnivora in reserved forests: and (3) licenses under the Arms Act should be granted freely to agriculturists located in the neighbourhood of forests and jungles for the protection of themselves and their cattle against wild beasts. He also thinks that more liberality might be shown in offering regards for the destruction of man-eating tigers. The system of granting rewards for the destruction of snakes has effected no reduction in the mortality from snake-bite. Indeed, the system of rewards has led, in many places, to the breeding of snakes. Recent enquiries have satisfied the Government that no system of granting rewards for the destruction of snakes is likely to have any appreciable effect on the mortality from snake-bite. Snakes exist in such numbers that it is hopeless to expect to exterminate them, and there can be no reasonable doubt that large numbers of those for which rewards have actually been paid have been really harmless snakes. No satisfactory means exist in most parts of the country for ascertaining whether a snake for which a reward is demanded is really venomous or harmless, for the native officials in the interior of a district rarely know the difference themselves, while a villager who has killed a snake does not think it worth while to take it into headquarters in order to obtain the small reward offered, even when the distance is not so great as to render it impossible to get the snake there before it has decomposed. If the rewards for killing snakes are raised to an amount which renders people willing to claim them, snake-hunters immediately begin to breed snakes in order to secure for themselves a livelihood. Moreover, so long as the people persist in walking in the dark with bare feet near their houses, where undergrowth, débris, and filth, the hot-beds of disease, provide cover in which venomous snakes can live and breed, deaths from snake-bite must continue to be numerous, for it is in such places that snakes are most dangerous, and not in the jungles where, though they exist in immense numbers, they can keep out of the way of human beings. The most effective way of reducing mortality from snake-bite is to destroy the cover afforded for snakes in or near villages. The Government of India does not believe that any general injunctions will produce much effect, and a system of exhibiting the statistics in totals and averages only serves to conceal the places most in fault. Local Governments and Administrations are therefore to direct their subordinates to find out and attack villages within their respective jurisdictions which show the greatest number of deaths from snake-bite, and insist on these officers paying personal attention to the organized cleansing of the surroundings of such places and reporting how these organized measures affect the mortality from snake-bite. If such a system were carried on year by year, the worst neighbourhoods should be in time appreciably relieved, and it would be interesting if the reports showed to what extent the destruction of venomous snakes and their eggs is carried out simultaneously with the cleansing of the villages, and how the removal of undergrowth or filth affects the mortality from cholera, fever, and other diseases, as well as from snake-bite. The extraordinary thing is that while the rewards increase in the aggregate year by year, meaning increased destruction of snakes, the mortality from snake-bites is also increasing. Obviously therefore the system of rewards is a failure to a great extent, and it is time that some more effective means be adopted.

### A MODEL JUDGE.

THE *Spectator* takes Lord Hannen as an ideal Judge, and writes of him as follows:—"No better example of the qualities which ought to win judicial office and judicial promotion can be found than those which belong to Lord Hannen. To say that as a Judge he is just and impartial, is not enough, for that, we are glad to think, may be said of very Judge on the Bench. In addition to these qualities, the absence of which would have meant disgrace, he possesses powers of mind and character which are exactly those demanded by his office. Lord Hannen has always shown himself, in the best sense of the word, a man of the world. Not a superficial cynic or a disillusioned critic of human action, but one of those men of the world who, in Byron's phrase, "know the world like men,"—a man, that is, who is capable of looking deep into human motives, and, through experience and observation, of giving them their proper value. The man of the world who knows the world like a man, is one who knows it thoroughly, who does not flinch from giving things their true names, and who makes use of no mental evasions to hide from his own eyes facts that are personally repellent, or that do not coincide with some preconceived view. He is, in fact, the man of large knowledge, the man capable of the sympathy of comprehension as of the sympathy of approbation, who understands as clearly that of which he disapproves as that of which he approves. Lord Hannen has this gift, the supreme gift for the Judge, and one which is seldom possessed by any but persons of great intellectual power. In him, too, it is tinged with real human kindness, and with a sense of the true import of human action. The standpoint from which men are regarded as struggling animalculæ, who bite and are bitten, but whose vagaries are of little real moment, should not belong to a Judge; yet it is one that the atmosphere of the Divorce Court is likely enough to produce. Lord Hannen, however, never hardened under the influence of his work. It was impossible to hear his judgments or charges to juries, in the ordinary matrimonial suits that came before him, without seeing that from his mind had been eliminated all such refracting cant, and that he saw the facts as they really were. This large-mindedness, coupled with a deep knowledge of the law, will render Lord Hannen's presence in the final Court of Appeal peculiarly valuable. It is true he will now deal only at a distance with human actions, but his keen judgment and well-balanced intellect will find ample scope in the discussion and settlement of the important legal problems with which the House of Lords is concerned."

### MR. HOLLAND.

WE learn that Professor T. S. Holland, of Oxford University, recently spoken of as coming to Japan in the service of the Japanese Government, has not been engaged, and we are not in a position to say whether he is likely to be engaged. This opportunity may also be taken to correct an inference drawn by one of our local contemporaries from the rumour of Mr. Holland's engagement. The circumstance was spoken of as "indicating a change of policy in legal matters by the Japanese Government." It is scarcely necessary to point out that the employment of an English expert in the capacity of adviser to the Japanese Cabinet on questions of international or constitutional law, can have no connection with a Governmental change of policy in legal matters. The inference is particularly singular in the present instance, seeing that an eminent English barrister filled that very post in Japan until the end of last February.

### NEW COMPANIES.

THE *Keisai Zasshi* gives an interesting list of new companies established in Japan during the five-year period 1885-89, inclusive. The names of the companies are not recorded in detail, but only their numbers, and total capitals according to localities. The list is as follows:—

| Place. | Number of Companies. | Aggregate Capital. Yen. |
|---|---|---|
| Hokkaido | 39 | 11,639,845 |
| Tokyo | 185 | 45,049,050 |
| Kyoto | 44 | 3,499,800 |
| Osaka | 140 | 11,553,700 |
| Kanagawa | 37 | 1,617,500 |
| Hyogo | 77 | 19,524,960 |
| Nagasaki | 45 | 603,113 |
| Niigata | 57 | 1,022,640 |
| Thirty-nine other Prefectures | 982 | 21,150,820 |
| Total | 1,636 | 115,661,428 |

* * *

How many of these companies, we wonder, are now in a flourishing state. Probably at no time during the past twenty years has the country suffered from severer industrial depression than at the present moment. Everywhere we hear of properties offered for sale at prices that

Digitized by Google

are only a fraction of their original cost. Large manufactories with expensive plants of machinery, started in recent years under apparently promising auspices, are said to be running at a loss, their owners anxiously seeking capitalists to relieve them of these unprofitable ventures. What relief might be brought to the country if investment of foreign money were possible. Beyond a doubt many of the industries now reduced to a languishing, if not a moribund, condition, might be resuscitated and carried on prosperously if foreign capital could be employed and foreign organizing experience utilized. It seems to us very singular that in the face of such circumstances there should be found men desirous of excluding foreign capital and interdicting the ownership of real estate by foreigners. Japan, we are persuaded, has no worse enemies than these selfish or short-sighted conservatives.

### A PETRIFIED CORPSE.

THE stories coming to us occasionally of late from Europe and America, about the bodies of buried people turned to marble in their graves, find a parallel in Japan. The *Kokkai* says that in the Mukayejima-nakatsu district of Saga Prefecture, there lives one Suyeyoshi Kumakichi, a merchant, whose grandfather Sobei, born in the year 1806, died in 1878, and was duly interred, the corpse being placed in a pine-wood coffin one inch thick. On the 11th of March, this year, it became necessary, for some unexplained reason, to remove the body to another place. The grave was opened for that purpose, when it was found that about one half of the coffin had become decayed from immersion in water that had drained into the grave. A part of the corpse thus exposed looked curiously white and undecayed, and felt as hard as stone. The exhuming folks, much astonished, removed the lid of the coffin—presumably a tub in which the corpse had been placed sitting, after the ordinary Japanese fashion—and saw old Sobei just as he had appeared thirteen years previously, the day after his death, a chaplet of beads about his neck, and his body perfectly intact, except that it had turned to stone, and seemed as though cut out of solidified lime. After long wonderment, the removal of the corpse was proceeded with, but ere it could be transported to the new burial ground, crowds of people assembled to witness the strange spectacle, and Suyeyoshi found it expedient to give the neighbours a few days to satisfy their curiosity before re-interring the petrified body. Some of those who came to look are said to have worshipped as if in the presence of a miraculous manifestation, From the waist downwards the corpse was blackened by the action of the water in the grave, but the upper part was quite white.

### THE NEW ORGANIZATION OF THE METROPOLITAN BOARD OF POLICE.

THE re-organization of the Metropolitan Board of Police, effected by Imperial Ordinance No. 34, promulgated on the 1st instant, was a necessary consequence of the large reductions voted by the Diet in the appropriation for the Board. Apart, however, from purely financial reasons, it had for some time been known that changes must be introduced in the original organization of May, 1886. The organizations of all the Departments of State and special Bureaux and Boards were more or less amended in the first half of last year, but the organization of the Metropolitan Board of Police remained unchanged, a difference attributed—though for our own part we fail to trace the connection of ideas—to the fact that Viscount Tanaka, former Head of the Board, was Chief Secretary of the Cabinet under which the scheme of re-organization was first elaborated. The principal feature of the present amendments consists in a reduction of the number of functionaries in the Board. Under the former organization there was a Vice-Inspector-General of Police, but that position has now been abolished. Similarly Assistant Police Sergeants, the Assistant Chief Police Physician, the Assistant Director of the Bureau, Assistant Governors of Penitentiaries, and so forth, have all been dispensed with in the new organization. Further, the number of Police Inspectors has been fixed at 36, the total number of higher officials, including the Inspector General of Police, being put at 40. The aggregate number of Police Sergeants, clerks, and other subordinate officials is fixed at 416. The former organization did not contain any provision limiting the number of functionaries. The new organization further provides that, within the limits of the appropriations for subordinate officials, special experts may be engaged at the discretion of the Inspector General of Police. In case of the temporary inability of the Inspector-General of Police, he is to be represented in his functions by the Chief of the Constables Headquarters Bureau, the highest official in the Board next to the Inspector-General. The disposition of bureaux, divisions, and sections, has been thoroughly changed. Here we need only mention the arrangements provided in the new organization, without wearying our readers by comparing these arrangements with those of the former organization. In the Office of the Inspector General of Police, there are to be two divisions, each sub-divided into several sections. All confidential correspondence, statistics, and all matters relating to higher police, are to be conducted in the Office of the Inspector-General. All other affairs of the Board are to be taken charge of by the following offices :—the Bureau of Police Affairs, the Bureau of Accounts, the Bureau of Medical Affairs, the Constables' Head-quarters, the Office of the Fire Brigade, and the Penitentiary Office. Each of these different offices are in turn divided into sections, but of the latter it is not necessary to speak here. Such are briefly the principal features of the amendments just introduced into the organization of the Metropolitan Board of Police.

* * *

Simultaneously with the issue of the new organization above described, another Imperial Ordinance was promulgated relating to the salaries of the officers of the same Board. Under the former system, the Inspector-General of Police received a salary of from 3,600 *yen* to 5,000 *yen* per annum, according to his official rank. But the new organization fixes the salary at 4,000 *yen*, though it is provided that under special circumstances it may be raised to 4,500 *yen*. The Chief of the Staff is to receive 2,400 *yen*. All the other officials of the so-called higher grade receive from 700 to 1,500 *yen* annually. It is scarcely necessary to add that the new standard of salaries is much lower than the old.

### THE RUSSIAN PRINCE IMPERIAL.

THE *Nichi Nichi Shimbun* and the *Mainichi Shimbun* publish identical accounts of the programme to be followed in Tokyo on the arrival of His Imperial Highness the Russian Prince Imperial. Reaching in Tokyo by special train, the Prince will be welcomed at Shimbashi station by His Majesty the Emperor, and will proceed in the carriage with His Majesty to the Palace of Prince Arisugawa which is now in course of preparation for the Imperial visitor's reception. The same day the Prince will be received in audience by Their Majesties the Emperor and Empress, with whom he will dine. On the following day the Emperor will visit the Prince at his residence, and visits will also be exchanged between the Prince Imperial and the Japanese Princes of the Blood. That evening the Prince will be entertained by H.I.H. Prince Haru at the Akasaka Detached Palace. One afternoon will be devoted to a purely Japanese entertainment at the Emperor's Palace, when dancing of various kinds and a performance of Japanese music will take place, the Ministers of State, the Foreign Representatives, and officials of the higher grades being present. There will also, on another day, be a grand review on the Aoyoma plain, where the Emperor and the Prince Imperial will ride to the ground in the same carriage. The Imperial guest will also be entertained by H.I.H. Prince Komatsu, Japanese polo, fencing, and other sports being prepared for his amusement. There will be a ball at the Palace occupied by the Prince, an entertainment by Prince Arisugawa Taruhito at the Shiba Detached Palace, and a ball at the Palace of Prince Kitashirakawa. One day will be spent visiting Yenoshima and Kamakura, and the Prince will pass a night at the latter place, proceeding the following day to Yokosuka to witness a naval review, at which the Emperor also will be present. Thence the Prince will go to Hakone and Miyanoshita, passing one night there, and proceeding the next day to Atami, where also a night will be spent. Returning to Tokyo, His Imperial Highness will be received in farewell audience by the Emperor and Empress, dining with their Majesties the same evening. On his departure from Tokyo the Imperial visitor will be accompanied to Uyeno station by the Emperor.

* * *

The *Tokyo Shimpo* says that the Russian Prince Imperial is expected to arrive at Nagasaki on the 28th or 29th instant, but that he will not land officially until the 4th or 5th of May, at the conclusion of Lent. His Imperial Highness will then proceed to Kagoshima, where he will be entertained by Prince Shimazu, representative of the House of Satsuma. Returning to Nagasaki after a very brief stay at Kagoshima, the Prince will embark for Kobe, arriving there about the 8th of May. There being nothing to invite delay in Kobe, a start will be made the same day for Kyoto, whence the Prince will visit Lake Biwa, Nara and Osaka, getting back to Kobe about the 13th, and reaching Yokohama by sea on the 15th. He will make no stay in Yokohama, but proceeding at once to Tokyo, will remain there ten days, and afterwards continue his journey viâ Nikko, Sendai, Matsushima, Shiogama, and Morioka to Aomori, reaching the last named place about the 30th of May.

### ANCIENT PICTURES.

IN the province of Higo, at Oguni-mura, there is a temple called Mangan-ji, which was built in the year 1274 by direction of Hojo Tokisada. In its cemetery are buried Tokisada himself, as well as a number of *Samurai* who fell in the wars of the *Bunyei-Koan* eras (1265-1287), and among its treasures have been preserved, during six centuries, portraits of Tokimune and Tokisada. The latter came to Kiushu in 1255, and was appointed to the high office of *Chinzei Bugyo*. No image or portrait of him was generally known to be in existence prior to the announcement of the Mangan-ji heir-loom, but Tokimune is supposed to be represented by a wooden figure kept at Kamakura. The strong inclination displayed of late by the Japanese public to preserve the country's antiquities has apparently extended to Kiushu, for a movement was set on foot some time ago to obtain subscriptions to repair and support the old temple of Mangan, and the abbot, Mr. Ado Bemmei, has now come to Tokyo, bringing with him the two pictures. They are to be submitted for the inspection of His Majesty the Emperor. Already they have been viewed and highly praised by Viscounts Hijikata, Sugi, and Tani, Mr. Kuki, Barons Takasaki and Shigeno and others. Portraits dating from the thirteen century are unique treasures.

### IMPERIAL VISIT TO COUNT KAWAMURA.

THE *Official Gazette* announces that His Majesty the Emperor will visit the villa of Admiral Count Kawamura, a Privy Councillor, on the 11th instant. This, if we are not mistaken, is the first occasion when such an honour has been paid to an official not a member of the Cabinet, and Count Kawamura's many friends will be highly pleased that the exception should be made in his favour. Count Kawamura directed naval affairs from 1871 to 1885, when he retired, owing to a divergence between his views and those of the Cabinet in respect of naval policy. But his ability and experience remained at the service of the Department over which he had presided so long and so successfully, and each subsequent holder of the portfolio constantly sought and profited by his counsels. His villa at Mamiyana, a graceful and handsome edifice in

Digitized by Google

foreign style, over-looks Shiba Park and Tokyo Bay on the east and south, and commands a grand view of Fujiyama on the west, and we need scarcely add that it is surrounded by the beautifully laid out grounds without the solace of which no Japanese gentleman deems his life complete.

### AN OLD JOKE RE-TOLD IN JAPANESE.

A JAPANESE correspondent sends us the following, for the truth of which he vouches, remarking also that it affords a pretty good illustration of the difficulties Japanese have to surmount in mastering English. We print the communication almost unaltered:—A certain lady, having occasion to send her maid to a grocer's to get some jam, feared, not without reason, that the woman would forget the name of the article, and therefore advised her in that case to call to mind a pock-marked face, the Japanese term for pock-marked being *jami*. Full of confidence the girl set out on her errand, and soon reached her destination. But poor thing! She had entirely forgotten the name of the delicacy she was sent for, just as had been feared by her mistress. 'I want to have some ——,' she stammered to an apprentice of the grocer's, but she could not recollect the all-important name. At last after a good while she cried '*Abata! abata!*' (*Abata* is another Japanese term for pock-marked, only a little more polite than *jami*). "I see!" said the apprentice, "you want some butter." Presently he gave her some butter, and she carried it in triumph to her disappointed mistress."

### SPEAKING FROM THE TOMB.

THE public is occasionally startled by ebullitions of that curiously strong feeling which the Japanese of former days used to designate *Yamato-damashii*; a species of patriotism always capable of impelling men to acts of fanatical self-sacrifice. A case is reported by the vernacular press. Staying temporarily at the house of his parents in Nishikata-machi, in the Komagome suburb of Tokyo, was a youth aged twenty-seven, by name Ohara Bukei. His career had not been marked by any unusual event. A soldier by profession, he had been attached to the militia infantry of Hokkaido, and had attained the rank of lieutenant. Obtaining leave of absence, he came home recently, and after spending some time in Tokyo, left his home on the 1st instant, announcing to his parents and friends that he was about to return to Hokkaido. During the following two days his movements are unknown, but on the 3rd instant, he went to the temple of Saitoku, in the Shitaya district of Tokyo, and, repairing to the cemetery, proceeded to commit suicide according the prescribed method of the Japanese *Samurai*. With a dirk he opened his abdomen by vertical and longitudinal incisions, and then, turning the weapon against his throat, inflicted a severe wound. The dimensions of the cuts are said to have been four inches long by a quarter of an inch deep in the case of the abdomen, and five inches by half an inch in the case of the throat. Neither injury was of a fatal character, however, and when the priests summoned the police, who quickly arrived with medical aid, the youth was still living. He had endeavoured, apparently, to carry the weapon backwards through the stab in his throat, but strength had failed and he had sunk down fainting. When consciousness was restored, it appeared that the wound in the throat rendered speech impossible. By repeated gestures, however, Ohara seemed to entreat the guardians of the law to make an end of him, while they, on their side, applied themselves to the more prosaic task of ascertaining his name and address. When he had written these, the Military Authorities were communicated with, and the young man was ultimately conveyed to the Hospital of the University, where medical examination showed that his injuries were not likely to prove fatal. Of course the first idea was that the attempted suicide had been due to madness, and indeed until the line between sanity and insanity is more distinctly traced, it will be difficult to decide how such a case is to be classed. For though the statement of reasons written by Ohara on the eve of his intended self-destruction, betrays what some would call inability to balance cause and effect, it nevertheless indicates also that he was capable of clear reflection, and that he had deliberately chosen the traditional method, fully recognised in former days, of emphasizing his opinions by sacrificing his life to propagate them. It appeared, on inquiry, that he had long been in the habit of lamenting the state of national affairs. The tendency of the country to recast its political institutions in Western moulds, and the aggrandizing disposition of foreign States had filled him with anxiety. Russia especially seems to have been a constant nightmare to him. Her proximity to Hokkaido suggested all sorts of disquieting contingencies, and it appears to be thought that he considered the eve of the approaching visit of the Prince Imperial a suitable occasion to sacrifice himself on the altar of morbid patriotism. His valedictory document, addressed to men of public spirit among his countrymen, ran as follows:—"First, the investigation of affairs relating to Hokkaido; secondly, the necessity of inquiring into the affairs of the hostile country adjoining Hokkaido; thirdly, the increase of the militia; fourthly, the stationing of militia and drilled whalers on the Chishima islands; fifthly, the importance of developing commerce with China, and the importance, also, of commerce with Russia; sixthly, the revival of Shintoism and Buddhism. For the accomplishment of these objects I have laboured during eleven years, but without success, and to-day I am hopeless. Instead of living a useless life, it is better, dying, to convey the truth to the public-spirited men of the empire. General Nagayama and others have made every effort on account of the Hokkaido question, but very few among the people pay attention to them. Above all, the newspapers of Hokkaido devote themselves entirely to exposing the defects of the newly reclaimed lands, instead of seeking to interest people in the place. It is a most lamentable state of affairs, and I have resolved to die. I pray that these facts may be widely published by the press, and that while men laugh at my madness, public spirited persons may be led, for the sake of our country, to devote their strength to the accomplishment of the six objects enumerated above. The terrible Russians!"

* * *

This writer of this methodical document cannot be called insane, in the ordinary sense of the term, although a duly balanced Occidental mind would scarcely entertain the idea of acting as he acted. He represents a type supposed to be gradually disappearing before the new civilization, and yet the attitude of the Japanese public towards every similar instance during recent years in no degree authorises such a supposition. The old creed still holds that nothing has so much power in the ears of the living as a voice from the dead, and that if a man, faithfully believing in the public importance of his views, nevertheless fails to obtain respect for them, his honourable duty is to die. We cannot measure how much, if any, additional value life has acquired in the eyes of an educated Japanese since he was relieved, twenty years ago, from the necessity of holding it at the beck of his feudal chief. But the procedure of this youth of twenty-seven in the cemetery of the Saitoku temple shows that resolute disciples of the ancient creed are still to be found.

### THANKS.

THERE is published in Yokohama, under the auspices of the Printing and Publishing Company, a French newspaper called *Le Japon*. It made its appearance on the 1st of January. A few days ago it produced a very pretty eulogy of the amateur charity theatricals at the Rokumeikan. With true international courtesy and a fine sense of proportion, a column and a half of panegyric was devoted to the performances of the French amateurs—whose acting certainly merited every word of the praise bestowed on it—while the English performance received the following notice:—"Nous allions oublier de dire que la soirée a été coupée par une petite pièce anglaise. 'Women's rights or the lady of the future:' qui a peut-être eu le tort de durer pendant trois actes, ses interprètes se sont du reste montrés pleins de verve et d'entrain."

### THE NEW SERVICE OF JAPANESE STEAMSHIPS TO AUSTRALIA.

WE take the following from the *Sydney Herald*:—

Since last September arrangements have been in progress for the opening of a new steam service, with its head-quarters at Tokyo, Japan. Firstthe *Musashi Maru*, then the *Tokyo Maru*, and other vessels belonging to the most important steamship company in the "Far East," the Nippon Yusen Kaisha Mail Steamship Company of Japan, were named as to commence the new service, but a series of misfortunes happened and the pioneer boat, the *Miike Maru*, finally received orders to leave Hongkong on the maiden trip of the new venture. Captain J. B. Macmillan, formerly in the E. and A. Company's service, is entrusted with the honour of first visiting Sydney in a Japanese-owned merchant steamer flying the white flag with the red ball. He expected to be here on Sunday evening, but some very bad weather was met with off the Queensland coast—some very wild weather indeed, and the voyage was prolonged until yesterday. Upon entering the port the vessel proceeded to the Quarantine Station, where her water tanks were emptied out and the other regulations compiled with. The work occupied a very considerable time at the quarantine ground, and it was late—after dark indeed—ere the steamer came up to the Tasmanian Company's Wharf. A word or two as to the high standing of the line to which this pioneer boat belongs will be found of interest in view of the opening of the service to these colonies. The Japan Mail Steamship Company, or Nippon Yusen Kaisha, possess a fleet of 52 first-class large and full powered steamships, fitted with the latest improvements for the comfort and convenience of passengers. These steamships, carrying the Imperial Japanese mails, sail weekly to and from Shanghai and Yokohama via Nagasaki, the Inland Sea, and Kobe, and run a tri-weekly service between Nagasaki, Korean ports, Chefoo, Tientsin, and Vladivostock. The home service comprises almost daily communication between the chief ports of the Empire, for all of which foreign travellers may procure passports, without difficulty or expense. The capital of the company is about £2,000,000 and the company is subsidised by the Government to the extent of about £145,000 annually. The president is Mr. M. Morioka, vice-president Mr. Y. Yoshikawa, and the directors are Messrs. K. Uchida, M. Asada, R. Kondo, M. Kato, and A. Macmillan. The company's head-quarters are, as stated, at Tokyo, with branches at the principal ports of Japan. From this account it will readily be gathered that the line holds a good position. On the coast of Japan it holds a premier place, and its steamers on the Australian line will call at China ports and the Straits Settlements. There are, as is known, two lines of first-class steamers now running in the China-Australian trade, and the directors of the Japanese line have received such promises of support as have induced them to enter the field. The total net registered tonnage of the fleet is in round figures 50,000 tons, and there are 22 of the steamers whose tonnage range between 2,000 and 1,500 tons net register—a handsome fleet. The name of the company is associated with that of good management, handsome treatment of its masters, and crews, and the best possible treatment of its patrons. The largest of the passenger steamers are described by those who have travelled by them as being unsurpassed in any part of the world. They are all British built, and from the best yards; all costly ships, and all commanded and officered by Europeans. The *Miike Maru*, which arrived here last evening, though about the largest tonnaged of the fleet, is not regarded as a specimen ship of the line, being designed more for cargo than for passenger service. She was not constructed specially to the company's order, but in an emergency was purchased on the stocks. Though not having the gracefulness of preportion which the generality of the fleet possesses, the pioneer has good lines and her steaming capacity, says Captain Macmillan, reaches 13 knots, and as much as 313 miles were covered in a day's run on this trip from China. She is a steel screw boat of 3,308 gross register, 2,382 tons net, rigged as a brigantine, and straight stemmed, with an elliptical stern and a whale-back or turtle back aft. Forward is a top-gallant forecastle 37ft. long, and amidships a bridge 70ft. in length, under which are the officers' quarters, pantry, galley, &c. Aft is a deck-house containingt he saloon, a nicely-furnished apartment containing state-rooms for a dozen passengers. There is every comfort on board, as the passengers who arrived yesterday from Singapore fully attest. The steamer was launched three years ago at Sunderland. She was built by R. Thompson and Sons, and her full dimensions are—Length, 327ft. 3in, 42ft. 2in. beam, and depth 19ft. 8in. The vessel is divided into six watertights, and is built on the cellular double-bottom principle for carrying water ballast. Her engines are by J. Dickenson, of Sunderland, and are on the triple expansion principle, the diameters of the cylinders being respectively 25in., 40in., and 60in., and the stroke 45in. The boiler

Digitized by Google

pressure is 150lb., and the nominal horse-power 219. The daily consumption is but 30 tons of coal, and the vessel has a carrying capacity of 4,500 tons. The officers with Captain Macmillan are Messrs. Thomas, Horton, and Dabelle, and the machinery is in charge of Mr. Jordan. The purser is Mr. Yashisuye. In point of order and cleanliness the *Miike Maru* is quite up to the mail boat standard, decks, deck fittings, and all aft being scrupulously well looked after. Her engine-room, also, is a picture, and though the steamer has just finished a 30 days' voyage her engines might from appearances be taken to be brand new. The cargo for Sydney consists of some 400 tons general, and 4,000 bales kapok, and 300 logs of teak wood. For Melbourne, to which port she proceeds, there are 3,000 cases of general, and 2,500 bales kapok, and 300 logs teak. After discharging the Melbourne portion, she will go up to Newcastle, and return to Sydney, proceeding hence towards China, via ports. Of the run down from China Captain M. Millan reports:—We left Hongkong at 6 a.m. on January 9, and arrived at Singapore at 1 p.m. on the 14th; left Singapore at 5 p.m. on the 16th, cleared Gaspar Straits early on the 18th, and arrived at Samarang at noon 19th; left Samarang at 1 p.m. on the 21st, anchored off the pilot vessel at Sourabaya at 5 a.m. on the 22nd, waiting for high water. Moored off Sourabaya at 5 p.m. same day, left Sourabaya at 10 p.m. on the 24th, passed Banjowangie at noon on the 25th, Goode Island at 6 p.m. on February 1, Cooktown at 9 a.m. on the 3rd, and arrived at Townsville at noon on the 4th. Landed passengers and cargo, and proceeded at 6 p.m. same day, arriving at Sydney Heads at 2 p.m. on the 9th. From Hongkong to Singapore had moderate N. E. monsoon and thick rainy weather; Singapore to Goode Island variable winds and rainy weather; Goode Island to Cooktown fine weather, but hazy; from Cooktown to Whitsunday Passage heavy rain and thunderstorms, thence to Smoky Cape strong S.E. gale and heavy sea, and thence moderate variable winds and fine weather to port. The Sydney agents of this line are Messrs. Wm. Howard Smith and Sons, Limited.

### THE "YOMIURI SHIMBUN" ON TREATY REVISION.

AMONG the various utterances recently published by the vernacular press on the subject of Treaty Revision, one of special interest appears in the columns of the *Yomiuri Shimbun*. It derives its interest from two facts; first, that it treats current opinions in a broad, liberal manner; secondly, that it appears in a newspaper regarded by the public as a principal organ of the *Kaishin-to*. The article is not to be taken wholly as an expression of the *Yomiuri's* views. On that point the editor is careful to guard himself. But he admits his agreement with certain parts of it, and we may fairly assume that the general line of argument is not opposed to the programme of the party, otherwise the *Yomiuri* would not have offered itself as a medium of publication. The article runs thus:—"It has been already stated in these columns that in order to accomplish Treaty Revision, harmony must be established between the views of the various political parties and those of the Government. Past experience has taught us that no useful decision can be arrived at unless public opinion is consulted in the first place. The programmes of Counts Inouye and Okuma failed simply because public opinion became too powerful to be controlled by those statesmen. On the other hand, public opinion has not hitherto succeeded in imposing itself on the Government. The sum of its accomplishment in the year 1887 was to suspend the scheme of Revision advanced by Count Inouye; and similarly in 1889, the union of five political parties only achieved the arrest of Count Okuma's plans. It is to be regretted that politicians contented themselves with these destructive results, instead of proceeding to elaborate terms of Revision really suitable to Japan's condition. The most earnest investigation ought now to be undertaken by political parties, in view of the fact that Viscount Aoki, Minister of State for Foreign Affairs, is about to re-open negotiations for Treaty Revision. If politicians aim at nothing more than preventing the Government from achieving anything, grave national injury will be the only result. Japan will be discredited and despised in the eyes of Foreign Powers, while at home the consolidation of public opinion will be impossible, and the spirit of patriotic sacrifice will be extinguished. The members of political parties should not be contented with negative results, but should endeavour to formulate practical and positive views, beneficial to the country. A word now about the terms of Revision. Since Revision has a strong bearing on the interests of foreign countries, what is proposed by us is often disapproved by them. To be sure, then, of accomplishing Revision we must be prepared to fight in case our proposals are completely rejected. On the other hand, since to invite war in this enlightened age would be discreditable, we must employ every means to attain our object without bloodshed. To one thing, in connection with this, attention should be drawn. It is that the Japanese ought to endeavour to secure the respect of foreigners, instead of submitting to be despised by them. Strange to say, some of our nationals fear foreigners so much as to be opposed to permitting mixed residence or the ownership of real estate by foreigners, great as is the desire to accomplish Revision. These objectors merely expose their weakness to foreigners. We proceed now to consider what is said to be the draft of Viscount Aoki's proposals. The points which he is reported to make the subject of negotiation are the advisability (1) of allowing mixed residence; (2) of giving to foreigners the privilege of possessing real estate; (3) of permitting foreigners to engage in the coast-wise trade; (4) of bringing foreigners under Japanese jurisdiction, except within the Settlements for a fixed term of years, some say three, some five, and some until the new codes shall have gone into operation; and (5) of omitting the taxes on alcoholic beverages, tobacco, soy, oil, and so forth, and of raising the general tariff to 11 per cent. With regard to the first point, mixed residence is a necessary condition of Treaty Revision. Not only is it the price that we have to pay for the abolition of Consular Jurisdiction, but if we do not allow foreigners to reside freely in the interior, they will say that the Japanese are too timid and too weak to associate with them. That there was little opposition in respect of this point either in the time of Count Iuouye or in that of Count Okuma, is to be attributed to the fact that the public appreciated the necessity of mixed residence. We believe that the immediate sanction of mixed residence would not involve any change in our social and economical state, since, even now when mixed residence is interdicted, foreigners reside wherever they please, influenced by tradal conditions, by beautiful scenery, or by religious considerations. Things being in this state, we can only pity the persons who oppose mixed residence. Besides, asking in one breath for equal treaties and in the next forbidding mixed residence, they contradict themselves flagrantly. They claim indeed that many dangers are involved in extending the privilege of mixed residence to Chinese, but in point of fact our treaty with China, being different from our treaties with Western Powers, entails no such necessity. If our treaty with China be revised on the basis of allowing the Chinese to trade, travel, and reside wherever they please in Japanese territory, the same privileges must be granted to Japanese in Chinese territory. This we believe to be impracticable. We cannot be content to place our countrymen under Chinese laws, neither is China prepared to extend to us the privilege of mixed residence. This question, therefore, would not enter into any negotiation for revision of the treaty between Japan and China. * * * * The opponents of mixed residence apprehend that, were it permitted, Japanese merchants and manufacturers would be ousted by men from the West, coming here with their wide experience and their newly invented machines. We deem such apprehensions quite groundless. If foreigners enter the interior, they will bring capital and machinery, and the results will be only beneficial to Japan. It is also asserted that though the Japanese possess capital and machinery, they have not the knowledge to utilize them, and would be at a disadvantage compared with foreigners. This is a weak contention. The Japanese, if they please, can employ foreign advisers and foreign engineers. Moreover, Western folks trading in Japan would have to sell their merchandise at higher prices than those demanded by the Japanese, the style of living of the former being much more costly than that of the latter. The same timid folks assert that, were mixed residence allowed, the number of marriages between Japanese and foreigners would increase and the Japanese race would finally become extinct. Apparently these people place the Japanese in the same category with the aborigines of North America and the Ainos of Hokkaido, and think that their extinction in the presence of a higher civilization is inevitable. It is extravagant to compare a thickly populated country like Japan with America as it was at the time of its discovery. The Japanese, too, have their own distinct traits as Europeans and Americans have theirs. If we examine into the circumstances of mixed marriages that have taken place thus far, we find that almost all Japanese who have married Western women are ardent admirers of Western civilization, while the Japanese women who have married foreigners, gave their hands, not because they loved, but because they were attracted by the pecuniary circumstances of their husbands. Experience indicates that the number of mixed marriages would not increase after mixed residence was permitted. If they did so increase, the result would be a strengthening of the Japanese race. From every point of view, the contention of the opponents of mixed residence is far less weighty than that of its advocates.

### A NEW WORK ON JAPANESE ART.

THE experts of the Museum of Antiquities in Tokyo are busily engaged compiling a work that will mark an era in Japanese art. It is to be a profusely illustrated history of the country's fine arts (*Nippon Bijutsu Rekishi*), and will consist of about twelve volumes, two of which will probably be published next year. Mr. Kuki, President of the Imperial Museum and Director of the Museum of Antiquities, is interesting himself keenly in the preparation of the work. Of course all the pictures, lacquers, porcelains, carvings, and other remarkable objects in the possession of the Museums or of the principal private collections will be available for purposes of illustration, but a feature of even greater interest will be the reproduction of the finest heirlooms in the keeping of all the ancient temples throughout the empire. These were photographed during 1888 and 1889, and great piles of exquisitely finished pictures are now lying in the Museum at Uyeno, the best and most remarkable of which are to appear in the book. Unfortunately it will be in Japanese only. We understand that the subsequent publication of an English edition is contemplated, but that it will not make its appearance for a considerable time after the Japanese original is in the hands of the public. This seems a great pity. There ought not to be any serious difficulty in issuing an English edition simultaneously with the Japanese, since intelligent translation is alone required. The compilers naturally desire to appeal first to their own countrymen, but it has to be remembered that the cost of such a work must be very high, and that, in all probability, a much larger number of purchasers could be found in Europe and America than in Japan. If the plates have to be subsequently reproduced for the purposes of an English edition, the proceeding will involve large additional outlay, whereas the striking of extra plates at the time of original publication would be comparatively inexpensive.

### SURPLUS REVENUE.

THERE appears to have been some anxiety felt in certain quarters about the consequences of surplus revenue being shut up in the Treasury vaults. During 1888 and 1889, by clever financia management, the incomings of the State exceeded the outgoings by an aggregate sum of over 7,800,000 *yen*. The disposal of this surplus was provided for in the last Estimates, but as it is to be applied to the building of ships and railways and the construction of telegraphs, it cannot go into circulation for some time. On the other hand, the result of the economies suggested by the Diet will be a surplus of 6,400,000 *yen* approximately in the Budget for this year, and it was assumed by some financiers that

Digitized by Google

a total amount of about fourteen million *yen* would thus be withdrawn from circulation and looked up in the vaults of the Treasury. But this is now declared to be a baseless apprehension. The fact is that the collection of each year's public income is a much more tedious business than its expenditure, and that the Treasury is invariably obliged to issue exchequer bills to a large amount in order to keep the machine of State moving. These bills will not have to be issued during the present year; or at any rate they will be issued in greatly reduced quantity, and the interest they would carry need not, consequently, be paid. This interest, say some critics, will be the only difference between the amount of money put into circulation during the present year by the Treasury and the amount usually put into circulation. But we do not entirely follow this reasoning. Exchequer bills are either money—*i.e.* discharge all the functions of money—or means of putting money into circulation. When issued in small sums, so that they pass from hand to hand for the purpose of making payments or discharging debts, they are undoubtedly money. But when, as is the case in Japan, and commonly in Western countries also, they are of large denominations and bear interest, their circulation is plainly retarded. For as the weight of interest accumulates towards maturity, the bills gradually pass out of circulation, and become ordinary investments. Even in the latter case, however, their issue or non-issue must have a distinct effect upon the money-market, since they enable the Government to obtain access to funds which presumably would not otherwise find employment. To put the matter more plainly, inasmuch as the proceeds of taxation do not come to hand until after a great part of the outlay has been made on account of which the taxes are imposed, it follows that the Government, when its actual outgoings and nominal incomings are nearly balanced, must be able to draw upon some surplus subsistence fund in order to pay its way. To keep such a fund in reserve would be bad economy, and exchequer bills are accordingly resorted to as means of obtaining from the banks whatever sums are needed to meet current expenses from time to time. The banks, on the other hand, thus obtain for their reserve notes an outlet not otherwise available, and the issue of the matter is that so much additional money is put into circulation. Of course, with a large surplus lying in the Treasury from 1888 and 1889, recourse need not be had to exchequer bills. But that is beside the question. The point is that, the Government's expenditure being reduced by some six million *yen*, while its collection of revenue remains unaltered, a certain amount of money must of necessity remain idle, which, under ordinary circumstances, would find its way into circulation. Probably the difference caused by the one-sided legislation of the Diet will not be so great as to affect general prosperity, but there will certainly be a difference.

### THE "JIYU SHIMBUN."

THE difficulty between the shareholders and the editorial staff of the *Jiyu Shimbun* remains unadjusted, and does not seem at all likely to be adjusted. Messrs. Horikoshi, Mogi, and Sato, the most prominent protestors against the former management, have refused to entertain any scheme of compromise. It was at one time proposed that Mr. Kurihashi, the old editor, should resume his functions, Count Itagaki undertaking to exercise a general supervisory control. But the *Kwanto-ha*, as Messrs. Horikoshi, Mogi, and so forth are called, seem to entertain a special objection to Count Itagaki's directorship. In fact the revolt is against Tosa influence, of which the principal representative, Count Itagaki, naturally becomes an object of dislike. The recalcitrant shareholders have no very large pecuniary interest in the paper—the sum is stated at two thousand five hundred *yen*—and it ought to have been easy to buy them out, but for some reason that solution was impossible. It is now stated that Count Itagaki has resolved to separate himself and start another daily newspaper, calling it the *Jiyu*, and leaving the *Jiyu Shimbun* to its own devices. The publisher is to be Mr. Sogawa Yasuma, and the necessary steps have been taken to register the paper. These disputes augur badly for the future of the Radical Party, as previously constituted. The split in its ranks appears to grow wider daily.

* * *

The unexpected issue of the disputes among political leaders and their followers may possibly be the recognition of the *Kaishin-to* as the true Liberal Party of Japan. The extreme position taken by the *Kaishin-to* in respect of the Budget, and its consistent maintenance of that position to the end, have attracted the attention and stirred the admiration of Japanese "stalwarts," and the party stands high in public favour to-day. Its roll of members contained only four thousand names when the Diet was prorogued, but several hundred have since been added. We find no incident in modern Japanese politics more curious than this. The *Kaishin-to* in former times were conspicuous for moderation and solidity. Any intimate union between them and the frothy, violent Radicals seemed as improbable as the mixture of oil with water. Even at the time when combination became the mania of the moment, additional zest being imparted to it by official prohibition, it was found hopeless to attempt any association of the Radicals and the *Kaishin-to*. Yet so soon as a question arose dividing the House of Representatives into Moderates and Extremists, the *Kaishin-to* occupied the camp of the latter in closest company with the most uncompromising agitators among the *Jiyu-to*. And now, when another convulsion in the ranks of the Radicals, has thrown off Count Itagaki and many of the soberest men in the Party, the *Kaishin-to* are found not with them, but with the uncompromising and uncongenial remnant.

### MANUFACTURE OF FOREIGN PAPER IN JAPAN.

THE manufacturers of foreign paper in Japan are now in great distress. The growth of the industry has outstripped the demand for its products. The *Keizai Zasshi* has an interesting article on the subject. From it we learn that there are at present nine manufacturers—eight private and one Government—of foreign paper in Japan. The object of the Government factory is to supply the demands of the various Departments of State, the paper produced in excess of official requirements being placed on the general market. The following table shows the quantity of foreign paper manufactured by the eight private companies during the 11 years between 1880 and 1890, inclusive:—

| Year. | Quantity. lbs. | Year. | Quantity. lbs. |
|---|---|---|---|
| 1880..... | 3,084,907 | 1886..... | 6,430,463 |
| 1881..... | 3,968,375 | 1887..... | 6,756,810 |
| 1882..... | 4,250,919 | 1888..... | 6,442,666 |
| 1883..... | 4,600,130 | 1889..... | 6,778,149 |
| 1884..... | 5,264,104 | 1890..... | 5,711,841 |
| 1885..... | 5,022,584 | (First Half) | — |

The figures for the first half of 1890 do not include the manufactures of a few companies such as the *Kobe Seishi Kaisha* and the *Senju Seishi Kaisha*, while the output of the *Yokkaichi Seishi Kaisha* is calculated only for five months, and that of the *Fuji Seishi Kaisha* for two months. Taking these circumstances into consideration, the actual quantity manufactured during the first half of last year is estimated by our contemporary at about 11,200,000 lbs. As a consequence of the industrial or speculative mania prevailing throughout the country during the last few years, several new companies for the manufacture of foreign paper were projected, and such of them as developed into genuine concerns began to work their mills from last year. The result was a sudden and large increase in the quantity of foreign paper during the first six months of the year. The quantity of foreign paper actually required in Japan is estimated by the *Keizai Zasshi* at about 16 million pounds annually. Thus, taking the aggregate manufacture of last year at 22,400,000 pounds, there remain 6 million pounds in excess of the demand. Great distress among the manufacturers has necessarily ensued. The following table shows the average annual price of foreign paper manufactured in Japan during the last ten years:—

| Year. | Price. per 100 lbs. *yen*. | Year. | Price. per 100 lbs. *yen*. |
|---|---|---|---|
| 1881..... | 14.020 | 1886 ..... | 6.852 |
| 1882..... | 12.720 | 1887 ..... | 6.675 |
| 1883..... | 10.850 | 1888 ..... | 7.039 |
| 1884..... | 9.280 | 1889 ..... | 6.713 |
| 1885..... | 8.204 | 1890 ..... | 6.194 |

With increasing manufacture, the prices thus steadily fell. On the other hand, while home production grew so rapidly, the quantity of paper imported from abroad also increased yearly, as may be seen from the following table:—

| Year. | Import. lbs. | Year. | Import. lbs. |
|---|---|---|---|
| 1880 ..... | 483,913 | 1886..... | 1,149,086 |
| 1881 ..... | 418,105 | 1887..... | 2,411,636 |
| 1882 ..... | 1,251,170 | 1888..... | 6,584,814 |
| 1883 ..... | 548,749 | 1889..... | 2,613,905 |
| 1884 ..... | 277,978 | 1890..... | 2,695,913 |
| 1885 ..... | 422,986 | (First half) | — |

Japanese manufacturers are not only subjected to keen competition at home, but have also to contend against the produce of foreign mills. They claim, according to the *Keizai Zashi*, that they are placed at a great disadvantage in the struggle with their Western competitors, because they have to import costly machines and plant from a great distance, and because they pay a much higher rate of interest on their capital than Western manufacturers do. Further they are inexperienced and unskilful. For these reasons, they argue that they are entitled to tariff protection against the imported article. The Tokyo journal, however, advises them not to rely on any such hope, for, apart from the theoretical aspects of protection and free trade, Japan is at present unable to carry out a protective policy even though conducive to national interests. Without relying on such a measure, the Japanese manufacturers ought to think of helping themselves in some other way. They may, for instance, try to manufacture note paper, drawing paper, and paper used for book-keeping, in addition to the ordinary printing paper which at present forms the only kind manufactured in Japan. And they may, as we (*Japan Mail*) think, fairly claim that the Government factory be closed, since the only excuse for conducting such work under official auspices is that private enterprise cannot undertake it. Two years ago an agitation was set on foot aiming at the closing of the Government's mills, but it was then claimed that the paper made there, being intended for special purposes, required special machinery and could not be supplied by private mills. The explanation is valid, so far as it goes. But if the *Keizai Zasshi's* information be correct, it appears that the Government factory does not confine itself to special papers, since its surplus production is sold every year in the open market. The point calls for investigation.

### THE DEADLY "HIBACHI."

ONE man was killed and three others narrowly escaped death by asphyxiation yesterday morning on board a large new coal barge belonging to the Canadian Pacific Steamship Company. The men, who are smiths by trade, had been employed till a late hour in various jobs connected with the completion of the barge, which lies in the Creek at Maeda-bashi, and went to sleep shortly before three in the morning in a small hold or tank in the bows of the vessel. They had with them to heat the place a charcoal brazier, and as a final measure they drew the scuttle over the small opening giving access to the place, and then went to rest. The fumes of the charcoal of course very soon overpowered them. About seven o'clock a man coming with food for the workers called on them, but receiving no answer opened the scuttle and found the men in an unconscious state. It is stated that this man was so frightened by what he saw that he fled, believing that the seemingly dead people were the victims of cholera, and thus the rescue of the men was needlessly delayed. So far as we can learn, however, the information in the possession of the police shows that little delay took place, and that soon after the men

Digitized by Google

were discovered Japanese doctors were at work trying to resuscitate them. Dr. Hall also arrived on the scene, and half an hour later, so successful were his efforts that three of the men were breathing more or less easily. In the case of one man, however, rescue had come too late, and his lifeless body lies covered by matting close to his more fortunate comrades.

### THE CASE AGAINST THE "NIPPON."

OUR readers will probably remember that the editor of the *Nippon*, Mr. Ota Yoshiji, and the publisher, Mr. Nakamura Tanekichi, recently gained an appeal made by them against a judgment of a Court of First Instance, by which they had been sentenced to a month's minor confinement and a fine of 25 *yen*, in consequence of having published an article which was declared to be subversive of the laws of the empire. The Public Procurator, dissatisfied with the verdict of the Appeal Court, carried the case to the Supreme Court, where judgment was on Monday delivered by Mr. Justice Kitamura. The Court, declaring that the verdict of the lower tribunal, by which the implicated article had been regarded as subversive of the laws of the empire, was illegal, ruled that the case must be re-heard by the Nagoya Court of Appeal. The *Nippon*, therefore, has not yet escaped, but it has the consolation of reflecting that its article was sufficiently skilful to give the law a great deal of trouble.

### MR. NAGASAKI.

THE departure of Mr. S. Nagasaki, a Master of Ceremonies, for Kagoshima, has been stated by the press to be in accordance with instructions from the Government, and for the purpose of making preparations to receive the Russian Prince Imperial. But it appears that this is not correct. The Prince, while in Satsuma, is to be the guest of Prince Shimazu, the former chief of the Great Southern clan, and the latter is naturally anxious to receive and entertain the illustrious visitor in strict accordance with all the rules of Western etiquette. But as this is the first visit of a European Prince Imperial to Kagoshima, there is, of course, some uncertainty about the details of the reception, and Mr. Nagasaki, himself a native of Satsuma, has obtained permission to be absent for a time from his official duties in Tokyo, in order to proceed to Kagoshima and give his assistance to Prince Shimazu.

### RECEPTION AT THE FRENCH LEGATION.

ON Thursday afternoon at the French Legation in Tokyo was held the usual spring Reception by Madame Sienkiewiez. This Reception has come to be looked forward to as one of the pleasantest incidents of the season of cherry bloom, and yesterday's event was not the least successful exercise of the hospitality for which the French Legation has always been conspicuous. The weather was perfect, and the garden, with its brilliant masses of blossom, looked very lovely, an additional charm being lent to the scene by the presence of about fifty children, foreign and Japanese, making fête with all the good-will in the world. Everybody who is anybody was present, from Ministers of State downwards. Music and a sumptuous cold collation helped to augment the enjoyment, and sunset was close at hand when the large assemblage, slowly and with evident reluctance, took its departure from the happy scene.

### A TREATY-REVISION FANATIC.

THE *Mimpo* tells a strange story of a youth who appears to have conceived the idea of emulating the example of Kurushima Tsuneki. An assistant in the dispensary of Dr. Okamura, in Hakozakicho, this lad, by name Yukiba Zenichiro, has been for some time in the habit of speaking in an angry discontented manner. A few days ago, he informed a friend that it was his intention to kill Viscount Aoki, in connection with the subject of Treaty Revision, and as he appeared to be taking measures to obtain money for his purpose and was moreover in possession of a written promise sealed with blood, information was given to the police, with the result that they arrested him on the 1st instant as he passed before the Shrine of Suitengu.

### THE AFTERGLOW.

If one should seek your door some hapless day,
With white and trembling lips, and face all pale,
And tell you, dear, that I was lying dead,
I would not have you start, or shriek, or wail,
Or shroud your form in weeds of rayless black,
Or shed for me one bitter, fruitless tear;
For know that, save for your beloved sake,
I drop earth's load without a sigh or fear.
But could you stand above my place of rest,
With calm eyes overlooking all the past,
And feel my life an influence to lift
Your own to purer, nobler heights at last,
My dust, like blossoms at the breath of morn,
Would thrill with joy at thought so strangely sweet,
Would wake to almost conscious life once more,
And tremble into flowers beneath your feet.

WILLIAM SHIELDS LISCOMB.

### NEW FOREIGN EMPLOYÉS.

AN Imperial Ordinance has been published, in connection with a law passed by the Diet, authorizing the Treasury to contract various engagements, the expenditures involved falling partly or wholly to the charge of the current fiscal year. From this Ordinance we learn that it is proposed to engage three more foreigners, one in the Nemuro Agricultural College at a salary of 3,350 *yen* annually; one in the Military Academy, at a salary of 612 *yen* monthly, including allowances'; and one in the Naval Academy, at a salary of 350 *yen* monthly. It is pleasant to learn that the reductions in the foreign staff of the Government are to be compensated in some degree at all events.

### COMPENSATION TO SUFFERERS IN THE SATSUMA REBELLION.

THE *Official Gazette* intimates that a sum of ten thousand *yen* is to be paid—in accordance with Imperial sanction granted on the 31st ultimo, and in consequence of an application made by the Minister of State for the Interior—by way of compensation to persons whose dwellings were burned during the campaigns of Kagoshima and Kumamoto in 1876. It seems strange that a payment of this kind should be made after such a long interval, but presumably the claims could not previously be established. It is also conceivable that the idea of seeking compensation did not occur to the sufferers, for assuredly no such notion would have been entertained in pre-Restoration times.

### VISCOUNT AND MR.

WHEN the news was received in America that Viscount Kuki had died, people confused the deceased with Mr. Kuki, formerly Japanese Representative in Washington, and it is said that many letters of condolence were addressed to Mrs. Kuki. The confusion is increased by a local English contemporary, which persists in speaking of Mrs. Kuki as "Viscountess Kuki," and of her husband as "Viscount Kuki," though in point of fact the former Minister to Washington and present Director-General of the Imperial Museum has no title of nobility, but is plain Mr. Kuki.

### THE KIUSHU RAILWAY.

THE section of the Kiushu Railway between Moji and Takase, a distance of about 100 miles, was opened for traffic on the 1st instant. The takings during the first three days were as follow:—1st instant, 1,195.95 *yen*; 2nd instant, 1,303.50 *yen*; and 3rd instant, 1,443.69 *yen*. The distance to be still completed in order to carry the line to Kumamoto is only 11 miles, and it is expected that when the connection is made, the traffic receipts will be largely increased. The prospects of the line are evidently very encouraging.

### DEATH OF THE PRESIDENT OF THE SUPREME COURT.

ON Monday morning Mr. Justice Nishi Shigenori, President of the Supreme Court (*Daishin-in*), died in Tokyo. Mr. Nishi had been ailing for some time, but we have not yet learned the nature of his malady. He was one of the oldest occupants of the Japanese Bench. Having served as a Judge of the Supreme Court up to the year 1886, he was promoted to be President of the Court of Appeal, which office he held until last year, being then raised to the highest position open to a Japanese Judge, namely the Presidency of the Supreme Court. He was a native of Shizuoka.

### U. S. NAVY.

SQUADRON CIRCULAR No. 4, dated on board the Flagship *Alliance* at Yokohama on April 3rd, and issued over the signature of Rear-Admiral Belknap, contains the following notification:—"Commanding Officers are notified that by a cablegram received this date from the Honourable the Secretary of the Navy, under date of Washington, April 2, 1891, the following are values fixed for the quarter beginning April 1st, 1891:—Imperial Japanese *yen*, Silver, 79.2; Mexican, 80.

### THE CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

AT the meeting of shareholders to be held this month the Directors will recommend a dividend for the half-year ending 31st December last at the rate of 9 per cent. per annum, placing £50,000 to reserve fund, which will then be £300,000. This, coupled with the fact that the Bank's capital is on a gold basis, is very satisfactory.

### LORD CONNEMARA.

LORD CONNEMARA, who is described by latest China papers as being entertained on a magnificent scale by the compradore of Messrs. Jardine, Matheson & Co., at Foochow, will, we learn, according to present arrangements arrive at Kobe about the first week of June. During his stay in China he intends to pay a visit to the gorges of the Yangtsze River.

### JAPANESE DIPLOMATIC APPOINTMENTS.

VISCOUNT NOMURA YASUSHI, recently gazetted Japanese Representative in Paris, has received the additional appointments of Minister Resident in Spain and Portugal. Also, Mr. Tateno Gozo, Japanese Representative in Washington, has been appointed Minister Resident in Mexico.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The vernacular press is much exercised at present about probable changes in the Cabinet. On the evening of the 9th instant, the curiosity of the news-reading public of Tokyo was roused to a high point by handbills distributed throughout the city by the enterprizing *Choya Shimbun*, announcing its intention of making a startling political revelation in its issue of the next morning. The revelation proved to be a report, alleged to be entirely trustworthy, that Count Yamagata had declared at a recent meeting of the Cabinet his resolution to resign his post of Minister President of State. Our contemporary states that Count Yamagata expressed a wish to go out of office just after the prorogation of the Diet, but that there being no statesman willing to succeed him, he was obliged to remain at his post. Not even now has he found a successor, but his idea, according to the *Choya*, is that, if he shows his irrevocable resolution to resign, the gravity of the situation will certainly induce his colleagues to prevail on some statesman to accept the post, as the Count himself was prevailed on under similar circumstances seventeen months ago. As to his probable successor, our contemporary points to Count Saigo. Count Saigo is said to be extremely reluctant to become Minister President, but the *Choya* belives that he will not be proof against the persistent request of his colleagues. There is a rumour that in the event of the above change, Count Matsukata will succeed Count Saigo at the Home Office, but the *Choya* professes itself unable to put any faith in the report. It is more

Digitized by Google

probable it says, that Count Saigo will combine the office of Minister President with that of Minister of Home Affairs leaving the business of the latter post to the Vice-Minister, Mr. Shirane.

* * *

It is a noteworthy fact that the majority of the papers are inclined to desire the continuance of Count Yamagata as Minister President of State. Their disposition is explained by two circumstances; first, that the nation, though recognizing the defects of the Count as a constitutional statesmen, is thoroughly assured of his disinterested patriotism and honesty; and secondly, that just now no statesman seems willing to succeed him, should he resign his post. Count Ito is generally counted among the probable occupants of the position, but there appears to be little ground to expect his speedy return to power. The same is true of Count Inouye.

* * *

The question of Treaty Revision more and more engages the attention of the journalistic world. It is as yet premature to forecast the attitude that will be adopted by the various parties towards Viscount Aoki's supposed programme. The details of the programme are not yet known, and the public has nothing tangible to go on. There is, however, reason to believe that the opposition, if there actually be opposition, to the programme of the present chief of the Foreign Office, will not be marked by that intense party feeling which characterized the opposition to Count Okuma's scheme. It is a remarkable circumstance that the Liberal organ, the *Rikken Jiyu Shimbun*, and the *Kaishin-to* organ, *Yomiuri Shimbun*, both protest against Treaty Revision being made a party question. The articles in the *Yomiuri Shimbun* are contributed by Mr. Hikita, and the editor states that the writer's views are not shared by him in every respect. But there is no doubt that the editor approves of the general spirit of the essay. The series of articles is not yet concluded, but from what has thus far appeared, it is evident that the writer is not opposed to the reported programme of Viscount Aoki.

* * *

The *Kokumin Shimbun* refrains from declaring itself on the subject of Treaty Revision until the details of the present Minister's scheme are known. But it advises Count Okuma—whose programme, its editor, Mr. Tokutomi, supported in 1889—to give every support he can to Viscount Aoki, if the latter's scheme be found worthy of support. The Count is strongly warned against suffering his followers to place obstacles in the path of the present Minister of Foreign Affairs.

* * *

The *Mimpo* urges the importance of studying the question of Treaty Revision, and ridicules the consistency of Liberals who, influenced by conservative considerations, ally themselves with Conservatives. In another article, the same journal observes that the Government is bound to consult the opinions of the Diet as to the commercial and financial aspects of the scheme of revision.

* * *

The papers unite in advising the Government to take an early opportunity of making the details of the new programme known to the public. The *Rikken Jiyu Shimbun* avers that it would be extremely dangerous to publish the details of the new treaties just on the eve of the completion of the negotiations, for public opinion would be liable to be swayed by prejudice and passion. It consequently advises Viscount Aoki to make known his programme at once.

* * *

The reduction in the number of officials recently effected by the Government, has not given entire satisfaction to the Metropolitan press. The *Kokkwai* advises the Authorities to amend the organization of the various Departments of State in such a manner that it may not be necessary every year to cause a panic in the ranks of public servants. The *Hochi Shimbun* regrets that the recent reductions were not made in such a manner as to infuse new activity into those who escaped. Reforms carried out in such a faint-hearted manner are not likely to lead to beneficial results. In order to make them effective, the *Hochi* thinks it necessary that the Ministers of State should themselves offer examples of industry and economy. Thus and thus alone, can subordinate officials be induced to mend their present lazy habits.

* * *

The *Jiji Shimpo* writes in a similar strain. The dismissal of a few hundred officials of the lower classes cannot give entire satisfaction to the advocates of public economy; whose primary motive is hatred of the extravagance of Cabinet Ministers and other high dignitaries of State. The people, avers the *Jiji*, are thoroughly sick of these luxurious officials, and as long as they continue in their present courses, a popular cry for retrenchment of public expenditure will never cease to agitate the political world. The Ministers of State are advised to sell their magnificent villas, abolish their splendid official residences, and return to the simplicity of former days.

* * *

The Korean question still continues to excite general interest. The *Kokkwai*, alluding to the critical situation of Korean affairs, draws attention to some circumstances, relating to the relations between Korea and Russia. First, though Russia has not resorted to any open territorial encroachment on the border of Korea; yet the increasing emigration of Koreans into Russian territory, and the increased facilities of commerce and navigation which Russia recently obtained on the Korean frontiers, have really brought the two countries into closer contact. Secondly the Russian party at the Court of Sōul is said to be steadily growing more and more influential, the King and the members of the Ming family being reported to be particularly well disposed towards Russia. Thirdly, the Treaty (of 慶興) gives Russians the privilege of navigating the river 豆們 as far as the commercial town of 慶興. Fourthly, Mr. Weber, the Russian Representative at Sōul, now a very influential man, follows the policy of seeking to estrange Korea from China. And fifthly, Russia is as ever desirous of obtaining a naval station open throughout the whole year. Our contemporary entertains no doubt that Russia is determined to obtain such a port in Korea. As to the policy that ought to be pursued in Korea, the *Kokkwai* thinks that the wisest plan would be to place the peninsular kingdom under the joint protection of Japan, China, England, and Russia. In another article, the same journal recommends the appointment of Mr. Mutsu to the post of Japanese Minister at Sōul. It thinks him the only statesman in Japan able to maintain in Korea the honour of his country in the present critical condition of affairs.

* * *

The *Hochi Shimbun*, in an article said to embody the opinions of a certain distinguished personage in the Government, observes that China may possibly entertain suspicions about the real motive of the Japanese Government in the latter's relations with Korea. China, however, ought to recognize the wisdom of assisting Korea to be an independent and progressive country. The united support of the Middle Kingdom and of Japan would be sufficient to ensure the safety of the peninsular kingdom. The question of the abolition of the Tientsin Convention of 1885 receives much notice from politicians. There are two rumours; one that China has intimated to Japan her desire to terminate the treaty; the other, that the Japanese Government, anticipating China's desire, contemplates opening negotiations with the Peking Government on the subject. The *Rikken Jiyu Shimbun* declares itself opposed to any such action on the part of this empire, if the object in view be simply to please the Chinese Government. But if Japanese statesmen wish to terminate the treaty on account of its provisions being inconvenient to Japan's freedom of action in the peninsula, the *Jiyu* will not oppose the step. The rescinding of the treaty would leave China free to pursue a militant policy in Korea, and in that event Japan, in the opinion of the Tokyo journal, must be prepared to protect the independence of Korea, even by appealing to force. "A country in a period of growth and development" says the *Jiyu*, "must sometimes adopt an aggressive policy. Such a policy may even be necessitated as a means of self-defence. Japan is now in a state of youth and development, and in order that her growth may be healthy, she ought to have spheres wherein she can move freely and without restriction."

* * *

The *Tokyo Shimpo* exposes the misconceptions entertained about the Tientsin Treaty. It does not pretend to say whether there is really any desire on the part of either the Japanese or the Chinese Government to terminate the treaty, but it denies that the treaty is inconvenient to either Japan or China. By the treaty, either country, if desirous of sending troops to Korea, must previously make a communication to the other country to that effect. It is supposed in certain quarters that "communication" means asking consent. But though the party receiving the communication is certainly entitled to protest against troops being sent, in the absence of such protest the party making the communication is not bound to wait for the approval of the other. Japan, according to our contemporary, has no territorial design upon Korea, and consequently cannot be much inconvenienced by the provisions of the Treaty. Regarding Korea as her dependency, China may feel rather inconvenienced by the treaty, but she cannot justly demand its termination, because at the time of its conclusion between Count Ito and Earl Li, the object of the contracting parties was to maintain the independence of Korea.

* * *

The approaching visit of the Russian Prince Imperial continues to furnish food for comment. The *Choya Shimbun* reproves those people who circulate disquieting rumours as to the ulterior object of the visit. Their allegations are denounced as disrespectful to the august personage who does Japan the honour of paying her a special visit. Men prone to believe such absurd stories betray a lamentable want of confidence in the strength of their country. They are assured that Japan need not be afraid of Russia, for the former is ready to put sixty thousand troops in the field within ten days, whereas it would take Russia at least fifteen days—even after the completion of the Siberian railway—to send out to the East an army of ten thousand. Some people busy themselves in circulating such rumours, being desirous of seeing Japan fight with Russia. The *Kokkwai* takes them roundly to task, and also censures the conduct of Japanese who spread the story that Saigo is returning home in the Russian war vessel that carries the Russian Crown Prince. For Saigo, despite his otherwise noble career, is a traitor to the present Government, and, even supposing him alive, the Russian Crown Prince would be the last person to carry him to Japan. To circulate such a story is, the *Kokkwai* says, an insult to the Crown Prince.

* * *

All the papers unite in calling upon the Japanese nation to receive the Imperial visitor with every possible mark of respect and good-will. The *Nichi Nichi Shimbun* censures the tardiness of the municipal authorities of Tokyo in making preparations for His Imperial Highness' reception, and urges upon them the importance of taking prompt action. The *Jiji Shimpo* invites merchants of the capital to take advantage of the visit to bring Japanese manufactures to the notice of the Russian people. The merchants are advised to prepare a special fair for the occasion. Dealers in objects of art are particularly recommended to abandon their suicidal, if not disgraceful, policy of charging foreign customers fabulous prices. On the whole, judging from what has appeared in the press, the Japanese nation seems determined to give a thoroughly hospitable reception to the Russian Crown Prince.

## *COMBINATION IN THE INTERESTS OF BOTH SIDES.*

IF unanimous testimony have any value, it is distinctly established that great irregularity exists on the part of Japanese traders in their dealings with foreign merchants. There may be question whether the abuses practised here are fairly representative of Japanese commercial morality. We ourselves believe that there are just grounds to doubt the fact, not because we pretend to know much about the morality of Japanese tradesfolk in general, but because we have no difficulty in detecting the existence of special conditions in Yokohama which have distinctly tended and do distinctly tend to encourage laxity, and because we reasonably infer that in the absence of such conditions a more rigid code would of necessity be observed. These conditions have so often been explained in our columns that we may be pardoned for not recapitulating them. What seems quite certain is that an almost unlimited amount of forbearance is shown by the foreign merchant towards the Japanese. So long as the latter does not absolutely abscond, he can always, apparently, count on obtaining credit and being treated as a substantial person. A correspondent of a local contemporary speaks of goods ordered years ago by Japanese, and yet lying to this day in the godowns of foreign merchants, who are compelled to act as unpaid warehouse-men for their *nonchalant* Japanese clients, and he adds that expenses amounting to thousands of dollars are annually incurred in this way by some foreign firms. Now, can this possibly be regarded as a wholesome state of affairs? However favourably disposed one may be towards the Japanese, there is no room to doubt that their moral attitude in respect of tradal affairs is distinctly casual. The reproach attaching to them on that account is by no means as strong as it would be had they a different social history. One of the plainest propositions in the primer of ethics is that men do not live above the estimate persistently formed of them by their fellows. If society unvaryingly treats one of its sections as worthy of contempt, the members of that section will end by becoming despicable. Trade was the least reputable of recognised professions thirty years ago in Japan. The mere fact of descending to earn a livelihood by barter, deprived a man of a portion of the respect of his fellows and weakened his self-respect correspondingly. He easily learned to regard his engagements in a light, airy fashion, not being expected to treat them with the austere punctiliousness of the *Samurai*. Thus was developed a give-and-take system, fatal to the growth of credit as interpreted and observed in the West. An engagement was something to be kept or postponed according to convenience, and where all traders took this volatile view of their obligations, a little extra levity did not entail serious consequences. But trade on its modern pedestal of Occidental refinement, trade to which credit is now as the very breath of its nostrils, cannot exist in such a tenuous atmosphere, and if trade is ever to prosper and grow in this country, the principle which, with foreigners, has been crystallized into an instinct, must be grafted by their efforts on the defective morality of the Japanese. There is no innate viciousness to overcome, but only a habit of mind educated by peculiar circumstances. Is this very desirable consummation likely to be promoted by the exceeding leniency said to be shown by foreign merchants towards defaulting Japanese in Yokohama? There has been, we are told, a distinct elevation of the Japanese standard during recent years. Men are now to be found who observe their engagements rigidly. If that be so, surely these men are ill rewarded and little encouraged when they see that to be lax costs their competitors nothing, and that the sin of broken faith is not punished by loss of custom. If foreign merchants in combination devised and applied some system tending to eliminate untrustworthy Japanese traders, and to confine the business of the port to the trustworthy only, Yokohama, ceasing to be the haunt of men looked down on by their own countrymen, might become a leavening centre of commercial morality. Time and the contact of wholesome habits, attended by visibly advantageous results, can alone accomplish the desired regeneration. It is distinctly retarded by indefinite tolerance of old abuses; by perpetually allowing men to escape the penalties that ought to attend breaches of faith. The British merchants have the bulk of the import trade in their own hands. They should be able to combine for the purpose of placing it on a sound footing. Competition is referred to as a fatal obstacle to combination, but if the objects of combination were perfectly fair and reasonable, competition could attract only those whose custom is neither safe nor desirable.

## *THE TROUBLE BETWEEN ITALY AND AMERICA.*

THE city of New Orleans possesses a large Italian element in its population. In this respect it is conspicuous among all American cities. Last year the Italians residing there were estimated to aggregate at least twenty-five thousand. Many of them are industrious and prosperous citizens. They have practically monopolized the fruit trade, two of their firms owning no less than twenty-one steamships which ply between New Orleans and Central America. But among them there are also to be found numbers of degraded, lawless persons, who freely resort to the dagger and the pistol to avenge their wrongs or promote their schemes. During the period of 35 years from 1856 to 1890, twenty-seven assassinations occurred in the city, the victims being Italians in twenty-three cases. In no instance did it prove possible to convict the assassins, their fellow-countrymen invariably refusing to testify against them. In May of last year, however, a disposition to assist the course of justice was exhibited for the first time. The occasion certainly sufficed to arouse indignation. Two rival firms of stevedores, the PROVENZANOS and MATRANGOS, had long competed for the business of loading and discharging the vessels engaged in the Central American fruit trade, but finally the former firm was ousted from the business by the latter. A feud therefore sprang up between the two. The PROVENZANOS claimed that they had been deprived of the work owing to secret threats addressed to the shipowners by the MATRANGOS, who, they alleged, had announced their intention of enlisting the aid of a Secret society known as the Mafia, unless the shipowners acceded to their demands. This Mafia Association enjoyed an exceedingly bad reputation in New Orleans. Exterminated in Italy by recourse to the most rigorous measures, it had been resuscitated in America, its chief purpose being to levy blackmail, and its proceedings often leading to the perpetration of bloody crimes. Conspicuously active in seeking to suppress the Mafia and in collecting evidence against it, was Mr. DAVID HENNESSY, Superintendent of the New Orleans police, who seems to have been a man of great courage and activity. When the quarrel between the two firms of stevedores reached an acute stage, serious complications being apprehended, HENNESSY called together the leading members of the firms, and having warned them in strong terms against resorting to violence, induced them to pledge themselves to keep the peace. A few nights afterwards, as six of the MATRANGOS were driving home in a large waggon, they were attacked by a party of men, who fired about fifty shots into the waggon, severely wounding three of its inmates. Then for the first time the police found Italians willing to assist the course of justice. The wounded MATRANGOS gave up the names of their assailants, and offered evidence against them in Court. This unprecedented incident seems to have loosed the tongues of many Italian merchants who for years had silently submitted to be blackmailed by the Mafia. They subscribed a large sum of money, employed detectives to assist the authorities, and engaged eminent Counsel to conduct the prosecution. A conviction was obtained, but on a legal quibble another trial had to be granted. In collecting testimony for this trial Superintendent HENNESSY made himself particularly active. He procured information from Italy, and it was generally understood that when placed in the box he would furnish evidence showing up the

Digitized by Google

whole organization and murderous rascality of the Mafia. But he did not live to come into court. On the night of October 16th, 1890, he was waylaid by two parties of assassins, while returning to his house, and literally riddled with buckshot and slugs, being fired upon from both front and rear. He died the next morning, having denounced the Mafia as his murderers. A number of arrests were quickly made, and great excitement prevailed. Threats to lynch the prisoners and to drive out the whole Italian colony were so freely uttered, that the Authorities deemed it necessary to make preparations for calling out the militia. Thirty years previously the city had risen *en masse* against the Italians, in consequence of the attempted murder of the clerk of the criminal court. On that occasion the head-quarters of the Italians were surrounded by a mob, and twenty to thirty of these strangers lost their lives, being either shot down or driven into the river to drown. Happily, however, no repetition of such violence occurred last year. The citizens were content to leave the matter in the hands of the City Council, which summoned a meeting and appointed a Committee of fifty to investigate the existence and methods of the Mafia and to suggest measures of suppression. It is worth noting, in connection with recent developments, that the *Italo Americano,* the organ of the New Orleans Italians, urged its nationals to cooperate in bringing the assassins to justice, and protested against the respectable Italian residents being confounded with the Mafia, whose doings and purposes they abhorred. The police showed themselves very active, effecting a large number of arrests and ultimately detaining some twenty-five men against several of whom strong testimony had been obtained. Meanwhile steps were taken by the Italian citizens of New Orleans to obtain diplomatic protection. Nine days after the murder of HENNESSY, Baron FAVA, Italian Representative in Washington, applied to the Secretary of State, declaring that the respectable Italians would lend every assistance to bring Superintendent HENNESSY'S murderers to justice, but protesting against holding the whole community responsible for the act of a few assassins. Thenceforth the excitement seems to have gradually cooled. Nineteen Italians were held for trial, but five months elapsed before sufficient evidence could be obtained to bring the case into court, and then the accused were acquitted. Public opinion, however, did not acquit them. It was generally believed that the Jury had acted under the influence of threats addressed to its members by the Mafia, and the people, surrounding the jail where the prisoners, for the sake, doubtless, of their better protection, were still confined, lynched seven of them. Of what ensued thereafter we have no accurate information, but it is certain that diplomatic representations were made by the Italian Minister in Washington, and that, as a telegram dated April 1st says, failing "to effect an adjustment of the affair," he demanded his passports, the American Government on its side summoning a special session of Congress.

Such is the history, so far as we know, of an affair that has assumed the dimensions of an international difficulty, threatening to involve the United States and Italy in war. We are at a loss to comprehend the action of the Italian Government in the matter. A violent demonstration against the Italian residents of New Orleans, *qua* Italians, would assuredly have called for diplomatic remonstrance. But nothing of the kind appears to have occurred. The fury of the mob was directed entirely against a few prisoners, who seemed likely to escape the consequence of the crime attributed to them. It was not an anti-Italian demonstration in any sense. Moreover, it is difficult to conceive what step the Government of the United States can be expected to take. Louisiana has its own laws, and its own organizations for preserving order. The central authorities cannot interfere with the States except in cases of a special character, which this assuredly is not, since lynchings occur frequently, American citizens being the victims in almost every instance. It is probably safe to conclude that no blows will be struck. Neither Power is in a position to do the other a serious injury, and an exit from the difficulty is pretty sure to be discovered.

## *THE OPPOSITION IN EMBRYO.*

IF we do not frequently translate and lay before our readers articles and notes from the vernacular press on the subject of Treaty Revision, our reticence must by no means be interpreted as signifying that the Japanese newspapers are silent on the subject. On the contrary, ever since the Diet was prorogued, numerous and copious references to this much hacknied topic have appeared. Indeed, at no time since Revision entered the field of practical politics has public opinion shown itself more active, except in the months of keen excitement immediately preceding the fall of the KURODA Cabinet. It would appear that while the Diet was in session people looked to it for a thorough ventilation of the matter, and that they have now taken it up on their own account. But despite this constant comment and discussion, we have not perceived any occasion to refer at length to the contents of our vernacular contemporaries' columns, inasmuch as their information, whenever it travels outside grooves already familiar, appears to be more or less incorrect, and inasmuch, also, as they reflect, not a decided, but a wavering and uncertain attitude. Speaking broadly, the difference between public opinion, thus far expressed, in 1891, and public opinion as recorded in 1889, is that whereas at the latter epoch the *Kaishin-to* organs stood alone as pronounced supporters of the Cabinet's programme, all the rest of the press being either covertly or overtly hostile, there are as yet no distinctly inimical demonstrations against what are supposed to be Viscount AOKI'S proposals, while several of the newspapers, though preserving a circumspect tone, allow it to be seen that they approve the proposals. Further, no attempt is made any longer to conceal that the question is distinctly influenced by party politics. We know that in Count OKUMA'S time the indiscreetly expressed exultation of the *Kaishin-to* when they witnessed their able leader's seemingly imminent success, provoked a spirit of opposition among men of different political views, with the result that the problem was seriously complicated. In those days, however, people were not willing to admit that the course of a distinctly national question could be influenced by party politics, whereas now there is plainly less delicacy. The men who were against the Government in the Diet make no pretence of concealing that they are against it in the matter of Treaty Revision also, and everybody admits that these politicians oppose for the sake of opposition. Much to be regretted as is this state of affairs, to look for anything else would be foolishly sanguine. Were the solution of a similar problem undertaken by a British Cabinet, and did the proposed solution leave a margin for wider national assertion, the opposition would behave just as the Japanese opposition behaves to-day. The interesting points, then, are: what is the distribution of the various political parties in respect of the question, and what are the conditions to which exception is taken by the opposition. With regard to the former, it will be easily understood that no absolutely hard and fast line can yet be drawn. A fairly accurate analysis is possible, however, and it shows us, in the first place, that the division which fatally weakened the ranks of the Government itself in 1889 has nearly, if not altogether, disappeared to-day. The discontented Privy Councillors and officials who publicly or privately added their voices to the outcry against foreign judicial experts and against the ownership of real estate by foreigners, are now either neutral, or supporters of a programme from which both of these conditions are understood to be expunged. An element of strength is also added by the fact that three Ministers of State being Plenipotentiaries, the credit of achieving Revision cannot accrue to one alone, and jealousy is thus, in some degree, disarmed. As to political parties, the supporters of the Government's programme appear to be the *Kyodo* Club, the Independents (*Taisei-kai*), the section of the Radicals known as the *Kokumin Jiyu-to* (National Radicals), and the *Jichi-to*

Digitized by Google

(Self-government Party). The declared opponents are the Kwanto section of the Radicals, and Viscount TORIO'S Conservatives; while seated on the fence are the Kiushu and Tohoku (north-eastern) sections of the Radicals, the *Kaishin-to*, and the Independent Conservatives of Viscount TORIO. The *Kaishin-to's* position is difficult. Responsible themselves for attempting to negotiate a treaty distinctly less favourable, from a Japanese point of view, than the supposed programme, they ought not, consistently, to be in the camp of the opposition. Yet we gather from stray utterances that they are preparing the way to take a hostile stand, on the ground that the country has changed since 1889, and that what suited it then is not sufficient now. Of course the *Kaishin-to* in alliance with a majority of the Radicals and the Conservatives would constitute, numerically, a powerful opposition. But their strength must depend, to a great extent, on the nature of their platform, and it is difficult to conceive first, that the nation will go with them in respect of the three counts advanced by Mr. OI KENTARO and his brother-extremists; and secondly, that there can be any genuine solidarity among the opposing elements themselves as to these counts. The counts are understood to be, that mixed residence must not be allowed; that Consular jurisdiction must be abolished at once and unconditionally; and that an absolutely free hand must be given to the country in tariff affairs. The *Kaishin-to* is, as we think, utterly precluded from endorsing the first of these propositions, and the third is sufficiently extravagant to be condemned by all reasonable folks. With such propositions, however, the vernacular press and party politicians are toying in an uncertain, tentative fashion, after the manner of men who require to familiarise themselves with a sin before they can set about committing it in earnest. They even ask for a special session of the Diet, though it was prorogued only a month ago, though no new development has occurred since its prorogation, and though the matter to be submitted to it is distinctly reserved as an Imperial prerogative. In short, so perplexed are they to discover a popular basis for their opposition, that they revert to the cry raised by Viscount TANI and his followers in 1887. It seems scarcely necessary to reproduce these echoes of unreasoning discontent. We are unable to believe in the sincerity of Japanese whose faith in the capacities of their nationals is so small, and whose pride in the progress made by their country during the Meiji era is so superficial, that they dare not face the ordeal of allowing foreigners to reside in their midst and to trade with them on equal terms. Such pusillanimity, such lack of self-confidence, contemptible under any circumstances, becomes absolutely ludicrous when exhibited by a people who, in the same breath, claim that they have qualified to stand shoulder to shoulder with the foremost States of the world in the comity of nations. Mr. OI KENTARO, the chief exponent of this cowardly doctrine, is called a leader of the Liberals, but should in truth be recognised as a conspicuous slave to the worst traditions of mediæval seclusion. Neither does it appear that serious treatment ought to be accorded to Japanese who, at this period of their national history, insist upon a degree of freedom not enjoyed by the proudest countries of Europe in tariff affairs. Every European State is bound by a conventional tariff more or less comprehensive. Japan cannot be humiliated by voluntarily submitting to what those States endure voluntarily. Finally, as to the immediate and unconditional abolition of Consular jurisdiction, there is just this to be said, that they are not sane persons who seek to make a compact without considering the other party at all. If Japan be determined to sweep away the present system incontinently and unconditionally, she is merely trifling with herself and others when she talks of negotiating. There can be no negotiation where one side takes everything and gives nothing. Evidently these issues have not yet been maturely considered. The malcontents angling with their three counts, will catch, so far as we can see, only poltroons, farceurs, and fanatics.

## *EDUCATION IN INDIA.*

IN view of the questions that are continually arising on the subject of Education in Japan, some notes upon Education in India, by one who recently made his way here across that country, may not be without interest.

The Education question in India was obviously rendered intricate by various difficulties which do not arise in Japan. The vast extent of country—nearly a million square miles, peopled by many different races, speaking different tongues and professing different religions; the immense school-going population—the total number receiving education in 1889 was 3,544,000, and this was but a percentage of 11.2 upon all who might have done so; the difficulty of the secluded life of the girls—only 290,000 were attending school in 1888; all these combined to make the problem before the Government exceedingly abstruse.

Education in India may be obtained (1) at a Government school; (2) at an aided school; (3) by private instruction. Class (2) contains the Missionary Schools, as to which, in order to clear the ground, we may say that as a general rule there is one hour's religious education given daily, either by the missionary or by a native teacher. There the direct religious influence practically ceases; except (so far as I know) at Delhi, where the members of the Cambridge Mission spend their whole mornings in teaching, thus presenting the ordinary subjects of examination from a Christian point of view. The number of converts made in the schools is very small, the scholars in many cases receiving no encouragement in the direction of conversion, lest the non-Christian parents withdraw their children.

Of classes (1) and (2) by far the largest number are "Public" schools; that is, schools in which the course of study is prescribed by the Department, and which are inspected by the Department, or present pupils at the public examinations. These are far more satisfactory in every way than the "private" schools, the percentage of passes at the Universities being considerably higher. The "Public" schools are primary and secondary. At the primary school, reading and writing, and such arithmetic and mensuration as a peasant might require, are taught. Of these there are 87,500, with 2,560,000 pupils; there are also 31,600 private elementary schools, with 416,000 scholars: about 84 per cent. of the entire school-going population is thus satisfied with elementary education.

In the secondary schools, an advanced knowledge of the vernacular and a substantial knowledge of English are imparted. Of these schools there are 4,700, with 533,000 students (14 per cent.) From a secondary school, the young aspirant passes to one of the 124 colleges, which contain 13,950 students, give direct preparation for the Universities, and thus control the mass of the higher and secondary education of India. These colleges are (1) Arts Colleges; (2) Professional Colleges, where instruction in engineering, etc., is given.

India possesses 5 Universities: Calcutta, Madras, Bombay, the Punjab University, and Allahabad; which last held its first examination in March, 1889, and it is satisfactory to notice an increase of 40 per cent. in the number of students under instruction in college classes in the last five years. At these Universities, 19,746 students presented themselves for examination in 1889, of whom 5,250 passed, while 1,734 degrees were given, the vast majority in arts and sciences.

These are simply examining Universities, on the same principle as that of London. We may take Calcutta University to illustrate the University course.

The entrance examination may be undergone at any one of 39 centres; the subjects being English (various books of battles, lives of eminent philanthropists, short pieces of poetry, some repetition); one of sixteen languages; elementary mathematics; and the outlines of the history of England and India. Next comes the examination for F.A. (First Arts): English (extracts from SCOTT, GOLDSMITH, MILTON, GRANT, GREEN): one of nine languages—Greek, Latin, Sanskrit, Hebrew, French, Arabic, Persian, Urdu, Armenian: but we may

Digitized by Google

say at once, that very few students take any language but Sanskrit, Persian, and Urdu; and as it would probably be vain to give the names of the books required in these languages, the Greek and Latin books used shall serve to show the standard. In Greek, a book of HERODOTUS, and a play of EURIPIDES; in Latin, a book of VIRGIL, and a dialogue of CICERO, are the set books. In addition, Mathematics, Elementary Physics, History, and deductive Logic must be offered.

The B. A. Examination may be taken with or without Honours. The subjects are the same as for F. A., with the addition of Philosophy: here is the list of books for 1888:—

| ENGLISH—PASS. | ENGLISH—HONOURS. |
|---|---|
| Shakespeare, 3 plays;<br>Milton, 3 books;<br>Dryden's Essays;<br>Golden Treasury of Songs;<br>Life of Dryden;<br>Burke, selections. | Add, Spenser, Bk. i.;<br>Tennyson, Princess;<br>Mat. Arnold, Essays on Criticism;<br>Milton, Areopagitica. |
| GREEK—PASS. | GREEK—HONOURS. |
| Sophocles, 2 plays;<br>Demosthenes—De Corona;<br>Æschines—In Ctes. | Add, Thuc., one book;<br>Euripides, one play;<br>Plato—Phaedo. |
| PHILOSOPHY—PASS. | PHILOSOPHY—HONOURS. |
| McCosh—Loquitive powers;<br>Sully—Outlines of psychology;<br>Calderwood—Handbook of moral philosophy;<br>Sidgwick—Essays. | Add, Ueberweg vol. ii.;<br>Schwegler's Hist.<br>Martineau, Study of Religion. |

The historical course includes the histories of England, India, Greece, and Rome: the Mathematical, in Honours, Analytical plane geometry, and the Integral and Differential Calculus.

For the examination for M.A., one of seven languages must be taken (the Sanscrit books required number 13), with the constitutional history of England, and a special period: Indian or European political philosophy, and political economy; mental and moral philosophy, including logic, psychology, ethics, natural theology; mathematics, and one of six branches of natural science. The English books are as follows:—SPENSER, "Faerie Queen" (one book); SHAKESPEARE (5 plays); MARLOWE, FAUSTUS; DRYDEN (3 poems); SHERIDAN, GOLDSMITH, DE QUINCEY, various biographies; philological grammars, history of literature, &c. In Greek, "Iliad" i.—xii.; PINDAR; AESCH., SOPH., EURIP. (three plays each): ARISTOPHANES (four plays); HERODOTUS (two books): THUCYDIDES (three books); DEMOSTHENES (three orations); PLATO (two dialogues): ARISTOTLE, Politics; besides grammar, history of literature, &c.

It would lengthen to excess an already long article, were I to try to give the subjects more completely. It only remains to speak of the cost of this great system, and to give a superficial view of its results.

In Bengal, the yearly cost of a student in a Government College is 233 rupees, of which 140 falls upon the State. In the elementary schools the cost of each pupil is 12.2 annas (16 annas in a rupee). The total expenditure of the country in 1888 on Professional Colleges, was 67,500 tens of rupees; on Art Colleges, 185,000 tens; secondary schools, 891,000 tens; primary schools, 850,000 tens; total, 2,709,232 tens of rupees. Valuing the rupee at 1s. 7d. and the *yen* at 3s. 2d., this gives the cost of Indian education, for 3,544,000 students, as 54,184,640 *yen*. The results, statistically, are encouraging. In 1867, there were at Calcutta 1,058 candidates, of whom 477 were successful, for entrance; in 1889 the numbers were 5,883 and 1,452. For F. A. 163 candidates, 94 passes, compare with 2,467 and 709; for B. A. 39 and 15 compare with 1,165 and 440; and the progress has been steady and rapid, year by year. The number of girls who are being brought out from their lifelong imprisonment is also a hopeful sign. But the percentage of children attending school (11.2) is still extremely small.

On the other hand, from the point of view of the moral growth of the people, men are doubting whither all this will lead. Young India is examination mad: the gems of the English poets are simply crammed for examination purposes, and philosophy appears to flow in at one ear and out at the other, as soon as the examination is done with. One embryo GERVINUS, having had SHELLEY'S "Ode to the West Wind" explained to him, asked "What did he write it for?" Such a question, and I am told it is a typical one, tells its own tale.

One difficulty is, as to what is to become of these lights of the examination room. It is amusing to be told that every degree, from "F.A. (failed, 188—)" to "M.A." has its value in the marriage market; every young genius also who attains to a degree expects to find a place in some Government office. If he fails to get this, and the number is necessarily limited, he will perhaps betake himself to the vernacular press, and earn his bread by denouncing the British tyrants, oppressors of the people, &c.

But the great drawback is, that a little knowledge seems likely to prove a dangerous thing. Education has sharpened, while it has not morally improved, the native character; and the law courts daily prove the truth of this. It is hard to see what system of justice the Government could have imposed other than the present one, which we owe in its most surprising fulness, to Lord MACAULAY, and which is founded, as would appear to us reasonable, on trial by evidence. But the native mind turns its ingenuity, sharpened by Britain-given education, to account, by concocting the most elaborate schemes of trickery for the courts of law. These schemes at times take the utmost ingenuity to unravel, and at last leave an unsatisfactory impression that something was wrong. In fact, the British Government (if I may say so without casting any slur upon a nation) found a people in ignorance, if not in innocence, and runs the risk of turning them into knaves. It almost goes without saying that the old religions of the country, with their ideals of righteousness and moral sanction, go by the board; and a system of morals manufactured to order cannot take their place. Such are the fears men express. The British Government is doing its very best to deal fairly and justly by the immense dependency committed to its keeping: it has set in motion gigantic forces; and whether it can turn them and guide them aright, or whether this will prove a task beyond its powers, time alone can show. H.M.

## *THE RELATIONS BETWEEN THE EASTERN CHURCHES AND THE CHURCH OF ENGLAND.*

THE opening of the Orthodox Cathedral on Surugadai the other day seems to offer the opportunity for a few remarks on the relation of the Anglican Church to the Orthodox Eastern Church, of which the Russian Church forms a large and important part.

It must not be forgotten that the English Church, as such, has never formally separated from the Eastern branch of the Catholic Church. As all readers of history are aware, the separation of the Eastern and Western Churches was completed before the end of the 11th century, the grounds of which division it is not necessary to mention here. The English Church, being a portion of the Western branch, was naturally included in the Western side of the breach. Since the Reformation, however, the English Church has taken an altogether independent line from that of Rome, and, having thus more distinctly asserted her individuality, it would be natural to suppose that she would on her own responsibility, as soon as the opportunity offered, seek for re-union. Such we find to be the case.

In proof of this let us refer to the following extracts (the italics are ours) from the report of "the Committee on the Eastern Churches" at the last Lambeth Conference in 1888, signed by the Bishop of WINCHESTER as chairman:—"Your Committee regard the friendly feelings manifested towards our Church by the orthodox Eastern Communion as a matter for deep thankfulness. These feelings inspire the *hope that at no distant time closer relations may be established between the two Churches.* Your Committee, however, are of opinion that any hasty or ill-considered step in this direction would only retard the accomplishment of this hope. Our expectations of nearer fellowship are founded upon the friendly tone of the correspondence which the Archbishop of CANTERBURY *and his predecessors* have held from time to time with Patriarchs of the Orthodox Church, and upon the cordiality of the welcome given by the Heads of that Church to Anglican Bishops and Clergy, such as the Bishop of GIBRALTAR, who have travelled in the East. Additional grounds of hope are furnished by the visit of Archbishop LYCURGUS (of Syra and Tenos) to England in 1870, by

Digitized by Google

the conversation which passed between him and the present Bishop of WINCHESTER at Ely, by the words which Archbishop LYCURGUS used at the conclusion of the second Conference held at Bonn; and by the request which the Orthodox Patriarch of JERUSALEM recently addressed to the Archbishop of CANTERBURY, that the Anglican Bishopric in Jerusalem should be reconstituted, and that the head-quarters of the Bishop should be placed in that city, rather than at Beyrout or elsewhere." The Conference practically adopted this report in its Resolutions.

Attention may also be called to Appendix D of Bishop BICKERSTETH'S *Pastoral Charge* for Lent, 1889, in which is given at length the letter of congratulation sent by the Archbishop of CANTERBURY to the Metropolitan of KIEFF on the 900th anniversary of the conversion of Russia, together with the speech in reply of the Procurator of the Holy Synod. The terms in which both are couched manifest the most kindly feelings and mutual respect, and testify to that gradual tendency of the two Churches to draw nearer to one another which has been spoken of above.

It may be added that distinguished ecclesiastics of the Eastern Church, such as Archbishop LYCURGUS and the Metropolitan of CYPRUS, during visits to England, have taken part in the services of the English Church, and, on the other hand, the Orthodox Patriarch of JERUSALEM has set apart the celebrated "Chapel of Abraham" in the Church of the Holy Sepulchre for the celebration of the Holy Eucharist in accordance with Anglican rites.

From another point of view, the welcome accorded by the English Parliament and people, notwithstanding the opposition of a small fanatical minority, to a Russian Princess, who now for many years has made her home in their midst, has tended to promote a similar good understanding between the two Churches.

From these facts it will be seen that the hindrances which are felt on both sides to reunion are becoming more and more likely, through mutual discussion and understanding, to be at any rate so far reduced as to make some kind of inter-communion, if not actual reunion, possible at no distant date. Meanwhile the best feeling is being maintained between the two Churches, and the presence of priests of the Anglo-Catholic Communion at the Consecration of the Orthodox Cathedral on March 8th was only what was fitting and natural in view of the present attitude of each Church to the other. In Tokyo, where the work of the Russian Church under that truly Apostolic man, Bishop NICOLAI, has so entirely won the admiration and good wishes of all, it was only natural that members of the Anglican Mission would gladly seize the opportunity afforded them by the Bishop's invitation to show their deep sympathy with his work. ANGLICANUS.

## *THE MISSIONS OF THE JAPANESE NATION.*

A PAMPHLET of much interest dealing with the natural missions of the Japanese nation has just been published in Tokyo by Mr. MIYAKE, editor of the *Nippon-Jin*.

No epoch in the history of Japan and probably of any other nation has been richer in materials for psychological study than the last two and a half decades of this country's progress. Europe and America can show States that have undergone more disturbing convulsions, social and political, but it is now a mere truism to say that no other people were ever brought so suddenly and thoroughly into contact with a civilization essentially different from their own. In proportion to the novelty of the phenomenon is the interest of analysing its effects upon the minds of the Japanese. One of these days, philosophers will devote themselves to an exhaustive examination of this distinctly memorable chapter of Oriental annals. Here we only allude to it briefly in connection with our immediate subject. Naturally, the first and general effect of contact with the new civilization was to awaken sentiments of keen curiosity and profound admiration. A more important and more interesting result, however, was that not a few Japanese youths of reflective temperament began to ponder whether they and their compatriots were morally qualified to hold their own in the struggle for existence against the pushing races of Europe and America: in other words, whether the Japanese nation had any rôle to play in the drama of human progress. To the naturally high spirited and hero-worshipping Japanese people, nothing could be more galling and unbearable than the idea of being permanently doomed to a secondary function in the progress of human development. No wonder, then, that the question of the future destiny of the Japanese race should have received anxious attention from the ambitious and proud children of the Land of the Rising Sun. Plainly, Mr. MIYAKE, the author of the pamphlet before us, is one of those who have eagerly pondered this question of the nation's future. A conspicuously original thinker and interesting writer of the nationalistic school, popularly called *Kokusui Hozon-ha*, his name has been so prominently before the public for the past few years that his last publication will assuredly appeal with peculiar force to the imagination of the rising generation. The work is divided into five chapters. In the first chapter, the writer propounds, in general terms, the proposition that each nation, like each individual of the human race, has its own special gifts, and that to develop and profit by those gifts is its mission in the scheme of the universe, for thus alone can there be possibility of building up a perfect temple of humanity. "Now," observes Mr. MIYAKE, "if while one Asiatic nation after another has declined and fallen, Japan, a little island Empire in the Far East, still continues to maintain her proud independence, the exception must have some deep significance. It indicates clearly that the Japanese nation is charged with some important mission in the destiny of humanity." Having laid down this general proposition, the author proceeds, in his second chapter, to deal with the natural capacities of the Japanese nation. We shall not refer to this portion of the subject at any length, for Mr. MIYAKE'S views have already been reproduced in our columns from an article in the opening number of the *Nippon-Jin* for the current year. We may note, however, Mr. MIYAKE'S firm conviction that the Japanese are not morally inferior to the nations of the Aryan stock. He supports this contention by copious reference to the history not only of Japan but also of China, for he maintains that whatever has been accomplished by the latter is surely within the capacity of the former, under similar conditions. As an object lesson in his comparison between Japanese and Europeans, he instances the case of the foreign employés of the Japanese Government. These gentlemen, he says, have been in most cases men of good education and respectable standing in their own countries, but their opinions and counsels have not always been entitled to admiration. Some assert that the Japanese are merely imitative, and not capable of original ideas and inventions. Mr. MIYAKE indignantly repudiates the charge. Men who create new schools of thought, he observes, are few and far between in any country. NEWTONS and DARWINS only appear at intervals of centuries. Only twenty years having elapsed since the introduction of Occidental science and philosophy into Japan, it is surely premature to expect the evolution of any new doctrines or opinions of importance on the lines of that science or civilization. On the other hand, the manner in which the Japanese formerly assimilated and digested Indian theology and Chinese philosophy, plainly indicates, in the author's opinion, that they are not naturally inferior to Western nations in their capacity to prosecute scientific and philosophical investigations.

In the remaining three chapters Mr. MIYAKE considers the natural missions of the Japanese nation. He discusses them under three headings, namely, *Truth*, *Justice*, and *Beauty*. To each a chapter is devoted. Under the first heading, he includes philosophical and scientific research. We are told that in this domain it is the special mission of Japanese scholars to investigate the history, literature, language, religion, political systems, the flora, and fauna, not only of Japan but also of China and the other countries of the Far East. Speaking of Japanese history in particular, the writer remarks that its study

Digitized by Google

cannot fail to be productive of valuable philosophical results, for the Japanese nation having developed along exceptionally homogeneous and continuous lines, its annals furnish valuable materials for the investigation of historical cause and effect. As for Chinese philosophy, he remarks that, although some of the Chinese classical works have been translated by European scholars, the task of collecting and systematizing the whole treasures of that ancient literature is not to be expected from Europeans, who are impeded by the extreme difficulty of thoroughly mastering the subtleties of the Chinese language, whatever study they devote to it. On the other hand, educated Japanese understand the written language of China as completely as that of their own country. It thus becomes the duty of Japanese scholars to bring to light all the hidden treasures of the unexplored mine. As to the means of realizing this great object, the author suggests that a really representative Oriental Academy be established in Japan, and that highly educated philosophers, scientists, and literati be despatched to the neighbouring empire at the public expense. Passing on to his second theme, *Justice*, Mr. MIYAKE considers the function of the Japanese nation as a factor for promoting justice among the nations of the world. To discharge this function, it is, of course, essential that the country be strong enough to defend itself in case of necessity, and strong enough, also, to secure the respect of other nations. In this context he compares the military and naval armament of Japan with that of other Asiatic Powers, and earnestly recommends its augmentation. Armaments, however, require money, so Mr. MIYAKE devotes the rest of this chapter to a statement of reforms that ought to be introduced in industry, agriculture, pisciculture, and so forth.

The last chapter deals, under the heading *Beauty*, with the mission of the Japanese in the sphere of fine arts. Their physical surroundings have made them an essentially artistic people. Their houses, their gardens, their furniture, even their domestic utensils are distinguished by exceptional artistic taste. It may perhaps be claimed, in Mr. MIYAKE'S opinion, that in respect of Art the Japanese are not very much behind the ancient Greeks. In support of this theory he instances the development of metal-working, painting, lacquering, and architecture. In the demain of pictorial art, he asserts that Japan can show men capable of supporting comparison even with the great masters of mediæval Europe. KOSE-NO-KANAOKA, MINCHO and SHUBUN, MOTONOBU and TANYU, OKYO and YEI I'CHO are names of which any nation might be proud. The distinctive characteristic of Japanese artists, according to Mr. MIYAKE'S view, is graceful simplicity. The history of every branch of art in Japan proves this. Sculpture, for example, when first introduced here from the Asiatic continent, was chiefly distinguished by imposing grandeur, but it subsequently lost this quality and acquired new characteristics of simplicity and grace. The same is true of every other branch of art, painting among the rest. The future of Japanese art lies in developing the national characteristic. Mr. MIYAKE is not opposed to the study of foreign art: he rather recommends it, laying stress, however, on the necessity of developing the special tendencies of Japanese genius.

The interest of this pamphlet for foreign readers lies in the fact that it may be taken as a fair indication of the sentiments entertained by the younger generation of the Japanese nation, and endorsed by the elder. Self-confidence is essential to success. Indomitable faith in his own capacity to overcome difficulties has always been the strongest factor in the progress of the Anglo-Saxon. A similar faith evidently inspires the Japanese. And what is still more noteworthy is that this faith is beginning to re-assert itself, after a quarter of century of contact with Western civilization. Twenty-three years ago, a Japanese *Samurai* of marked ability—who unfortunately died before the promise of his talents could be fulfilled—being asked to describe the impression left upon his mind by close examination of Occidental civilization and Occidental ways, quoted in reply the first three lines of a well known couplet:—

*Kite mireba*
*Sahodo ni mo nashi,*
*Fuji no yama,*

Familiarity, in his case, though leaving admiration undisturbed, had not bred respect. His dictum seems to have been in some degree prophetic.

## *THE CITIZENS' COMMITTEE'S STATEMENT.*

ONE of the most remarkable features of the Meeting held in Yokohama last September to protest against the rumoured action of HER BRITANNIC MAJESTY'S Government in respect of Treaty Revision, was that no reasons whatever were advanced in support of the first and principal resolution. The proposer of the resolution, influenced by some consideration which he significantly refrained from formulating, dispensed with all explanation, and the Meeting applauded his reticence. Subsequently, however, this silent attitude was abandoned. The Citizens' Committee, appointed for the purpose of representing the Community in matters relating to Treaty Revision, drew up a Statement of reasons and forwarded it to the China Association, and this Statement is now in the hands of the public. It bears date "January, 1891:" in other words, an interval of some four months separated the passing of the original resolution and the enunciation of the reasons on which it was based. A delay so strikingly inconsistent with the magnitude of the interests concerned, and with the sweeping character of the declarations embodied in the resolution, called for explanation. The Committee offer three explanations; first the excitement prevailing among the Japanese; secondly, "the difficulty of drawing up a concise yet ample and forcible statement covering such a wide area as that presented by the whole question of the Revision of the Treaties;" and thirdly, "the condition of uncertainty, not to say ignorance, in which the residents found themselves, in regard to the actual point at which the negotiations had arrived, and the measure of support their views might meet with at home." It will be felt that any one of these reasons might have been advanced with sufficient force, but the three are unfortunate in conjunction. The Committee, appreciating the strength of the international umbrage engendered by the ill-judged meeting, and fearing to increase that umbrage by any public statement of reasons distasteful to the Japanese, might prudently and properly have postponed the preparation of such a statement. That would have been a dignified and conciliatory explanation. But when the delay is in the same breath referred to the "difficulty of drawing up a concise yet ample and forcible statement," as well as to "uncertainty, not to say ignorance, in regard to the actual point at which the negotiations had arrived, and the measure of support the views of the residents might meet with at home," we are driven to speculate in what proportions the interval of four months is to be divided between these three explanations. They remind us—if we may be pardoned the comparison—of the young person who declined to undergo an examination in French because she considered examinations unladylike, and also because she had never studied the French language. If the Citizens' Committee experienced so much difficulty in marshalling arguments to support the action already taken by the Meeting, we begin to discover a new reason why those arguments were not laid before the Meeting, and to appreciate the justice of the inference drawn at the time, namely, that the Meeting acted on impulse and sentiment rather than on calm reflection and logical deliberation. Wholly inexplicable, too, is the last assertion, namely, that the Committee were restrained by "the uncertainty in which the residents found themselves as to the measure of support their views might meet with at home." The object of the Committee's appointment as well as the purpose of the Meeting, was to sway home opinion towards a waiting policy in respect of Treaty Revision. The Committee now assert, in effect, that they hesitated to pursue this object, being uncertain as to the reception their efforts might obtain at home.

Digitized by Google

Surely that was a somewhat perfunctory view to take of their duties.

We dwell upon this phase of the matter because nothing has excited more comment and surprise than the silence observed at the Meeting of last September, and subsequently maintained by the Citizens' Committee, in regard to the reasons for postponing Treaty Revision. That a strong feeling existed among the foreign residents against abolishing Consular Jurisdiction was a fact needing no further public declaration. Every intelligent person recognised the presence of such a feeling, and understood that due weight must be given to it in negotiating any workable scheme of Revision. But a sense of dissatisfaction, and even of indignation, had grown up under the immoderate and cruelly unjust methods adopted by persons professing to represent foreign local opinion, and it was confidently hoped that when the community took the affair into its own hands, a logical and fair exposition of views would replace and efface the unsightly manifestoes of the past. Correspondingly great was the disappointment experienced, when the Meeting of September 11th, accepting everything on trust, voted a sweeping resolution by acclaim, and when the representative Committee appointed by it refrained from offering any explanation of the Meeting's radical protest. It is easy to understand that the promoters of the Meeting were reluctant to give public utterance to reasons which could not fail to hurt Japanese national pride. But if their appreciation of the delicacy of the situation counselled a course so injurious to the cause they advocatcd, consistency required a complete modification of their whole procedure. The Meeting, as organized and conducted by them, was purely a sentimental demonstration. Not only were no reasons given for the principal resolution, but it was not even thought necessary to explain this singular reticence, and from first to last not a word was uttered indicative of sympathy with Japan's aims or showing approval of the efforts she had made. If the mover of the resolution had embodied in his speech some kindly references to Japan's progress, some expression of the goodwill which all true Englishmen must feel towards a country struggling to recover its independence; if he had explicitly avowed his desire to avoid embittering controversy, and had relied simply on the perfectly natural hesitation of Europeans and Americans to submit their persons and properties to tribunals and laws with the working of which they are not yet familiar, is it at all likely that the people of Japan would have been stirred to any serious excitement? But the projectors of the Meeting and the movers of the resolutions went about their work with absolute indifference to Japanese feeling. They organised a demonstration that could not fail to excite intense national umbrage, and when they found themselves confronted by umbrage, some of them sought to lay the blame on the shoulders of the *Japan Mail* because it had ventured to condemn their methods, not their motives or their purposes. We are sorry to see that the Committee have so little sense of dignity as to descend to similarly unjust recrimination. "The immediate outcome of the meeting," they write, "was an unusual amount of excitement among the Japanese in Tokyo and elsewhere; and the native press, led on by a foreign paper, which holds a brief from the Japanese Government, teemed with articles of a more or less violent character, upbraiding the foreign residents for presuming to interfere in the smooth course of Treaty negotiations, and daring to raise a protest in defence of their own interests." The imputation contained in this paragraph is unworthy; the implication, untrue, and the tone, vindictive. No article in any degree deserving the epithet "violent" appeared in the *Japan Mail*. It has never been even hinted in these columns that the foreign residents have not an undeniable title to interfere in the course of Treaty negotiations, nor have we at any time advanced the silly proposition that they must not "dare to raise a protest in defence of their own interests." That such assertions should be embodied in a statement compiled by sober business men for a public purpose, is extremely discreditable. We say nothing of their unfairness, nor need we do more than direct very brief attention to the curious mood of men who infer that a newspaper disapproving of their methods must be paid to oppose them. When these disfiguring phrases find their way into a document of the character of the Committee's Statement, the only reasonable conclusion is that its compilation was entrusted to persons who allowed feelings of personal rancour to overcome their sense of what was due to their representative functions. Our contention last September was, and our contention to-day is, that if a protest were deemed necessary in the interests of the community, it should not have been placed on record by means of a public meeting, but should have been forwarded in the shape of a memorial, as was done by the Kobe residents. To the latter course no just exception could have been taken, nor would it have roused any excitement among the Japanese. There may be some who set small store by the latter consideration. In our eyes, however, it is of the greatest importance. Every year, nay every month, that Treaty Revision is postponed, adds to the force of Japanese public opinion and correspondingly enhances the difficulty of solving the problem in a manner satisfactory to foreigners. In Count INOUYE'S time we could easily have obtained terms that will not be listened to now. When Count OKUMA assumed the portfolio of Foreign Affairs, the country was resigned to a settlement that has not a single supporter to-day. Each postponement, whether due to the nature of foreign demands or to the growth of Japan sentiment, has led the nation to a higher level of self-respect and self-assertion. It is with public opinion in Japan that the negotiators have to reckon, and whatever tends to excite public opinion is distinctly opposed to foreign interests. The promoters of last year's Meeting did not think of this. They did not observe that while their own Government, on the one hand, was labouring to obtain the best possible terms for them, the Japanese Government, on the other, was willing to carry its concessions to the extreme limits prescribed by national sentiment. A demonstration like that of September weakened the chances of a favourable compromise by just so much as it strengthened the umbrage of the Japanese public. It is a singular mistake to denounce as enemies writers who point out these things, their demonstrations being confirmed by events from point to point.

In another article we shall examine the important conclusions and recommendations set forth by the Committee. With much that the Statement contains all will doubtless agree, but in some respects it invites discussion too lengthy to be undertaken here.

## *CORRESPONDENCE.*

### CRUELTY TO ANIMALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Knowing that public opinion in Japan when aroused to the fact of existing evils is ever most active in mitigating them, I venture to call your attention to that remnant of barbarism that is still so prominently and persistently thrust before one when encountering sundry lines of omnibuses and street cars. Any person with any sensibility must actually dread meeting with most of the specimens of that noble animal, the horse, in the service of these conveyances; but when to swollen joints and scarred, uncurried hides, we add hip bones lacerated and the blood trickling from open sores, while the lash from the coach-box ceases not its painful flourishes; when in an outing of less than half an hour, two *basha* were encountered with the poor animals thus disfigured by bleeding sores, and a third had one of its horses actually staggering and almost lying upon its companion, from weakness, we feel certain that we are *far from home*, and that civilizing influences have yet to work changes in the humane characteristics of our Japanese kindred. The old adage, a merciful man is merciful to his beast, has its equivalent in the Japanese language, but, it needs practical demonstration.

I am all too well aware that men toil here and pull loaded waggons when totally unfit for the task. Compassion and indignation must often be awakened by these human "beasts of burden" who are of far more value than the noblest blooded quadruped; but this unjust expenditure of human strength does not for one moment mitigate the dehumanizing influences of goading suffering animals into labour when their condition is revolting to any person of refined feeling.

I have read or heard that somewhere in some city or province of this island empire there is a society for the prevention of cruelty to animals, but it is surely not in Tokyo, and it is a blot on the boasted civilization of this representative Government that such sights are familiar and of daily occurrence.

On the minds of the young the influence of such wanton cruelty and disregard of suffering is degenerating, blunting as it must the higher, finer feelings of pity and tenderness, and encourag-

Digitized by Google

ing brutalizing propensities, or at least indifference to suffering, which, being in no wise akin to bravery or courage or heroic endurance, should not pass uncondemned. A new line, spoken of as "those red cars" has already won admiration and patronage, because of the healthy, well-cared-for appearance of the horses, so that this appreciation is but proof of the protest in the minds of the people against the evil I here disclaim.

Yours, etc., A FRIEND OF MAN AND BEAST.

Tokyo, March 26th, 1891,

## MR. BRADLAUGH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The brief account of Mr. Bradlaugh which appeared in your columns a few days ago, though no doubt intended as a kindly criticism of the deceased statesman, yet contains several references to his character, his work, and his followers which are certainly incorrect and misleading. For instance, the writer speaks of going one Sunday evening to a debate between Mr. Bradlaugh and a young clergyman at the Hall of Science; and while the subject of the discussion is not remembered, and, it may be added, the writer's memory is probably at fault with regard to the discussion taking place on a Sunday—at least, with a good many years' intimate acqaintance with Mr. Bradlaugh's work I cannot recall any instance of a formal debate taking place on that day—yet the writer remembers the room to have been "thronged with those curious weedy youths with pinched, sharp, intelligent face who are always ready to speak at a moment's notice;" upon which slender basis of doubtful facts it is inferred that such "seem to form the bulk of the militant secularists of London." Now these youths, if holding secularist views, made a curious mistake in going to the Hall of Science in order to acquire practice in speaking, seeing that no speech-making by members of the audience is there permitted unless in opposition to the views of the lecturer occupying the platform. To describe the majority of the attendants at the Hall of Science as youths is sufficiently absurd—at any rate, in the course of a large number of attendances at that Hall I have seldom seen any present under twenty years of age, and friends who have occasionally accompanied me have frequently remarked on the large number of grey heads among Mr. Bradlaugh's auditory—but to describe his adherents as "weedy" is still more ludicrous. The British workman, from the skilled and educated ranks of which came the majority of Mr. Bradlaugh's adherents, is not generally regarded as particularly "weedy," and no one who had ever seen Mr. Bradlaugh giving his stalwart "marshals" and "stewards"—almost to a man "militant Secularists"—final directions previous to one of his great meetings could ever have made such a remark.

The writer again falls into error in saying that two years ago Mr. Bradlaugh denounced socialism at a Trades Union Congress "permeated with modern socialistic ideals." It is doubtful whether Mr. Bradlaugh ever in his life attended a Trades Union Congress—certainly not for the last twelve years—nor is it even correct to say that any Trades Union Congress until that of last year was to any extent permeated with Socialism, the passing by a small majority at the last Congress (where the "Unionism" was first represented) of a resolution with so mild a socialistic flavour as the "legal eight hours" scheme coming near to cause the secession of an influential minority of the representatives of the old Trades Unions.

These are, however, minor points, and are only worth calling attention to as showing that the writer has not such an intimate acquaintance with the subject of his remarks that he can be regarded as an authority in certain other sweeping criticisms made by him, such, for instance, as that Mr. Bradlaugh assailed the "cherished faith of millions in a manner that was both brutal and blasphemous." Mr. Justice Stephen long ago pointed out that according to the law of England as it at present stands on the statute-book, any speech, writing, or publication against the Bible or the Christian religion, no matter how expressed, is liable to punishment as "blasphemy," and in this sense of course Mr. Bradlaugh's speeches and writings would be open to the charge; but if the writer uses the word in its ordinary sense, as joining it with "brutal" he apparently does, then he certainly speaks without knowledge of Mr. Bradlaugh's method of propaganda or of his numerous writings. The use of the term "brutal" as fairly descriptive of either his speeches or writings against Christianity shows even greater ignorance, unless by "brutal" is meant "straightforward" argument. From several other remarks it is clear that the writer of the article imagines Mr. Bradlaugh an uncultured demagogue who by sheer tenacity forced his way to the front, whereas those who knew him are aware that he was perhaps the most widely read man of his generation, as his library of 7,000 volumes, his only personal "hobby," testified, while his intimate acquaintance with more than one Continental language and his ability to discuss a knotty point in Hebrew with Hebrew scholars proved him to possess a vastly superior education to many whose pronunciation of "ing's" and "h's" is immaculate.

The most absurd statement of all is that "Mr. Bradlaugh was not an attractive personality in any sense of the term," which seems based on slanders circulated by unscrupulous opponents, and could only have been written by one totally ignorant of his private life, and with but little knowledge of his public career. I venture to say that no man of his generation, aye, of his century, had a larger *personal* following than the deceased statesman—followers who would have risked their lives in his cause, and who proved their loyalty by the many sacrifices made in order that "the lad," as the North-countrymen affectionately called him, might not be overborne in the fight. Such love and devotion as he continually met with are never inspired by men without an "attractive personality" or possessing an unlovable disposition. The scene at the graveside was of itself sufficient refutation of such a criticism, when strong men wept as they laid to rest the man who had given up fame and fortune that he might champion the oppressed; the man who with all his multifarious work was never too weary to assist poor suitors with his vast store of legal knowledge, and almost whose last words were of others—that he only wished to live some years longer because "there is no one quite who will do my work. No one understands how that market business affects the food supply of the poor. It's a dull looking thing, and no one will take the trouble to work it out." If the unselfishness shown by such a man throughout his whole life does not of itself constitute an "attractive personality," one wonders what does.

Yours, etc., SECULARIAN.

Kobe, April 5th, 1891.

## "DISCRETION THE BETTER PART OF VALOUR."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Whoever read my article referring to the cruelty of Universalism, will remember that I spoke in terms of praise of the advocates of that doctrine. In reply, Rev. G. L. Perin, instead of argument, strictly limits himself to calling me odious names. In that he can have the field to himself. I have not so learned Christ. It is presumable that Mr. Perin will not claim originality in disposing of arguments which cannot be met, by saying that I am not a representative man, as the same plan was used by the Pharisees, Jno. 7.48; in reference to the proofs of the Deity of the Son of God, they said that the fishermen of Galilee were not representative. As it must yield my discreet friend a certain amount of subjective satisfaction to arbitrarily classify me among the lowly, I would fain add to that grim pleasure by stating that as I am an intense lover of books, I have not any ambition for distinction among men. If I can, however humbly, be a representative of the teaching of the Nazarene, I am ready to pray with Queen Matilda of Denmark: Oh, "keep me innocent, make others great." I would rejoice to know that every one of God's missionary workers in Japan knows more, has more ability, and is more useful than I. When one of such humble attainments can so effectually preclude an argumentative answer to the proofs that Universalism is cruel, what *would* become of the system if a representative man were to take hold of it? I advanced no theory of my own. To show that the teaching of universal salvation is cruelty, I assumed that God is loving, wise, and merciful, and any teaching which contradicts the plain meaning of his words is cruel. I simply copied the words of the Master to show that Universalism annuls or contradicts. As it is not my teaching, it follows that the choice epithets "sectarian," "narrow minded," by which the representative man tries to extinguish me are mere empty words, or they apply to the Author of the teaching which I quoted. I wrote that sectarianism is sin, and ought to be abandoned; that all Christians in Japan ought to be united: that does not seem to be a defence of sectarianism. As to being narrow-minded, if to wish to believe Universalism to be true, and to be unable to do so because the Son of Mary stands across the way declaring that all roads *do not* lead to heaven is to be narrow-minded, I plead guilty. I am as narrow-minded as Jesus of Nazereth. I can, however, differ radically from a man, and yet not allow the amenities of social intercourse to be impaired. Now I think that a narrow-minded man would not write as I did, "the believers of that doctrine are very kind-hearted and liberal-minded." "With profound respect for the Christian graces and self denial of those who advocate this theory." Rather he would try to transfer the odium which belongs to error to its misguided advocates, and would call ugly names. If any who read this have felt a relaxation of zeal under the delusive hope that the incorrigible wicked may find in the penal sufferings of the next world a power to move them to repentance, which the tears and blood and dying love of the Redeemer could not effect, I respectfully commend to their perusal the article "An explanation," in the *Japan Mail* of 23rd ult. The summary of Jesus' teaching there given can never be set aside. It is neither wise nor kind, neither righteous nor merciful to teach contrary to the Infinite and Peerless "One," as we shall all fully understand in the last day, when the fabric of Redemption shall have been completed, the scaffolding torn away, and the lost, in comparision with the redeemed, seen to be but a speck in the universe.

GEO. T. SMITH.

Hongo, Tokyo, April 6th, 1891.

## *IMPERIAL ORDINANCE.*

The following Imperial Ordinance was issued on the 2nd instant:—

With the consent of the Imperial Diet, we hereby create authority for entering into various engagements, apart from the Budget, which involve charges upon the National Treasury, and direct the same to be carried out.

(Imperial Sign-manual.)
(Great Seal.)
(Signatures of the various Ministers of State.)

ENGAGEMENTS, APART FROM THE BUDGET, INVOLVING CHARGES UPON THE NATIONAL TREASURY.

1.—The power to make an agreement promising an outlay of 700 *yen* annually for a period of five years from the 24th year of Meiji, inclusive, by way of subsidy on account of maritime communication to the various islands of Okinawa Prefecture.

2.—The power to conclude an agreement securing the services of a foreign instructor in the Agricultural School at Nemuro, Hokkaido Administration, for a period of three years, from the 1st month of the 25th year of Meiji to the 12th month of the 27th year of Meiji, at a salary of 3,350 *yen* annually.

3.—The power to issue a Notification authorizing the payment of a total sum of 25,856.516 *yen*, during a period of two years commencing from the 24th year of Meiji, inclusive, by way of subsidy towards the construction of a road between Nobuoka, in Miyagi Prefecture, and the boundary of Oita Prefecture.

4.—The power to issue a Notification authorizing the payment of a total sum of 30,344.182 *yen*, during a period of five years commencing from the 24th year of Meiji, inclusive, by way of subsidy towards the construction of a road between Kumamoto Prefecture and the boundary of Fukuoka Prefecture.

5.—The power to conclude an agreement securing the services of a foreign instructor at the Military Academy for a period of three years commencing from the 24th year of Meiji, inclusive, at a monthly salary of 500 *yen*, with a monthly allowance of 100 *yen*, and 12 *yen* per month for forage, and a sum of 1,000 *yen* to defray the travelling expenses on the return journey at the conclusion of the agreement.

6.—The power to conclude an agreement securing the services of a foreign instructor at the Naval Academy for a period of three years, commencing from the 19th day of the 5th month of the 24th year of Meiji, at a monthly salary of 350 *yen*, with an allowance of 697.30 *yen* to defray travelling expenses on return at the conclusion of the agreement.

7.—The power to re-engage three foreign instructors at the Imperial University the periods of whose engagements have terminated, namely:—

One instructor, from the 8th day of the third month of the 25th year of Meiji to the 7th of the 3rd month of the 28th year, a period of three years, at a monthly salary of 400 *yen* with an allowance of 400 *yen* for travelling expenses to return to his country at the conclusion of the agreement.

One instructor, from the 22nd of the 10th month of the 24th year to the 21st of the 10th month of the 26th year, a period of two years, at a monthly salary of 350 *yen*, with an allowance of 714 50 *yen* for travelling expenses to return to his country at the conclusion of the agreement.

One instructor, from the 12th of the 2nd month

Digitized by Google

of the 25th year of Meiji to the 11th of the 2nd month of the 28th year, a period of three years, at a monthly salary of 200 *yen*, with an allowance of 650 *yen* for travelling expenses to return to his country at the conclusion of the agreement.

8.—The power to re-engage six foreign teachers employed in the First Upper Middle School, the periods of whose engagements have terminated, namely, four teachers, from the 11th of the 7th month of the 24th year of Meiji to the 16th of the 7th month of the 25th year, a period of one year, at a salary of 200 *yen* per month; one teacher for the same period at a salary of 150 *yen* per month, and one teacher for the same period at a salary of 100 *yen* per month.

9.—The power to re-engage one foreign teacher, employed in the Fourth Upper Middle School, the period of whose engagement has expired, from the 21st of the 7th month of the 24th year of Meiji to the 20th of the 7th month of the 25th year, a period of one year, at a monthly salary of 150 *yen*, with an allowance of 50.80 *yen* to defray travelling expenses at the termination of the agreement.

10.—The power to re-engage one foreign teacher, employed in the Fifth Upper Middle School, the period of whose engagement has expired, from the 8th of the 5th month of the 24th year of Meiji to the 7th of the 5th month of the 25th year, a period of one year, at a monthly salary of 200 *yen*.

11.—The power to engage one foreign teacher, employed in the Yamaguchi Upper Middle School, the period of the present teacher's engagement having terminated, from the 25th of the 7th month of the 26th year, a period of two years, at a salary of 200 *yen* monthly, with an allowance of 235 *yen* to defray return travelling expenses at the termination of the agreement.

12.—The power to re-engage one foreign teacher at the Tokyo School of Music, the period of whose engagement has expired, from the 2nd of the 9th month of the 24th year of Meiji to the 1st of the 9th month of the 27th year, a period of three years, at a salary of 400 *yen* monthly, with an allowance of 1,300 *yen* to defray return travelling expenses at the termination of the agreement.

## *MITO BELL LITERATURE.*

The present town bell of Mito is more than 200 years old. It was set up in the period of Kwambun [1661-1672] by Mitsukuni, Prince of Mito, and contains an inscription by Shu Shunsui, a Chinese *savant*, who found a refuge in the Mito *han*, and was the honoured instructor of the afore-mentioned prince. This inscription is not considered remarkably good as a composition, and it proved extremely difficult to translate. But, by the kindness of a native friend, I was favoured with the following translation, which at least gives the general idea of the inscription:—

"A bell is a thing that warns against the indulgence of princes and subjects, and stimulates them to diligence. When the big bell tolls, its sound reaches near and remote places. The Emperor and his feudal lords haste to put on their morning robes, and to inquire about their governments; the chief ministers and lower officers are ready to dress in their official garments and to call their riding-horses. If there is a bell, the wise princess has no chance to complain of the late attendance of her husband [at court]; if there is a bell, the common people have no need to hear the 'red-cap' who cries out, 'the cock crows.' How great its benefits are!

"Therefore, beginning with the Imperial metropolis, in all feudal provinces of all countries, and even in hamlets, we always find a bell. Mito is a large province; of course, a bell is required. The prince of Mito, a Councillor (*Sangi*), loves learning, and is rich in knowledge of history and antiquity. Thinking that a bell is necessary, he has melted good metals, has moulded a bell, and has hung it in the castle. By this he intends to warn persons of rank, to warn lower knights and common people, and to warn himself also. Though the length, size, and sound of the bell do not exactly correspond with the old style, there was no need to bring in a bell from another country.

"The future good of the bell is beyond doubt. The stanza (*mei*) is as follows;—'When the sky and the earth dawn, this bell begins to toll. All gales become silent when its sound solemnly rolls. The prince dresses in the twilight, and the tinkle of the carriage-ring is heard. The prince asks about his subjects; the officers tell the state of the administration. The bell-cord rubs off constantly; but the bell sounds more and more deeply. Having sought to be made, the bell's work is now completed. Its wise plan is the model for ever; and its grand name lives to eternity."

One or two references may need a little explanation. It appears, for instance, that there was a custom, originating during the Han dynasty in China, for an officer wearing a red cap to go about to announce the dawn. In the closing sentence the "wise plan" of the bell refers to its "warning" influence. There are also one or two points for which I could obtain no satisfactory explanation.

The bell also contains an inscription giving the names of the prince and his heir; the date (which, however, does not correspond with positively established dates in Mito local history); the names of three councillors (*Karo*) of the prince; and the name of the bell-moulder. The fact that the inscription was written by a Chinaman adds, of course, to its interest as an antiquarian relic of Mito.

April 4th, 1891. CLEM.

## *ASIATIC SOCIETY OF JAPAN.*

A general meeting of the Asiatic Society was held on Wednesday at the Society's Rooms. Rev. Dr. Amerman presided, and there was a fair attendance.

The minutes of last meeting were held as read.

The RECORDING SECRETARY (Dr. Knott) announced the election of Rev. G. L. Perin.

A paper by Mr. A. H. Lay on "Burial Rites in Japan" was then, in the absence of the author, read by Dr. KNOTT. The following is a résumé of the paper:—

The most ancient mode amongst the Japanese of disposing of their dead was, so far as can be judged, burial, the word *homuru*, to bury, being a modified form of one of the oldest words in the language. The *moya* or mourning house, in which the body was laid until all the preparations for the interment were completed, was a feature from the earliest times—as were also music and funeral laudations (*shinobi-goto*). Stone coffins date from about the beginning of the Christian era; but about 670 A.D., they fell into disuse, the Emperor Tenchi considering that the construction of sarcophagi entailed too much loss of time, money, and labour.

The very ancient custom of immolating human beings to supply attendants for service in the future life reached a climax in the year B.C. 1, on the occasion of the interment of Prince Yamato Hiko. On the suggestion of a courtier, Nomi no Sukune, the Emperor proclaimed that the sacrifice of human life must be stopped, and clay images used instead.

The introduction of Buddhism had a distinct effect upon most of the ceremonial institutions of the country; and in the matter of funeral, its effect was most apparent in the mode of disposing of the body. Cremation was first practised in 701 A.D., and came into general use early in the ninth century. Casting the body into the sea or river, or abandoning it in unfrequented places, were also practised during the 8th century—the Buddhistic idea being that the body was worthy of honour only when animated by the spirit. The last method was put a stop to by Imperiol edict after the fierce epidemic that visited Kyoto in 809 A.D. The *ihai*, or wooden memorial tablets, were also of Buddhist origin. Most of the mourning customs, however, were Shinto, and may be traced to the doctrine of the defilement by contact with a dead body. Feudalism, again, is responsible for the revival of the custom of *junshi*, following one's lord into the next world. This differed from the ancient cruel practice in so far as it was voluntary, and was intended to exhibit fealty in the highest degree. In this form it came into vogue in the 13th century; but in 1664 the *Bakufu* promulgated an edict forbidding it under the worst penalties.

With the introduction of the *ihai*, the *urabon* or festival for the souls of the dead was established, but did not become general till the time of the Shogunate. It is still a great Japanese festival and is held on the 28th, 29th, and 30th of August.

With the revival of Pure Shinto towards the end of the 17th century came the discountenancing of many Buddhistic rites. At the Restoration, which was itself a part of the general movement, Shinto was re-established as the State religion. The funeral ceremonies of the Imperial family and of the upper classes are now conducted with pure Shinto rites; but the bulk of the nation still cling to their old Buddhistic methods. A noteworthy difference exists between the Shinto and Buddhistic modes of washing the dead. In the former the body is washed with the same gentleness as would be shown to a living man; in the latter the corpse is handled without overmuch ceremony. The paper gave full details as to the mode of preparing the body, and described at length both Buddhist and Shinto funeral processions with the religious services held in the house and at the cemetery; and after a short discussion of the cremation of the present day, concluded with a reference to the probable effect which the growth of a Japanese Christianity might ultimately have upon the funeral ceremonies of the country.

The CHAIRMAN said he was sure the meeting would accord its thanks to Mr. Lay for his interesting paper, and to the Recording Secretary for reading it.

Mr. CLEMENT said in regard to the abolition of the custom of *junshi*, he believed that Mitsukuni, the second Tokugawa Prince of Mito, might claim the honour of being one of the earliest, if not himself the earliest, to discontinue the practice. At the time of his father's death Mitsukuni, anticipating that the practice would be followed, gave strict orders against it. It was also singular that the Mito Princes and people, though they had very little sympathy with Buddhism, retained the Buddhist ceremony of burial. There was another custom—he did not know whether it was peculiar to Mito—that of burials taking place at night, which was said to have been ordered by Nariaki, the leader of the *joi* party in the present century, the intention being that funerals should be conducted with as little pomp and expense as possible.

In reply to the Chairman,

Mr. CLEMENT said he could give no reason why the Buddhist funeral ceremony had been retained in Mito.

Mr. DIXON pointed out that the custom of burying the dead at night had a parallel in former times in the interment of famous men in England. Addison, for instance, was buried in Westminster Abbey at night.

Mr. CLEMENT said he had somewhere heard a remark about the Japanese being Shintoist in life and Buddhist in death.

Dr. DU BOIS then read a short paper descriptive of the *Gekkin*, and of the two modes, the *Houcho-shi* and the *Ni-agari*, which comprised the tunes played on that instrument.

Dr. KNOTT followed with a longer paper, elaborating and supplementing Dr. Du Bois's conclusions. He objected to the statement recently made by Mr. Piggott that the frets of the *Gekkin* could be represented on the piano; it was impossible to do so, owing to the presence on the *Gekkin* scale of flattened notes. The true way to deal with the *Gekkin* tunes was to regard them as belonging to the Dorian mode, which, he remarked, was an old ecclesiastical mode, to be found in Scotch tunes, one of which was the "Braes of Balquhidder" and the psalm tunes "Bangor" and "Martyrs," which ended on *re*, to use a tonic sol fa term. To illustrate the resemblance here referred to, Dr. Knott sketched the following table of comparison by beats:—

| *Niagari.* | Major. | Dorian. |
|---|---|---|
| 100 ..... | 100 ..... | 100 |
| 111.7 ..... | 112.5 ..... | 111.1 |
| 121.8 ..... | 125 ..... | 118.5 |
| 133.3 ..... | 133.3 ..... | 133.3 |
| 148.9 ..... | 150 ..... | 148.1 |
| 162.4 ..... | 166.7 ..... | 166.7 |
| 177.7 ..... | 187.5 ..... | 177.8 |
| 196.9 ..... | 200 ..... | 200 |

The *Ni-agari* scale of the *Gekkin* thus, he pointed out, more nearly resembled the Dorian than the Major.

At the close votes of thanks were accorded to Dr. Du Bois and Dr. Knott for their interesting papers, and the meeting adjourned.

## *MR. ERNEST HART AND THE MEDICAL FACULTY OF TOKYO.*

Mr. Ernest Hart lectured before, and was afterwards entertained at a banquet by, the medical faculty of Tokyo at the Koyo-kan, Shiba, on Monday the 30th ult. Surgeon-General K. Takagi presided, and interpreted Mr. Hart's remarks, and among those present were Dr. S. Nagayo (member of the House of Peers); Dr. K. Ikeda, (Chief Physician of the Imperial Household); Professors H. Miyake and M. Ogata (of the Medical College, Imperial University); Dr. K. Osawa, (Dean of Faculty, Medical College); Dr. Y. Saneyoshi, (President of the Naval Medical College); Professors S. Kimura, S. Suzuki, B. Oka, J. Ishikawa, and T. Miyake, and Assist-Professor J. K. Kimura, (Naval Medical College); Dr. S. Miyahita (President, Miyahita Opthalmic Hospital); Dr. T. Hasegawa (Member of the House of Representatives); Professor M. Sasaki (Medical College); Dr. T. Sasaki (President, Tokyo Medical Society); Drs. H. Ito, and J. Iwase (Imperial Physicians); Dr. H. Sewaki (Director, Tokyo Hos-

Digitized by Google

pital); Dr. H. Kawamura, (Deputy Inspector-General of Hospitals and Fleets); Dr. S. Kumagawa (Secretary, *Seiyikai*); Drs. T. Ando, and R. Shinzo (Councillors, *Seiyikai*); Dr. T. Matsuyama (Vice-President, *Seiyikai*); Drs. K. Futakami, and T. Harada (Editors of the Tokyo *Medical News*); and Dr. K. Okakura.

A letter was read from Surgeon-General T. Ishiguro, President of the Bureau of Military Surgery, regretting his absence on account of official engagements, but offering, in case Mr. Hart should wish to visit the Military Depots at Osaka, Nagoya, or Sendai, to facilitate in every way possible his inspection and observation of medical affairs.

Dr. TAKAGI, in introducing Mr. Hart to the meeting, assured that gentleman that he had given them great pleasure by accepting their invitation to meet the medical men of the capital, and also by promising to address them on the subject of the British Medical Association and the Medical Providence Society. They anticipated the highest benefit and advantage from the lecture to which they were about to listen.—(Applause.)

Mr. HART said—Gentlemen, I will ask you first to allow me to say a word or two of prefatory introduction, expressing to you my impressions on one or two points of what I have seen during the short time that I have had the privilege of being in your beautiful country. First of all I must express my pleasure at meeting so many of the heads of the medical profession in the Far East. Let me offer my heartfelt acknowledgments of your kind reception. It is always a delight to find oneself in an assembly of medical colleagues. There we exchange mental impressions; we make and renew friendships; we add to knowledge; we find new inspiration in the fresh thoughts and original observations of men of learning and experience, and we strengthen the impulses to self-devotion and higher effort, which are the accepted aims of our profession throughout the world. Those are the main objects for which we have established the periodical meetings of the British Medical Association, and we find that the organization of a great association with branches, properly administered, tends to promote unity, affection, respect and the growth of knowledge in each part of the empire and throughout the whole profession. But before describing to you that organization, let me say a few words special to this occasion. I feel this to be an occasion of peculiar interest. This beautiful Land of the Rising Sun saw the early dawn of a civilization stretching far back into the records of time. It possessed and enjoyed an intellectual culture, an art culture, of a very abstract metaphysical and refined kind, in past ages when many European countries such as my own were rude, barbarous, and uncultivated. Your records, and still more, your preserved monuments of art, such as the mural paintings of the temple of Horuiji, dating a thousand years back; the spiritual religious paintings of Kanaoka, dating 800 years ago, your vigorous statues; the exquisite lac, and the elaborate embroideries of the Royal Treasury at Nara, all testify to an advanced art in Japan, as do the writings of the priests to a highly developed system of thought and philosophy at a time when in Britain and in Gaul all was yet primitive and undeveloped. As centuries passed on your peculiar arts and your refined philosophies underwent some new developments, but were untouched by the innovations of the then rapidly progressing nations of Europe. From the 15th down to the 18th century your feudal system maintained peace and favoured the growth of a series of art products and conceptions which compare with those of a corresponding period of time in Italy; but it was at the cost of an isolation which shut you off from modern thought in the West, and which helped to crystallize existing knowledge in Japan, but to arrest progress. Forty years ago the barriers fell, and with the restoration of the Imperial power of the Mikado came the entrance of Japan into the comity of nations of the West. She has taken her place in the great Councils of the World, never we may hope and believe to derogate or depart from it. Chief among the rapid and enormous changes that have occurred within these few decades has been the rapidity with which you have acquired and assimilated European science, social organizations, and law, and have applied technical and industrial procedures. Since I have been here His Imperial Majesty the Emperor has launched an ironclad ship of war, complete, and equipped according to the latest requirements of the terrible science of war, built in your own dockyards and by your artizans, and efficiently manned by native seamen and this is only the latest of a series so built; and I have the high authority of Captain Ingles, R.N., for saying that it would be difficult to discover any point of inferiority to a high European standard, whether in ships or men. The telegraphs and telephones which traverse this vast and ancient city of Tokyo, in which I am speaking; the railways, the tram-cars, the electric lighting testify to an eagerness for modern study, a power of rapid assimilation and an executive facility which is without precedent in Asiatic history, and in respect to the rapidity and completeness of the transformation has certainly no parallel in the history of the world. This is a country and a city of strange contrasts. None more striking than on the day last week when I passed from the tombs and the memorial shrines of the Tokugawa Shoguns to the Imperial University. On one hand at Shiba were the gorgeous and silent shrines, resplendent with lac, and gilding, and colour, but fading and ill cared for; the forest of colossal lanterns whose light has departed for ever; and despoiled by the vigilant hand of the furtive robber of some of their most valuable accessories. There was the majestic seated image of Iyeyasu, who moulded the feudal system with so strong a hand and such far-seeing despotic will. All was eloquent of a day which has but just passed away, but which was vitally continuous with the Japanese civilization of centuries ago and which reflected with precision the elaborate art, the regal splendour, but the arrested knowledge, the distorted philosophies and the suppressed individuality of by-gone days. Thence I came to the University buildings, themselves seated in the broad-acred park of the castle enclosure, till lately occupied by the great *Daimyo*, the Prince of Kaga. A modern building strictly English in its utilitarian ugliness, with a board room which might have been in Cheapside, and with an organizagation compiled of types selected in England and in Germany—it is a true University, with its Colleges of Law, Medicine, Engineering, Literature and Science each with its full staff of professors and equipped with laboratories, libraries, workshops, hospitals, and museums. In the Faculty of Medicine I found a staff of fifty-five professors and assistant professors, many of whom have followed their studies for several years in the great centres of medical knowledge in Europe and some of whom have graduated with high distinction in foreign universities. The arrangements for five years preliminary study in languages and in physical science, and for a four years, compulsory professional curriculum of strictly professional education, were of the most approved standard, and are more than we have yet been able to enforce in Great Britain. The teaching combined the best features of the English and German systems. The practical laboratory teaching in such departments as those of Professor Osawa in Physiology, of Professor Yoshikyo Koganei in Anatomy and Histology, of Professor Miura in Pathology, Professor Takahashi in Pharmacology, &c., was, I found, up to the latest scientific knowledge and on the best practical methods. They are well planned and efficiently carried out. The work which I saw being done, much of the physical and microscopical researches by the Japanese students of Japanese professors, would be a credit to any students of to-day in any university, and reflect the highest honour on both professors and students. You have favoured me with a series of monographs and published articles and pamphlets containing the results of original research in the most important departments of medicine and the allied sciences. These I shall study, and I shall hope to communicate some information derived from them to the medical profession in England. Many of them are, however, known and esteemed by the best scientific men in Europe. The specimens which have been put aside for me of new active principles derived from Japanese drugs by Professor Takahashi, I propose to hand to Professor Fraser of the University of Edinburgh, whose name and researches in kindred subjects are, I find, familiar to you. Your hospitals with all their departments for medicine, surgery Gynekology and Opthalmology have greatly interested me. Finally I shall be able to report to my colleagues at home that Japan has raised herself as it were by one leap from the deep valleys of the old Asiatic medical superstitions to the upper level of advanced medical science and practice, and that by no superficial methods but by thorough-going, sound and real study and good work. Let me say a word or two by way of passing observation and suggestion grounded on our British experience. We have not always found that merely University teaching suffices to turn out students well armed to cope with the daily requirements and constantly varying exigencies of practice. We are studying now how to avoid too encyclopœdic and minute detail of study for the ordinary student and for the general medical practitioner. You may likely find that something less elaborate may be needed for the mass of practitioners, and that a difference may usefully be made in the field of study and limits of examination for those who are graduating for professorships and consulting practice, and for those whose life will be passed in ministering to the daily needs of the poor and of the general population. Not all are called upon to be familiar with histological refinements or to practice chemical research. Deductive knowledge too exclusively pursued becomes a snare, and theory is often insufficient if practical skill and resource have not been developed. I may venture also to express a hope that the Government liberality which has been so wisely and generously exercised may be extended further. The Museums will soon, nay indeed do now, require more space and better fittings; and the University Hospital has not yet been supplied with all that is needed to satisfy a severe critic in its buildings or its fittings. Your training system of nurses is according to European ideas, good, but to secure a high class of women the salaries appear to be inadequate. Bathing is so great and so important a part of your domestic institutions that I was a little surprised not to see more complete and better bathing arrangements in your hospitals. They do not compare with those in European Hospitals at present; and I may also venture to add that whereas in Japanese homes nothing is more striking and delightful to the European eye than the extreme cleanliness and neatness which become in itself a beauty, I have not always observed the same cleanliness and neatness in the hospitals, nor have I seen that custom of making the hospital ward more beautiful, giving it colour, introducing pictures and flowers and adding newspapers, which we in England have come to regard as a valuable addition to the equipment and which is supplied by the liberality of kind patrons and in the case of pictures by the artists themselves. Let me add, as I am speaking among medical men, and for medical ears, that I observed that in those hospitals that I have seen which were under thoroughly medical control, the administration was better than in those which were administered by laymen or by lay directors. I observed with great pleasure the part which women are beginning to take in administering hospitals here; and I saw with admiration how greatly the munificence of Her Majesty the Empress of Japan has contributed to set an example which ought to be fruitful not only amongst the ladies of Japan but also among the men, for with us the hospitals, as you know, are mainly supported by private and voluntary contributions, and it is to private and voluntary contributions that the whole of the great hospital system of London, which forms one of its greatest glories, is due. It was formerly the custom here for men of wealth and for nobles to devote large sums to keeping up shrines, memorial temples, and tombs. That time is to some extent passing away, and if, following the example of the Empress they should contribute out of their means largely to the foundation and the maintenance of hospitals and Universities, they would be doing that which in Europe has been customary now for some centuries, and has greatly contributed to the public welfare. Pardon these few words of friendly criticism where there is so much to admire. There are many things on which we may look to you for valuable contributions to our further knowledge. Among them, if I may be allowed to enumerate, there are the etiology and communicability of leprosy, which some among you find strong reasons to doubt, and the question of its prevention and treatment; the pathology and prevention of what we call *beri-beri* and you call *kakké*, as to which your specially appointed committee is conducting researches for the result of which we are looking with much interest. Your experience will be very valuable to us. As to the influence of prolonged lactation—over from one year to three years according to Japanese custom—first on the health and longevity of the mother, second on the diminution of infant mortality, which is I believe very small in Japan: and, thirdly, its influence on the rate of increase of population—for that purpose we should require to have careful statistics of the average number in a family—and whether there is any other cause than prolonged lactation which increases or diminishes the number of children in one family. The habit of prolonged lactation does not exist in Europe and its influence would be very important for us to know. Then we should like to know something exactly and scientifically of that remarkable experience of yours of the comparative immunity of your people from scarlet fever, and of the alleged rarity with which it spreads. I am informed by experienced physicians here that this, which is with us the most contagious disease by personal contact, is here hardly to be considered contagious from person to person. We want specific details as to the variations of the disease, its incubation, and its results upon the kidneys—in fact an accurate record clinically and scientifically in order to determine whether it be specifically identical or whether it differs in any way from the scarlet fever which we know. Then it would be very in-

Digitized by Google

teresting to us to have from some of your experienced surgeons complete information as to a curious form of what we know as the senile gangrene, occurring here apparently among adults of middle age otherwise seemingly in ordinary physical condition, such as some of the cases Dr. Takagi pointed out to me in going round his wards. Then you could communicate to us observations which would be important as to the influence of those very hot baths which your population are in the habit of taking, a habit which is contrary to European experience, and as to which we have little information on the precise difference of the physiological effect of a bath at 95 Fah., and one at 105 to 120. Baths at 120 are unknown to us in Europe, and information as to the influence on health and disease would be most welcome. I am told by Dr. Baelz that the treatment of infantile pneumonia by very hot baths at 105 is with him very successful. This would be at once a field for interesting information if it were communicated by us to your physicians. There are other points, such as the hemorrhages in typhoid fever, which with us are the worst possible prognosis; they mean most commonly a very serious case and have a very bad diagnosis. I am told that here, on the contrary, hemorrhages in typhoid fever are common and are comparatively benign. That also points to a difference of type on which comparison and information would be very valuable to us. Massage or shampooing, is with us a comparatively recent introduction: with you it is an ancient and long practised art. What have you to tell us of the value of massage in medical cases, and of its real value—not in the hands of the uneducated *amma* but in the hands of the educated physician, carefully and methodically carried out us we are beginning to carry it out in Europe? These are among the subjects on which we should be pleased to offer you the hospitality of our medical periodicals, and as to which we should be glad to receive communications at the meetings of our British Medical Association. Speaking as the editor of the *British Medical Journal*, which is the journal of the Association, and speaking also as one of its members holding an official position, I may say we should heartily welcome everything which would bring the members of the Japanese profession into more frequent and more direct communication with the British medical profession, and which would allow us an opportunity of seeing them from time at our meetings and to read their communications in our pages. The British are very sympathetic towards the Japanese, and we have the vanity to speak of you as the English of the East, which, knowing that we have not as bad an opinion of ourselves as we might have, you will understand is in our minds an unforced and voluntary compliment. Now if you are disposed to think of following one precedent which we have in England in our Medical Association I shall briefly summarise some of its features, and I shall place in the hands of your seniors here all the documents and papers which may be necessary to give you such detailed information as you may subsequently require. The British Medical Association owes its origin to an eminent provincial physician, then Dr., afterwards Sir Charles, Hastings, who founded it some fifty-six years ago. Its declared objects then were, and they have never been departed from, first of all the elevation of the standard of professional knowledge and the improvement of medical education; secondly, the collection of information from all parts of the empire as to local prevalent diseases and the best means of treating diseases according to locality; of studying epidemics and of considering local conditions so far as they might affect the public health; and thirdly,—and this is amongst its most important and its always most valued objects and results—the cultivation of a sentiment of friendship and unity amongst all the medical men of the empire and the raising of professional ethics and of conduct towards one another to the highest standard of professional duty and courtesy. The British Medical Association is essentially a representative institution. It is one in which for purposes of association, and of meeting, the members of the profession, however humble in pretention or however great in position, meet for the time on an equal footing. Each must meet the other as a friend and a brother, each making his contribution to knowledge or to the general unity and power of the profession. It is an institution founded in the first instance, as you see, by a provincial practitioner, with the object of extending not from the centre to the periphery, but from the periphery to the centre, so that every medical man, in however remote a district or colony, may feel himself a member of the whole body, and may have an opportunity of communicating with the centre. The arrangements are such that the whole body of men have the opportunity of periodically meeting at convenient times and places in their own locality, forming there a committee for their own self government, according to a common and general pattern and sending from each local centre a representative who comes every three months to form one of a central committee, and to meet his colleagues from the other parts of the kingdom. Each of these local bodies, which have arranged themselves by a sort of natural growth according to geographical necessities, constitutes what we call a Branch. Each Branch has a set of bye-laws formed not with absolute uniformity, but modified to suit the necessities of each locality. Before the branch can be recognised these bye laws must be approved and accepted by the General Committee. The funds of the Association are supplied by an annual subscription from each member. That subscription includes a small contribution required for carrying on the work of local organization, and the general expenses of the central committee and of their publications. I need not trouble you with the details of its growth, but I will tell you that at present, at the end of 50 years, our position is this. For the annual subscription of £1 or $6, each member has all the privileges of attending the great general meeting, which takes place every year in a different part of the country by invitation, the medical men and the authorities of each town vieing with each other from year to year in inviting the pleasure and the honour of meeting the Association, and giving to their professional brethren a hearty welcome at this annual gathering. On these occasions not only do the medical men themselves, so far as the resources of their homes permit, invite their medical visitors to stay with them in their houses, but the principal inhabitants of the town take pleasure, at the suggestion of the medical men, and knowing the event is to happen, in extending similar hospitalities to the medical practitioners who assemble. The total number of members of the British Medical Association, all of whom must be British subjects, is upwards of 16,000, so that it has grown to be a great organization starting from small beginnings. Its branches have each their local meetings at such times and places as are most convenient to themselves — in some places where there are not many medical practitioners they meet rarely. Where the district is extensive the place of meeting is changed from time to time, and arrangements are made for local meetings at which papers are read, cases are shown, discussions are held, and probably a friendly dinner takes place afterwards. So great is the power of numbers and of union that the influence of the Association is now very considerable, and its funds have grown to a great point. The total income of the association is £17,500 from subscriptions. The *British Medical Journal*, which is supplied to the members for their subscription of a guinea, is a weekly journal which has grown now to 120 or 140 pages weekly, constitutes in fact a volume in itself, and gives the members information from every part of the world on medical subjects, and it supplies in virtue of its great circulation, an income of eighteen to nineteen thousand pounds a year from advertisements. So that the association is able not only to supply this great mass of literary matter, but also in virtue of its prosperity to put aside a sum of £2,000 a year, which it assigns in donations and studentships for scientific research to assist medical men who desire to carry on medical research. It is collecting also a valuable library, and it is able to defray the expenses of a Parliamentary Committee which exercises great influence over the welfare of the nation in respect of sanitary questions and over the welfare of medical men in all public departments. Being so numerous it is in a position to study all sanitary questions; all questions of public law, and all questions of the organization of army and navy medical officers, and to make representations to Parliament which, coming from such a great body of men —a large proportion of whom are able to influence local members of Parliament—are always listened to with respect. I need not trouble you with the enumeration of the questions—but on points of sanitary law, the health of the people, drainage, water supply, the organization of the Poor Law medical service, the condition of Army and Navy medical officers—on all these as they arise the Government finds it an advantage to be able to hear from such a highly organized body what their views are, and the medical men find it of great advantage to express, by organized means, to Ministers, to departments, or to Parliament what they think about questions affecting the public welfare. These duties are largely carried out by the Parliamentary Committee, of which I have had the honour for many years to be Chairman, on which every branch of the Association is represented by one member, so that this Central Committee is always in touch with the local branches, and on the other hand the local branches are all represented on the Parliamentary Committee. It only remains for me to say that we shall be happy to afford any information or assistance to you if you should at any time think of adopting an organization of the sort—of course with such modifications as may be suited to the genius and customs of your nation. We shall be glad to send copies of our journal to your libraries, and otherwise to do that which will show our brotherly feelings towards the faculty in Japan. A word or two now of a much younger institution, in which I learn that you are much interested, and which has also proved itself to be most useful to medical men. It had long been felt that it was exceedingly desirable that some means should be provided to enable medical men, —whose very living depends upon their good health, and whose means of livelihood often cease if their health fails—to provide against sudden calamities of sickness or accident. The merchant or official has in times of illness the income of his business or of his office still going on, even if temporary disablement should overtake him. When the doctor himself falls ill, however, his income often and sometimes permanently ceases. In that respect he resembles the artizan or the barrister: he lives by the daily work of his brain just as the artizan lives by the daily work of his hands. How then to provide something which should put the doctor at ease in his mind when times of sickness suddenly overtake him without his having been able to put by money adequate to provide for them. That is a difficult problem, which has more than once engaged the attention of thoughtful men; and which it has always been found very difficult to solve on account of the complexity and costliness of the machinery necessary to control the demands on such a fund, and to carry it out in a thoroughly trustworthy and reliable way on a sound financial basis. An effort of this sort was made in England some years ago and failed by reason of its difficulty. But a few years ago, when the subject was again raised by some of our medical men, it seemed to me that the extensive organization of the British Medical Association and the wide circulation of the journal which I edit, and our knowledge thus obtained of each other would enable me to make that effort again on a better footing, and possibly with a more successful result. And so about seven years ago after making the necessary preliminary enquiries and after getting some actuarial bases of the expectation of life of the average medical man so as to obtain accurate tables, we had a meeting at Liverpool, at which we resolved to found a society for providing an adequate weekly payment to medical men disabled by sickness or by accident, and with some provision for permanent disablement. I won't give you the figures, which would weary you, but I will tell you briefly the result. I based the whole structure upon this: that the society must be absolutely mutual, that is to say, that there should be no aiming at any other profit than the profit to the subscribing medical men themselves: that there should be no shares, no capital, no interest to be paid except to the medical men themselves. We therefore decided that we would not commence until we had a sufficient number of subscribers to this new institution to ensure a sufficiently large average for stability—which our actuary fixed at 200 medical men. By our general meeting and by making the whole facts and propositions known in the *British Medical Journal*, we were able to commence with that number. That was little more than six years ago. The whole basis of payment was accurately calculated by the proper authority whom we call an actuary, and tables were prepared showing what annual sum needed to be paid by each of the two hundred medical men in order to enable every one of them to have a claim for the payment, according to their subscription, of either £2 or £4 a weekly when disabled by sickness. The payment varied therefore according as they desired to receive £2 or £4, and it varied of course according to the age at which a subscriber entered, and therefore according to their expectation of sickness. To give you an idea of the kind of payments necessary, I may say that for the higher sum of £4 a week a man aged thirty would pay about £10 a year. If his illness lasted for six months he would be entitled to the £4 a week for the whole six months; if it went on for more than six months and permanently disabled him—if it were a case such as we often have of a permanently disabling illness or accident, he would be entitled after the first six months to half that amount, £2, a week for the rest of his life. We have already had three such permanent claimants on the fund in the course of the first six years, who joined in perfect health, and they have been receiving and will receive that sum for the rest of their lives. We find that an average of, I think, 10 per cent., of the members are disabled by sickness or accident each year. Medical men

Digitized by Google

were found to be exceptionally liable to accident. The sick members receive their payments every week on receipt of a certificate from the medical man attending them, showing that they are disabled by illness from attending to their practice but in no case is any payment made except upon such certificate, which must be renewed every week. Every man who desires to retire after having been a member for twelve months can do so with the approval of the Committee, and on doing so receives nearly 75 per cent. of the money which he has paid in, 25 per cent. being forfeited by his retirement, and representing the risk incurred and insured against while a member. The same payment entitles every man, whether sick or well, to a pension of £50 a year from the time of his attaining the age of 65, and by a slight addition to the annual payments his family become entitled to a sum of £200 at his death. That institution has been found to be so useful that at the end of six years we have over 1,000 members. The result of the actuarial enquiry at the end of the first five years has been to show that we have made a profit, that is to say the receipts have been in excess of the requirements, to the amount of £3,000, which was put in reserve to diminish the future payments of members. We have accumulated to meet future demands £40,000, which is invested, the property of the members, and every year the sphere of usefulness of the Society improves and the number of its members increases. I think my brief account of that Society might perhaps be suggestive, and useful to my colleagues here in Japan. Of course all our tables and regulations and calculations and other documents are enterely at your service, if at any time in the future they may be useful to you. In conclusion, gentlemen, I thank you very sincerely for the kind attention you have given to me.—(Applause.)

Dr. TAKAGI, in the name of the meeting, thanked Mr. Hart very heartily for his address, and expressed the pleasure with which they had listened to his most interesting and instructive remarks.—(Applause.)

Subsequently the President of the Medical Society of Tokyo, Dr. T. Sasaki, requested Mr. Hart to forward sets of the documents relating to the two Societies described, and in the name of his colleagues of that Society invited Mr. Hart to meet them at a banquet, at which the hospitalities of the Society might be tendered, and the subject further discussed on his return to Tokyo at the end of the month, after visiting Kyoto, Nara and Osaka.

Mr. and Mrs. Hart were afterwards entertained at a banquet.

## *THE PHOTOGRAPHIC SOCIETY OF JAPAN.*

The next ordinary meeting of the Society will be held at the New Masonic Hall, No. 60, Yokohama, on Friday, 17th inst. The principal object of the meeting is the exhibition of the prints made on bromide paper presented to the Society for competition by Mr. S. Cocking, who offers prizes for the best, second best, and third best prints. Members of the Committee may exhibit, but do not compete for prizes. The exhibition of the pictures will begin at 1 p.m. The public are invited, and the prizes will be awarded to those who gain the greatest number of votes from those viewing the pictures. There will also be exhibited the results of various flash light exposures that have been made at different meetings of the Society. Besides this members are invited to send, for exhibition, anything that they think may be of particular interest to photographers. There will be a regular meeting of the Society at 8 p.m. A demonstration of a modified silver printing process will be given by Mr. W. K. Burton. The portfolio of photo-engravings recently presented to the Society by Dr. P. H. Emerson will be handed round for criticism. Mr. Kajima will attempt a photograph of the meeting by flash light. Those who intend to exhibit are requested to send their work to either of the secretaries, at his house, before the day of the meeting, or to send it to the Masonic Hall early on the morning of the day of meeting. Prints should be mounted, but need not be framed, although the Committee prefer that they should be.

A Brain and Nerve Food, for lecturers, teachers, students, clergymen, lawyers, and brain-workers generally.

## *SHAKESPEARE IN FRANCE.*

A LECTURE DELIVERED BEFORE THE LITERARY SOCIETY OF YOKOHAMA, ON THE 3RD APRIL.*

It is well known how strong a hold our national poet has always had upon the Germanic mind. Recent researches have made it clear that Shakespeare's dramas were played in Germany during his lifetime, and that in the first half of the 17th century not merely translations, but the actual English originals, were rendered by actors at various German Courts. The great literary revival in Germany at the close of the last century, the period of illuminism as it has been called, was marked by a keen and close study of Shakespeare. Goethe's famous novel, "Wilhelm Meister," is largely a study of the character of *Hamlet*. So deep an impression did this creation of Shakespeare's make on German thought that one critic exclaims, "Hamlet is Germany," and has written a poem with the theme as subject.[1] But this was in the days when Germany was still divided, and was largely given over to dreaming. His reproach is no longer applicable:—

> He ponders, dreams but at this need
> No counsel comes, firm purpose granting,
> Still for the prompt, courageous deed
> The prompt, courageous soul is wanting.

To attempt to estimate the influence of Shakespeare upon German thought would be no slight undertaking, far exceeding the limits of a short half hour's paper. But when we come to France, where the study of foreign literatures, not classical, is of quite recent date, the survey is much narrower and the task far easier. The romantic movement in Germany was not hampered by any previous native literature having the immense prestige of the Louis Quatorze drama. Racine and Corneille remained all powerful influences in France for nearly a century after their deaths, and their sway was not easily to be broken. Very few Englishmen of letters in the first half of the 18th century, and no French savants, but regarded the London theatre of 1700 A.D. as an immense advance on that of 1600 A.D. They looked down patronizingly upon the Elizabethan drama, while allowing the existence in the plays of isolated passages of great beauty. From this period of French ascendancy in literature we date the expression, "The Beauties of Shakespeare." Such is the attitude of Pope, of Addison, and of Goldsmith, names which were mentioned with respect and approbation in Parisian circles. It was in 1761 that Voltaire made the boast that he was the first to introduce Shakespeare to French readers. Perhaps it was a mere second introduction, for there is reason to believe that Shakespeare was known in French literature as early as 1604. He did not estimate his protégé very highly. To French critics of that day, the undoubted blemishes and cruditis which find a place in every one of Shakespeare's dramas, and greatly disfigure some of the less finished of his productions, were intolerable barbarisms which, like flaws in a jewel, reduced their value to almost nothing. Seven years later Voltaire published at Geneva his "Théâtre Complet," in which his views are stated pretty plainly. He calls the tragedy of "Hamlet" a vulgar and barbarous drama which would not be tolerated by the vilest populace of France or Italy. His description of the plot is sufficiently contemptuous. "*Hamlet*," he says, "becomes crazy in the second act, and his lady-love becomes crazy in the third; the prince slays the father of the young lady under the pretence of killing a rat, and the heroine throws herself into the river; a grave is dug on the stage, and the grave-diggers talk quodlibets worthy of themselves, while holding skulls in their hands; *Hamlet* responds to their nasty vulgarities in silliness no less disgusting. In the meanwhile another of the actors conquers Poland. *Hamlet*, his mother, and his father in law carouse on the stage; songs are sung at table; there is quarrelling, fighting, killing—one would imagine this piece to be the work of a drunken savage. But amidst all these vulgar irregularities, which to this day make the English drama so absurd and so barbarous, there are to be found in "Hamlet," by a *bizarrerie* still greater, some sublime passages, worthy of the greatest genius. It seems as though nature had mingled in the brain of Shakespeare the greatest conceivable strength and grandeur with whatever witless vulgarity can devise that is lowest and most detestable."[2] Voltaire's estimate was acquiesced in by several of our leading English writers. Hume, who was largely under French influences, speaks of Shakespeare in much the same terms as the great Frenchman. An English lady, the first of our noble army of blue-stockings, Mrs. Montague,[3] was inspired, more by a laudable patriotism than by any competent knowledge of the subject, to take up the cudgels on behalf of her countryman. Some time after the publication of her essay, an insignificant dramatist produced a play, which Mrs. Montague admired so much as to exclaim in its praise, "I tremble for Shakespeare." *Apropos* of which Dr. Johnson, to whom the remark was repeated, growled out in his downright way, "Shakespeare is in a bad case, when he has such a rival and such a defender." In the year 1772 appeared an adaptation of "Romeo and Juliet" for the French stage by M. Ducis, who was to perform other and still more remarkable work of the same kind before the close of the century. Ducis's "Romeo et Juliette" took striking liberties with the original. The simple story of love, with its natural evolution of events—admirable features in Shakespeare's art—must give way to that drama of surprise which is pitched upon so much lower an intellectual scale. After his father's banishment the infant *Romeo* is received into the household of his hereditary enemies, the *Capulets*, his true name and birth being concealed. Old *Montague*, after living in hiding for many years, suddenly returns and rallies his partisans. In the struggle which ensues young *Romeo* hesitates between filial duty and the affection which he bears to his patron and his patron's daughter, with the latter of whom he is in love. The affection of the two, instead of being the centre and pivot of the play, is made a mere episode in the bloody story of a vendetta. Twelve years later Ducis, who by this time was in the French Academy as Voltaire's successor, performed a similar operation on "Macbeth," mutilating and patching up that noble tragedy. He cuts out the prediction of the witches, a very important element in the whole drift of the story, particularly in its bearing on *Macbeth's* moral deterioration. These fateful women come on the stage as in a pantomime, recite six lines, and then disappear. Here again M. Ducis must have his mystery and his Jack-in-a-box surprises. The son of the murdered *Duncan*, educated under an assumed name by a Highlander, grows to manhood. His kind protector officiously goes to *Macbeth's* court to claim the throne for the prince; and *Macbeth*, the assassin, the blood-stained usurper, in an outburst of Rousseau-like sentimentalism *very* characteristic of a Scotchman, falls on the old man's neck and yields up his ill-gotten throne. And then, afraid perhaps of a curtain lecture from *Lady Macbeth*, he commits suicide. But it is in "Othello," published in 1792, that we find the highest outcome of M. Ducis's genius. He begins by changing *Othello's* complexion. "I have thought fit," he remarks in his preface, "to dispense with the hero's black face, departing in this particular from the usage of the London theatre. It seemed to me that a copper tint, while equally characteristic of an African, would have the advantage of not revolting the eye of the public, and, above all, of the ladies. This brown complexion would permit the audience to take greater delight in all the scenes, to enjoy the full force of their charm—the variety and the play of passion which overspread the mobile and animated face of a young actor, radiant with enthusiasm and intoxicated with jealousy and love." Ducis, in changing *Othello's* complexion, leaves him his name, a compliment which he pays to none of the other characters. *Desdemona* becomes *Hédelmone*, *Iago* is *Pézare*. And the circumstances of the final catastrophe are altered to suit his idea of French taste. *Hédelmone* is not smothered to death; she is dispatched with a stiletto. "On the English stage," he remarks, "it is not with a dagger that *Othello* kills his wife; he smothers her in bed with a pillow, pressing upon it repeatedly until she dies. Now a French audience would find the brutality of this scene intolerable. A tragic poet," (it is to be remembered that Ducis's translation is in French heroic verse), "is obliged to conform to the character of the nation before which his works are represented; an incontestable dictum, since his first duty is to please. So, to satisfy several of my spectators, who have found my denoûement of pity and terror altogether too harrowing, I have, by a slight change, been able to substitute an ending which will spare their feelings. The original denoûement, nevertheless, apears to me to be much more suited to the nature and moral truth of the subject. But as I have printed both denoûements, directors of theatres will be at liberty to choose whichever appears most suitable to them." And so M. Ducis left it to the discretion of theatrical managers how far they might trespass on the sensibilities of their audiences. It was an age of sensibility, when tears flowed, in drawing-rooms and public halls, and even on the highway, at the

slightest provocation. M. Ducis was wise in taking this precaution against an excessive stimulation of the lachrymatory glands. Ducis also adapted "Hamlet," this play preceding "Roméo et Juliette" by three years, and made a serious omission—he omitted *Hamlet!* Do not suppose, however, that the proverbial allusion to "the play of 'Hamlet' without *Hamlet*," comes from the cruel mutilation of M. Ducis. It is the elder *Hamlet* whom he omits—the ghost! In the French play the spectators do not see the ghost, the fact of its appearance being communicated to the audience by the ghastly look on the Prince's face. Talma, the great tragedian, made a deep impression by his rendering of this scene. "Certainly," said Madame de Staël, "when in the midst of a calm and melancholy conversation he all at once sees the spectre, we follow its every movement on the eyes which look upon it, and we find it impossible to doubt the presence of the phantom when such a look bears witness to it." With all his shortcomings, to Ducis belongs the credit of having made French audiences acquainted with the wonderful genius of Shakespeare. His dramas had the signal fortune of securing the services of a first-rate actor. Talma, the greatest of French tragedians, was thoroughly conversant with the English language and its literature, passed some years in London, and was a friend of John Kemble's. He rendered the stiff and monotonous lines of French tragic verse with a new force and vigour, throwing into them some of the sparkle and variety of Elizabethan blank verse. He also conformed the stage costumes to the dress of the period with which the play dealt. The new school of dramatic reform made rapid strides. It was a fresh and stimulating draught to the jaded Parisian palate. Madame de Staël, who was intimate with Schlegel, Schiller, and others of the German romanticists, interpreted the movement to her countrymen in the pages of "l'Allemagne," and was the precursor of Victor Hugo and the anti-classical revolutionists of 1826. Before the close of the century the first complete French translation of Shakespeare's works appeared—that of Le Tourneur, in 1779. It is customary to speak slightingly of French translations of Shakespeare, and most of them are undoubtedly wanting in exact scholarship and adequate rendering of particular phrases, but still they have their merits. It is easier to derive pleasure from the perusal at a single sitting of one of Shakespeare's dramas in a French dress, than if we take up a more elaborate German rendering. The one occasion on which I can remember having finished a play of Shakespeare without a break, was one evening when I took up a French translation of "Romeo and Juliet." The drama as a whole, the evolution of the story, the swiftness of the action, the pathos of situations, are placed simply before us in clear and flowing language. "People," says Matthew Arnold, in his essay "On Translating Homer," "praise Tieck and Schlegel's version of Shakespeare: I, for my part, would sooner read Shakespeare in the French prose translation, and that is saying a great deal." One sometimes hears these French translations spoken of as if their authors perpetrated all sorts of absurdities. We are told, for instance, that one will find in them the term *Monsieur* prefixed to names where the effect is most bizarre. For instance the line "Macbeth! Macbeth! Macbeth! beware Macduff," is rendered, "M. Macbeth! M. Macbeth! M. Macbeth! donnez-vous garde de M. Macduff." But this was a trick of that mischievous spirit, Voltaire, perpetrated with the design of rendering the dramatist ridiculous. Fancy *Madame Gertrude, Mademoiselle Ophélie!* as Voltaire has dubbed these unfortunate ladies in his travesty. In the same spirit he translates.[4] "Not a mouse stirring," by "Pas un souris qui trotte!" It was not, however, the pure spirit of mischief which impelled him. The unconventionalities of Shakespeare, his flagrant disregard of court etiquette, his exposure on the stage of princes and heroes in undress, with the tragic air completely doffed, revolted Voltaire's sense of propriety. Louis XIV. expected to be put to bed like a prince, and to rise like a prince; the ways of ordinary mortals were too commonplace and vulgar for his Majesty. This was the national ideal, carried out with the uncompromising national logic; once a prince, always and on all occasions a prince. There must be no mingling of the sacred and profane, of the heroic and the vulgar. Chateaubriand was, after Voltaire, the next eminent Frenchman who tried to interpret Shakespeare to his countrymen. The Vicomte, whose "Sketches of English Literature" appeared in 1837, is distinctly unsympathetic in his whole treatment, though recognizing much of the superlative genius of the dramatist. With his classical tastes and fastidious mind he found it a wearisome task to get through the thirty-six dramas, "a pious but tiresome duty," as he calls it, "paid to departed genius." His grasp of the language seems to have been somewhat deficient, and he often misses the force of a remark or argument. One peculiarity of Shakespeare's, a peculiarity which perhaps the dramatist shares with his countrymen, is the very matter-of-fact way in which he deals with the ugly processes of death and the grave. A person of English race does not shrink from this treatment, as one of another nationality is apt to do. Scarcely a French writer, treating of the grave-yard scene in "Hamlet" but expresses his disgust at the introduction in such surroundings of so repulsive an object as a skull. Equally obnoxious to criticism seem *Romeo's* reflections in the churchyard. To a Frenchman's ear the mention of rottenness and worms is a barbarism and an impertinence. Since the days when Chateaubriand was all powerful a complete change has passed over French criticism. A wave of romanticism, of which, as we have said, Mme. de Staël was the precursor, swept over French literature after the restoration, and its prophets have not failed to do Shakespeare full justice. The career of Victor Hugo, not remarkable for political consistency, shows in his literary sympathies a no less striking mutability—or perhaps we should say mobility of progression, for the literary change was all in one direction. Nothing could be more Voltairean than Hugo's judgment of Shakespeare at eighteen years of age. "We have never understood," says he, "the distinction which people seek to establish between the classic style and the romantic style. The plays of Shakespeare and Schiller only differ from the plays of Corneille and Racine in that they are more faulty. That is the reason why, in the former, recourse must be had to greater scenic pomp. French tragedy despises such accessories because it goes straight to the heart, and the heart hates whatever disturbs its interest." Five years later the whole spirit of his criticism is changed; he has burst the bonds of classic tradition; he has begun to view the drama as the painting of actual life, in which the tragic and the comic, the noble and the degrading, the beautiful and the ugly, should find a place side by side. This theory of the juxtaposition of the beautiful and the ugly, Hugo was destined to carry to a point far in excess of what is necessary to justify Shakespeare's dramatic art. In 1827 Shakespeare is already to Hugo "the highest poetical altitude of modern times." Later on in life he ceases to criticize Shakespeare, he deifies him. His "William Shakespeare," published in 1864, is not a criticism, it is a rhapsody. The rise of the romantic school in France was marked by strenuous efforts to introduce Shakespeare unadulterated on the French stage. In the autumn of 1822 a company of English actors visited Paris and gave a Shakespearian representation; but they were not well received. Cries of "Speak French," "Down with Shakespeare; he is an aide-de-camp of Wellington," and other unfriendly taunts greeted them. Before many years were over, however, a different reception was granted to a distinguished English company, which numbered among its members one of the Kembles and a pretty Irish girl named Henrietta Smithson. Shakespeare and Miss Smithson became all the rage, and the lady finally married a distinguished French musical composer, Berlioz, himself an enthusiastic romanticist and admirer of Shakespeare. A few months afterward the great Edmund Kean appeared in Paris, and took his audiences by storm with his powerful impersonations of *Richard III.* and *Shylock*. He came near scoring badly on his first appearance by arriving late and drunk, but the ill-humour of the audience melted before the actor's wonderful power of enthralling them. It is doubtful how much of Shakespeare's popularity at this time was due to real appreciation, and how much resulted from the unconventionalty of the situations. Certainly all the enthusiasm must not be ascribed to permanent causes. Since then Shakespeare's place as a master poet and dramatist has been assured in all French literary circles. The "divine Williams," as a Gallic admirer once fantastically called him, is no longer introduced with apologies. Many of the most appreciative and excellent criticisms that have been penned of late years have came from French sources. There has been a gradual *rapprochement* between French and German canons of criticism. "Hamlet" is the play which in France and Germany is indissolubly associated with Shakespeare's name and genius, and, as a distinguished German commentator has remarked, "Through 'Hamlet' the German mind has penetrated into French literature, which has already begun to modify its character. The influence is, however, a mutual one; the Germanic mind is already no longer like 'Hamlet,' any more than the French mind is its opposite."[5] Among French translations of the century may be noted the complete translation of Guizot, first published seventy years ago, and now in its seventh edition. More than fifty years ago the masterpieces of Shakespeare, as they are termed, "Othello," "Hamlet," and "Macbeth," appeared in a French dress, with imitations in French verse by de Vigny, Deschamps, and other leading littérateurs of the time. And almost simultaneously with the "William Shakespeare" of Victor Hugo there came forth from the press a complete translation of the dramas by his son, François Victor. To a Belgian, M. Lacroix, we owe a masterly survey of Shakespeare's influence on the French drama, published at Brussels in 1855. It was followed six years afterwards by the work of Professor A. Mezières, "Shakespeare, his Works and his Critics," an excellent and able treatise. Of all French criticisms perhaps Taine's is the best known to English readers. It is suggestive and appreciative, but is scarcely to be termed nicely-balanced or satisfactory. His descriptive remarks are much more applicable to the drama of horror which preceded Shakespeare, and of which Marlowe and Ford may be taken as representatives. "Startling imagination, furious velocity of exuberant ideas, passion let loose, rushing upon death and crime, hallucinations, madness, all the ravages of delirium, bursting through will and reason," are not exactly the terms which we should consider befitting the plays that are really Shakespeare's very own creation. Taine's verdict is not by any means to be taken as representative of the French criticism of the time, which sees much more art and repression in Shakespeare than Taine would allow. Taine's theories and his exuberance of words frequently run away with him. The later French criticism of Courdaveaux and Gomont leaves little to be desired. The classical spectacles through which French critics used to regard everything literary, have been thrown away once and for all. Alfred de Musset sings the dirge of the combatants, and hails the new era of a broader and more generous criticism, which recognizes the excellence both of classic and romantic masterpieces:—

> Racine, rencontrant Shakespeare sur ma table,
> S'endort près de Boileau, qui leur a pardonné.

[4] Bernardo. Have you had quiet guard?
Francisco. Not a mouse stirring.

## *STATEMENT OF THE CITIZENS' COMMITTEE ON THE TREATY REVISION.*

The Japanese Government seek to obtain full and complete jurisdiction, civil and criminal, over the persons and property of foreigners resident in Japan, such jurisdiction to be exercised solely by native judges and according to the laws of this country; to annul the covenants under which foreigners hold land in the settlements, and to subject such land to the native law of tenure; and to obtain tariff autonomy, with power of levying tonnage, harbour, and light-house dues.

In the month of September last, it was understood that Her Britannic Majesty's Minister in Japan was about to concede these demands, the concession to take effect after the lapse of a given period of time; and it was for the purpose of protesting against such action, that the meeting of the foreign residents of Yokohama was held on the 11th of that month.

The immediate outcome of the meeting was an unusual amount of excitement among the Japanese in Tokyo and elsewhere; and the native press, led on by a foreign paper, which holds a brief from the Japanese Government, teemed with articles of a more or less violent character, upbraiding the foreign residents for presuming to interfere in the smooth course of Treaty negotiations, and daring to raise a protest in defence of their own interests.

Unfortunately the matter did not end here, and it is a matter of regret to the Committee to have to state, that threatening letters were sent to several of the residents who had taken a prominent part in the meeting, necessitating their being placed under special police protection, a condition of affairs which has not yet been terminated.

The Standing Committee appointed at the Public Meeting, in view of the excitement then prevailing among the Japanese, decided that, beyond transmitting by telegraph the resolutions passed at the meeting, it would be better not to follow them up with a written statement in support, but to confine their action to a formal confirmation by mail of the telegram sent, accompanied by a newspaper report of the proceedings at the public meeting.

It was felt that the reasons to be alleged in support of the resolutions were of a more or less invidious character, calculated, doubtless, to give farther umbrage to the Japanese, in the not un-

Digitized by Google

likely event of their being published, and so to increase the feeling of ill-will towards foreigners which had been engendered.

Other reasons suggesting delay in the matter were, the difficulty of drawing up a concise yet ample and forcible statement covering such a wide area as that presented by the whole question of the Revision of the Treaties, and also the condition of uncertainty, not to say ignorance, in which the Residents found themselves, in regard to the actual point at which the negotiations had arrived, and the measure of support their views might meet with at home.

Hence the decision taken by the Committee to do no more at the time than formally confirm the telegraphic transmission of the Resolutions, but, as this action on their part seems to have been misconstrued into an inability to adduce arguments in support of their contention, they now proceed to state their reasons in as brief and concise a form as possible.

The meeting has been called an Anti-Revision meeting; but so far from being opposed to Revision, there is not an intelligent member of the community who does not admit that Japan is entitled to demand some relaxation of the terms of the present treaties. The progress she has made in various directions is recognised with sincerity and admiration, and her aspirations are regarded with sympathy; but the most persistent advocates of her cause are obliged to admit that she has not yet proved her right to claim unconditionally the promise of unrestricted judicial control over us, and it is an undoubted fact that there are many among the Japanese themselves who share their opinion. It will therefore be understood that the term Anti-Revision, as applied to the meeting, and those taking part in the resolutions arrived at, is entirely misleading.

On the subject of the Tariff the Committee are of opinion that it may be modified to meet the wishes of the Japanese Government; but that it should be regulated by Commercial Treaties with the Powers interested, as is done in European countries. This would guard against sudden changes and the imposition of excessive duties, which might ruin certain important branches of trade. The levying of tonnage, harbour, and light-house dues might in the opinion of the Committee, reasonably be conceded.

On the question of Jurisdiction, the first of the resolutions of the 11th September accurately and precisely expresses the unanimous opinion of the foreign community. That opinion is based on the fact that the native judiciary is not yet fitted by education, knowledge, or practice, either to understand or to administer the Codes of law that have recently been compiled from foreign sources; and that the Codes themselves, which are not to come into force for two years, have not been subjected to that practial test without which it is impossible to form an opinion in favour of their adequacy. It must be borne in mind that the laws contained in these Codes are not indigenous, but imported, not to satisfy an acknowledged want, but for the attainment of a political object, namely, the Revision of the Treaties and the abolition of extra-territorial jurisdiction. In order to show that the community are not alone in their opinions, we append hereto a report of a speech of Mr. Masujima, a Barrister-at-law of the Middle Temple, and one of the leading practitioners in the native Courts, on the subject of the proposed new Commercial Code of Japan (a bill for the postponement of the operation of which to 1st Jan., 1893, has recently been carried in the House of Representatives by 189 to 67, and in the House of Peers by a 2/3 vote on the ground that the Code is of foreign importation and totally opposed to the mercantile and business customs of the Japanese); also an address by the same gentleman, read before the Asiatic Society of Japan on the 18th June last, on the subject of "Modern Japanese Legal Institutions;" and an extract from a local paper of a speech in the House of Representatives made on the 20th December, by Mr. Kato Hiroyuki, on the subject of the promulgation of the Commercial Codes; papers which cannot fail to be read with interest and advantage in understanding the questions at issue. We may also call attention to the fact that drafts of portions of the Codes found their way into the hands of the public some two years ago, the language of which was so highly technical as to be almost unintelligible to the lay mind, and not easily to be understood by scientific lawyers. For a large number of the expressions used there are no Japanese equivalents, and words have therefore had to be coined, which convey absolutely no meaning whatever to educated Japanese, some of the Judges themselves having acknowledged their inability to understand them. The Committee agree with the conclusions of the writer of a letter to *The Times*, under date the 20th December, 1889, to the effect that the British and other foreign merchants in Japan who have created the foreign trade as it exists at present, which amounted in 1888 to 21¼ millions sterling, and who are the persons chiefly concerned in the proposed new arrangements, heartily approve the cautious and prudent policy pursued by Lord Salisbury's Government down to the end of the year 1888. They do not view with confidence or satisfaction the prospect of being placed under Japanese laws and tribunals, for they have no faith in either. It is true certain branches of law have been codified, but, as one eminent foreign Minister said in regard to these Codes, they are mere books; the foreign merchants and residents want to see the Judges who are to read and interpret these books. Such men are not produced in a single generation; they do not exist in Japan now. The wisest laws, in the hands of incompetent or corrupt Judges, may be instruments of tyranny and injustice, while even bad laws are shorn of many of their terrors in the hands of upright and capable administrators. Besides, it is too often forgotten that Japan is the first Oriental state which has claimed the abolition of Consular jurisdiction; Turkey has acquiesced in the system for centuries; it exists in China, Morocco, Siam, and elsewhere; it is about to be created in Persia. In all these countries British commercial interests are of the greatest magnitude, and it therefore behoves her Majesty's Government to be slow and wary in creating and shaping a precedent; to obtain guarantees and securities before permiting British subjects to pass from the control of their own magistrates and under that of Orientals, who, however intelligent and interesting they may be, are, in this respect at least, absolutely on their trial. No one can say what the result of the experiment may be, but one thing is quite certain; there can be no retracing of the path; it may be, and is, an experiment to place foreigners under Japanese jurisdiction but, if it should turn out to be a failure, we cannot return to the *status quo ante*. Once give up Consular jurisdiction, and whether we have done well or ill, it is abandoned for ever, which is all the more reason why we should do so with caution and hesitation, and why we should surround the persons and property of foreigners in Japan, if it be decided to hand them over to Japanese tribunals, with all reasonable safeguards. This, the men who have created, and who now maintain, the foreign trade of Japan, have a right to expect of their Governments.

It is possible that time may show the new Codes to be all that is claimed for them by the Japanese, and the Judges competent to administer them; but, in the opinion of the Committee, it is impossible to predict what length of time may be necessary to test the efficiency either of the laws or of their administration; and to promise that foreigners shall be subjected to them on the expiration of a given period of time, whether that period be five or ten years hence, would be as unwise as to make the concession at once. What the Committee would recommend would be an undertaking to abandon extra-territorial jurisdiction as soon as the Codes shall have been a sufficient time in force to afford practical proof of their efficiency, and the administration has been shown to be satisfactory, without attempting beforehand to determine a limit of time which, from the circumstances of the case, must necessarily be based on mere guess work; and if the Japanese Government are not content to await the result of this probation, then that their demands should be conceded only on condition of the interposition of some such safeguards as have hitherto been admitted on all sides, and notably by the Japanese Government itself, to be necessary.

To meet the argument now put forward that the appointment of foreign experts to the Judicial Bench, which was the solution offered by the Japanese Government and acquiesced in, in principle, by the Treaty Powers, is no longer possible, owing to constitutional difficulties, a suggestion has been made which, in the opinion of its author, would, if conscientiously and intelligently carried out constitute a reasonable guarantee for foreigners while not in any way involving a breach of the Japanese Constitution, though it would necessitate an amendment of the laws of the country. The suggestion is that it should be provided by treaty, that any foreigner whose life or liberty is brought in question before a Japanese Court shall have the right to demand a jury *de medietate linguæ*, and if necessary to enable him to exercise that right, to change the *venue;* and that in civil cases he shall, on the same principle, have the right to demand either a mixed jury, or that the Court be aided by experts, sitting as assessors or associates; the verdict in all cases to depend upon unanimity in the tribunals thus formed. The Committee are of opinion that this suggestion is worthy of the serious consideration of the various Governments interested in the question of Treaty Revision; and they would add that they consider a radical amendment of the police and press laws and the law of public meeting as at present administered a *sine qud non* to the entertainment of the demands of the Japanese Government.

It will be seen from the foregoing that no factious or unreasonable opposition is entertained by the community to the principle of the demands of the Japanese Government on the question of jurisdiction; but on the contrary, that there is an earnest desire to comply with their wishes as soon as this can be done with safety. In short, the foreign residents would not be reconciled to the abandonment of their extra-terrritorial rights and privileges until ample time shall have been given to test the new Codes, nor until they have acquired confidence in the ability of the Judiciary, unless some satisfactory safeguard can be interposed between them and the native tribunals.

But though acquiescing conditionally in the principle of the Japanese demands with regard to the recovery of tariff and judicial autonomy, the Committee are quite unable to recognize the justice of those put forward in respect of land held by foreigners in the settlements. By the treaties Japan undertook to lease land in the open ports to the subjects and citizens of Treaty Powers for residential and business purposes; and by subsequent arrangements and conventions, leases in perpetuity have been granted, conditional only upon the payment of a fixed annual ground-rent and the observance of certain formalites with regard to transfer. Many hundreds of thousands of pounds have been spent in improving the lands so acquired. It is now proposed to call in the existing title-deeds and issue others in their stead, and it is argued that foreign landowners will be the gainers, inasmuch as the land-tax payable by Japanese is lighter than the ground-rent payable by us. Even if this were so, there is no guarantee for the future; but the argument is fallacious, as it ignores the house property tax which would at once become payable in addition to the land tax. But in any case a compulsory alteration of the conditions of land-tenure created by solemn covenant, is considered by this Committee to be *ultra vires*. Foreigners are quite content to continue to pay the present ground-rents, and to observe the conditions of the title-deeds, retaining the privileges and immunities attaching to their tenure, and they do not desire the propose change. They quite understand the object of the Japanese Government, which is arbitrarily to abolish an exceptional tenure, created by convention, and ratified by covenant, and by compulsion to obtain more favourable terms for themselves. In short, the land now held by foreigners is required by the State, and it is sought to confiscate it without their consent to the terms offered in palliation of the act of confiscation. This is the grave injustice complained of in the second resolution of the 11th of September; and the Committee cannot too strongly protest against any action on the part of the Treaty Powers which would deprive foreign landholders of their rights without their concurrence. If the land is required for State purposes, it needs no argument to show that the consent of the landholders is a condition precedent, and that they should not be compelled, by Treaty or otherwise, to make any sacrifice of the rights and privileges they have acquired, without due and ample compensation. The only way to adjust this question would be by the appointment of delegates, or a Commission armed with full powers to negotiate a settlement.

The question has been asked, what does the Japanese Government propose to give the Treaty Powers in return for the concessions it asks of them? To residents in Japan, it looks as if a great deal were being demanded of Foreign Powers and very little offered them in return.

The bait which is apparently being held out, and which to the uninitiated seems a tempting one, is the throwing open of the whole country to foreign residence and trade, and no efforts are being spared by the Japanese and their partisans in this matter, to impress on European Governments, as well as on merchants and Chambers of Commerce at home, the belief that a large and valuable internal trade, hitherto beyond the reach of foreign traders in the Treaty Ports, will at once become available to them, and that great results may be expected.

Now in the opinion of the great majority of those who have been longest engaged in business in this country, there can be no greater fallacy than this, and whatever hopes might be formed of seeing a material increase or expansion of the trade

Digitized by Google

in foreign imports, would certainly be doomed to disappointment.

It is hardly to be supposed that foreign goods have not, in the course of the past thirty years, found their way to every part of the country, and it is precisely this work of distribution to consumers in the interior that can done more economically, and to better purpose, by the native merchants or middlemen, than by any foreign traders, were the country thrown open to-morrow unrestrictedly. Turning to the subject of Exports, it is hardly necessary to point out that there has been a steady and continuous growth in the volume and importance of the trade in them for many years past, and there seems no good reason to suppose that the opening of the country would effect any beneficial change in the conditions under which business has been conducted in the past.

It is possible we might see foreigners engaging in mining and industrial enterprises of various kinds, either in concert with Japanese, or otherwise, provided laws were passed under which they could hold land and other property in the interior, and associate themselves securely with the natives in such transactions; but even in this direction, it may be doubted whether foreign capital would at once be ready to lend its aid.

The Committee do not wish the conclusion to be drawn from what is here stated, that the opening of the country would not, in itself, be a desirable measure, but they strongly combat the notion that it can be in any respect looked on in the light of an equivalent for the unconditional surrender of Consular jurisdiction.

Yokohama, January, 1891.—*Japan Herald.*

## *OUR "SPECIAL" TELLS THE STORY OF FELIX HOLT SECUNDUS.*

IN THREE SECTIONS.—BY A. M.

### Section I.—On the Plains.

It was at once a simple and a beautiful idea and in 1886 a perfectly feasible one. The notion was to form the shipmasters into a United Society and the ship's officers into another and by means of delegations from the bodies so organized to federate with the F.S.U.A. which is cabalistic for Federated Seaman's Union of Australia. This of course would have meant perfect solidarity in the labour of those who go down unto the deep in ships, and the owners shivered in their slippers when they got wind of the scheme. It had been conceived in the silent watches of the night, and for the best part of nine months its gestation had been a secret. Then somehow or other whispers of the approaching birth got bruited around among the capitalists, and when the baby did appear it was next door to still-born. Not still-born altogether though; it would be more correct to say that the Plutocrats, Hera-like, sent snakes to strangle it in its cradle, and that the creeping things succeeded in their mission. It was a pity, because, as said before, it was a plan that would have gone through at that time if all the Unions had been in earnest. Brisbane and Adelaide were, but Sydney and Melbourne were not, and of course we have high authority for prognosticating the speedy collapse of a structure divided against itself. So the project miscarried, and the Adelaide and Brisbane men got smitten hip and thigh, not with the jawbone of one solitary ass, but with a perfect chorus of donkey-brays from the whole Plutocratic Press of the Continent. Now this was nothing short of a calamity for all concerned. Of course the notion *has* to go through ultimately,—there is no doubt about *that*. If well engineered it would have become *un fait accompli* then without any very considerable amount of friction, or of industrial waste and wear and tear. It didn't; and so both sides organized for a battle royal and after a three years' interchange of lying expressions of mutual regard and politeness, issue was joined in 1890. The result was very expensive to both sides and glorious to none of them, but that has nothing to do with story at present.

It was Will Hawkston that was at the bottom of the '86 plot, and if he had got his way then, Australia would be a good many mile-stones further on the road to Social-Democracy than she is to-day. He felt the miscarriage keenly—far more so than I ever fancied he could feel anything. He had worked like an intellectual Hercules in piecing the thing together and in trying to run it through, and the breakdown of the concern seemed to break him down utterly. It is true that he was in a very ricketty state physically,—his wasted frame and cadaverous cheeks were suggestive at once of Will Langland, William III., and zymotic disease,—especially of zymotic disease. The only thing to be thought of was a "spell," and I told him as much in the plainest Anglo-Saxon I could muster for the occasion. He delighted me by admitting that I was right, and that furthermore he had taken steps to get one. It seems that an old Oxford chum of his was then philandering about in the Colonies, and Hawkston had run across him at the Club. The chum in question was a real live Japanese nobleman—a thoroughly good sort too, in spite of the unfortunate handicap of having to go through life with a brummagem prefix in front of his name. He evidently saw that Hawkston was in a bad way. He told him he wanted an English teacher for his former retainers, and asked Hawkie to undertake the job as a favour. "Barkis was willin," and so when I ventured to open my mind to Hawkston on the matter of a spell he took me utterly aback by informing me that he was to sail for Japan on the next day but one. I was glad of course, but yet in some ways my sorrow was much greater than my joy at the turn events had taken. For Hawkie had been my closest friend for the last twelve months, and I didn't at all like losing touch of him. I took a day off and spent the four and twenty hours previous to his departure in his company. We had much to talk about, but of course only a small part of that enters into this story. Among other things Hawkie gave me a few fat M.S. volumes bound in black and closely packed with his own crabbed hieroglyphics. For Hawkston's copy is with one exception the worst I ever set eyes upon, and that exception is my own.

"Look here, old man," he said "Gibson (that was the crack Brisbane specialist on throat diseases) "tells me that it is merely a toss up as to whether I shall be thrown overboard or buried in a Buddhist Cemetery, and I'm half inclined to believe him. Now there are some things I know of that nobody else does, and it is just as well for the Cause—a Capital C. of course,"—(here he smiled sarcastically) "that some one should be able to use the knowledge if need be. You'll find them all there in black and white, and some of them will have to be acted upon before six months are over. There are other matters besides that are purely private. But I'm without father or mother or sister or brother or chick or child or any relation whatsoever, and you may just as well have these volumes as anybody else. If I get better and come back, let me have them again; if not—then good and well, do with them even as you list."

His prospects of recovery struck me about being on a par with those of a Queensland wild-cat mine after the directors and promoter shareholders have succeeded in unloading every shred of their scrip on a gullible London public. I would have taken any odds against the chances of his coming back,—that is if I had been callous enough to put money on such a contingency. When I said good-bye to him he was the sickest socialist I ever saw,—those batoned in Trafalgar Square by a gallant and courageous police force not even excepted. But as matters turned out, there was a lot of vitality in him after all—just as is the case with Social Democracy itself.

Well, I set to work on the volumes, as in duty bound and found them not at all unlike the earliest attempts at literature we possess, in the variety of subjects dealt with. They constituted a sort of diary, where "impressions" of slums jostled with sarcastic etchings of high life; while ethics, and politics and economics were mixed up together in a jumble that would have delighted the innermost cockles of the heart of Moses or Confucius, or of the author of the Laws of Manou. Then there were notes on the dodges and tactics of the capitalists and a scheme for the Universal Federation of Labour in Australia cheek by jowl with real live lyric poems, and scraps and figures that might have some far off connection with the Integral Calculus or the Fourth Dimension. Of course all this with the single exception of the last item, was interesting. But there was even better in the note-books than the sum total of everything above mentioned. Running through the tangled skein of the text was what I scarcely ever dreamt of in the case of Hawkston—a first class Romance. After I had extracted the political tips that might be of special value at the time, or in the near future, I set to work upon the personal factor in the notes, and soon with a little editing and a few interpolations, I succeeded in piecing together a story that would have brought me sundry shekels of silver, if I only had had the luck to be christened Wilkie Collins.

I propose to jot down the first part of the yarn in the style of the "Woman in White," being partly persuaded to this course by the original sin of inherent laziness, and partly from being wishful to let the man speak for himself.

There are two classes of entries; those of 1884 and those of 1886. In the case of the former the scene is England, principally Oxford and the little village by the Thames with the brace of contradictories "Commerce and Christ" for a trade-mark; in '86 the Southern Cross must be supposed to be shimmering down upon the love-making such as it was. The only prologue necessary to the comprehension of the piece is that Hawkston was a Queensland native, born on the slopes of the ranges just where they sweep up and spread out into the plains. It is a hot-blooded impetuous brood mostly that is reared in those quarters,—a generation not over much given to unbonneting to shoddy dignities or kowtowing to the conventional lay-figures of respectability and vested interests. Every child there born of woman is brought up to ride and to shoot and to stand sauce from no one; most of the males add to these rudiments of a liberal education, the further accomplishment of hitting straight out with the left and getting in with the right when a chance offers. Hawkston learned all that at Toowoomba Grammar School, and then he went to Sydney University and afterwards to Oxford to get an inkling of what was utilitarian in the learning of the Egyptians and to put on the top-dressing that is as very bird's lime in catching a well-bred mate in the drawing-rooms. In Oxford he was a success, came out with a first in Lit.-Hum. and another in Modern History, and was looked upon as surely booked for an All Soul's Fellowship in spite of his low and disreputable Radical views. For be it remarked it was not after all such a very serious drawback to flirt with Radicalism in Oxford in the early 'eighties, if it was but a mere flirtation. But there is a big difference between a mistress and a mésalliance, and respectable Dons were more than scandalized to find that Hawkston's intentions regarding Radicalism, or as it was then beginning to be called Social Democracy, were not only honourable, but to keep up the figure, even matrimonial. That, however, did not appear conclusively until the day after the exam., while the merits of the canditates were still under consideration, with as it afterwards turned out a strong consensus in favour of the brilliant Oriel man, Hawkston to wit. Then he needs must outrage Decency and Respectability by inviting to dinner at the Bachelor's table in Hall, not the Devil himself—that would have been pardonable perhaps—but an individual to whom the Devil and and his Angels and eke their heavenly adversaries were all so many effete symbols and negative ones at that. When the Member of Northampton —for it was the redoubtable Bradlaugh no less that was the guest of the evening—walked into the place, it was as good as a play to watch the commotion at the Don's table as soon as the word went round that that lineal descendant of the eldest of the sons of Belial was in their midst eating the college salt and drinking the college brew. But the indignant fluttering of their academical robes did not seem to discompose Bradlaugh in the slighest. He looked upon the episode as a good joke and so did Hawkston. But the latter did not look at the occurrence in that light two days later when the result of the Fellowship election came out. He found himself passed over, and another—and a very weak vessel indeed that other was—appointed to the vacancy at the common-room table of All Souls. It is at this point that the Diary as edited—begins.

* * * * * * * * * * *

September 1st.—'This is a fix and no mistake. It is as good as being "bushed" in a lantana-scrub. Scholarship run out; no show of a Fellowship after that Bradlaugh business now. A mastership in any of the "respectable" schools,—Eton, Harrow, Rugby and so forth, is not to even be dreamt of. And I don't want to leave England just yet a while. Wherefore I purpose to join myself unto a citizen of this country who will send me into his fields to feed swine *i.e.*, into his classrooms to cram dunces with the husks of word-mongering.

September 4th.—What a glorious country this is for a man with no money! With this blessed competition-wage system there is a lot of inducement to be honest. Dick Whittington and his Cat and Hogarth's Two Apprentices sound very, very funny indeed, at this time of day. Society is mainly divided into plunderers and plundered, exploiters and exploited. There are still a few relics of fossil probity left us by our industrial individualism. But that is all. The thing itself, as a living entity, is extinct as the Moa. Of course there is a big difference in the connotations of honesty and of keeping out of jail. *Probitas laudatur et alget*—gets praised in the abstract but goes with an empty stomach in the very flesh.

The above reflections are neither new nor profound. But notwithstanding they are true—and that's a lot more than can be said of the orthodox economic theories. They are prompted by the fact that I find that £90 per annum for eight hours' work a day is all that two firsts in

Digitized by Google

Finals in Oxford bring in the competitive scholastic mart. A Queensland stockman gets as much and he dresses in moleskins, a Crimean shirt and a cabbage-tree, and has no struggle with the incidentals of broad-cloth, un-creased unmentionables, white shirts and collars and all the other miserable appurtenances of British Philistine respectability engaged in the pitiable game of keeping up appearances! For cheapness and a general spirit of nastiness there is nothing like industrial competition! It is is a grand thing, a holy thing, a blessed thing! Therefore let us put our necks under its yoke and lift up our voices in its praise in a bovine chorus of heartfelt thankfulness for nothing! That is those of us who have qualms about turning licensed foot-pads and scrambling up atop of our neighbours and then kicking down the ladder we mount by! Body and soul must be kept together somehow; and so Respectability on £90 a year let it be! Anyhow there is still time left for the propaganda. The Fabian Society is beginning to get a hold. It is giving me enough to do and to spare.

October 25th.—We are making headway. At least the "classes" show signs of taking an interest in us. We had a bumper house in Bermondsey last evening. John Burns, Champion, and one or two others spoke. I was sitting on a bench in the back of the hall when I noticed something peculiar about a woman rigged out in rather frayed and weather-worn and unfashionable raiment. I couldn't for the life of me make out where the attraction came in. Then she shifted in her seat and I saw at a flash what it was. It was her pose, *and the way she carried her rags*. They sat upon her like the robes of a Duchess. Her companion seemed to be a flash got-up costermonger, "seemed," I write advisedly. I looked at his fists; there was far too little real estate about his well-trimmed nails for one of the "'orney 'anded."

Just then the speaker concluded with a few telling shots, and was cheered to the echo. As the applause died away I caught one or two sentences the pair were exchanging under cover of the whirlwind of shouts.

"These people are no fools" she remarked. "Who could have fancied that a speech like that would have taken with the mob? That man spoke better than most in St. Stephen's."

"Humph! Too much school-board hath made them mad," answered the other, with a contemptuous ring in his tone.

It needed no great insight to twig that they were masqueraders. I fancied it would be just as well to know all about them. So I kept my eye on the twain and kept stride with them when they left. After getting clear of the crowd they hailed a four-wheeler and I got up behind and took a ride out of Jarvey for nothing. It was as I thought. The man is a member of the shop that misgoverns a *free* people by hereditary right; the female is his lawful spouse. I got a glimpse of her features,—hers is a face that a man who looks upon it once will not readily forget.

November 5th.—This talk of an unholy alliance between the Nihilists, the Irish Dynamiters and ourselves is all so much fudge. There is nothing to justify the Fenians in their madness; they have the means of constitutional agitation. With the Russians it is different. The Bureaucrats of Czardom seemed determined to sit on the safety valve of Constitutionalism. If the boiler bursts they can't legitimately complain. That little Russian woman is a wonder. A regular Perovskaia and a Vera Sassulitch thrown into one. She is not La Pucelle though. Jeanne d'Arc gave her life for France; if what is told is true Lisa has sacrificed more than that for the propaganda. To raise funds for the Centre to which she belongs—as likely as not they are wanted for some infernal piece of nitro-glycerine devilry—she has parted with what is incomparably more precious to a virtuous woman (she is one too, if I am not a fool) than life—her *honour*. She is not beautiful till she speaks. Then a glow of spirituality lights up each one of her features, and she shines out more resplendent than a Vittoria Colonna. What wonderful things those Russian folk's songs are she sings! The pace is trying me a bit. Eight hours dunce-driving by day and as much speaking and writing and plotting and conspiring by night are getting too telling altogether.

January 19th, 1885.—So that was the meaning of it! Czaricide no less! Poor Lisa! She is to be executed next week!

March 10th, 1886.—So it is good-bye to "Hold Hingland." Poor wretched caste-ridden mammon-driven old country! Marx and Saint Matthew Arnold to the contrary, I cannot help now and then taking a desperate view of your social problem. But there's hope for you in Democracy and the Schoolmaster after all. Anyhow I've done my share of the day's work. The medicine-man after ten minutes ominous spirit-rapping on the sackful of bones that used to be my chest, tells me my only chance is the nerving air of the Austral land. So I'm off "'ome." 'Tis seven years since the Heads faded into mist behind me, and these years have wrought changes. I go back to a home where there are neither kith nor kin to welcome me more.

* * * * * * * * * *

June 20th, 1886.—Here I have been vegetating for the best part of two months. I am content and I don't like the situation, but I think that has been said by some other fellow before—by Goethe, I fancy. He has the unhappy knack of filling up all the lacunae in the quotation line accidentally left by Shakspeare and the Bible. Between the three of them there is now very little show left for the coining of original epigrams and aphorisms. But to "reshume" as my Hibernian friend, O'Hara, the overseer, would put it. I am content because I have been pulling up famously. When I came up here I was like a piece of lathe, mounted on a pair of churchwardens—(pipes, I mean of course). O'Hara assured me that I must be a "man av no mane courage to vinture on such outrajisly tinder shupports." But O'Hara is plump and rotund, not to say obese, with short stumpy overgirthy understandings that would be a disgrace to even an Esquimaux or an ancient Etruscan. Symmetry is certainly not his strong point, and so his criticism must not be taken too seriously. But the fact remains that I *was* thin, when I came up from Brisbane. I am just six and twenty pounds heavier than when O'Hara passed judgment on me, and yet I scale a full stone under my Oxford rowing weight. But at this rate I shall not be long about putting on the extra flesh. That is the effect of the bright sunlight, the free out-of-door life and the whispering breezes that sough among the wattles and the gum-trees. Another month of it and I shall be as fit as a fiddle. But I don't like it notwithstanding. It is too slow and monotonous; too frightfully calm and smooth, altogether too materially comfortable. I ought to be down below in the towns among the workers—although I might do something here in knocking together a Shearer's and Bushman's Union and getting the beggars to organize. At the same time, if discontent and disquiet and unrest would only let me, I shouldn't be very sorry to grow gray in the midst of this eucalyptic cloisterdom. But what modern man since Petrarch can calmly make up his mind to dream away his life in a hollow Lotos-land?' For in spite of occasional dingo hunts and wild dashes after breaking cattle and Homeric feeds of mutton and damper and tea by the flashing camp-fires on the ranges, sweetened by sweat, yet this existence savours altogether too much of 'the Gods reclining on the hills together, careless of mankind.' There is a pleasure, a keen and thrilling pleasure in warring with evil—Tennyson's Choric song to the country, and here there is little chance of a good stand-up set-to with either Chaos or the Devil.

This station—cattle principally—is just fifty miles off from its nearest neighbour. The buildings are about thirty miles from the limit fence, measure in whatever direction you please. That means about 3,000 square miles of country, one-half of it freehold, most of it got by a wholesale process of "dummying" which is just a euphemism for doing the Government in the optic. And as the freehold commands all the water-holes on the run, the rest of the squattage is safe—from a squatter's standpoint of course. That signifies that it will never be resumed by the authorities, since no settler in his sober senses would ever dream of selecting where there's no water to be had, unless he's prepared to pay more for it than for custom-house whiskey. In my position of store-keeper and book-keeper and general rouse-about I see a good deal of the "hands,"—we have imported this choice piece of nomenclature from the humane English factory system,—and something of the "boss" and his family. He is English and aristocratic, a younger son, and a possible member of the House of Fossils; that is if his eldest brother drinks himself to death before he marries, and friend Bradlaugh does not succeed in turning the Alpheus through that Augean stable of Respectability and Vested Interests. It is amusing to get him on the string about Democracy and the Masses, as I see I can do every time the mail comes in. He is not a fool by any means, yet he does not seem to know what way to take me and my remarks. Wouldn't he horrified to discover the social fire-brand he has imported to weigh out his flour and tea and sugar to his boundary riders? (The metaphor is mixed, but never mind.) He will discover it some day not very far off, and then I promise myself no inconsiderable amount of amusement. But he is not at all objectionable in some respects. To those within the pale of his caste he is hospitality personified. The "swagmen," though, curse him roundly, and more than once have taken their departure vowing in their own lurid vocabulary to bear him in mind. This of course is a covert threat to fire his run, in spite of the £100 reward offered by the Pastoral Association "for evidence leading, &c. &c.," or to cut his fences. And twice within the last month these gentlemen have been as good as their word.

His wife the Hon. Mrs. Wingfield is just the average "goodless ill-less" matron of the English Upper classes. She might have been a woman worth knowing but for the blighting influence of a devastating attack of Mother Grundy at an impressionable age. She is kind-hearted, "lady-like" in her manners (of course), pudding-faced and conventional. There are two olive branches, regular wild, untamed blue-blooded devils. I have succeeded in winning their heartiest respect. They tried a bit of hazing on me, and were a trifle astonished when I caught them and rapped their thick skulls together in the presence of their lady mother and then dismissed them with a blessing and a kick apiece rearwards.

I hear our loneliness is to be relieved by the proximate advent of visitors,—a pair of new chums, of assorted sexes.

June 25th.—She came upon me as I was cutting up a sheep in the shed; evidently she was pleased with me after a fashion,—finding me a picturesque object in a romantic landscape. That evening at dinner—Sturgis the *paidagogus* of the establishment is my informant—she remarked that she had found a companion to George Eliot's picture of Adam Bede at his bench! Hey diddle-diddle! but this waxes amusing!

I knew her at a glance; no less than the *inconnue* of the meeting in Radcliffe Highway, Bermondsey, who was patronizingly pleased to admit that the Democracy did really possess some culture! Of course this is an opportunity to trot out the stock commonplace that the world is a very small place after all.

She is a clipper though! The lines of the Venus da Milo and the head and the poise of the flashing-eyed goddess Athena. These Aristocrats are really fine in their way. And why should they not be? They have had the show for generations. When *we* get *our* innings we will turn out products like her, not by the score, but by the nation. She—but why the Devil should I trouble myself to waste paper and ink on her?

June 27th.—More arrivals to break the monotony of our eucalyptic cloisterdom. We have all the elements of a second-rate symposium without Socrates or Aristophanes to make away with the liquor. An itinerant Anglican Bishop and his chaplain represent the church militant. Then there's Dutton, the Minister for Lands, to expound Henry George and to run him as a kind of Universal Social Painkiller or St. Jacob's Oil. Next we have a Bank Inspector to rave on the sacredness of "proputty" and the right divine to collar the unearned increment of corner allotments. To complete the list we have an infernal Manchester carpet-bagger on the outlook for pastoral and mining investments for his syndicate. He is said to be making sheep's eyes at the "widdey," for she lost her little lordling of a husband two years ago. It was he no doubt that was her escort at the meeting. Since then she has been travelling—very much interested in social problems. Humph! She doesn't look much like the orthodox blue stocking though.

June 28th.—To-day I was amused. I had just finished a thing on Nihilism for the *Bulletin*, and was sitting on a log looking over it before I dropped it into the mail-bag. Possibly what psychologists call "contiguity," set me a-humming that little Russian air I learned from Lisa. Suddenly—it must have been about four in the afternoon, the shadow of a sunshade and a woman's body was thrown over my shoulder, and I looked round.

"That is a weird melody," she said—it was *she* of course—"It sounds like Russian music."

"It is Russian." I answered.

"Indeed! That is very interesting. Where does it come from?"

I told her it was a folk's song I had heard from a friend. She caught sight of Tourgenieff's *Otsi i Dietsi* lying on the grass, and *sans ceremonie* took it up and looked at it.

"You read Russian?" she asked with the slightest elevation of her pencilled eyebrows.

I said I knew a little of it.

She then asked what I thought of Tourgenieff. Then before I knew where I was I was subjected to a cross examination about Poushkin, Learmontoff, Gogol and Goncharoff. After that she began to put "feelers,"—leading questions the lawyers call them—which I did't like a bit and shunted them as politely as I could. She was a lady down to her finger tips and so she dropped them at once. I could see that she fancied that there was something incongruous between a Crimean shirt and a critical know-

Digitized by Google

ledge of Sclavonic literature. I was at once amused and irritated at her. Why will these people coddle themselves with the notion that we Democrats are uneducated boors?"

June 30th.—What next? Are the streams about to flow back to their sources after all? I have been invited, and ultimately begged, to dine at the "boss's" table to-morrow evening. First the cubs came; then the boss; and then "mamma," as pleasant and as soft and as wheedling as you please. A station-hand at the Wingfield's table, with an itinerant bishop, a Minister of the Crown, a lady of title, a syndicate-manager, a bank-inspector, and in the poetical vernacular of the auctioneers a variety of other articles too numerous to mention! Verily we are broadening down with a vengeance!

July 2nd.—In the low cant of thiefdom, I am afraid I blew the gaff upon myself last night. But it was past human endurance to stand them all sitting up on end and airing their pretty air-bubble theories. I kept in the back-ground as long as I could. In the course of the talk Her Ladyship must needs trot out her account of the Radcliffe Bermondsey episode and cap that with her criticism of the attainments of the crowd. I couldn't endure that quite, so I remarked that I was somewhat astonished at the courage of the party. When a dozen pair of eyebrows went up interrogatively I went on to say that it needed a pretty bold individual to venture on challenging the claims of Lassalle concerning the irresistible equipment of Social Democracy in point of Culture after he and Marx had, with Ricardo in one hand and Hegel in the other, turned all the heavy guns of the philosophers and economists on private property in land and the means of production and knocked it into match-wood. I spoke very quietly, but notwithstanding the assembly started as if some one had let off an infernal machine under the mahogany. They were all upon me like a mob of garrotters, but I think I came out of it decently. I expect to get my walking-ticket soon though. One thing galled me shrewdly. Her ladyship thrust the discussion on to moral qualities, and in the course of it declared that after all it was blood that told, and that the boasted Democracy could never show what she called patrician courage. She asserted that in a race for instance, a plebeian could never do the impossible, while an aristocrat certainly could and would. The phraseology was somewhat enigmatic, but I fancy I grasped her drift. She looked at me meaningly, as I thought, when she said that. But why in the name of peace should I allow that woman to "ruttle" me in the way she does?

July 4th.—I don't like that carpet-bagger a bit. To-day he came down to the sheds with *her*, and some young squatters that have come over from the neighbouring runs to pass the time of day. I had taken a fancy to shoe Shylock, and was sawing away at his hoofs when the procession came on the scene. It seems the c. b. fences a little. He caught sight of a pair of single-sticks crossed on the wall, and nothing would serve him but a chance to display his accomplishments. So he took them down, whisked one of them whistling through the air and issued a comprehensive challenge to the neighbourhood. Now the saving grace and the savour of the salt of Australian life lies in sport. If anything can save the immortal soul of the future Republic it will be the courage that is born of the thrill of pig-skin 'twixt one's knees in front of a five rail fence, or the crush of a Rugby scrimmage. So although the youngsters knew nothing about the sticks, they put on the masks and buckled to readily enough. The c. b.'s science, however, was altogether too much for their untutored native pluck, and the Johnnies got warmed all over their persons. Just about this time I finished rasping the last shoe of the four and sauntered over to see the fun. I was more than astonished to find myself singled out by the Manchester man. I think I know the reason of the sneering ring in his words, and the mocking look on his phiz when he addressed me in the fashion of Severus to Maximin: "Thracian, art thou disposed to wrestle after thy —— horse-shoeing." It meant that he wanted if possible to score the impudent working-man who had scored off him somewhat extensively two evenings before. I saw that he felt morally cock-sure of having his revenge by basting my ribs if I should be venturesome enough to tackle him. Which I did. Now I had passed the long vac. of '83 I think it was, in Naples with San Martelli and knew pretty well how to take care of myself when it came to sabres. The Carpet Bagger had one frightfully weak point; he exposed his elbow. So I just contented myself with rapping his "funny-bone" as the boys call it, twice or thrice not over gently, and he threw down the stick with a twinge and what sounded as twin-brother to a curse. I caught *her* eye at the end of the performance and mischief glittered in its unfathomable depths.

July 4th.—I wish to Heaven that old beast Sturgis had told me sooner! What a muddle-pated clown of a paidagogus it is, albeit a thoroughly good-hearted fellow. So I was haled into the feast because, forsooth, she wanted to see a typical Australian working-man! Did she wish to amuse herself by seeing me eat peas with a knife, I wonder. Confound them, if I had but guessed! Their patronizing remarks anent me after my departure, *Sturgis teste*, are something to be humbly grateful for! I think it is in Kenilworth that Scott paints Leicester as doing immortal honour to Will Shakspeare by tossing him his bridle to hold, or something equally condescending. We've now got a little beyond that; it seems the Australian Plutocrat's way of acknowledging Democratic talent is to invite its possessor in with the pudding. How kind of the modern Philistines to call for Samson—Demos I mean,—from the prison house where he does grind that he may make them sport when their hearts are merry!

July 5th.—The Sydney Labour folks have sent for me. I am about all right again, and I mean to up swag and off.

July 10th.—This afternoon there was a mild bit of excitement. These aristocrat women have no end of pluck—and why shouldn't they? They have every possible chance to foster and develop the quality. At the same time, *barring the brains*, they are as fine in their way as the Renascence females. It is a sight to see *her* on horseback. She has a seat and hands too that the best stock-rider on the plains might be proud of. But she tackled what was altogether too "kittle" for her when she insisted on getting on Bonnibel. She is a brute, a regular out-and-out-brute, as her dam was, and her grandsire before her. She comes of a strain that has turned out more devils, and killed more grooms and jockeys than any other at the Antipodes. The "boss" protested when she made the proposal, I'm told, but what was the use? When he went off to the out-station after lunch, she came out and ordered the mare to be saddled. It was none of my business to interfere of course, and I didn't. But I thought I'd take Shylock out for a canter in the direction I was pretty sure she would follow. He is the only horse on the run that can outpace the mare, either in a spurt or a long course. I had got on to the stretch of open beyond the scrub that belts the station clearing when I saw a floating cloud of dust tearing along the back road like a comet with a woman on horseback for its head. I guessed what had happened. The brute had bolted; and saw, and saw and saw as she might, the woman could no more touch that rock-callous mouth than she could hope to rasp through a capstan bar with a darning-needle. Now it so happened one of the station niggers was coming along the track and he threw out his arms and shouted. This simply sent the mare off her course, and away she rushed to the right like a snorting whirlwind. I knocked the spurs into Shylock, for there was good need to. About six hundred yards off was a gulch with a bottom of whinstone rock and sides as sheer as a castle-wall, making fully a hundred feet of a drop. The brute was going straight in a bee-line for that; and going with the spin of the winner of the Melbourne Cup. She had a start too, and I knew, without taking much time to consider, that I just *might* catch her a yard on this side of eternity. How the gum-trees flitted behind the thunder of the four pair of hoofs! It was like the Erl King in a night-mare! I got up level with her just as we had the brink in sight. It was no use reaching for the rein, we should have all gone over then in a regular family party. So I let the mare go and confined my attention to the woman. I got hold of her and swept her on to the saddle in front of me, and yelled like an Indian, swinging round to the near side at the time. Shylock was the best cutting-out horse on the run, and round he came like a fork of lightning bent on business. It was a lucky thing that I had shod him a few days before. He struck all his hoofs into the turf at once and tore it up as if a shell had burst upon it. Just then I heard a ghastly "thud" in the gulch below and when I looked round I saw a long score on the brink and then over it,—the marks of the infernal beast when she saw that she was getting her own accursed skin into a pickle and wanted to charge her route. Then I jumped down and lifted "Her Ladyship" from the saddle. I went to the brink and peered over. Atop of the whinstone lay a bright-coloured mass *very still*. From it little rills of trickling red oozed out of sight in the crannies.

*She* took the thing very cooly—not in the least flustered or excited—she only paled a trifle,—that was all. Then her clear-cut face flushed like the morn when the sun's first kiss brushes the ranges, and she looked at me with a smile and said quite simply

"That was a gallant thing, Mr. Hawkston!"

Then, like a cad, I needs must have my fling at her.

"It wasn't the impossible quite, perhaps, but if the Patrician *had* gone over that ledge, the Plebeian would have been in at the death a good second."

"I know what you mean," she answered very quietly, "and no doubt circumstances justify the retort. But I don't know if I am wrong after all though. It is not every working-man that reads Russian, quotes Æschylus, and rides to the death like a Centaur or a Paladin, is it?"

"Possibly not, but to how many do you give the chance? Give us a show and you'll find a good many Hervé Riels among us, and ten thousands of men better than I."

"With your leave well postpone the discussion to another time. Meantime I won't attempt to thank you. I have found—"

"A very interesting specimen no doubt." I interrupted, for now I felt a most unreasoning anger against her, and at the same time a feeling I have never felt in the presence of woman before. "But please leave me alone in future, and don't get me any more invitations to dinner."

She saw that I knew all about it. At first her head went up haughtily; then her features softened and she put her hand gently on my sleeve. (How that touch thrilled me! I felt the blood run jumping and leaping in my veins!)

"I ask your pardon," she said gravely—"you have the right to speak as you do. But I meant no offence, and I am more than sorry for what has happened."

"Don't mention it, only it is true that the people feel as keenly as you Aristocrats, though perhaps you don't fancy so. But let us get stationwards."

Of course there was a lot of talk about the incident, although I said as little as possible.

July 14th.—I thought she was at the bottom of it. A fine plan truly! Yesterday the boss asked me to undertake the management of Jimboomba station with a salary of £1,000 a year and a share in the profits. To-day Paidagogus informed me that Her Ladyship had bought it. A very nice plan indeed!

July 15th.—*She* came herself and asked me to undertake the post. When I said "no," she pressed me for reasons. I put her off gently at first. When she insisted I talked "straight." I told her I meant to keep below with the crowd and not raise myself on their shoulders.

"Ideal Felix Holt nonsense is it?" She said with more warmth than I ever marked in her speech before.

At that remark—the tone of it more especially, I kindled.

"Nonsense, if you please," I answered. "But Felix Holt is my ideal and I don't like to hear him sneered at. You know an ideal is at once the strength and the weakness of Democracy, and in stabbing at that you touch me in the raw. Do you fancy you and your caste have a monopoly of *noblesse oblige?* I am of the people and I intend to remain among them to the end of the chapter. You mean kindly no doubt, but you are only trying to bribe me to make *il gran refuto.*"

She looked at me with a trace of wonder in her face. I fancied I saw something else there also. Then she turned, and swept away proud, erect, and stately.

I must get out of this. She wants to amuse herself with me, evidently—to make me a winter plaything and then cast me off with her furs. I fancy I see the whole stretch of the comedy with all its lame and impotent conclusion. Supposing her in earnest —which is a gigantic suppose!—it would not work. It would be glorious to be known as Lady ——'s husband! No, no! Will Hawkston! *Uxori nubere nolo meæ.*

July 16th.—To-morrow I am off for town. Things look black in the Unions there; I'm afraid were in for a big strike,—if the thing is well engineered it will be a nail in the coffin of Plutocracy.

July 17th.—As I went off I saw a copy of Tennyson lying on the bench in the bush-house. It had her name on the title-page. I looked up *Lady Clara Vere de Vere*, and turned down the leaf after initialling the bottom of the page. She is a most accomplished woman, but she has yet an odd thing or two to learn. Among which ranks not least the fact that Democrats also have pride!

December 8th.—So it is virtually all over,—the defection of the Sydney and Melbourne branches has doomed the move. It would have gone through easily, if they only had stood fast. I had no idea I could feel anything so much. Never mind though. "*Bear up my heart; thou hast suffered even doggier things than this.*" But I'm sadly

Digitized by Google

run down again,—in mining vernacular well-nigh "petered out."

And just when my immortal soul is a-hungered the Devil disguised as an aristocrat in petticoats must needs start up at my elbow tempting me with bread. It is odd. I had seen her and the carpet-bagger in the streets several times and once or twice on the lawn of Government House. But I had carefully kept my distance, though twice I saw she wanted to speak to me. Of course the syndicate man may run her down, but I have my doubts. If he does he will find a bit in his mouth before he is much more aged.

Of course in view of the news from the South, at the mass meeting I put forth all my power to stop these fellows here ruining themselves in a bootless and hopeless forlorn hope. They were plucky though and meant fight right up to the hilt. However, I had my way. I made an ass of myself through sheer physical weakness. As far as I can make out I dropped in my tracks as I left the platform.

That evening friend Gibson came. I fancied he had just dropped in for a chat. I soon saw though that some one had sent for him, and I asked him who it was.

"Well," he answered, "I fancied it was your precious self. I got this note just as I was setting down to dinner."

He showed me the paper. It was simply a few lines requesting him to call on Mr. Hawkston at such and such an address without delay. My heart gave a thump when I saw the handwriting. I then remembered that I had seen a woman thickly veiled on the back benches in the hall, when I was on the platform, and my mind at once flashed back to the Bermondsey episode. I thought a minute and then told Gibson I was'nt sorry he had come, although it wasn't I that had spoiled his dinner. He and I are *friends* in the true sense of the word,—on the score of my being a 'Varsity man he will never accept fee or reward from me. "Dog doesn't eat dog" he remarks curtly when I try to remonstrate. So I spoke out plump, because I knew he can keep as quiet as the grave. I begged him if any money came to him on my account or in an envelope in the handwriting of that note, to send it back to so-and-so. He looked somewhat surprised and so I told him why and wherefore. He said he would as a matter of course, but at the same time he made a few remarks about Pride that would have sounded very well from an evangelical pulpit.

Two days later the medico told me he had seen her and that he had followed my instructions. He also took the liberty of holding forth once more on Foolish Pride. I told him he was a chip of the old block; his father being a Scotch Presbyterian minister.

To-day I met her in the Botanical Gardens. She sat down beside me on a bench under a clump of bamboos. It is odd how certain bits of scenery get painted indelibly on one's mental retina. In front, the great tawny stream, with countless craft swaying and swinging as the ebb tide began to sweep seaward, gurgling against their hulls and moorings as it waxed in force apace. Beyond, the huge trailer-clad granite cliff topped with its line of chalets and bungalows, and little spired chapels. Then the smoke-wreaths sweeping up in clouds against the russet-veined scaur where the channel turns off abruptly to the left. And over all a great flood of crimson violet light flushing the bunya-bunyas, the palm-fronds and the bamboos now swaying and rustling and whispering in the breeze which was now kissing the surface of the reach into tiny ripples and sighing forth love secrets overhead. I shall carry that scene with me for ever. Possibly the overpowering force of the impression was due to physical weakness, possibly because I was so wretchedly morbid. And then her presence; the supple lines of her body, the curve of her swan-like neck, the pose of her head, and a subtle odour of something that may be set down as magnetism —that word will do to shroud my ignorance of what it really is as well as any other, perhaps—all this set my blood tingling and my heart thumping in a way that was weakness itself. She tried to tempt me again, begged me to get better and then take charge of her station. But I steeled myself and said no. I closed the interview by telling her that there could be nothing possible in common between us, that she looked at life and its problems from one side and I from another entirely opposed; and that between our points of view there was a great gulf fixed. I told her as before I meant to keep down among the crowd; it would be better for her to keep with *her* people and to leave me alone. By this time the closing-bell had rung and we separated at the gate of the Gardens. She invited me to call upon her on the 11th. On that day I shall be steaming northwards for Japan!

(TO BE CONTINUED.)

## *THE FROG OF ÆSOP'S FABLE.*

There was a frog of fabled fame,
Which in a pond resided,
And on its pomp and circumstance
This froggy often prided.

A solemn cow in meadow green—
By some mischance decided—
Trod on a brood of little frogs
And may of them die did.

One only little frog escaped
To tell the sad disaster,
Diaculum would never prove
Regenerative plaster.

Off to the pond in haste he went
In panting perspiration,
And to the frog maternal made
The pitiful narration.

O mother, quoth the little frog,
In solemn tones to warn her,
It was a big square-bodied beast
With four legs, one each corner.

How big, replied the mother frog,
I'll be as big as he.
Not if you burst, the child replied,
Could you swell to his degree.

But mother frog sat on a log
In the pond where she resided
And thought she'd emulate the cow,
And finally she tried it.

The cow looked on in solemn mien,
At froggie's marked attentions,
And viewed with wonder and alarm
It swell to her dimensions.

With oxygen and hydrogen
Its little form adjusted
The frog expanded, swelled, and then
Unfortunately busted.

F. STANILAND.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 3rd.

The British revenue surplus amounts to £1,300,000.

Mr. Thomas Baring is dead.

London, April 4th.

Serious disturbances through strikes have occurred in Pennsylvania, the strikers at one place making an attack upon coke-works, where the police, firing upon the assailants, killed and wounded forty-nine. Great excitement prevails, and troops have started for the scene.

London, April 6th.

The conference of Colonial Representatives at Sydney for the purpose of preparing a draft convention, has agreed upon a Bill embodying the principles of a federal constitution, the title of the federated colonies to be the Australian Commonwealth of the Crown.

[This telegram has reached us in a somewhat incomprehensible form.—ED. *J.M.*]

London, April 7th.

The Treasury Department of the United States has arrived at the decision that all tea imported into the United States from European countries must bear marks that shall indicate the country in which the tea so imported has been grown.

London, March 8th.

The President of the United States has refused to sanction the negotiation of a commercial treaty with Canada. It is believed that he resents the Canadian electoral attacks upon the United States.

[FROM THE "SINGAPORE FREE PRESS."]

London, March 19th.

The convention at Sydney has passed resolutions for a Customs Union between the federated Colonies; the federal forces will be combined under one command. The members of the federal Parliament, Senate, and Chamber, will be elected under different systems.

London, March 20th.

Lord Knutsford has presented a bill to revive the lapsed powers of an Act of George the Third empowering Naval Commanders on the Newfoundland Station to enforce the execution of the treaties to which Great Britain is pledged.

London, March 21st.

The Newfoundland Chambers have petitioned the House of Commons to postpone the bill recently introduced by Lord Knutsford.

## *LOSS OF THE "QUEEN ELIZABETH."*

No report of the Court of Enquiry into the loss of this steamer appears in the *Rising Sun*, which gives only the finding, but the following is taken from the particulars of the disaster supplied to the Nagasaki paper by one of the officers:—

The steamer *Queen Elisabeth*, of Glasgow, was owned by Messrs. Thos. Dunlop and Sons, of that port. She was built in 1888, by Messrs. Alex. Stephen and Son, of Glasgow, and was 1,628 tons register, and 250 horse-power. The vessel left Karatsu at 4.30 p.m. on the 20th March, with a full cargo of coal, amounting to, including bunkers, about 4,000 tons. The evening closed in very thick, and with heavy rain; but all went well till about half-past eight, when she struck on a sunken rock. The engines were only going half-speed at the time of the occurrence, otherwise the calamity might have been greater. She was backed off, but it was found that water was making its way rapidly into the fore-hold. The pumps were set to work, but were unable to cope with the influx of water, which now gained rapidly. It having been decided that it would be dangerous to proceed further, in her then state, the captain thought it advisable to make for some safe anchorage, where he could wait for daylight; and it was in making for this desired haven, that the unfortunate ship struck for the second time. This time she could not be got off, having a heavy list to starboard, so much so that it was feared she would go over altogether. It was then resolved to make for the shore, and there await daylight. Throughout the whole time, perfect order was maintained; and the boats left the ship about one o'clock on the morning of the 21st, amid a deluge of rain. The beach where they landed was of a very rocky nature, and afforded but little shelter to the eight and twenty shipwrecked persons. When daylight broke on the scene, a visit was paid to the ship; but as her position was worse than ever, and water making in her stoke-hole and engine-room, it was decided that nothing could be done with her. Meantime the Japanese began to come down to the beach in numbers, and very soon kindled large fires of brushwood, as the rain had now ceased. In the afternoon shelter was found in the fishing village of Kadzumoto, where two large houses were placed at the disposal of the officers and crew. The Japanese of this village were most kind to the castaways, and their stay was made as pleasant as possible under the circumstances. On the morning of the 24th the Japanese men-of-war *Nisshin-kan* and *Banjo-kan* arrived, and the former took off the ship-wrecked crew. The grateful thanks of the officers and crew of the *Queen Elisabeth* are due to the officers and crew of the *Nisshin* for their very kind treatment whilst on board.

The Court of Enquiry was held on the 25th and 28th ult. at the British Consulate, Nagasaki, before J. C. Hall, Esq., H.M.'s Consul; Captain S. J. C. Parsons, Master of the steamer *Zambesi*; and Captain R. Meikle, master of the *Swanhilda*. The following is the finding of the Court:—

1.—That the ship was not properly supplied with charts for the voyage on which she was then engaged.

2.—That the course shaped at 7.30 p.m. on the night of the 20th, viz., W. by S. ½ S., was not a safe one; considering the state of the weather and the darkness of the night.

3.—That proper soundings with the deep sea lead were not taken, and that after obtaining soundings with the hand lead, at 14 fms., the ship should have been hauled off the land.

4.—That the master, in shaping his course, should have made allowance for a possible current setting the ship to leeward.

5.—The Court, therefore, orders that the master's certificate be, for the omissions ~~and mistakes~~ of judgment aforesaid, suspended for six calender months from this day. In consideration, however, of the fact that this is the first accident which has happened to him during the 13 years for which he has been in command of ships, and of his general good conduct and character, the Court recommends the Board of Trade to issue him a First Mate's certificate during that period.

6.—The Court commends the chief officer for having, previous to the casualty, expressed his opinion to the Captain that the ship was too close to the land, and ought to be hauled off. The conduct of the other officers and crew was free from blame.

## TIME TABLES AND STEAMERS.

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6,* 7, 8.05, 9, 9.35,† 10.45, and 11.40† a.m., and 1.10, 2.20,† 3.35,‡ 4.45, 5.55, 6.50,† 8.30, 9.50,* and 11.15* p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.45,* 8.20, 9.20,* 10.20, and 11.25* a.m., and 12.50, 1.50,* 2.55, 4.51,* 5.45, 7.05, 8, 8.58,† 10, and 11.05* p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Tsurumi Stations. Those marked (†) run through without stopping at Omori and Tsurumi Stations. Those marked (‡) run through without stopping at Tsurumi Station.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, and 10.25 a.m., and 12.30, 3.10, 4.30, 5.45, 7.40, and 10.40 p.m.; and KOZU (up) at 6.09, 7.30, 9.40, and 11.05 a.m., and 1.08, 3.13, 5.15, 7.17, and 9.43 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

A tramway runs between KOZU and YUMOTO (distance 4 *ri*.) Jinrikisha may be hired between YUMOTO and MIYANOSHITA (distance 1½ *ri*)

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.26 and 9.40 a.m., and 12.10, 3.50, 5.09, 6.25, and 8.20 p.m.; KAMAKURA (down) at 7.35 and 9.51 a.m., and 12.21, 4.01, 5.18, 6.36, and 8.31 p.m.; and DZUSHI (down) at 7.43 and 10 a.m., and 12.30, 4.10, 5.25, 6.45, and 8.40 p.m., YOKOSUKA (up) at 6.25, 8.02, and 11.20 a.m., and 3, 4.30, 5.45, and 7.35 p.m.; DZUSHI (up) at 6.41, 8.16, and 11.36 a.m., and 3.16, 4.46, 6, and 7.51 p.m.; and KAMAKURA (up) at 6.50, 8.25, and 11.46 a.m., and 3.26, 4.55, 6.08, and 8 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TOKYO-SHIOGAMA RAILWAY.

TRAINS LEAVE UENO (down) at 6, 6.35, 8.50, and 11.35 a.m., and 2.45 and 5.45 p.m.; UTSUNOMIYA (down) at 9.57 a.m. and 3.04 and 6.11 p.m.; SHIRAKAWA (down) at 8 a.m. and 12.34 and 5.42 p.m.; KORIYAMA (down) at 9.24 a.m. and 1.53 and 7.01 p.m.; FUKUSHIMA (down) at 7.30 and 11.35 a.m. and 3.48 p.m.; and SENDAI (down) at 6.15 and 10.25 a.m. and 2.35 and 6.45 p.m.

TRAINS LEAVE SHIOGAMA (up) at 6.50 and 11 a.m., and 3.10 and 7.20 p.m.; SENDAI (up) at 7.30 and 11.40 a.m., and 3.50 p.m.; FUKUSHIMA (up) at 6.40 and 10.23 a.m. and 2.36 p.m.; KORIYAMA (up) at 8.28 a.m., and 12.15 and 4.26 p.m.; SHIRAKAWA (up) at 6.30 and 9.45 a.m., and 1.35 p.m.; and UTSUNOMIYA (up) at 6.15 and 9 3 a.m., and 12.20, 4.18 and 6.30 p.m.

FARES.—Ueno to Utsunomiya, first-class *yen* 2, second-class *yen* 1.32, third-class *sen* 66; to Koriyama *yen* 4.10, *yen* 2.74, *yen* 1.37; to Fukushima *yen* 5, *yen* 3.32, *yen* 1.66; to Sendai *yen* 6.45, *yen* 4.30, *yen* 2.15; to Shiogama *yen* 6.75, *yen* 4.50, *yen* 2.25.

### UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 p.m.

* Through Trains to and from Uyeno.

FARES—First-class, 75 *sen*; second-class, 50 *sen*, third-class, 25 *sen*.

### KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE KOZU at 8.26 and 10.33 a.m., and 2.03, 4.42, and 6.09 p.m., and 12.08 a.m.; GOTEMBA at 9.48 and 11.55 a.m., and 3.32, 6.05, and 7.35 p.m., and 1.24 a.m.; NUMAZU at 10.37 a.m., and 1.10, 4.35, 7.10, and 8.30 p.m., and 2.12 a.m.; SHIZUOKA at 6 a.m., and 12.17, 3.30, 6.35, and 8.55 p.m., and 3.45 a.m.; HAMAMATSU at 9.05 and 11 55 a.m., and 2.44 6, and 9 20 p.m., and 6.10 a.m.; TOYOHASHI at 10.08 a.m., and 1.05, 3.48, 7.08, and 10.26 p.m., and 7.20 a.m.; OFU at 11.51 a.m., and 2.49, 5.21, 8.52 and 11.55 p.m., and 8.59 a.m.; NAGOYA at 5.45, a.m., and 12.45, 3.35, and 6.03 p.m., and 12.33 and 9.43 a.m.; GIFU at 6.43 a.m., and 1.52, 4.45, and 7 p.m., and 1.25 and 10.48 a.m.; OGAKI at 7.10 a.m., and 2.22, 5.18, and 7.29 p.m., and 1.54 and 11.20 a.m.; MAIBARA at 8.32 a.m., and 3.47, 6.47, and 8.46 p.m., and 3.10 a.m. and 12.50 p.m.; HIKONE at 8 43 a.m., and 3.59, 7.01, 8.57, and 1.01 p.m.; BABA (Otsu) at 10.18 a.m., and 6, 8.40, and 10.26 p.m., and 4.50 a.m., and 2.40 p.m.; KYOTO at 11.05 a.m., and 6.50, 9.30, and 11.08 p.m., and 5.36 a.m., and 3.30 p.m.; and OSAKA at 12.36, 8.18, and 11.12 p.m., and 7 a.m., and 5.05 p.m.

UP TRAINS LEAVE KOBE at 6.15 and 8.55 a.m. and 12, 1.50, and 9.30 p.m.; OSAKA at 4.45, 7.27, and 10.05 a.m., and 1.08, 2.54, and 10.36 p.m.; KYOTO at 6.07, 8.55, and 11.35 a.m., and 2.45 and 4.34 p.m., and 12.15 a.m.; BABA (Otsu) at 6.47 and 9.38 a.m., and 12.23, 3.32, and 5.19 p.m., and 1.10 a.m.; HIKONE at 8.16 and 11.07 a.m., and 1.53, 5.01, and 6.59 p.m., and 2.41 a m.; MAIBARA at 8.30 and 11.21 a.m., and 2.09, 5.16, and 7.16 p.m., and 3.05 a.m.; OGAKI at 9.48 a.m., and 12.35, 3.25, 6.32, and 8.35 p.m., and 4.19 a.m.; GIFU at 10.14 a.m., and 1.01, 3.51, 6.58, and 9.02 p.m., and 4.44 a.m.; NAGOYA at 8.20 and 11.14 a.m., and 2.05, 4.46, and 8.10 p.m., and 5.45 a.m.; OFU at 9.01 and 11.53 a.m., and 2.52, 5.23, and 8.50 p.m., and 6.20 a.m.; TOYOHASHI at 10.40 a.m., and 1.36, 4.48, 7.09, and 10.29 p.m., and 7.56 a.m.; HAMAMATSU at 6.15 a.m., and 12.15, 2.50, 5.57, and 11.40 p.m., and 9.02 a.m.; SHIZUOKA at 5.15 and 8.51 a.m., and 3 and 5.20 p.m., and 2.05 and 11.17 a.m.; NUMAZU at 7.03 and 10.35 a.m., and 4.45 and 7.14 p.m., and 3.40 a.m., and 12.55 p.m.; GOTEMBA at 8.15 and 11.50 a.m., and 6.02 and 8.28 p.m., and 4.52 a.m., and 1.57 p.m.; and KOZU at 9.40 a.m., and 1.08, 7.17, and 9 43 p.m., and 6.09 a.m., and 3.13 p.m.

FARES—Kozu to Gotemba: first-class, *sen* 66, second-class *sen* 44, third-class *sen* 22; to Numazu *yen* 1.11, *sen* 74, *sen* 37; to Shizuoka *yen* 2.13, *yen* 1.42, *sen* 71; to Hamamatsu *yen* 3.57, *yen* 2.38, *yen* 1.19; to Toyohashi *yen* 4.23, *yen* 2.82, *yen* 1.41; to Ofu *yen* 5.22, *yen* 3.48, *yen* 1.74; to Nagoya *yen* 5.58, *yen* 3.72, *yen* 1.86; to Gifu *yen* 6.15, *yen* 4.10, *yen* 2.05; to Ogaki *yen* 6.42, *yen* 4.28, *yen* 2.14; to Maibara *yen* 7.05, *yen* 4.70, *yen* 2.35; to Hikone *yen* 7.17, *yen* 4.78, *yen* 2.39; to Baba *yen* 8.10, *yen* 5.40, *yen* 2.70; to Kyoto *yen* 8.40, *yen* 5.60, *yen* 2.80; to Osaka *yen* 9.21, *yen* 6.14, *yen* 3.07; and to Kobe *yen* 9.81, *yen* 6.54, *yen* 3.27.

### TOKYO-MAEBASHI RAILWAY.

TRAINS LEAVE TŌKYŌ (Ueno) (down) at 6, 6.35, 8.50, and 11.35 a.m., and 2.45 and 5.45 p.m.; and MAEBASHI (up) at 6, 8.50, and 11.45 a.m., and 2.40 and 5.45 p.m.

### SHINJIKU-HACHIOJI RAILWAY.

TRAINS LEAVE SHINJIKU, TOKYO, (down) at 6.55 and 9.55 a.m. and 12.52, 4, and 7 p.m.; and HACHIOJI (up) at 5.25, 8.25, and 11.25 a.m. and 2.20 and 5.30 p.m.

FARES—First-class *sen* 90; second-class *sen* 60; third-class *sen* 30.

### OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4.55 p.m.

FARES—First-class, *yen* 1.56; second-class, *yen* 1.04; third-class, *sen* 52.

### TAKETOYO-OFU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 8 a.m., and 1.50 4.20 p.m., and OFU (down) at 2.55, 5.25, and 9.05 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

### OYAMA-MAEBASHI RAILWAY.

TRAINS LEAVE OYAMA (down) at 6 and 9.55 a.m. and 1.15 and 5.30 p.m.; KIRIU (down) at 7.50, and 11.48 a.m., and 3.08 and 7.23 p.m.; MAEBASHI (up) at 5.45 and 9.40 a.m., and 1 and 4.25 p.m.; and KIRIU (up) at 6.47 and 10.42 a.m., and 2 02 and 5.26 p.m.

FARES—Oyama to Kiriu, first-class *yen* 1.29, second-class *sen* 86, third-class *sen* 43; to Maebashi, first-class *yen* 1.98, second-class *yen* 1.32, third-class *sen* 69.

### YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.: and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—FARE, *sen* 20.

*City of Peking*, American steamer, 3,128, R. R. Searle, 11th April,—Hongkong, General.—P. M. S.S. Co.

*Thibet*, British steamer, 1,676, W. S. Broun, 11th April,—Kobe, Nagasaki, Hongkong, and Bombay, General.—P. & O. S. N. Co.

## PASSENGERS.

### ARRIVED.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Miss Clara Howard, Miss Orth, Mr. Orth, Mr. Frank Ronalds, and Captain W. G. Forbes in cabin; Mr. Shiraishi in second class, and 55 passengers in steerage.

Per French steamer *Djemnah*, from Hongkong viâ ports:—Mr. and Mrs. Feldman, Mr. and Mrs. Marshall, Messrs. Harris, Hunt, de Soliveus, Miss J. Fanny, Mr. Lecomte, Captain and Mrs. Gerrard and child, Mrs. Clarke and 2 daughters, Dr. Geo. Goodall, Captain A. Goodale, Messrs. Shibuya, Trumont, R. de Lavisory, Takada, Mr. and Mrs. Davenport, Mr. and Mrs. Weber, Messrs. R. Field, Stephenson, W. Rathbone, P. Rathbone, Field, E. Ware, Major-General Cherry, Mr. and Mrs. Prentice, Miss Birmingham, Misses B. and M. Gray, Mr. Gray, Mr. and Mrs. Lee, Mr. and Mrs. Mathewson, Mr. S. Kynett, Mr. R. P. Perry, Mr. and Mrs. Arthur, Mr. and Mrs. Gray, Messrs. Thelche, Robertson, Rev. Mr. Crosby, Mr. A. Rathbone, Mr. Stone, Dr. Ellis, Count Greppi and servant, Mr. Fraser, Rev. M. Arthur, Messrs. Birmingham, P. A. Rossell, C. Rossell, Dr. Fisher, Dr. Bonar, Messrs. Gardner, Hawes, Bethell, Percival Lowell, Ross Curtis, Miss Cornell, L'Abbé Sutter, Mr. and Mrs. Hammond, Mr. Elwes, Sir W. and Lady Ffolkes and daughter, Mr. and Mrs. Moller, Mr. and Mrs. Hong, Miss Lee, Mr. Petsaly, Mr. and Mrs. Mallaivre, Miss Debay, Messrs. Bernard Meivesta, and Herve in cabin; 3 Chinese in steerage.

Per Japanese steamer *Sagami Maru*, from Kobe:—Miss Webb, Messrs. E. S. Bell, E. R. Woodman, James Williams, S. Kobano, and R. Koidzumi in cabin; 42 passengers in steerage.

Per British steamer *Dardanus*, from Kobe:—Mr. and Mrs. Weatherstone and daughter, and Mr. and Mrs. Heath in cabin.

Per American steamer *China*, from Hongkong:—Mr. and Mrs. C. B. Bouton, Messrs. N. S. Bouton, A. J. Averill, Fraser, Scoville, Barney, Olger, D. S. Lasder, Percy Percival, A. H. Ough, Smith, Joy, Mrs. Burgess Watson, 2 children, and maid, Mr. Houlton, Mr. Rodriguez, Miss Graham, Commander H. C. B. Hulbert, R.N., Mr. G. H. Wood, Mr. Ralph Smith, and Mrs. Robbins in cabin. For San Francisco: Mr. Liebes and Mr. Pace in cabin; 11 passengers in European and 180 in Chinese steerage.

Per Japanese steamer *Nagato Maru*, from Hakodate:—Mr. Yendo, Mrs. Sonoda and 3 children, Mr. H. Henson, Miss Platty, Messrs. R. Asada, S. Ijiri, R. Mizushiri, and Miss Sasada in cabin; 39 passengers in steerage.

Per American steamer *City of Peking*, from San Francisco:—Messrs. D. Pricot, C. D. Livierato, C. W. Collier, C. B. Bernhard, W. D. Gerke, E. H. Kenney and family, Mr. and Mrs. R. G. Ogle, Messrs. M. Bolles, M. Baggally, M. Gillingham, Mr. and Mrs. J. Pattison, Mr. and Mrs. H. H. Montell, Mr. F. K. Muramatsu, Mrs. M. P. Storey, Lieut. and Mrs. Smith, and Mr. B. Hyde Pearson in cabin. For Hongkong: Messrs. Geo. Hauhart, M. Purriz, J. Stewart Happer, Mrs. X. Hill, Mrs. H. H. Paxton and Miss Paxton, and Mr. T. B. Cunningham in cabin.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Mr. and Mrs. J. O. P. Bland, Misses Sutton, Thomas, Bishop Williams, Count de Llorente, Dr. Scranton and family, Dr. and Mrs. Wainwright, Messrs. Kirby, F. da Roza, O. Vinals, T. Winkler, C. F. Strome, W. Lebetoff, J. H. Armstrong, J. L. Pereira, J. T. Cole, E. Volke, Fr. Neck, M. Revilliod, Borhes, and W. A. Wilson in cabin; 11 Japanese and 4 Chinese in steerage.

### DEPARTED.

Per British steamer *Verona*, for Hongkong viâ ports:—Miss Flora M. Bristowe, Mr. Nelson and son, Messrs. T. B. Clarke-Thornhill, Bennett, Goodison, and C. W. Arnould in cabin; 4 Chinese in steerage.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Messrs. N. Foot, Geo. Sale, A. Barnes, Revilliod, H. S. Freese, R. Hamilton, Kato, L. Ridout, J. G. Holt, Lieut. L. Wood, Miss A. Parker, Miss S. M. Burnet, Miss E. MacRae, and Mr. and Mrs. Hashiguchi in cabin; 34 passengers in steerage.

Per American steamer *City of Peking*, for Hongkong:—Mr. C. S. Moore in cabin.

## CARGOES.

Per British steamer *Verona*, for Hongkong viâ ports:—Silk for France 783 bales; for London 32 bales; total 815 bales.

## REPORTS.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 27th March at noon. Arrived at Nagasaki the 29th at 5 a.m. and left the 30th at 5.30 p.m. Arrived at Shimonoseki the 31st at 6 a.m. and left at 10.30 a.m. Arrived at Kobe the 1st April at 8 a.m. and left the 2nd at noon. Arrived at Yokohama the 3rd April at 4.30 p.m.; had light to moderate winds and fine pleasant weather throughout the passage.

The Japanese steamer *Niigata Maru*, Captain Arai, reports:—Left Hakodate the 1st April at 2 p.m. Arrived at Oginohama the 2nd at 1.15 p.m. and left the 3rd at 4 p.m. Arrived at Yokohama the 4th at 6.40 a.m.; had fine weather all the passage.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Kobe the 4th April at noon; had fine weather and light winds to Oshima, which was passed at 9.35 p.m.; thence to Omaisaki had strong E.S.E. winds and head sea; passed Rock Island the 5th at 3.10 p.m.; thence to port light variable airs and calm. Time of arrival at Yokohama at 9.45 p.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Hakodate the 4th April at 2 p.m.; rounded Shiriya-saki at 5.30 p.m.; had light to moderate southerly winds with fine weather and smooth sea. Arrived at Oginohama the 5th at 1 p.m. and left the 6th at 5.30 a.m.; had moderate northerly winds and cloudy dull weather; at noon wind freshening to moderate and strong north gale with thick rainy weather and tremendous head sea; passed Inuboye at 7 p.m.; at 11 p.m. weather and sea moderating; rounded Noshima the 7th at 1 a.m., had strong to fresh north wind up to port. Time of arrival at Yokohama 6 a.m.

The American steamer *China*, Captain Seabury, reports:—Left Hongkong the 2nd April; had strong N.E. monsoon with foggy weather through Formosa Channel; easterly winds across eastern sea; from Lunschoten group hard gales from N. to N.N.E. blowing with hurricane force during the night of the 6th; from noon of 7th to report fine weather with moderate northerly winds.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 6th April at 2 p.m.; had light breeze and overcast sky; when passed Shiriya-saki wind hauled to N.E. strong breeze and thick, with snow and sleet, remaining so until Cape Riore was passed; then, weather clearing and moderating, had moderate winds from N.W. to S.W. to Noshima, when wind hauled round to north; off Sagami passed British schooner *Esmeralda* beating up. Arrived at Yokohama the 8th April at 10.45 a.m.

The British schooner *Esmeralda*, Captain J. T. Harrison, reports:—Left Guam the 16th March for Yokohama viâ Northern Islands of the Mariana Group; lost trade winds in lat. 20° N.; light winds and calms to the Bonin Islands; thence to port frequent heavy gales and very high sea. Arrived off Noshima light the 6th April at 3 p.m., but had to put to sea again for a very hard gale from the N.N.E. Arrived at Yokohama the 8th April at 7 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left San Francisco the 21st March; had fine weather with variable winds throughout with exception of last two days, during which we had strong winds from S.E. to N.W. with rough cross sea and heavy northerly swell; crossed meridian 33.43. Time 17 days, 20 hours, and 31 minutes.

## *LATEST COMMERCIAL.*

### IMPORTS.

There has not been much change in the general aspect of the market during the past week; dealers have been about, and from all that can be learned respecting the condition of trade in the country it may be gathered that a slow improvement is going on and that if crop prospects continue favourable trade will benefit accordingly, but it will take a long time to rëestablish prosperity. Sales of English Yarn amount to about 1,000 bales; prices show a further decline on nearly all counts. Bombays have been very dull, owing to the competition of the Japanese mill productions, which are being offered freely at low rates. Sales of Shirtings amount to about 2,000 pieces, T.-Cloths 3,300 pieces, and Victoria Lawns 5,000 pieces, but there has been almost nothing doing in Fancies or Woollens.

### COTTON PIECE GOODS.

| | Low prices. | | |
|---|---|---|---|
| Grey Shirtings—8¼lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |

| No. 16s, Bombay | 70.00 | to 77.00 |
| Nos. 10/14, Bombay | — | |

### METALS.

A fair amount of sales at last quotations, but dealers will only pay current rates for "spot" cargo, offering lower prices for anything "to arrive."

| | PER PICUL. | |
|---|---|---|
| Flat Bars, ¼ inch | $2.80 | to 2.85 |
| Flat Bars, ½ inch | 2.90 | to 2.95 |
| Round and square up to ¾ inch | 2.85 | to 2.95 |
| Nailrod, assorted | Nom. | |
| Nailrod, small size | Nom. | |
| Iron Plates, assorted | 2.90 | to 3.00 |
| Sheet Iron | 3.00 | to 3.40 |
| Galvanized Iron sheets | 6.20 | to 6.40 |
| Wire Nails, assorted | 4.40 | to 4.70 |
| Tin Plates, per box | 5.70 | to 6.00 |
| Pig Iron, No. 3 | 1.40 | to 1.45 |

### KEROSENE.

Small sales of American Oil at quotations. Market is called steady, but without much business doing. Nothing done in Russian. The *Endeavour* landed 50,000 cases here, and took the balance of her cargo to Kobe. There have been some arrivals, and present stock is close upon 700,000 cases of sold and unsold Oil.

QUOTATIONS.

| | |
|---|---|
| Chester | $1.65 to 1.67½ |
| Comet | 1.62½ to 1.65 |
| Devoe | 1.60 to 1.62½ |
| Russian | 1.55 to 1.60 |

### SUGAR.

Market quiet, and Browns have dropped in price. Takao is nominally $3.90, but holders will not part at this price. White quiet and unchanged in value.

| | PER PICUL. |
|---|---|
| Brown Takao | $3.90 to 3.95 |
| Brown Daitong | 3.10 to 3.95 |
| Brown Canton | 5.00 to 6.00 |
| Brown Java and Penang | 5.50 to 6.00 |
| White Refined | 5.00 to 7.75 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 3rd April; since that date settlements on this Market amount to 1,870 piculs divided thus:—*Filatures*, 1,163; *Re-reels*, 466; *Kakeda*, 238; *Oshu*, 13. Direct shipments have been nothing during the present week; consequently the total export business remains at the above figures—1,870 piculs.

The great activity noted in our last continued, and prices were still further advanced, the top price paid for best *Shinshu* filatures being $655. This was the turning point; buyers refused to go on at these extreme rates, and after two days quiet Market holders gave way to some extent. A fresh amount of business was done at our quotations given below, and the Market closes quiet with a tendency towards ease.

Exchange has been fairly steady with a very slight fluctuation, and has had practically no effect on our Market either one way or another.

Arrivals from the interior are very scanty and present stock list is down to 3,100 piculs. There are some further supplies in the country, but they are not of any great moment, and it is not likely that we shall see further arrivals of any great consequence during the present season.

The Spring weather seems very favourable for vegetation in most districts, and consequently there is at present no reason to fear for the coming crop. Holders are getting slightly anxious in face of the advanced point of the season at which we have arrived; at the same time they will not reduce prices very much although they can well afford to do so having regard to the large quantity of silk they have lately sold at very high figures. As before noted stocks of all kinds are very much reduced with the single exception of Re-reels; in this class holders remain very firm especially for chop silks, and thus stand in the way of business being done.

There has only been one shipping opportunity during the week, the English Mail of the 5th inst. This vessel, the *Verona*, took 815 bales for Europe and the present export figures are 27,649 piculs, against 34,980 last year and 38,364 at the same date in 1889.

*Hanks.*—Nothing done; holders are strong and ask $530 for 50 bales of *Shinshu Hanks, Shimare*, grading No. 2½. Same price is wanted for some *Chichibu Hanks*, of fine size but poor in colour and quality.

*Filatures.*—The large business noted in our last went on, prices rising daily until $655 was paid for some best *Shinshu*, fine size, for Europe. In coarse sizes $625 was paid and the remaining stock of best chops was at once held off the Market for $640 or over. At one time *Shunmeisha* asked this figure ($640) for his silk, but after trying the market in vain he reduced his pretensions to $630 and $620, finally selling about 100 piculs at $610. For the moment this last may stand as the representative quotation for this class of silk. Good quality and well known marks are now very scarce and are likely to be so until new silk comes round again. *Koshu* filature, *Yajima*, has just been done at $605.

*Re-reels.*—Comparatively small business in this class owing to the firmness with which holders keep their stock off the market. *Koriyama* have been done at $595, with second quality at $575; *Joshu* 1½ at $575; *Chichibu* $580; but no business passing in any of the well known recognised *Joshu* marks.

*Kakeda.*—Considerable purchases at an advance in price and present stock is down to 100 piculs.

*Oshu.*—One parcel of *Sendai* has passed the scales, and that brought $550 per picul.

### WASTE SILK.

Settlements in this branch are 381 piculs, namely: *Noshi*, 71; *Kibiso*, 294; *Neri*, 16.

Arrivals are now very light and even with the small daily sales stock is decreased 300 piculs on the week. The quality still runs down, and although quotations still [illegible] anged buyers would gladly pay m[illegible] could [illegible] better quality.

The exp[illegible]URE, AND ART. consisti[illegible] an[illegible] br[illegible] pi[illegible] [illegible]V to 27,919 [illegible] 29,342 at the same date in 1889.

遞信省認可

*Pierced Cocoons.*—The larger portion of our stock has been returned into the interior for use in home consumption. The export season for this produce may be considered closed.

*Noshi.*—Small dealings in *Joshu* are from $72 to $82. The assortment on offer is now very poor and unattractive.

*Kibiso.*—Considerable business done in *Low Curlies* at from $25 to $35. A few bales *Filature* at $118, *Shinshu* at $65, $48 and $37. Some inferior *Oshu* passed the scales at $42½ and $35.

*Mawata.*—No transactions, the stock being old and undesirable in quality.

*Sundries.*—Another sale of *Tama-ito* at $210, and some small purchases of *Neri* at from $10 to $15, according to quality.

Export Table Waste Silk to 10th April, 1891:—

| | Season 1890-91. | 1889-90. | 1888-89. |
|---|---|---|---|
| | Piculs. | Piculs. | Piculs. |
| Waste Silk | 26,632 | 23,882 | 26,864 |
| Pierced Cocoons | 1,287 | 2,190 | 2,478 |
| | 27,919 | 26,072 | 29,342 |
| | Piculs. | Piculs. | Piculs. |
| Settlements and Direct Export from 1st July | 29,300 | 27,600 | 29,950 |
| Stock, 10th April | 3,400 | 5,850 | 4,000 |
| Available supplies to date | 32,700 | 33,450 | 33,950 |

*Exchange* has been fairly steady throughout the week; closing as under with a probable tendency downwards in the near future:—London, 4m/s. Credits, 3/3; Documents, 3/3⅛; 6m/s. Credits, 3/3¼; Documents, 3/3⅜; New York, 30 d/s. U.S. $78½; 4m/s. U.S. $79¼; Paris, 4m/s. fcs. 4.10; 6m/s. fcs. 4.12.

Estimated Silk Stock, 10th April, 1891:—

| Raw. | Piculs. | Waste. | Piculs. |
|---|---|---|---|
| Hanks | 80 | Cocoons | 100 |
| Filatures | 1,050 | Noshi-ito | 950 |
| Re-reels | 1,814 | Kibiso | 2,060 |
| Kakeda | 102 | Mawata | 140 |
| Oshu | 49 | Sundries | 150 |
| Taysaam Kinds | 5 | | |
| Total piculs | 3,100 | Total piculs | 3,400 |

### TEA.

Nothing doing; no stock; season closed. Settlements to date 217,250 piculs against 184,000 piculs last year. All quotations withdrawn. Weather is good for the crop, and some sample packages of new Tea should go forward by the *Belgic* in a fortnight's time.

## EXCHANGE.

Exchange has been fairly steady during the week, but there are symptoms at the close of a weakness that indicates a decline.

CONTRACTORS TO THE ADMIRALTY, LEADING [illegible] COMPANIES, AND YACHT OWNERS.

[illegible], American bar[illegible]
11th April,—New York 3rd Nove[illegible]
General.—Captain.
*Breconshire*, British steamer, 1,648, Jackson[illegible]
April,—Kobe 9th April, General.—Adams[illegible]
[illegible]steamer, [illegible] J. S. Hogg, 11th [illegible]

STEAM LAUNCHES & YACHTS,

Fitted with HINGDON'S PATENT MACHINERY (of which we are sole makers) are [illegible] any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery aud Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

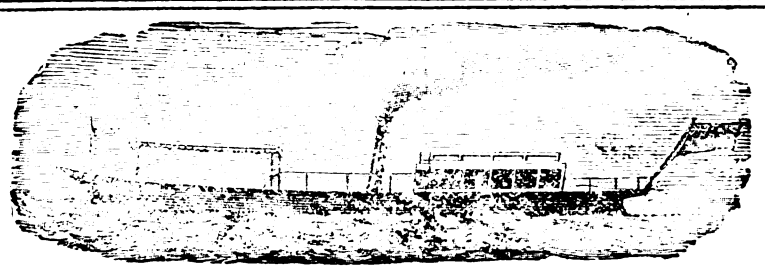
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated bye th name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 18, 1891.

BIRTH.

On the 11th inst., the wife of J. N. SEYMOUR of a Daughter.

DEATH.

In Hongo, Tokyo, Monday, April 13th, from disease of the brain, URIEL LHAMON SMITH, aged 21 months, son of Geo. T. and Candace L. Smith.

## SUMMARY OF NEWS.

THE peach trees on the banks of the Rikugogawa, Kawasaki, are now in full blossom.

THE *Kongo Kan* and *Hiyei Kan* arrived at Singapore on the 13th instant, *en route* for Japan.

THE HON. MRS. SWIFT, wife of the late American Minister, will start from Japan on the 23rd instant for home.

THE Russian Minister will start from the capital on the 22nd instant for Nagasaki to receive H.I.H. the Czarewitch.

THE PRINCE IMPERIAL proceeded on the 11th instant to the Imperial hunting preserves at Minamitoshimagori, Tokyo.

H.I.H. PRINCE ARISUGAWA TAKEHITO will proceed to Nagasaki about the 17th instant to receive the Russian Prince Imperial.

THE regular general meeting of shareholders of the Japan Tea Export Company will be held on the 22nd instant, in the capital.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU AKIHITO and his family left the capital on the 11th instant to visit their villa at Numazu.

THE regular general meeting of shareholders of the Kyushu Railway Company will take place about the 28th instant at Monji, Buzen.

THE receipts of the Horonai Railway in Hokkaido, during the three months ended March last, were *yen* 56,298.177, showing an increase of *yen* 16,708.457 as compared with the same period of the previous year.

VISCOUNT TANUMA NOZOMU, ex-Chief of the Kokubo clan, Kazusa, was elected a member of the House of Peers on the 10th instant.

THE daily average receipts of the Kyushu Railway Company are at present over *yen* 1,357, which shows an average of *yen* 13.10 per mile.

A DRAWING of Seven per Cent. Capitalized Pension Bonds amounting to *yen* 3,000,000 will take place on the 28th instant at 10 a.m. in the office of the Bank of Japan.

HIS IMPERIAL MAJESTY THE EMPEROR proceeded on the 10th inst. at 1.30 p.m. to the residence of Count Kawamura, a Privy Councillor, returning to the Palace in the evening.

THE receipts of the Kabuki Theatre, Kobikicho, Kyobashi, Tokyo, during the 15 days ended the 28th ultimo, were about *yen* 20,000, making a daily average of over *yen* 1,333.

THE *Chiyoda Kan* arrived at Yokosuka on the 11th instant about 5 a.m. Viscount Kabayama, Minister of State for the Navy, proceeded thither the same afternoon and visited the ship.

A FINE ART EXHIBITION will be held by members of the Meiji Art Society in the former buildings of the Nobles' Club at Uyeno for about 30 days, commencing on the 11th of next month.

AN ordinary meeting of the Cabinet was held on the 14th instant, at which there were present Counts Matsukata, Yamada, Saigo, and Goto, Viscount Aoki, and Messrs. Mutsu and Yoshikawa.

THEIR MAJESTIES THE EMPEROR and EMPRESS will proceed to the Hama Detached Palace on the 24th instant to view the cherry trees in the enclosure of the Palace, which will then be in full blossom.

THE fifth general meeting of members of the Red Cross Society of Japan will be held on the 21st inst., at the former Suisan Kan, or Marine Products Hall, in Uyeno Park. H.M. the Empress will, it is expected, be present on the occasion.

DURING the month of February last the Sanyo Railway Company carried 77,390 passengers, from whom *yen* 12,343.67 was realized by the sale of tickets. During the same period 7,400 tons of freight were carried, realizing *yen* 2,512.27.

MESSRS. UNO HOGARA and Sasaki Masakichi, Professors, and Yamagiwa Katsusaburo, an Assistant Professor of the College of Medicine in the Imperial University, were ordered on the 14th instant to proceed to Germany with the object of investigating Dr. Koch's invention.

DURING last year 495 fires occurred in the city of Tokyo, by which 4,501 houses burned. Of the above figure 200 fires were incendiary, the remainder being caused by the upsetting of lamps, or by accidents in connection with *hibachi* or furnaces.

MEMBERS of the Kanagawa Prefectural Assembly elected from the city of Yokohama and a number of members of the Yokohama City Assembly met on the 13th instant at the Machigaisho, and conferred as to the presentation of a petition to the Government asking that Mr. Asada, Governor of Kanagawa, should not be removed.

MR. NUMATA MASAYOSHI, who sent to the *Nippon* a copy of the letter supposed to be forwarded from Mr. Tei to Lord Li, the present Chinese Minister, is now on trial at the Tokyo Local Court. On the 13th Messrs. Tei Yeinei, Tei Yeiho, and Tei Yeikei, Mrs. Numata and her sister, and Mr. Matsuno Shinjiro were summoned as witnesses.

DURING the week ended the 10th instant 4,079 persons visited the Fine Art Exhibition in Uyeno Park. From the opening of the Exhibition up to the 10th instant 13,199 visitors were registered, of whom 74 were distinguished, 1,438 special, and 10,926 ordinary visitors, the remainder being members of the Fine Art Society, and students of the Tokyo Fine Art and Tokyo Technical Schools.

THE trial of Matsumoto Kyuichi, who threw from the gallery of the Lower House a quantity of horse-dung wrapped up in paper, and his instigators Asai Yoshio (aged 24), a *shizoku* of Wakayama Prefecture, and Kubota Shunosuke (aged 25), a *shizoku* of Miyagi Prefecture, has been concluded, and judgment was given on the 14th instant in the Tokyo Local Court. Asai was sentenced to 10 months' major confinement, and a fine of 20 *yen*, Kubota to 5 months' major confinement and a fine of 15 *yen*, and Matsumoto to major confinement for 2 months and to pay a fine of 10 *yen*.

THE Japanese Consul at San Francisco reports that the total amount of the trade between Japan and San Francisco during the month of January last was $898,824, of which $37,069 represented exports from San Francisco to Japan, and $861,775 imports. The values of articles forwarded to the Eastern States of America through San Francisco during the period amounted to $303,098. The following are the values of imports and exports over $5,000 during the month:—Imports, $9,937 coal, $9,742 rice, $21,164 mats, $759,102 raw silk, and $22,387 tea; exports, $7,443 wheat flour, $14,114 leather, and $5,612 provisions.

THE Import trade is without much alteration, and what Yarns have been taken went off at prices in buyer's favour generally, in some instances at a reduction of 50 cents per picul. Grey Shirtings and Italian Cloth have been taken in small quantities, but prices are almost nominal. The Metal market is not brisk, and rates are about the same. Buyers, however, make low offers for parcels to arrive, but importers do not catch on. Kerosene is quiet, and prices unaltered. The heavy stock has been further increased by the arrival of two cargoes from New York. The Sugar trade is not active, and as Browns are still coming in a large stock is accumulating. The Silk market has not been so brisk, though, with the paucity of high qualities now on offer, this is a natural condition of the trade. The stock is very much reduced, and many parcels now on the market are not suitable for export, and will be used up by Japanese manufacturers. Arrivals are very light, and what comes is not first class, in fact all the tip-top Silk has been cleared off, and so far as the best chops are concerned the season is practically at an end. The mulberry is reported healthy and abundant, and the early worms will be out in a week or ten days. Waste Silk has been dull, the assortment being now very poor, and the stock left is not large. Nothing unfavourable has occurred with regard to the new Tea crop, and no frost is reported from any quarter. A check to growth, however, has probably taken place on account of the fall in the temperature, but this is not looked upon as a drawback to quality, though it may slightly retard early production. Exchange has not been subject to much variation, and is weak at latest quotations.

## *EDITORIAL NOTES.*

### THE TEI AFFAIR.

THE public has heard nothing for some time about the Tei affair, which caused such keen excitement in Tokyo when it was first known. It will be remembered that the *Nippon* newspaper published a letter communicated by a person giving the *nom de plume* of "Untosei." The letter purported to be a copy of one addressed to His Excellency Lord Li, the present Representative of China in Tokyo, and the description given of himself by the writer clearly identified him as Mr. Tei, formerly Japanese *Chargé d'Affaires* in Peking. The sender of the letter did not give his real name and address to the *Nippon*, but the latter nevertheless departed from the usual journalistic custom by inserting the letter in its columns. The *Nippon* went so far as to point out that the internal evidence furnished by the letter indicated Mr. Tei as the author, and for a time the latter was branded as a black traitor to his country. Mr. Tei immediately instituted proceedings against the *Nippon*, and the result of the suit was awaited with curiosity. Evidently, the discovery of the person who sent the letter to the *Nippon* constituted the most important link in the evidence, but it seemed scarcely likely that this could be found out, as "Untosei" had not afforded any apparent clue to identification. The *Jiji Shimpo*, however, now alleges that the original of "Untosei" has been traced, and that he is a *Shizoku* of Tokyo, by name Numata Masanobu. The evidence of identity is said to have been procured by a Chinese, but our contemporary passes over this part of the business in a very cursory fashion, merely remarking that the discovery of "Untosei" will enable the mystery to be cleared up.

### CHANGES IN LOCAL GOVERNMENTS.

A NUMBER of changes in Local Governments are announced in the *Official Gazette* of yesterday. The list is as follows:—

| NAME. | APPOINTMENT. | FORMER POSITION. |
|---|---|---|
| Mr. Koteda Yasusada | Prefect of Niigata | Prefect of Shimane. |
| Mr. Matsudaira Masanao | Prefect of Kumamoto. | Prefect of Miyagi. |
| Mr. Funakoshi Mamoru | Prefect of Miyagi | Prefect of Ishikawa. |
| Mr. Oki Morikata | Prefect of Shiga | Retired List. |
| Mr. Uchiumi Tadakatsu | Prefect of Kanagawa. | Prefect of Nagano. |
| Mr. Iwayama Kaneyoshi | Prefect of Ishikawa. | Prefect of Miyazaki |
| Mr. Asada Tokunori | Prefect of Nagano | Prefect of Kanagawa. |
| Mr. Chida Teigyo | Prefect of Wakayama. | Prefect of Niigata. |
| Mr. Iwazaki Kojiro | Prefect of Oita | Prefect of Shiga. |
| Mr. Tatemori Mao | Prefect of Kagawa | Retired List. |
| Mr. Nakamura Motoo | Prefect of Gumma | Chief of Taxation Bureau in Finance Department. |
| Mr. Nishimura Ryokichi | Prefect of Tottori | Prefect of Oita. |
| Mr. Shinozaki Goro | Prefect of Shimane. | Retired List (formerly Prefect of Niigata). |
| Mr. Nagamine Yakichi | Prefect of Miyazaki. | Secretary of Osaka City Government. |

* * *

The following are placed on the Retired List:—

| NAME. | FORMER POST. |
|---|---|
| Mr. Tomioka Keimei | Prefect of Kumamoto. |
| Mr. Shibawara Wa | Prefect of Kagawa. |
| Mr. Sato Yozo | Prefect of Gumma. |
| Mr. Ishikawa Chiuryo | Prefect of Wakayama. |
| Mr. Takei Morimasa | Prefect of Tottori. |

* * *

Mr. Uchiumi Tadakatsu, who becomes Prefect of Kanagawa, moving there from Nagano, was formerly Prefect of Hyogo, and while in that position earned great popularity among the foreign residents. The post of Prefect of Kanagawa is now regarded as the most important local appointment in Japan, after the Governorship of Tokyo and Osaka.

* * *

Two new members of the House of Peers are also nominated by the Emperor. They are Mr. Tomioka Keimei, hitherto Prefect of Kumamoto, but now placed on the Retired List, and Mr. Kyoura Keigo, Chief of the Police Bureau in the Home Department. Mr. Tomioka became Prefect of Kumamoto sixteen years ago, when it was among the least easily governed districts in the empire. When the Satsuma rebellion broke out, he was besciged in Kumamoto Castle with Viscount Tani, and in consequence of a severe wound then received, he more than once sought to retire from active life, after the suppression of the rebellion. His resignation was not accepted, however, and only now, at the advanced age of 72, is he enabled to retire to the comparative ease of a member of the Upper House.

### THE JIYU SHIMBUN.

THE complications connected with the editorship and control of the *Jiyu Shimbun* culminated in a *fracas* on the 11th instant. At 7 o'clock in the morning, Messrs. Mogi and Sato, attended by a couple of youths described as *soshi*—every "gentleman at large" is a *soshi* now-a-days—made their appearance at the office of the paper. They found Mr. Nakanishi in charge, who told them that he was there as the representative of Mr. Naohara, and that they could not be admitted. After some altercation, Messrs. Mogi and Sato retired, saying that they should consult Mr. Naohara. Soon afterwards they returned at the head of about twenty *soshi*. Mr. Nakanishi asked whether they had obtained Mr. Naohara's permission, to which Mr. Mogi replied that there was no occasion to consult Mr. Naohara, and at once began to force his way in. Resistance being offered by Mr. Nakanishi, the *soshi* fell upon him. He defended himself with a chair, and received two wounds on his head, but nevertheless managed to seize two of his assailants and hand them over to the police, who arrived upon the scene in a few minutes.

### COUNT YAMADA.

THE *Official Gazette* announces the promotion of H.E. Count Yamada, Minister of State for Justice, to the First Grade of the Second Rank. This very unusual promotion attracts much attention. No other member of the present Cabinet occupies a higher position than the Second Grade of the Second Rank, and Count Yamada is consequently placed by the present promotion above the heads of all his colleagues. By some the honour paid to the Minister of State for Justice is referred to the successful compilation and promulgation of the Civil Code and Code of Civil Procedure, and there can be very little doubt, we think, that this is the proximate cause. But the elevation of one member of the Cabinet above the heads of his colleagues, in official rank, though his services may justify the measure, is not unlikely to prelude his retirement or removal to another post, and in that light the announcement of yesterday is regarded by many.

### WATANABE KAZAN.

WE described, last autumn, the festival held in Tokyo to celebrate the fiftieth anniversary of the death of the well known painter, Watanabe Kazan. The people of his native place in Mikawa province have now followed Tokyo's example, by setting up a handsome monument to his memory on the site of the old castle of Tomoye. On the 3rd instant a great ceremony was organised in honour of the completion of the work, wrestling, fireworks, and other features being all present. A colossal green arch, erected at the entrance of the road leading to the monument, was decorated with the flags of all nations, in memory of the fact that Watanabe had made a painting of the various national ensigns of the West and sent them to the *Kuge* of his time. The monument was a single slab thirteen feet high and 6½ feet broad. The superscription had been written by the late Prince Sanjo; the inscription, composed by Professor Kawata, and written by Mr. Cho Sanshiu, a celebrated caligraphist, formerly tutor to His Majesty the Emperor. The most interesting feature of the affair was an exhibition of Watanabe's pictures. No less than three hundred had been brought together, several being invaluable masterpieces.

### THE CABINET.

RUMOURS about Cabinet changes continue to fill the air. A short time ago, it was only Count Yamagata who contemplated resigning. Now the Count is resolutely bent upon retiring from the Presidency of the Cabinet, while Count Oyama, Viscount Aoki, and Mr. Yoshikawa are all determined to divest themselves of their portfolios. The Tokyo News Agency is so confident about the truth of this information, and of the supplementary statement that the retiring Ministers will become members of the Privy Council, that it has taken the pains to inquire into the circumstances of the latter body, and now records the result of its inquiry, namely, that although the number of Privy Councillors is not complete, the appropriation for their maintenance is entirely absorbed by the present establishment, and if any additional Councillors are appointed, they will have to go without salaries until next year. We imagine that this forecast of changes considerably exceeds the limits of probability. Count Yamagata's retirement in favour of Count Saigo would not surprise us. The present Minister President never, we believe, contemplated a protracted tenure of office. He accepted the leadership of the Government at a time of great difficulty, and he held the reins with remarkable judgment throughout the first session of the Diet, a period within which the fall of his Cabinet had been confidently predicted by many politicians. The prediction came within very close range of fulfilment. Probably very few know how severely the proceedings of the Diet in December and January tested the strength of the Cabinet's cohesion. Had the combination between the *Kaishin-to* and the *Jiyu-to* accomplished its purpose in respect of the Budget, it is hard to see how Count Yamagata could have remained in power. Well-informed persons said openly, at that time, that Count Okuma had one hand on the presidential chair, and that the secession of the twenty-five Radicals saved the Government. It was most fortunate for the smooth working of parliamentary institutions in Japan that such a crisis was not precipitated during the first session of the first Diet, and the Minister President deserves much credit for his skilful steering. But Count Yamagata is not an ambitious man. His tenure of office was never likely to outlast the period dictated by public expediency, and he apparently thinks that the period has terminated now. It is not given to outsiders to understand his reasons for such a conclusion, or to apprehend the arguments in favour of his replacement by Count Saigo. However, things seem to point in that direction. But that a change of Minister President would be accompanied by any large alteration in the other members of the Cabinet, we do not believe.

* * *

One thing must strike every observer of Japanese politics, namely, that the present period is a species of interregnum. Government by party has not become an accomplished fact, but is undoubtedly in the air. The Cabinet, though nominally unaffected by the action of the Diet, could scarcely have survived the success of the *Kaishin-to* and the *Jiyu-to* combination in the House of Representatives. It was saved by a defection from the ranks of the latter, which is only another way of saying that it survived in consequence of an addition to the strength of its supporters in the House. The principle of party government was thus virtually established. No leading statesman who looks to play a prominent part in the future politics of the nation can be willing to accept the post of Minister President to-day. The obvious course of every far-seeing man is to wait until he finds himself at the head of a party sufficiently strong to command a majority in the Lower House. Measures necessary for political organization cannot easily be taken by Cabinet Ministers, who, according to the present theory of Government, are supposed to stand aloof altogether from party affairs. What we may expect to see is that the reins of Government will be held for the nonce by men whose popularity and prestige compensate their lack of political influence.

### THE CABINET.

MONDAY was a day of some excitement in Tokyo, the public being generally persuaded that a definite decision would then be reached as to changes in the Cabinet. It is well understood that no reason exists for Count Yama-

Digitized by Google

gata's retirement from the post of Minister President except his own desire to be relieved of office, and it is equally well known that his colleagues are very anxious to keep him in. We should not be safe in concluding that since the consultation of Ministers on Monday did not result in any decision, so far as is generally known, the contemplated change has been indefinitely postponed. Every day's delay, however, suggests that a fresh understanding may have been come to. Count Saigo is certainly not solicitous to become Minister President, and no other candidate offers at present, so that in addition to the personal character of Count Yamagata's wish for rest and the desire of his colleagues to keep him in office, there is the difficult of finding a successor just at this time. Possibly things may fall again into their old groove without any alteration.

### THE PRAYER OF FAITH.

We pray for rain. We pray for the sick. We pray to be delivered from battle, murder, and sudden death, and we pray for those in peril on the sea. But while we importune the Deity to be good to us, each in his own special interest, it has never occurred to us to pray that the Divine influence might be brought to bear upon the judgment of members of Parliament. A Japanese has the credit of originating that idea and acting upon it. Unfortunately his name has not been published, but the story is that when the trouble in the Diet with reference to the Budget was at its height, and when everything seemed to indicate a serious collision between the Government and the representatives of the people, he proceeded to the temple of Reiun, at Yushima, Tokyo, and, addressing himself to the chief priest, explained that he did not side with either party, the Extremists or the Moderates, in the Lower House, but he found it impossible to look on calmly while a struggle was in progress which might lead to serious trouble between rulers and ruled. He therefore begged that prayers might be addressed to Heaven for the wise direction of the issue and for a peaceful termination of the dispute, presenting at the same time a sum of a hundred *yen* to the temple to pay for incense and litanies. The priest, struck by this earnestness, sought his name, but the other refused to give any information, describing himself simply as an anonymous patriot. It will probably be regarded as a curious coincidence that the member of Parliament whose motion disintegrated the opposition and opened the way to a final settlement of the trouble, himself an ex-priest, attributed his success to the influence of Hotoke, doubtless unaware that a pious peace-lover had already paid a hundred *yen* to secure that influence. Might it not be advisable to offer up prayers in the churches of the British realm for the softening of the hearts of the wicked Parnellities? After all, that result would be of at least as great public benefit as a day's rain in a time of drought.

### ATHLETICS.

From an outsider's point of view, the Yokohama Athletic Club had a most successful meeting yesterday afternoon on the old Rifle Range. Strolling along that way after tiffin it was a most pleasant surprise to see over a hundred Japanese youths and boys enjoying themselves in friendly contests. The number of people there, and the bunting displayed with the Club flag, the Government ensign with a Y in the centre of the Sun, first attracted attention; also arms, rifles, with sword bayonets, but mostly of the toy order, piled, and quick-firing guns, of the same description, unlimbered. At the assembly call they fell into line, Companies A and B facing each other; and after addresses from respective captains they were dismissed. Then commenced the Obstacle Race, run in heats, most amusing and well contested; the obstacle being a strong rope netting, with meshes sufficiently large to get the head through easily, pegged down to the grass. Under this they crawled like rats, some, however, getting entangled owing to their heads going through instead of under. Some of the running was very neat, the winner of one heat appearing so satisfied with the result that he threw a double somersault. Short races, blindfold races on all fours, wrestling, fencing, foot-ball, tug-of-war, and other sports followed. An amiable *Hyacinth* Jack who happened to be there was for a time the centre of attraction to a few foreign children, and a large circle of Japanese, who listened eagerly to his chat about the rifle and the machine gun, bugle calls, etc. At five o'clock the prizes—a large terrestrial globe, books, handkerchiefs, etc., were presented, obstacles, flags, posts, and other impedimenta were packed, and what must have been to many a very pleasant gathering, closed.—*Communicated.*

### SHIPBUILDING IN GREAT BRITAIN IN 1890.

The official record of shipbuilding for the past year in all the centres of the industry throught the United Kingdom shows that the output during 1890 amounted in round numbers to close on 1,271,000 tons, or about 30,000 tons less than the previous year. The Clyde as well as the other Scotch yards show a positive increase, while from the Tees and Hartlepools similar indications of prosperity are reported. The greatest decline has taken place on the Tyne and the Wear, and Belfast, Barrow, and the Mersey have also shared in the downward movement. The following table shows precisely how this stands:—

| | Total. | Increase. | Decrease. |
|---|---|---|---|
| Clyde | 349,995 | 14,794 | — |
| Tyne | 235,567 | — | 46,143 |
| Wear | 197,482 | — | 19,852 |
| Tees | 127,741 | 17,305 | — |
| Hartlepools | 99,847 | 13,972 | — |
| Belfast | 66,783 | — | 16,220 |
| Mersey | 30,577 | — | 5,196 |
| Barrow | 24,665 | — | 2,182 |
| Dundee | 24,494 | 8,183 | — |

The output for the whole of Scotland during the year is 416,617 tons, as compared with 395,841 in 1889, or an increase of 20,776 tons, and the tonnage of the north-east ports of England, which reached 695,357 last year, has fallen this year to 660,637, a decrease of 35,720 tons. Besides taking its usual place at the head of the shipbuilding list, the Clyde has contributed the largest quantity of shipping put into the water by any one firm in the country. This position, which was occupied in 1889 by Palmer's Company on the Tyne, is now held by Messrs. Russell, of Greenock and Port Glasgow, with the enormous amount of 70,370 tons. Sir William Grey of Hartlepool, is second, with 62,000 tons; Messrs. Harland and Wolff, of Belfast, third, with 48,000 tons; and Palmer's only fourth with 45,000 tons. The fluctuations of the trade are indicated in other ways. In 1889 the increase on the Clyde over 1888 was more than 55,000 tons; now the proportional increase is under 15,000. The Tyne again, which had an increase in 1889 over the previous twelve months of as much as 68,000 tons, shows this year a decrease as compared with 1889 of upwards of 46,000 tons. It is easier to mention these fluctuations than to account for them. Perhaps the best reason that can be assigned is that labour disputes have barred progress on work to a greater extent on the Tyne than on the Clyde. The remarkable fluctuations in British shipbuilding industry are shown by the following table for the past decade:—

Total production.

| Year. | Tonnage. |
|---|---|
| 1881 | 1,000,000 |
| 1882 | 1,200,000 |
| 1883 | 1,250,000 |
| 1884 | 750,000 |
| 1885 | 540,000 |
| 1886 | 473,000 |
| 1887 | 578,000 |
| 1888 | 903,687 |
| 1889 | 1,300,933 |
| 1890 | 1,271,110 |

From these figure it appears that the great year of 1883 was followed by a period of severe depression, that the revival did not commence in earnest until 1888, and that the new "boom" attained its height in 1889. The industry is now again on the down grade, and it is impossible to say how far it may go. It is true that 300,000 tons of shipping still remain in the hands of the shipbuilders of Scotland, and that double that quantity is in process of construction at other centres of industry. But freights are in such a condition that many owners feel compelled to lay up their boats. New orders are few and far between. Nearly all the tonnage which has been booked is already on the stocks, and at the rapid rate of building now in vogue will be completed before many months are over. The chances are, therefore, supposed to be that unless some new development occurs in shipping operations, the glut in vessels afloat will cause depression in the building industry.

### THE HARBOUR WORKS.

The Yokohama Harbour Works have more than once afforded food for gossip to people who were either ignorant or interested. The latest story about them appears in the vernacular press. It is to the effect that sixty-one thousand six hundred men are to be employed upon the works from next month until March, 1892. The reason assigned for this noble outburst of energy is that the Diet asked questions, indicating an idea that the works were not making proper progress, and the Authorities accordingly determined to put their shoulders to the wheel in unmistakable earnest. The tale goes on to describe the difficulties connected with the gathering together of such a large force of workmen, and the necessity of special arrangements for their control, details that enhance the artistic effect of the *canard*. We do not find the story by any means as wonderful as the fact that people sufficiently simple to believe it could be discovered in Japan.

### THE FOUR HEAVENLY KINGS.

"Viscount Tanaka, Chief of the Metropolitan Police," writes the *Kokkwai*, "has resigned and accepted a sinecure. Mr. Inouye Ki has retired from office. Mr. Kyoura Keigo, Chief of the Police Bureau in the Home Department, has resigned and is going to travel abroad. Thus Count Yamagata loses three of his most important assistants. Further, Mr. Su Kohei, Chief Secretary of the Cabinet, is expected to resign in a few days. Inouye, Tanaka, Kyoura, and Su, these four gentlemen are the Four Heavenly Kings (*Shi-Tenno*) that guarded Count Yamagata. They served the Count as feet and hands. He cannot intend to remain long in office now that they are gone." This forecast is confirmed by the *Yomiuri Shimbun*, which says that the Count sent in his resignation on the 7th instant.

### RECENT WORKS ON SHAKESPEARE.

Shakespeare enthusiasts cannot complain of any want of attention shown at the present time to the dramatist. A journal in America, *Shakespeareana*, is exclusively devoted to research in this one department. The magnificent Variorum Edition of Mr. Furness, issued from the London and Philadelphia press of Messrs. Lippincott, was begun in 1876, and will form when complete an unrivalled commentary, thoroughly worthy of the subject. Indeed, one finds it difficult to characterize the work in too high terms. A few months ago the last number of the "Henry Irving Shakespeare" brought that fine edition to completion, and now a new edition of the "Cambridge Shakespeare" is promised by Mr. Wright, the sole surviving editor. An illustrated edition of Shakespeare, entitled "The International," and having a claim to that name inasmuch as its illustrations are from the pencils of continental as well as English artists, is now in progress, and promises to be of very high merit. Several school editions, some of them being those terrible compilations intended to meet the requirements of particular examinations, put forth their parts from month to month. Macmillan's series for Indian students is increasing in number, the last volume being "Richard II." under the able and experienced editing of Mr. Deighton. A noteworthy book as marking an endeavour to rescue the school-room treatment of Shakespeare from the purely verbal and barren method fostered by the Clarendon Press edition, is Professor Ransome's

Digitized by Google

"Short Studies of Shakespeare's Plots." It is an attempt to stimulate the youthful mind to appreciate the great dramatist as a literary artist, and to postpone verbal criticism until an intelligent interest in the play as a whole is awakened. "In our study," says Mr. Ransome in his preface, "we will not at first occupy time in researches either into etymology or mythology, into various misreadings or curious interpretations, but taking the plain text as our guide, will endeavour to follow the plays as they must have been followed by the audiences of Shakespeare's own day." The work is from the press of Messrs. Macmillan & Co. and is of the excellence which we expect in works issued by that firm.

### INGENIOUS.

HERE is a clever statement which we translate from the *Yomiuri Shimbun*:—"The opponents of Count Inouye's Treaty Revision Scheme were outside the Government. The opponents of Count Okuma's Scheme were partly inside and partly outside the Government. The opponents of Viscount Aoki's Scheme are officials. This is the latest discovery of a certain politician. The opposition, he alleges, to Viscount Aoki's programme is small. It centres upon the question of mixed residence. The chief opponents of Revision say, if Revision can be effected without granting mixed residence, all right; if not there is nothing for it but to leave extra-territoriality alone. They ask the Cabinet to postpone Treaty Revision unless it can be accomplished without allowing mixed residence. Treaty Revision is very apt to shorten a Cabinet's life. It is about the most difficult problem that could be offered for solution to the present Cabinet. The opponents of Revision, knowing well that it cannot possibly be accomplished without granting mixed residence, nevertheless prefer this demand to the Cabinet, their evident desire being to put a stop to all steps toward Revision, so that the Cabinet's life may be lengthened. Plainly men pursuing such a course must belong to the Government's party."

### SENTIMENT.

WE find a very singular article in the *Tokyo Shimpo*. "Russia," the writer says, "having set about building her Siberian Railway, England has devoted herself to shorten the distance between the mother country and her Eastern colonies by constructing the Pacific Railway and by subsidizing a new line of steamers. The railway is already finished, and three large steamers, built so as to serve as mail steamers in times of peace and as cruisers in times of war, have left the docks and travelled many miles on their voyage eastward. One of them is called the *Empress of India*, another the *Empress of China*, and the third the *Empress of Japan*. What are we to think of these names? We may regard them with indifference merely as paltry matters of ships' nomenclature, having no connection with international relations. We may treat the thing, again, as an evidence of desire to show respect to Japan, on the ground that, ships being of the feminine gender in the English language, the selection of the names of the English and Japanese Empresses is a compliment. On the other hand, these ships have been built as a part of England's Eastern policy and with a Government subsidy. The word "Empress" may be translated by *jōko* (female sovereign) or *kogo* (consort of an Emperor). The first of the ships is called *Empress of India*. Now in international phraseology Her Majesty Victoria, Queen of England, is actually the Imperial Ruler of India. If, then, we choose to take a suspicious view of the matter, the argument may be pushed to the point of discovering an *arrière pensée* that the Queen of Great Britain and Ireland and Empress of India may come to be called also Empress of China and Empress of Japan. We do not deem this an unreasonable suspicion."

* * *

This criticism has not been altogether unanticipated, though we did not expect to find it in the *Tokyo Shimpo*. Scarcely any incident in every-day life is incapable of being adapted to an evil meaning if the spirit to so adapt it be sufficiently strong. The *Tokyo Shimpo*, it must be confessed, takes care to place before its readers the benevolent as well as the malicious interpretation of this question of ships' names, but the trouble is that it extends a sort of half-hearted endorsement to the malicious view. Yet a newspaper of such standing ought to know very well that the names of the three big steamers were chosen by the company to which they belong; that the choice was subjected to no official direction whatsoever, and that the sole idea in selecting such titles was to pay a compliment to the countries after whose Sovereign consorts the vessels are called. The *Tokyo Shimpo* has the clue in its hand, but fails to follow it. The steamers, it says, are sister ships (*Shimai-sen*). That is precisely the point. Their names were chosen in the sense that the Empress of India, the Empress of China, and the Empress of Japan are sisters. The graceful idea that the three august ladies belong to the same family circle, and have a sisterly community of interest in widening and cementing the relations between the Orient and the Occident, has been marred by an unsightly and unworthy suspicion which we are disappointed to find in the columns of an eminently intelligent and respectable Japanese journal.

* * *

Evidently the *Tokyo Shimpo* was in a particularly captious mood on the 7th instant, for it extends its criticism to the Chinese Minister because, in issuing Japanese invitations for a ball, his Excellency wrote "the 18th of next month, according to the Western calendar." The Tokyo journal denies the propriety of this term "Western calendar." It asserts that though Japan has adopted the scientific principle of Occidental reckoning, her calendar ought not to be officially spoken of as the "Western calendar;" or rather, that references to dates in the body of invitations addressed to Japanese and written in the Japanese language should be distinguished either as according to the "Japanese calendar," or according to the "solar calendar." It is a nice point of etiquette, and the triviality of the question is admitted by the *Tokyo Shimpo*. But these little incidents serve to indicate the trend of Japanese thought. There shall be no distinction of East and West, so far as Japan is concerned, says the Tokyo journal in effect. The same sun shines on all alike, and a calendar calculated in accordance with his motion is no more Western than Japanese.

* * *

In the sequel of these criticisms the *Tokyo Shimpo* writes as follows:—"When Mr. Hoshi Toru was Superintendent of Customs, he got into great trouble with the then British Minister, Sir Harry Parkes, because he translated the word "Queen" of Great Britain by *Jo-o* (女王). He maintained his point and resigned his post, but ever since that time the Japanese written title of the British Sovereign has been *Kotei Heika* (Her Majesty the Empress). Similarly, objection was taken by the Russian Minister to the fact that *Rokoku* (Russia) was written with the ideograph (魯) signifying "foolish." This, too, was consequently abandoned, and *ro* is now written with the ideograph 露, (dew). These changes were not made because Japan is a small State, while Russia and England are Great Powers, but because the honour of a country must not be touched in the most infinitesimal degree. We are well aware that in these matters of the ships' names and of the calendar there was not the smallest intention of giving offence. Knowing this, we do not say that corrections must be sought at the point of the bayonet. But we do think it necessary to direct English and Chinese attention to these matters. What do our counrymen think?"

### DISTINCT DISAVOWALS.

IN view of the assertion that the term "anti-Revisionists" was "invented for the sake of the stigma supposed to be conveyed by it," there is some interest in recalling the fact that the Meeting of 11th September was first publicly described as "the Anti-Revision meeting" by the *Japan Gazette* of Sept. 13th; the term "anti-Treaty Revision" being applied again on the 15th of September, and on subsequent occasions, till one of the chief promoters of the meeting protested against its use, on which the *Gazette* discontinued the practice. Further, the *Japan Herald* adopted the phrase "Anti-Treaty Revision," as applicable to the meeting, on the 20th of September, and became so enamoured of it that when the protest already mentioned was published, the *Herald* roundly called the protestor names, and declined to desist. "The object," we are now told, "of employing the term was no other than the creation of a hostile feeling among the Japanese." "We are glad to observe," says the newspaper which invented the name, "that the Statement distinctly disavows the name it is the fashion of opponents to give to the party represented by the Committee, for the sake of the stigma that is supposed to attach to it—anti-Revisionists." The Statement, then, distinctly disavows a name which one of its organs invented and another organ employed, such invention and employment being for the sake of the stigma supposed to attach to the name, and with the object of creating a hostile feeling among the Japanese. May we take it that the Statement also "distinctly disavows" the inventor and employer of the name which has caused so much trouble? As for the *Japan Mail*, which the accurate organ of the agitators imagined that it was abusing when it began to discourse about this subject of nomenclature, the fact is that the *Mail* was the one paper which avoided any such term. Our two leading articles, written within the first week after the Meeting, were headed respectively "The Treaty Revision Meeting," and "The Effect of the Treaty Revision Meeting." These subtle critics ought to manage their weapons more circumspectly. To sting oneself is generally the prelude to a larger catastrophe.

### "IVANHOE" AS AN ENGLISH OPERA.

THE greatest musical event in England for some years back has been the production of "Ivanhoe" as an opera by Sir Arthur Sullivan, in a "New English Opera House" erected in Shaftesbury Avenue by Mr. D'Oyley Carte. It has proved an enormous popular success, which is all the more satisfactory in that, while Sir Arthur Sullivan's genius for light comic opera has been unquestionable for years, there were doubts whether he would be eqally fortunate in a serious work such as the present one. The libretto is by Mr. Julian Sturgis, and it is interesting to see how he has turned the familiar classic story to stage purposes. Normans and Saxons are living in almost open enmity. King Richard, who should control both, is thought to be still away in foreign lands; his brother John plots for the crown. In these doubtful times Cedric the Saxon lives in his old home, and guards his ward Rowena, who is of Royal Saxon blood, and whom he hopes to mate with the Saxon heir to the throne. So he has driven away his only son, Wilfred of Ivanhoe, who dared to love Rowena. Wilfred has gone to the Crusades with King Richard. But both Ivanhoe and the King are back in England in disguise. Ivanhoe, in the garb of a palmer from the Holy Land, comes to his father's house. There he meets the Templar Brian de Bois-Guilbert, who, with Maurice de Bracy, has come for a night's shelter on his way to the great Tournament of Ashby-de-la-Zouche, and in the name of the absent Ivanhoe the palmer accepts the Templar's challenge to mortal combat. There too, he sees Rowena again, and learns that she loves him; and thence he carries off Isaac the Jew, whom the Templar would plunder on the road. Isaac, in gratitude, lends him a horse and armour, and with these he unhorses the Templar in the lists at Ashby. But, though victorious, he is wounded; and when he kneels before Rowena, who has been chosen Queen of Love and Beauty, he faints. Rowena recognises him, and Rebecca, daughter of Isaac, who has met him as the saviour of her father, supports him in her arms. King Richard, disguised as

Digitized by Google

the Black Knight, has also appeared at the Tournament; but on the second day departs, afraid of detection, and answering the taunts of the jolly Friar with a promise to visit him in Sherwood Forest and fight him there. So he becomes the Friar's guest; but from such sports he is summoned by Locksley, who bids him rescue Cedric and Rowena, who have been captured on their journey from the Tournament by Maurice de Bracy and the Templar, and brought prisoners to Torquilstone. De Bracy would become the husband of the Saxon heiress; but the Templar has reserved for his peculiar prize the Jewess Rebecca, who has been captured too, with her father and Ivanhoe, whom she has nursed since his wound, and whom she loves, and hopelessly loves. But the great courage and nobility of the Jewess bends even the Templar from his purpose; he is called from her by the first summons of the Black Knight and his army of outlaws. On the next morning Ulrica brings Rebecca to nurse the wounded Ivanhoe, while she makes ready to burn the castle, where she has lived too long in infamy. Then the attack is renewed; and suddenly Rebecca sees that Torquilstone burns. The Templar comes back to save her from the burning castle; Ivanhoe tries to stop him, but, weak and wounded, is hurled down; and the Templar carries her away. The castle falls and burns; over the ruins swarm the Black Knight and his outlaws; and Ivanhoe cries out that it is the King. On the top of the tower is seen Ulrica, torch in hand; and, with a last savage song, she sinks among the flames. In the wood near the ruined Torquilstone, King Richard does justice at his ease. His prisoner, De Bracy, expecting death, is pardoned and sent hot-foot to Prince John to demand his prompt submission. Cedric, too, is induced to pardon his son, and to allow his wedding with Rowena. But this fair meeting of the faithful lovers is interrupted by Isaac, who brings news that Rebecca has been condemned by the Grand Master of the Templars to be burned for bewitching Brian the Templar, that she has claimed a champion, and that Brian himself has been named to fight the champion. Rowena nobly bids her lover go, and he flies to save Rebecca. Brian the Templar is torn with contending passions. Even when the torch is about to fire the pile, he prays Rebecca to let him save her yet; but her only answer is a prayer to Jehovah. Then Ivanhoe, weak and weary, rushes in as her champion. Brian attacks him furiously and beats him down, but just as he would slay him he himself feels death; his overcharged heart can bear no more—he falls dead. The Templars recognise a judgment; and Rebecca is set free. She turns to Ivanhoe, but even in that moment he sees Rowena, who, with Cedric, has come fast upon his track. He goes gladly to Rowena, and Rebecca turns away. Isaac comes timidly and touches her hand. And so King Richard enters with his men, bids the Templars begone, and the royal banner of England is raised above their walls.

### A NAME.

THE hubbub made by the promoters of last September's Meeting and their zealous advocates about the name applied to them, strikes us as being a trifle exaggerated. The latest declaimer on the subject asserts that the term "Anti-Revisionists" was "invented for the sake of the stigma that is supposed to attach to it; that "no one pretending to write accurately would think of applying such a term to the promoters of the Yokohama Meeting," and that "the object of employing the term was no other than the creation of a hostile feeling among the Japanese." This is strikingly ingenuous and manly. The meeting was organized and held for the distinctly avowed purpose of protesting against and opposing the settlement of the Treaty problem then supposed to be imminent. The principal proposer declared in his speech that they would have protested against and opposed Count Okuma's settlement had they not believed that there was no chance of its acceptance by the British Government. Therefore, by their own showing, the promoters of the meeting were opposed to the only two solutions that had seemed possible to the negotiators since 1887, and yet they cry out when they are called "Anti-Revisionists." Their manifesto, prepared after mature deliberation, advances as many reasons as possible to prove that the Japanese are not fit to exercise judicial autonomy. One of the principal objects of the Japanese in seeking Revision is the recovery of judicial autonomy. Yet the promoters complain when they are described as Anti-Revisionists. So far as this journal is concerned, we are perfectly willing to humour their whim. Indeed, we have carefully done so ever since the protest on the subject by the principal promoter, a week after the Meeting. But the Japanese press has never shown any disposition to alter its description of the affair. To this day it continues to call the Meeting *hi-joyaku-kaisei-kai* (Anti-Treaty-Revision Meeting), and will call it so to the end of the chapter. It adopted the name long before a syllable appeared in these columns with respect to the Meeting, yet now, with fine respect for truth, the latest champion of the promoters accuses us of having invented the term.

* * *

We have now a new and very pretty explanation of the delay that occurred in the preparation of the Citizens' Committee's Statement. The Committee held its hand because "it was considered desirable to allay as much as possible the agitation which had been raised and fanned by a local English journal among the Japanese." We really cannot but express our hearty acknowledgement of the handsome compliment paid to us by these good people. They hold a big meeting. They apply high-sounding adjectives to it. They declare that its influence outside Japan has been deep and wide. They aver that all sorts of signal results have ensued from it. And then in the same breath they tell us that if this journal had not written about the affair, no notice would have been taken of it by the Japanese nation. Truly we had no idea that our humble efforts in the newspaper line attract so much attention. If we are such influential folks, surely the syndicate of last year made a mistake in not addressing itself primarily to us. We are freely accused of being terribly mercenary, and of perpetually carrying our conscience in our pocket. If the syndicate believes this, and believes also in our potency, why did it not try us with some of those tens of thousands of *yen* that it longed to invest in the purchase of an organ last year?

### AMATEUR THEATRICALS AT THE PUBLIC HALL.

THE amateur theatricals given at the Rokumeikan in Tokyo the other day were repeated on Nonday in the Public Hall before a large and delighted audience. It is unnecessary to refer again at length to the three pieces played, or to the acting of the players. It may briefly be said, however, that all three went capitally, the performers being perfectly at home in their various parts. *Gaston* and *Germaine* in "L'Obstacle" and *Blanche*, *Caboussat*, *Poitrinas*, *Machut*, and *Jean* in "La Grammaire," were personated by actors who amply justified their allocation to those characters; while in "Woman's Rights, or the Lady of the Future" one felt at a loss which the more to admire—the modest simplicity of *Victorine Wigfall*, or the husband hunting voracity of *Wolverine Griffin*; the judicial solemnity and dignity of *Mr. Wigfall*, or the business like alertness of *Mrs. Badger*; the miserable domesticity and the tender solicitude towards his squalling offspring of *Mr. Wigfall*, or the expression of crushed, vacuous, and hopeless despair which *Mr. Carberry* was able to assume when brought to bay by the man-hunting *Griffin*. During the evening the band of the *Monocacy* played various airs, including the overture to "Zampa" by Herold; a selection from "Fatinitza," a march, "Continental Guards;" the waltz "Donau Wellen" and a gavotte by Trempler, "Jubilee." The hall was very prettily adorned by many flowers and dwarf trees and shrubs sent free by the Gardener's Association at Nakamura, which also on the same condition supplied the floral decorations of the stage. The proceeds, which are considerable, go to aid in the erection of a Charity Hospital.

### MURDER IN TOKYO.

A STRANGE affair occurred at the official residence of His Excellency Count Saigo on the 10th instant. It appears that the Count had gone to spend the day at Count Kawamura's, on the occasion of the Emperor's visit to the latter's residence. During their master's absence, the cook and a youth who lived in the house, went to see the cherry blossoms at Mukojima, where a dispute arose as to the manner of spending the evening. The cook declined to fall in with his comrade's dissipated plans, and the pair returned home. In the evening the argument was renewed, and the cook ultimately retired to bed, shutting the door of his room. By and by the youth forced the window, cutting his hands severely in doing so, and, leaping in, attacked the cook with a heavy oak cudgel, inflicting a terrible wound on his head. Medical assistance was quickly procured, but the injury was fatal, and the cook expired the following day. No further details are known, but unless some deeper motive than the above inspired the murderous attack, there can be little doubt that the youth was not in possession of his senses.

### THE VENDORS' GUILD.

THE long dispute between Messrs. Tuska and Company and Messrs. Takifuji and Company appears to have been at length adjusted. The *Mainichi Shimbun* says that the Guild of Porcelain Dealers of Tokyo acted as go-betweens, and after much negotiation succeeded in bringing the affair to a peaceful settlement. The same paper gives a copy of a document bearing the signature of Messrs. Tuska and Company, and purporting to contain the terms of settlement. We translate it as follows:—

A difficulty having arisen between Messrs. Takifuji Company, a Yokohama vendor, and this Firm, the whole circumstances have been inquired into by the Guild of Porcelain Dealers in Tokyo, and the following terms of settlement have been agreed to:—

(1) The present difficulty having arisen without this Firm's having full knowledge of the agreement existing among the members of the Yokohama Vendors' Guild, and we being now aware of that agreement, will, in the event of any business dispute arising hereafter, enter into careful consultation with the Guild upon all points.

(2) In future, when this Firm gives an order to a Yokohama Vendor, the terms shall be embodied in a written agreement, of which each party shall have a copy. The agreement shall be in Japanese.

(3) Receipts shall be given by this Firm for all articles received by it from a Yokohama Vendor. If the Vendor desire, the receipt shall be entered in his Seal Ledger (*Hantori-cho*).

(4) Should this Firm have need of any samples brought by a Yokohama Vendor, it shall pay a reasonable price for them. This shall not apply, however, when the owner of the samples does not seek to be paid.

(5) This Firm will make immediate examination of any articles received from a Yokohama Vendor. And the system of payments on regularly prescribed days shall be carried out.

The above terms shall be observed by us in relation to Yokohama Vendors, and in witness of the agreement we hand this document duly signed by us, to the Tokyo Porcelain Dealers Guild, by whom the Settlement has been made.

(Signed) Messrs. TUSKA & COMPANY,
No. 194, Settlement, Yokohama.

(Countersigned)
THE TOKYO PORCELAIN DEALERS GUILD
(Go-betweens).

* * *

The *Fiji Shimpo* states that a special meeting of the Yokohama Miscellaneous Dealers Guild was held on the 11th instant. Seventy-two members attended, and Mr. Morita Chiubei took the chair. The object of the meeting was to receive an account of the proceedings hitherto taken in connection with the dispute between Messrs, Tuska and Company and Messrs. Takifuji and Company, and to determine the future policy of the Guild. The President explained that a settlement of the Tuska trouble had been

Digitized by Google

arrived at, the goods to be delivered and paid for by the 25th instant. A discussion was raised as to the most effective manner of preventing foreigners from going into the interior to purchase goods, a practice which the members of the Guild seemed to consider common. The decision of the meeting was that steps should be taken to enter into an agreement with the miscellaneous dealers in the various localities, and that the Standing Committee of the Guild be instructed to that effect. It was further agreed that a union between the Guild and all the miscellaneous dealers throughout the Empire would be desirable, and that relations might be established with the *Seinen-kai* of the *Boyekishonin*. A vote of thanks was directed to be conveyed to the Tokyo Porcelain Dealers' Guild and its Committee, for their efforts in connection with the Tuska affair. Another point raised was the advisability of concerting measures with all the Japanese merchants concerned in the foreign trade in order to put a stop to levying of large commissions by Chinese bantos, but concerning this no decision was reached.

### NATURALIZATION OF FOREIGNERS.

IT appears to be imagined by some of those who discuss political questions in this Settlement that the naturalization of foreigners in Japan is connected with Treaty Revision. One of our local English contemporaries evidently labours under this misapprehension, for in a synopsis recently published, professing to set forth the views of the Japanese public in regard to the Revision problem, it took Naturalization for one of its topics. But in point of fact Naturalization has nothing whatever to do with Treaty Revision, except in the sense that after extra-territoriality is abolished, there will be no technical obstacle to the enactment of a law enabling foreigners to be become naturalized in Japan. Writers who gravely tell us that Japanese opinion is divided in regard to Revision, since some people claim that the problem of Naturalization should be left entirely to the Legislature, while some would have it settled by the Administration, might just as relevantly talk about hay-making or beer-brewing. They are quite off the track; a condition, for the rest, not unusual with them.

### T. NODDY.

THE solemn simpleton who thought that people must be in grim earnest when they talked of a Japanese newspaper directed by Prince Bismarck, published by Sir Charles Dilke, and edited by Count Ito, nearly rises to the level of his precious performance in some remarks about prayers for the better guidance of truculent parties in Parliament. A pious Japanese having conceived and acted upon the original idea of paying a good round sum to have litanies chaunted and incense burned in order that Heaven might be induced to interfere favourably in a parliamentary crisis, we noted the new departure and suggested its adoption as a precedent in the Occident. Then up rises Mr. Thomas Noddy, talks of our "pious unction," presumes that our suggestion will fill holy folks with "seraphic rapture," and actually finds another Bœotian to criticise the *Mail's* ignorance of the Church of England Liturgy which "includes a supplication on behalf of 'the High Court of Parliament.'" Dear brothers Noodle, "wind up the watch of your wit": it strikes with a somewhat muffled sound.

### SMART JOURNALISM.

ON Wednesday the 11th of March, the New York *Sun*, which is published every morning, contained an excellent portrait of the Hon. J. F. Swift who had died the preceding evening at 7 o'clock in Tokyo. This was a remarkably quick feat of journalism, though of course the great difference in time between Tokyo and New York must be taken into account. Something similar, though less striking, was accomplished by the *Choya Shimbun*. Its present editor, a gentleman of exceptional attainments and ability, visited the United States Legation in the afternoon of the day succeeding Mr. Swift's death, and asked for a photograph of the deceased Minister. No copy was available, however, and the editor had to go in search of one elsewhere. He succeeded, for in the *Choya* of the following morning a capital likeness of Mr. Swift appeared, accompanied by a full account of his life.

### THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 11th inst. were as follows:—

| CONVERTIBLE NOTES. | YEN. | RESERVES AND SECURITIES. | YEN. |
|---|---|---|---|
| Notes issued | 99,350,736 | Gold coin and bullion. | 24,993,710 |
| | | Silver coin and bullion. | 18,352,263 |
| | | Public Loan Bonds | 13,476,450 |
| | | Treasury Bills | — |
| | | Government Bills | 22,000,000 |
| | | Other securities | 6,927,593 |
| | | Commercial Bills | 13,600,721 |
| | 99,350,736 | | 99,350,736 |

Of the above total issue of notes, the sum of *yen* 6,025,394 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and *yen* 71,325,342 is in actual circulation, the latter showing a decrease of *yen* 756,466 as compared with *yen* 72,081,808 at the end of the previous week.

### THE BEHRING SEA DISPUTE.

MONDAY the 13th instant was the day fixed for the hearing by the United States Supreme Court of the appeal made by the owners of the *Sayward* against the judgment of confiscation delivered by the Alaska Local Court. It is therefore probable that by the end of this week we shall have telegraphic intelligence of the judgment. Our own belief is that the Supreme Court, following a precedent quoted in these columns some time ago, will decline to pronounce any verdict in respect of a matter actually forming a topic of international dispute. It will doubtless interest our readers to examine the British Government's view of the issue which the Supreme Court has to consider—if it consents to consider it at all. The last despatch—dated February 21st, 1891—of Lord Salisbury to Sir Julian Pauncefote contains a very clear presentation of the case :—

"The claim of the United States to prevent the exercise of the seal fishery by other nations in Behring Sea rests now exclusively upon the interest which by purchase they possess in a ukase issued by the Emperor Alexander I. in the year 1821, which prohibits foreign vessels from approaching within 100 miles of the coast and islands then belonging to Russia in Behring Sea. It is not, as I understand, contended that the Russian Government, at the time of the issue of this ukase, possessed any inherent right to enforce such a prohibition, or acquired by the act of issuing it any claims over the open sea, beyond the territorial limit of three miles, which they would not otherwise have possessed. But it is said that this proposition, worthless in itself, acquired validity and force against the British Government because that Government can be shown to have accepted its provisions. The ukase was a mere usurpation, but it is said that it was converted into a valid international law, as against the British Government, by the admission of this Government itself.

"I am not concerned to dispute the contention that an invalid claim may, as against another Government, acquire a validity which in its inception it did not possess, if it is formally or effectively accepted by that Government. But the vital question for decision is whether any other Government, and especially whether the Government of Great Britain, has ever accepted the claim put forward in this ukase. Our contention is, that not only can it not be shown that the Government of Great Britain, at any time since 1821, has admitted the soundness of the pretension, put forward by that ukase, but also it can be shown that it has categorically denied it on more than one occasion."

To sustain this contention Lord Salisbury quotes from a letter (January, 1822) from Lord Londonderry to Count Lieven, the Russian ambassador in London, a reservation of British rights to the navigation of the waters described in the ukase, and also from a note by the Duke of Wellington to Count Nesselrode (October, 1822) refusing to admit Russia's right to exclude foreign vessels for 100 miles from the coast.

"It is evident, therefore, that so far as diplomatic representation went, the King's Government of that date took every step which it was in their power to take in order to make it clear to the Russian Government that Great Britain did not accept the claim to exclude her subjects for 100 miles from the coast, which had been put forward in the ukase of 1821.

"Mr. Blaine does not deal with these protests, which appear to her Majesty's Government to be in themselves amply sufficient to decide the question, whether Great Britian did or did not acquiesce in the Russian claim put forward by the ukase. He confines himself mainly in the despatch under consideration, to the consideration of the treaties which were subsequently made between Great Britain and Russia and America and Russia in 1825; and especially that between Russia and Great Britain. This treaty, of which the text is printed at the close of Mr. Blaine's despatch, does not contain a word to signify the acquiescence of Great Britain in the claim recently put forward by Russia to control the waters of the sea for 100 miles from her coast. There is no stipulation upon which this interpretation can be imposed by any process of construction whatsoever. But there is a provision having in our judgment a totally opposite tendency, which indeed was intended to negative the extravagant claim that had recently been made on the part of Russia; and it is upon this provision that the main part of Mr. Blaine's argument, as I understand it, is founded. The stipulation to which I refer is contained in the first article, agreeing that the respective subjects of the two nations shall not be molested in the navigation of or fishing in any part of the Pacific Ocean.

I understand Mr. Blaine's argument to be that if Great Britain had intended to protest against the claims of Russia to exclude ships for 100 miles from her coasts in Behring Sea, she would have taken this opportunity of doing so; but that in confining herself to stipulations in favour of full liberty of navigation and fishing in any part of the ocean, commonly called the Pacific Ocean, she by implication renounced any claim that could arise out of the same set of circumstances in regard to any sea that was not part of the Pacific Ocean. And then Mr. Blaine goes on to contend that the phrase 'Pacific Ocean' did not and does not include Behring Sea.

"Even if this latter contention were correct, I should earnestly demur to the conclusion that our inherent rights to free passage and free fishing over a vast extent of ocean could be effectively renounced by mere reticence or omission. The right is one of which we could not be deprived unless we consented to abandon it, and that consent could not be sufficiently inferred from our negotiations having omitted to mention the subject on one particular occasion. But I am not prepared to admit the justice of Mr. Blaine's contention that the words 'Pacific Ocean' did not include Behring Sea.

"I believe that in common parlance, then and now, Behring Sea was and is part of the Pacific Ocean, and that the latter words were used in order to give the fullest and widest scope possible to the claim which the British negotiators were solemnly recording of a right freely to navigate and fish in every part of it and throughout its entire extent. In proof of the argument that the words 'Pacific Ocean' do not include Behring Sea, Mr. Blaine adduces a long list of maps in which a designation distinct of 'Pacific Ocean' is given to Behring Sea; either 'Behring Sea' or 'Sea of Kamschatka' or the 'Sea of Anadir.'

"The argument will hardly have any force unless it is applicable with equal truth to all the other oceans of the world. But no one will dispute that the Bay of Biscay forms part of the Atlantic Ocean, or that the Gulf of Lyons forms part of the Mediterranean Sea; and yet in most it will be found that to those portions of the larger sea a separate designation has been given. The question whether by the words 'Pacific Ocean' the negotiators meant to include or exclude Behring Sea depends upon which location was esteemed to be the correct usage at the time. The date is not a distant one, and there is no ground for suggesting that the usage has changed since the Anglo-Russian treaty of 1825 was signed. The determination of this point will be most satisfactorily ascertained by consulting the ordinary books of reference.

"I append to this despatch a list of some thirty works of this class, of various dates from 1795 downward, and printed in various countries, which combine to show that in common parlance the words 'Pacific Ocean' do include Behring Sea.

"If, then, in ordinary language the Pacific Ocean is used as a phrase including the whole sea from Bebring Strait to the Antarctic circle, it follows that the first article of the treaty of 1825 did secure to Great Britain in the fullest manner the freedom of navigating and fishing in Behring Sea. In that case no inference, however indirect or circuitous, can be drawn from any omission in the language of that instrument to show that Great Britain acquiesced in the usurpation which the ukase of 1821 had attempted. The other documents which I have quoted sufficiently establish that she not only did not acquiesce in it, but repudiated it more than once in plain and unequivocal terms, and as the claim made by the ukase has no strength or validity, except what it might derive from the assent of any power whom it might affect, it results that Russia has never acquired by the ukase any right to curtail the natural liberty of her Majesty's subjects to navigate or fish in these seas anywhere outside of territorial waters. And what Russia did not herself possess she was not able to transmit to the United States. Her Majesty's Government have, in view of these considerations, no doubt whatever that British subjects enjoy the same rights in Behring Sea which belong to them in every other portion of the open ocean; but it is nevertheless a matter of sincere satisfaction that the President is willing to refer to arbitration what he conceives to be the matters which have been under discussion between the two Governments for the last four years.

### M. BIGOT.

AN album has just been published by a French artist resident in the capital, bears the title *La Journée d'un Policeman à Tokyo*. The English word in a French title, when the subject matter is Japanese, has a realistic oddity about it characteristic of the whole performance. M. Bigot, the artist, possesses a skilful pencil, and he can draw upon a familiarity with native scenes and manners that is perhaps unequalled. The sketches are delightfully sympathetic and suggestive, few indeed of the faces in a whole squad of Tokyo "bobbies," as depicted by the artist, being without an individual character. The "Lost Child" is a very neat little sketch in whith the figures of the *enfant perdu* and the *obasan* at its side are particularly well rendered. As for the final sketch, twice repeated, it will be certain to call forth from English people who turn over the

Digitized by Google

album, those exclamations of 'Shocking!' which cause so much amusement to our Gallic friends. The figure of the polite policeman who shows the way to a girl with a child on her back, is perhaps less to our mind than almost any other of the sketches: the attitude is too Parisian.

### TRY AGAIN.

We find it very amusing and not uninteresting to watch the perplexed attempts of our busy critics to convict this journal of inconsistency. The gentleman who chiefly devotes himself to the task just now, is doubtless highly qualified to discharge it, seeing that his own writings are conspicuous for accuracy, elegance, and good taste. He did not succeed very well, it is true, when he attempted, some time ago, to prove that we had been guilty of various contradictions in discussing Treaty Revision schemes. For among three schemes the glaring discrepancy of which he volunteered to demonstrate, it turned out that his attention had been diverted from the details of the second, and that he had no knowledge whatever of the third. It is essential, however, to the journalistic *raison d'être* of this critic that he should adhere to the hacknied habit so diligently adopted by those who, finding themselves quite unable to answer our arguments, are driven to the device of calling us names. It is essential to show that the *Japan Mail* is always unfriendly to its own countrymen, always ready to attack those on whose support it depends, and always labouring to present an over-roseate view of Japanese affairs. Unless these things can be demonstrated, what claim to public tolerance would our gentle critic possess? We recognise the cruel necessity that drives him to play such a part, and are not disposed to resent his attacks very vehemently. Besides, his difficulties command our sympathy. He is required to convict the *Mail* of tergiversation. He sets about the task bravely, if not rashly; indites the title of a leading article, "The *Volte-face* of the *Japan Mail*," and then, after weary research and comparison, discovers that his proposed feat is a fiasco. These articles, he cries in his trouble—these articles of the *Mail's* "are in tone and leading features antagonistic to each other; yet so cleverly are the subjects handled, so cautiously have the sentences been grouped, that it is impossible to discover any contradiction in the actual wording." Ingenuous critic, did it not occur to you that until you had overcome this impossibility, you were a little previous in denouncing the *Mail's* "*volte-face?*" Did it not strike you that to confess yourself unable to discover any discrepancy between articles which you declared contradictory, was not quite consistent with the triple-ply honesty in which you so ostentatiously wrap your journalistic person?

### NEWS FROM CHINA AND THE SOUTH.

Singapore papers publish particulars of the recent fighting in Acheen. It seems that on the morning of March 9th, "about a quarter past six, continued firing was heard in the direction of Lamara near Ketapang Dua. Later on the news came that Captain N. C. Van Heurn, the Military commander of Ketapan Dua, and Lieut. Ostreig had gone out in the morning and taken the stockade at Kandang by surprise. Lieut. Ostreig was the first inside the stockade. Afterwards a number of Achinese so hemmed in the place as to stop communication with Ketapan Dua. Lieut. Ostreig and two brave privates left the stockade under a heavy fire from the enemy, and were fortunate enough to reach Ketapang Dua without being hit. From there they signalled by telephone to the Commander for assistance. This was attended to immediately and at eight o'clock the 14th battalion of infantry, two companies of the third, two companies of the twelfth, some cavalry, and a battery of artillery were sent out to Ketapang Dua, whilst the Commander of the fort at Landjamoe marched to Kandang at the first signal. When the detachment from Landjamoe arrived at a point about five hundred yards from the stockade they were fired on by the enemy and unfortunately the Captain received a wound in the abdomen from which he died in hospital half an hour afterwards. The troops coming up later drove off the enemy. On this occasion there were five killed, including the Captain, and nine badly wounded. The General, his staff and some of the troops returned to Kota Radja in the evening." * * * H.M. twin screw cruiser *Archer*, 6 guns, 1,770 tons and 3,500 horse-power, Commander J. Ferris, arrived at Singapore on March 30th on her way from the Cape to the China Station. * * * The steamer *Devonhurst*, which collided with the *Strathendrick*, has arrived in Singapore to be over-hauled in dry-dock and have her bows re-plated. We learn that "the breach in her bows measures about twenty-five feet from the point at which she struck the *Strathendrick* to her keel, and is between ten and twelve feet deep. The collision took place, according to the little verified information available before an impending Court of Inquiry, at 1 a.m. on the 7th March about 50 miles off Sourabaya. The *Devonhurst* came foul of the *Strathendrick* just abaft the foremast; and the fact of the latter being deeply laden with about 3,000 tons of coal accounts for the depth at which the former struck her. The base of the breach resembles a mass of crumpled paper, so violently does the concussion appear to have rolled up the three-quarter inch plating of the *Devonhurst*. By means of packing a quantity of canvas, cement, and planking into it the water was kept from flowing too fast into the hold, and the vessel was taken slowly into Sourabaya where her cargo was shifted aft as much as possible. It is unfortunately true that the second engineer of the *Strathendrick* went down in that vessel." * * * The Singapore Syndicate which has in hand the proposal to construct a railway across the Malay Peninsula, has received an offer on behalf of private bankers and other financial men in London, who are desirous of taking over the Kedah-Singora railway concession. * * * The steamer *Pilot Fish*, engaged in the local coasting trade, was towed into Singapore on March 27th with screw shaft broken. * * * Penang has followed the lead of Singapore in protesting against the increased military contribution required from the Straits Settlement by the Home Government. * * * The Czarewitch arrived at Hongkong on the 4th instant, in the *Pamiat Azova*, escorted by the *Wladimir Monomach*. The Prince Imperial, who was received on landing before noon by the Governor, was accompanied by Prince George of Greece. On the morning of the 5th the Prince left for Canton, intending to return to Hongkong on the 8th and to leave on the 9th for Foochow, whence he was to proceed to Hankow. * * * A census of the population of Hongkong and its dependencies is to be taken on the 30th instant. * * * Consequent on the departure of Mr. A. B. Johnson, Crown Solicitor of Hongkong, on four months' leave, Mr. A. M. Stokes has been appointed Acting Crown Solicitor. * * * The *China Mail* reports the death at Canton under strange conditions, of a Mr. Sills, a Government cadet from Singapore. "It appears that some months ago Mr. Sills came to Canton to study Cantonese. Some weeks since he started on a trip into the country and proceeded some two or three days' journey up the West river. One day he wandered into the country and lost his way. Being unable to get back to bis boat, he passed the night in a Likin station. During the night a noise in his room attracted attention, and on some one entering his room he was found to be dead or dying, and his bed saturated with blood, and a revolver by his side. Considerable time was allowed to elapse before the Chinese authorities brought his body to Canton. Perhaps they were afraid that trouble might arise, and they desired to make as full enquiries as possible. His clothes, money, &c., were all brought to Canton. The cause of his death was a wound in the top of his mouth caused doubtless by a shot from the revolver. Whether the shot was fired by himself or some other person will probably remain a mystery." * * * There is plainly some hitch in connection with the opening of Chungking. By the Chungking Convention the port was to be opened to foreign trade on the 13th of January last. "Two months later," says the *N.-C. Daily News*, "the new system could not be worked, though the port was nominally opened on the 1st and 2nd of March, because the British Minister still withheld his approval of the necessary regulations. No explanation of any kind is forthcoming; Sir John Walsham appears to simply treat the matter with silent contempt. We do not like to characterise this neglect as it seems to deserve, because Sir John may have some reason for it, of which we have not heard; but it seems to us that the Chamber of Commerce here, which is the one most interested in the extension of foreign trade at Chungking, should ask for some explanation, or make some representation before long." * * * The German squadron, consisting of the frigate *Leipzig*, flying the flag of Rear-Admiral Valois, and the cruisers *Alexandrine* and *Sophie*, arrived at Woosung on the 2nd inst. and were to proceed to Nanking on the following day. * * * The last of the farewell dinners to Sir Richard Rennie took place on the 2nd inst. at the Shanghai Club, where the retiring Chief Justice was entertained by the members of the Bar, the chair being taken by Mr. H. Wilkinson, Crown Advocate. * * * Picnics in the neighbourhood of Shanghai cannot be said to lack that element of peril which is so fascinating to most people. On the 15th instant a party of thirty-five foreigners arranged to tiffin near the Pagoda "on a piece of ground that had been hired for the purpose." Hiring a piece of ground in order that it might be tiffined upon strikes us as the very essence of precaution in the matter of legal qualification; if a man cannot have his tiffin in peace after hiring a piece of ground on which to enjoy it, there must surely be unreasonable people about. Well, the picnic party, which included all ages and both sexes, found when half through the *al fresco* meal that a mob of about two hundred Chinese had surrounded them—a mob, too, which very clearly indicated its wish to share in what was going on. Incidentally it threw mud, and then, probably becoming impatient when it found that the foreigners would not be scared away from their repast,—it threw stones, so that the picnickers at length made it convenient to leave the remains of their tiffin and all their dishes, &c., on the piece of ground which had been hired for a much different purpose. These did not go far in a crowd of Chinese, but they seem to have been satisfactory to this extent, that the pleasure-seekers were allowed to depart in peace. Picnicking at Bokenji seems a tame and spiritless affair compared with an outing of this kind. * * * The annual inspection of the Shanghai Volunteer Corps was made on the 4th inst. by Major Tottenham, appointed for that duty by the officer commanding at Hongkong. * * * The annual meeting of the Shanghai Rowing Club was held on the 6th inst. The Club now has 81 members, and is a very satisfactory condition—as the Captain, Mr. D. Glass, remarked, it never had so many members, or so much money coming in, or so much money going out. * * * H.E. Fū-K'un, a Minister of the Tsung-li Yamen, has had, we learn from the *Shenpao*, a somewhat unpleasant experience with robbers. While on his way to the Palace early one morning, he saw several thieves perched on the city wall. Exactly how the Minister was able to decide that they were thieves, we are not told; the circumstance that they were perched upon a wall is hardly enough to show their nefarious character; the only justifiable deduction, indeed, from the Minister's observation might be that they were occupying a position with which the Minister and his colleagues are supposed to be fairly familiar,—sitting on the fence. Be that as it may, however, the Minister ordered their arrest, for which ceremony the strangers did not wait. Next evening a party of men entered the Minister's house. After loading themselves with plunder, we are told in the *N. C. Daily News* translation, "they made their presence known with lighted torches and glittering swords." They pointed a gun at the Minister, and, having thus

Digitized by Google

secured an undivided monopoly of that gentleman's attention, they told him to remember their looks and not forget them. They then with a shout broke open the main door and escaped. We should fancy that if H.E. happens to meet again any of the leaders in this little escapade, neither lighted torches nor glittering swords—leaving pointed guns entirely out of the case—will be necessary to awaken the interest of that official. * * * It is stated that the present Chinese Consul at Singapore is to be succeeded by Whang Taotai, who has been Secretary of Legation in London, and Consul-General at San Francisco. * * * At a meeting the other day, of the North China Branch of the Royal Asiatic Society, a paper was read by Mr. Fraser on the "Fish-skin Tartars," or Orotches, a tribe who are described as poor relations of the Manchus who now rule the Chinese empire. * * * The *N.-C. Daily News*, writing of the Postal Subsidy Bill which was passed by Congress on 2nd March, and of the results in the form of increased and faster steamer communication with the United States, expresses the hope that considerable improvement will be made in the mail service to Shanghai. It is no advantage to Shanghai that "the new steamers will run from San Francisco to Yokohama in twelve days or less, if the mails are to lie in Yokohama four or five days waiting for a steamer to Shanghai, and are then to be sent by a Japanese mail steamer, which stays at least a day at each port on the way. The interests of Americans in Shanghai are at least as large as they are in Hongkong, and it is only fair that their mails should be delivered to them here as quickly as in Hongkong: whereas it still sometimes happens that the American mail reaches here *vid* Hongkong earlier than from Japan. The outward Canadian mail is to come regularly to Shanghai on its way to Hongkong, and there is no reason why the San Francisco steamers could not do the same, and then perhaps by degrees the expedient will be adopted of sorting the mails on board the steamers, and Americans will not have to wait 6 or 12 hours or more after the steamer arrives before they can get their letters."

---

### NOW THAT WE ARE UNDER A CONSTITUTIONAL GOVERNMENT DO NOT CAUSE THE CRY OF "EXPULSION OF THE BARBARIAN" TO BLAZE OUT AFRESH.

In a leading article with the above title, the *Nichi Nichi Shimbun* of the 15th instant discusses the opposition to Treaty Revision which is now being raised on the point of the opening of the country. "Treaty Revision," says the writer, "having now again engaged the attention of the political world, political parties are using the question as a weapon to further their several views. There can be no objection to persons opposing Treaty Revision or favouring it according to their political points of view, but if the question be discussed unreasonably and blindly without due examination of facts, there is reason to apprehend that the result may be startling, and what we more especially fear is a resuscitation of the anti-foreign cry. Certain politicians are constantly proclaiming the disadvantages which will ensue from the admission of foreigners into the interior, and they even go so far as to say that it is better to continue extra-territoriality than to open the country. These politicians do not, we presume, make these statements because they are animated by a bitter hatred of foreigners and wish to stop intercourse with them; their opinions are probably based on an estimate of the advantages and disadvantages which will follow upon the opening of the country, but we cannot be certain that many of those who listen to their statements and applaud their views will not misapprehend their real sentiments, and, regarding foreigners as enemies of the country, consider mixed residence with them as the same thing as living with wild beasts. There is therefore ground for apprehension that the old feeling which was manifested in the isolation of the country and the cry for the expulsion of the barbarian may be revived. To regard other races as enemies is a natural feeling in all countries. This feeling has always existed, and the more uncivilized the country and the less intercourse it has with the outside world the more strongly is this feeling shown. We in the course of many centuries of isolation came to look upon all foreigners as enemies, and before the Restoration the words 'Reverence the Emperor and expel the barbarians' were the watchwords of every *Samurai*, just as in these days the cry of every politician is 'liberty and right,' and had even more effect upon the people. The persons who used the former cry in those days to stir up the people might be perfectly well aware that the thing they advocated was an impossibility, but this knowledge did not hinder them from using it on every occasion, and the fact that it was used and with effect may be taken as a proof of the universal feelings of the Japanese of those times towards foreigners. . . . We cannot assert that this anti-foreign feeling died out entirely with the Restoration; on the contrary, it is more than possible that it has only been concealed and lying dormant to be awakened with fresh activity when the impulse is given." The writer goes on to point out that the wave of foreign civilization which swept over the county after the Restoration left the nation no time to think of anything else but the progress to be made, but that the reaction against foreign influences of all kinds which has lately set in tends to revive the old anti-foreign feeling which formerly existed, and he urges his countrymen not to be carried away by these reactionary tendencies, and, instead of fearing and disliking foreigners, to endeavour to attain a position in which they will be able to cultivate closer relations with them upon a footing of equality.

---

### THE "EMPRESS OF INDIA."

A large number of residents availed themselves on Thursday of the opportunity of going on board the Canadian Pacific new steamer *Empress of India*. By favour of Messrs. Frazar & Co., the local agents, the steamer *Spindrift* ran between the vessel and the shore, conveying sightseers, and a band played a number of selections on board during the afternoon. The first *Empress* of the line is undoubtedly a splendid vessel. Her voyage out was not marked by any incident of note. The only occasion when she was driven at full speed (but without forced draught) was on the trip from Hongkong to Shanghai when at about 75 revolutions she ran mostly at a speed of about 17 knots an hour—of course in favourable weather. On this the *N.-C. Daily News* remarks:—"The *Empress of India* made the run from Hongkong to Gutzlaff in under 48 hours, the previous best time being the *Oriental's*, 49 hours, 5 minutes. She arrived at Woosung at 3.45 p.m., making the run from Hongkong to Woosung in 2 days, 3 hours, an average speed for the whole distance of just under 16 knots." She left Kobe at midnight on Monday being then well down by the head. Strong north-westerly winds were experienced and the ship, though with all 4 double ended boilers going (a total of 32 fires) was not driven, her average speed being about 12 knots. With a clipper, fiddle-bow and under light schooner rig, (three masts) the *Empress of India* looks a very pretty ship. She has a top-gallant forcastle and a full poop, wells intervening between these and the saloon deck, on which the state-rooms, smoking room, etc., are situated. Of the capacity of these rooms an idea may be gained when we say that with her 51 feet of beam the visitor certainly does not get the impression that the open deck space is very great. The accommodation for saloon passengers is suggestive rather of a large first class hotel than of an ocean steamship. Perhaps the least attractive part of the ship—next to the Chinese steerage—is the engine room, and yet this is certainly the most wonderful portion of the great structure. A longitudinal bulk-head, carried up to a height almost level with the main deck divides the engine room into two, connection between which is supplied by a door-way which can be closed in case of emergency. Here the visitor, descending by various stages to the starting platform, may view the maze of cranks, of pistons, of cylinders, of pumps, and the countless other mechanism which goes to make up the modern marine engine. The stoke-hole is not longitudinally separated like the engine-room, but is a deep well between 'thwart-ship bulkheads. Aft from the engine-room is the tank,—for so we can only describe the space which the exigencies of latter day engineering allow and which is the hottest place on the ship—in which are the engines driving the electric system of the vessel, and the Linde's British Refrigerator engine, the refrigerating chamber itself being aft. From the engine also there run aft the shaft tunnels, probably the most spacious compartments in this part of the ship, and it is interesting to note that, as our detailed account sets forth, no brackets are required to support the twin shafts which emerge easily from the run of the ship. On the upper or saloon deck, next to the exquisitely decorated cabins, that feature of the steamer which most specially claims attention is the huwe scale of the fittings. Large iron life-boats hang on massive davits; the gigantic funnels are surrounded by a thicket of great ventilators to provide fresh air to the workers in stoke-hole and engine-room, and the forward funnel carries a couple of steam whistles the larger of which might be a funnel, and a siren which would prove a very respectable ventilator, for the *Spindrift*. It has hardly been decided yet, we suppose, whether the *Empress* will carry her white paint henceforward. The colour suffers dreadfully from that unavoidable process, coaling, but, unlike black paint, may be patched without showing the patches. We cannot help hoping that the new ship may retain her colour, which is distinctive, and, even in these non-tropical climes, grateful to the eye.

---

### THE DISTURBANCE IN NEMURO.

Some particulars of the disturbance in Nemuro on the 31st of last month, which has already been briefly reported, are to hand. It appears that at about 11 a.m., a number of the local militia settlers came to the office of the *Nemuro Shimbun*, and the leader, giving his name as Hayashi Nobuhisa, asked to see the second editor, Mr. Watanabe Shigeki. As Watanabe was acquainted with Hayashi he did not hesitate to present himself, whereupon he was immediately asked to give up the name of the person who had written in the newspaper an article headed *Masa-yume* (a true dream). Watanabe declined to give the name, alleging that to do so would be a violation of rule as well as of journalistic custom, but the intruders pressed him, and declared that they felt grossly insulted by the article. Alleging that he wished to confer with the editor, Mr. Sato Kiyokichi, Watanabe withdrew, but was quickly followed by Hayashi's party, who at once set themselves to smash everything they could find, including the windows, the lamps, and the printing presses. No resistance appears to have been offered by the staff of the newspaper, which was probably fortunate, as the intruders drew their swords at an early stage of the proceedings and used them freely to break up the furniture and plant. Mr. Watanabe was attacked in the street after he had left the office, and severely though not fatally wounded. A number of the employés of the paper fared similarly, and for a time the disturbance was very serious. It is supposed that some reason, other than mere offence in consequence of the incriminated article, was at the bottom of the affair. The leaders of the truculent militia-men have all been arrested, it is said.

---

### AUSTRALIAN FEDERATION.

We learn from exchanges that the following are the resolutions submitted to the Australian Federal Convention, which met in Sydney last month:—

1st.—That the powers and privileges and the territorial rights of the several existing Colonies, shall remain intact excepting in respect of such surrenders as shall be agreed upon as necessary

Digitized by Google

and incidental to the power and authority of the Federal Government.

2nd.—That the trade and intercourse between the Federal Colonies, whether by means of land or coastal navigation, shall be absolutely free.

3rd.—That the power and authority to impose Customs duties, shall be exclusively vested in the Federal Government and Parliament, subject to such disposal of revenues thence derived as shall be agreed upon.

4th.—The Military and Naval Defence of Australia shall be entrusted to the Federal forces under the one Commandant.

5th.—That subject to these and other necessary provisions this Convention approves of framing a Federal Constitution to be established as follows:—

1st.—A Parliament, consisting of a Senate and House of Representatives, the former to consist of an equal number of members from each Province, to be elected by a system which shall provide for the retirement of one-third of the members every (blank) years, but securing to the body itself perpetual existence combined with definite responsibility to the electors. Said Parliamentary representatives to be elected by districts on the basis of population, and to possess the sole power of originating and amending Bills, appropriating revenue and imposing taxation.

2nd.—A Judicature, consisting of a Federal Supreme Court of Appeal for Australia, under the direct authority of the Sovereign for the time being, and whose decision shall be final.

3rd.—An Executive, consisting of a Governor-General and such persons as may from time to time be appointed by him and his advisers, such persons being selected from those sitting in Parliament, and their term of office depending upon the confidence of the House of Representatives as expressed by vote of the majority.

### ADDRESS BY BISHOP BICKERSTETH.

We publish elsewhere an address delivered by the Rt. Rev. Bishop Bickersteth at the third biennial Synod of the Nippon Seikokwai, which was held on the 4th instant in Osaka. The Synod, which sat during a week in Osaka, consisted of the Bishops and of an equal number of clerical and lay delegates. Japan is divided, for missionary purposes, into four districts, Tokyo, Osaka, Kumamoto, and Hakodate. Each district is entitled to send to the Synod ten clergy delegates—Japanese or foreign—and an equal number of laymen. Only Tokyo and Osaka are as yet in a position to send the full number. Among those present at the Synod just concluded, was Bishop Hare, of South Dakota, who has been deputed by the American House of Bishops to come to Japan for six months, to exercise during that time all episcopal functions devolving on a Bishop of the American Church in Japan. Bishop Williams, hitherto the head of that church in this country, resigned a year and a half ago, and no successor has yet been appointed. It will be observed that Bishop Bickersteth alluded in strong but subdued language to the beautiful life and noble work of Bishop Williams during thirty years in this country. Bishop Williams is in truth one of those perfectly good men, rarely to be met with in this small world. His life has been a perpetual sermon, more eloquent than any words, more effective than any precepts. Bishop Bickersteth most happily summarized the record of his thirty years' devotion when he said, "only the day of God will reveal the results of his life and example." *Acta deos nunquam mortalia fallunt.*

### NONE SO BLIND AS THOSE THAT WILL NOT SEE.

It is very plain that journalistic discussion in this Settlement will never help to elucidate the international problems discussed. When there is a confirmed objection, or confirmed inability, on one side to understand the plainest statements advanced by the other, it results inevitably that time and space which should be devoted to profitable argument, are wasted in explanations and repudiations. No one reading, with any degree of sincerity and attention, our recent comments on the Citizens' Committee's Statement, could arrive at the conclusion that we "denied the assertion it contained respecting the competency of the native judiciary." We did nothing of the kind. Our contention, on the contrary, was that foreigners are not in a position to pronounce a sweeping verdict—as the Committee's Statement did—on the competence of the Japanese Judiciary to administer Codes not yet in operation; and that further, this emphatic judgment of the Committee's was inconsistent with its equally emphatic assertion that the competence of the Judiciary could only be tested by future practice. Surely if we deny the right of the Committee to settle, completely and immediately, the qualifications of Japanese Judges, it is not likely that we should venture to claim that right for ourselves. What we have pointed out is simply that judgment should be suspended until materials to form it are forthcoming. That is a proposition to which every moderate and fair-minded man must assent. But the Committee does not suspend judgment. It announces as a fact that "the native judiciary is not yet fitted by education, knowledge, or practice, either to understand or administer the Codes of law that have recently been compiled from foreign sources," and that "the Judges who are to read and interpret these books do not exist in Japan now." By committing itself to these wholesale and as yet unwarranted assertions, the Committee, or rather the compilers of the Statement, convict themselves of precipitancy and prejudice. The attitude of deliberation which they urge so strongly upon the foreign negotiators, is not exemplified in their own manifesto. Surely it does not follow that in pronouncing the Committee's verdict premature in one direction, we must be taken as pledging ourselves equally prematurely to a verdict in the opposite direction. That would be as though one should say that a man who denied the possibility, at the present stage of scientific research, of declaring the non-existence of an unfrozen space about the North Pole, had committed himself to asserting the existence of such a space.

* * *

To the same category of false accusations belong the charges that we have pronounced any general opinion about the character of the new Codes, and that it is an opinion opposed to "the testimony of hundreds of our fellow-countrymen and of the Japanese themselves." The strangely exaggerated character of this accusation needs no demonstration. The newspaper preferring it asserts, in one breath, that "no intelligible translation of the Codes has been made," and in the next, that "hundreds of foreigners" have testified to their faultiness. Where did these "hundreds of foreigners" obtain their knowledge? It is by such manifest hyperbole and gross inaccuracy that the foreign community is misrepresented and its attitude about Treaty Revision brought into ridicule. We have never ventured to pronounce any opinion about the new Codes, for the simple reason that we have had no opportunity of perusing them. It might be well if our traducers observed a similar reticence.

* * *

Count Yamada's instructions to the Committee of Revision, as described by Mr. Murata Tamotsu, are perpetually re-produced, by way of proving that these bodies of law were compiled solely in the interests of Treaty Revision. The disingenuousness of this argument is evident when we remember that the work of compiling the Codes had been completed long before Count Yamada became head of the Committee appointed to revise them. The facts about the Codes are perfectly simple and well known. Up to the close of 1885, the Japanese proposals about Treaty Revision did not extend beyond the recovery of a very limited portion of jurisdiction over foreigners, and did not involve the necessity of giving any pledge about the New Civil and Commercial Codes. The enactment or non-enactment of these bodies of law was in no sense directly essential to the success of the Japanese programme. Yet their compilation had been commenced years previously, and a draft of the Commercial Code was already in print. How can it be pretended, under these circumstances, that the work of compilation was undertaken solely for purposes of Treaty Revision? Thereafter the negotiations assumed wider scope, it having been found quite impossible to elaborate any practical system of divided jurisdiction, as proposed by Japan. In the new programme some engagement as to the nature of the Codes was required by the Foreign Plenipotentiaries, and the difficulty of giving such an engagement figured conspicuously among the causes that wrecked the negotiations. The Japanese then understood that their case would be immensely simplified could they lay the completed codes on the conference table, and the work of revision—that of compilation had already been concluded—was therefore pushed forward with all possible celerity. There never was any secret as to the reason of the expedition urged on the revisers. Everybody understood it, but we may assume that intelligent people did not make the mistake of supposing that because the last stages of the undertaking were hastened in the interests of the Treaties, its inception and original purpose were also political. Nothing seems to us harsher or more unjust than that, after Japan has been urged by Foreign Powers to devote her energies to the speedy compilation of civil laws consistent with the principles of Western jurisprudence, in order to qualify herself for international recognition, she should now be censured by foreigners themselves for the rapidity of her efforts. Mr. Murata's contention was that sufficient time had not been given to revise the laws. Yet he had himself taken part in the task and endorsed its completeness. If it subsequently suited his convenience to range himself with the opposition, and for political purposes to take advantage of the reactionary spirit against foreign innovations, the value of his statements should be discounted by all sober-minded observers. These are facts which any careful student of modern Japanese history can verify easily. Men who plunge into the Treaty Revision controversy at the eleventh hour, without instructing themselves about the incidents of the early part of the day, should not be too ready to accuse others of "ignoring inconvenient facts," of "consummate deceit," of "insincerity," and so forth.

### DEATH OF MR. D. J. JENKINS.

The *Overland Mail* has the following notice of the death of the owner of the "Shire" line of steamers:—We regret to announce the death last night at Torquay, on board the steamer *Flintshire*, on which he was cruising for his health, of Mr. David James Jenkins, who represented Falmouth in the Beaconsfield Parliament of 1874-80, and was the proprietor of the fleet of steamers known as the "Japan Line." An accident which occurred to Mr. Jenkins while swimming, in the autumn of last year, necessitated an operation which, after a prolonged illness, led to his death. At an early age Mr. Jenkins, who was of an exceptionally active and vigorous temperament, went to sea, and after going through the various stages, arrived at the command of a vessel, and made himself conspicuous in the Liverpool and New York trade as a skilful and daring navigator. Foreseeing the development of steam navigation, he came ashore for two years and qualified himself as an engineer. When the Crimean War broke out Mr. Jenkins was in command of the *Brandon*, at that time an exceptionally fast steamer, of which he was part owner, and which was taken up by Government as a despatch vessel to run between Buyukdere and the British camp near Sebastopol. Subsequently, Mr. Jenkins commenced business in the City of London, and eventually built and established the fine line of steamers named after the Welsh counties, which are now know as the Japan Line. In politics Mr. Jenkins was a Liberal, and was returned to the House for Falmouth within a few days of the election of his nephew Mr. Edward Jenkins for Dundee. His brothers, the Rev. John Jenkins, D.D., late of St. Paul's Church, Montreal, one of whose daughters is the wife of Mr. H. S. King, C.I.E., M.P. and the Rev. E. E. Jenkins, a distinguished Wesleyan Methodist minister, survive him. Mr. Jenkins married twice, and has left a widow and a large family.

### EXHIBITION OF PAINTINGS.

It is now definitely fixed that the exhibition of Mr. J. Varley's paintings, in aid of the Tokyo Charity Hospital, will be opened to the public

Digitized by Google

on the 26th instant, at 1 p.m. Some of the important pictures painted by Mr. Varley during his stay in Japan have already been sent to London for his proposed exhibition in Bond Street, but there remains a large collection of oils and water colours, about 83 in number, we believe. Of course the pictures will not be seen to the best advantage as the framing will have to be done in a temporary manner, but the exhibition will be a treat such as we seldom have an opportunity of enjoying in Japan. Mr. Varley comes of a race of artists. His father and grandfather were both distinguished painters, the latter being known among artists as the father of water colours; while Mulready, the Royal Academician, and Copley Fielding, of the Royal Water Colour Society, each of whom stood at the head of his profession, were his great uncles. Mr. Varley himself has studied in France, Spain, Italy, Germany, Belgium, Holland, and other places, and has devoted some fifteen years to painting in various parts of the East, Egypt, Asia Minor, Morocco, and so forth. It is probably owing to this long familiarity with Oriental scenery that he succeeds so admirably in the colouring and atmospheric effects of his pictures.

### COUNT YOSHII.

THE stroke of paralysis by which Count Yoshii, of the Privy Council, was attacked on the 27th ultimo, threatened to have immediately fatal results, but yielded to medical treatment sufficiently to inspire hope that recovery was not out of the question. Within the past few days, however, there has been, we regret to say, a relapse, and the Count's state is now very critical. Special inquiries have been made from the Palace, and on Saturday a sum of a thousand *yen* was sent in the names of the Emperor, the Empress, and the Empress Dowager, to defray medical expenses, according to the old Japanese custom. The patient has lost the power of swallowing, and it has become necessary to feed him by means of a tube. We fear that, at his advanced age and considering that this is by no means his first seizure, the chances of a rally are very slender.

### SHAKESPEARE IN YOKOHAMA.

MESSRS. KELLY AND WALSH inform us that they have received intimation from the manager of the dramatic company recently performing in Hongkong and the south of his intimation to visit Japan, Mr. Miln in his communication stating that the company may be expected here about the middle of May, after a visit to Shanghai. From accounts in the papers, Mr. Miln appears to be able to produce Shakespeare's plays in their entirety, and to the satisfaction of the critics, but the audiences have not been large, We hope the enterprising player will not suffer loss through his visit to Japan, and he may possibly just pay expenses if he does not remain too long, as was the case apparently at Singapore.

### RICE.

THE *Nippon* says that the production of rice in Japan last year was 43,040,811 *koku*, and that the area on which it was cultivated measured 2,747,797 *cho*, or 6,869,482 acres. Compared with the figure for 1889, this yield shows an increase of 30.3 per cent., and compared with the figure for 1888, an increase of 11.3 per cent. It is also 23.6 per cent. above the average of the past ten years. If the *Nippon's* statement about the area under cultivation be correct, the yield averaged 6.26 *koku*, or 32 bushels, per acre over the whole empire; an extraordinary figure.

### MR. BRADLAUGH'S SCOTCH RETREAT.

A CORRESPONDENT writes:—Last summer when in Scotland I was spending a few days with a friend who has a place on the Gareloch. One afternoon we drove past the head of the lock, and crossed the neck which separates it from Lock Long. In a little nook below lay a small fishing village, with one or two cottages for summer residents in and about. "Who do you suppose comes and spends his summers here?" asked my friend. "A well-known political character, who does a great deal of good in the community and is a favourite with the fisher folk." I failed to guess the right name, and was then informed that the politician visitor was no other than Mr. Bradlaugh, who was passionately fond of the rod and line. His memory is likely to linger long in this quiet spot.

### NEW MEMBERS OF THE HOUSE OF PEERS.

HIS MAJESTY THE EMPEROR has nominated eleven new members to the House of Peers. Their names and former positions are as follow:—

| | |
|---|---|
| Mr. Go Junzo | Formerly Vice-Minister of Finance. |
| Mr. Miyamoto Koichi | Former Senator. |
| Mr. Iwamura Sadataka | Former Senator. |
| Mr. Nagayama Moriteru | Former Senator. |
| Mr. Hashiguchi Kenzo | Former Senator. |
| Mr. Chosho Kan | Former Senator. |
| Mr. Kanai Yukiyasu | Former Senator. |
| Mr. Iwaya Shu | Former Senator. |
| Mr. Terajima Jusuke | Former Senator. |
| Mr. Kawasaki Yumei | Chief of Army Bureau of Superintendence. |
| Mr. Miyake Shu | Medical Professor in Imperial University. |

These nominations, together with the two announced a few days ago, bring the number of Imperial Nominees in the Upper House to 72. According to the present composition of the House, it is competent for His Majesty to nominate 101 members in all, so that only 29 vacancies remain.

### IN MEMORIAM "CHINESE TIMES."

"TUNG CHIA" in the *N.C. Daily News* chants the dirge of the *Chinese Times*, which ceased publication at the end of March:—

"More light"*—it was thy watchword and thy will,
Thou gallant beacon on this rocky shore!
Alas; thy helpful rays shall guide no more
Through fog and stormful night—henceforward still
Thy clarion note of caution and of cheer.
Thy days are done,—the swift encroaching tide
Of ignorance and littleness and pride
Rolls darkly o'er thy place; now doubt and fear
Resume their ancient hold. Yet not in vain
Nor thankless all thy toil—brave ships to-day
Sail the wide seas that learned from thee the way
Through treacherous shallows to the open main.
Therefore adieu! Not darkly falls the night
Since thou hast been, and being, brought "more light!"

TUNG CHIA.

* "Mehr Licht" the motto of the *Chinese Times*.

### COUNT YOSHII.

COUNT YOSHII continues to linger on in a semi-conscious condition. On Tuesday evening it was supposed that he had only a few hours to live, but by the aid of powerful stimulants his physicians have succeeded in prolonging his existence up to the present. Recovery is said to be out of the question, however. It is impossible not to speculate on the uselessness of maintaining such a fruitless struggle with death. Certainly the most merciful course to the patient himself would be to let him expire quietly. He gains nothing by remaining in his present state, so far as we can see, though possibly the pain of parting may be lessened for his family and friends.

### "AVE ATQUE VALE."

THE outgoing American mail on Saturday carries away from Japan Mr. F. A. Satow, who was for four years in the service of the Imperial Judicial Department, where he rendered valuable aid in the compilation of the Civil and Commercial Codes and the Code of Civil Procedure. No one has ever won such a host of genuine friends in so short time in Japan as Mr. Satow. His departure leaves a blank in the lives of many, and he will always be remembered in Tokyo and Yokohama as one of the truest-hearted and most sterling men that have ever visited this country.

### MRS. T. A. LARGE.

MANY of our readers will be interested to hear that Mrs. T. A. Large, of the Toyo Eiwa Jo-Gakko, Tokyo, who was obliged last year to seek rest and change in Canada under circumstances of great sadness, still fresh in the memory of the public, intends to sail for Japan on August 10th, to resume her work in Japan. Mrs. Large will be accompanied by her sister Miss Spencer. Her return to the school over which she presided with so much ability during several years, will be a welcome event.

### MUSICAL SOIRÉE AT THE GERMAN LEGATION.

A PLEASANT variety in the social entertainments of the capital was inaugurated at the German Legation in Tokyo on Wednesday evening, when a large party, including all the notables of Tokyo and several Yokohama residents had the pleasure of listening to some excellent music, vocal and instrumental, by German and English amateurs. After a programme of considerable length, every item of which was capitally rendered, a sumptuous supper terminated a most enjoyable evening.

### LAND AT OTARU.

THE Tokyo News Agency states that land at Otaru in Hokkaido is now worth ten *yen* per *tsubo*, and that Viscount Yenomoto and Mr. Kitagaki Kunimichi, who are joint owners of a considerable tract in that locality, are taking advantage of the state of the market to sell their property for a hundred and eighty-five thousand *yen*. It seems scarcely credible that such a price should be obtainable for land in the northern island, especially in these times of general depression.

### THE MINISTER PRESIDENT.

THE fact that H.E. Count Yamagata has left the capital for Kyoto, where Count Ito is now staying, gives rise to many conjectures. People now talk of Count Ito's assuming the leadership of the Cabinet, instead of Count Saigo, whose acceptance of the post was generally regarded as certain before Count Yamagata's journey southward. We do not believe, however, that Count Ito will consent to return to the Cabinet at present.

### THE RADICALS.

THE *Yomiuri Shimbun* says that Count Itagaki, as leader of the *Jiju-to*, has appointed the following six members of Parliament to be the heads of Sections for inquiring into various political affairs:—Messrs. Kawashima Jun, Matsuda Masahisa, Kono Hironaka, Suzuki Shoji, Sugita Tei-ichi, and Arai Shago.

### DEATH OF MR. BRYCE DOUGLAS.

NEWS has been received by telegram in Tokyo of the death of Mr. Bryce Douglas, the well known designer of ships. A noble specimen of Mr. Douglas' ability is now in Yokohama harbour—the *Empress of India*.

### MR. HOLLAND.

WE learn that in the event of Mr. T. E. Holland, Professor of International Law at Oxford, being engaged for service in Japan, he will take the place of Dr. Hermann Roesler, who desires to return to Europe.

### APPOINTMENT.

BISHOP BICKERSTETH has appointed the Rev. C. F. Warren to be Archdeacon of the Church of England in Osaka and Central Japan.

### TRINITY CHURCH, TSUKIJI, TOKYO.

ON Sunday, April 19th, Morning Prayer at 11 a.m. and Sermon by Canon Tristram, D.D., F.R.S., of Durham Cathedral.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

Rumoured changes in the Ministry constitute the principal topic of discussion in the columns of the vernacular press. Count Yamagata seems unmoved in his resolution to resign the post of Minister President. It is stated that, on the point of leaving the capital for his native Province a few days ago, he was dissuaded from taking such a rash step by Count Saigo. The latest report is that the Emperor has telegraphed to Count Ito—now staying at Kobe—to return to the capital. The papers doubt very much whether Count Ito will accept the post, but predict that it will be offered to him on his arrival in Tokyo. The general journalistic opinion seems to be that no persuasion or pressure will induce the Count to take a leading part in politics at this juncture. Count Saigo, too, is said to be firm in his refusal to succeed Count Yamagata. The next statesman

Digitized by Google

thought of in connection with the post of Minister President is Count Matsukata, but there seems to be opposition to him in a certain influential section of the Government. It is even rumoured that he is desirous of resigning his present post of Minister of Finance, the ventilators of this rumour alleging in support of it that he has vacated his official residence in Nagatacho, and referring his resolve to the ground that his dealings with the House of Representatives on the question of the Budget gave some offence to the rest of his colleagues, though in what way offence was given or taken is not clearly stated. Count Oyama is also living at his private house at Aoyama, and he, too, is said to have decided to resign, his probable successor being General Takashima. Mr. Yoshikawa, again, is represented as being determined to resign the portfolio of Education, in the event of the retirement of his patron, Count Yamagata.

* * *

The situation being thus hopelessly uncertain, the Metropolitan papers all unite in advising the Ministers to effect a speedy arrangement for the formation of a new Cabinet. Until some time ago, the leading journals tried to dissuade Count Yamagata from resigning, but now they seem to think that there is no hope of inducing him to remain. They argue that the people have become entirely sick of the time-serving changes in the *personnel* of the Ministers of State, and urge the necessity of a new departure by creating a Cabinet capable of lasting for some years. Equally with the Ministers, however, the journalists of the capital appear to be at a loss to find a suitable successor to Count Yamagata, should he really resign his post. Usually when a Minister President is reported to be going out, the newspapers experience no difficulty in indicating some proper and probable successor, but in the present instance all are plainly perplexed.

* * *

The question of Treaty Revision engages the attention of the vernacular press, especially the organs of the *Kaishin-to*. The attitude of that party towards the reported programme of Viscount Aoki is a question of considerable interest. As stated in a former weekly summary, the *Kaishin-to* organs are evidently preparing the way for their party to assume, if necessary, even a hostile attitude in conjunction with the *Jiyu-to* and other progressive parties. The *Yomiuri Shimbun*, generally regarded as one of the organs of the *Kaishin-to*, states that the party has not yet held any conference for the purpose of determining the course of policy to be adopted. But according to a conversation which the editor of the paper had had with leading members of the *Kaishin-to*, the latter did not all approve the scheme of Count Okuma. Messrs. Ozaki Yukio and Shimada Saburo are cited as the most noteworthy non-contents. They were in Europe at the time, and if they did not oppose Count Okuma's proposals, it was because they believed that the negotiations had already reached such a point that to suspend them or introduce any large modifications would be injurious to the national reputation of Japan. The *Yomiuri* states in conclusion that the leading members of the *Kaishin-to* are opposed to the programme of Viscount Aoki, and that the policy of the party will be decided upon ere long.

* * *

Judging from the utterances of its organs, the *Kaishin-to* seems determined to oppose chiefly that portion of Viscount Aoki's programme which relates to tariff autonomy. The *Mimpo* observes that Viscount Aoki, inheriting the erroneous policy of his predecessors, seem to regard an increase of customs duties as equivalent to the recovery of tariff autonomy. So long as Japan is bound to consult the convenience of the Treaty Powers before making any change in the rate of the duties, she cannot be said to enjoy her full right of fixing the tariff at will. If it is necessary to agree to a conventional tariff, then its provisions ought to be reciprocal. Our contemporary prefers to have the tariff determined by the Japanese Government with the consent of the Imperial Diet, according to the provisions of the Constitution, so that Japanese subjects may have the duty of paying taxes as directed by law.

* * *

The *Yomiuri Shimbun* writes on the importance of effecting an alliance of political parties on the question of tariff autonomy. Like the *Mimpo*, it thinks that although the conclusion of treaties is a prerogative of the Crown, it is not an absolute prerogative, and that any treaty bearing on the taxation of people ought to be submitted to the deliberation of the Diet. According to the *Yomiuri's* information, the Authorities are determined not to submit the new commercial treaty to the Legislature, on the ground that customs duties are different from ordinary taxes, partaking more of the nature of special fees. Such a procedure is evidently unconstitutional, and our contemporary invites the various parties to combine on this question, so as to compel the Government to lay before the people's Representatives such portions of the proposed treaties as bear on the question of tariff. Alliance for this purpose is said to be very easy, the point at issue being simple and clear, and the subject having little in it to suggest those outbursts of party animosity and ill-feeling which have too often disfigured the discussion about judicial autonomy. Once combined on this point, it would not be very difficult, we are told, for the allies to extend their union to other points involved in the question of Treaty Revision.

* * *

The *Mainichi Shimbun* writing under the heading "English Villages in Japan," remarks that although Chinese are condemned on account of their incurable tendency to form a separate community wherever they go, the same tendency is manifested by Englishmen in the East, especially in Japan. The foreign settlements in this country contain people of all nationalities, but the English element preponderates so much that they may justly be regarded as so many English Villages. At first sight, it might be thought that Englishmen would be the first to sympathize with Japan's efforts to get her treaties revised; for Englishmen, together with Americans, are held in the highest esteem by the Japanese, and of all foreign literatures and languages, the English literature and the English language are most extensively studied in this country. Modern history furnishes many instances of noble chivalry displayed by the English people in their relations with foreign nations, notably in the cases of Greece and the helpless fugitives from down-trodden Poland. How different is the conduct of English residents in Japan in regard to the question of Treaty Revision? It was they who opposed most strenously the programmes of both Count Inouye and Count Okuma, and now it is they who oppose the programmes of the present Minister of Foreign Affairs. There are doubtless several causes for so strange a departure from the magnanimous dealings of the Anglo-Saxon race, but one of the principal is stated to be their existence as separate and isolated communities in the midst of the people of the country. Our contemporary, consequently rebukes those Japanese who object to mixed residence, for the effect of the policy they advocate is to keep Englishmen eternally prejudiced against Japan.

* * *

The changes recently effected in the *personnel* of the Governors of Cities and Prefectures are not very popular. Five of these officials were put on the *hishoku* list, and five were newly appointed from among ex-Senators and officials in Tokyo, while nine were removed from one locality to another. The *Hochi Shimbun* alone among the leading dailies in Tokyo does not openly condemn the changes. On the contrary, it hopes that the Government will make further changes. All other papers of importance unite in frankly stating their disapproval. They recognize the vital importance of radical alterations in the Governors of *Fu* and *Ken*. Many of the present Governors, they say, are not fit for their posts under the régime inaugurated by the carrying out of the Constitution, and the new system of local self-government. Those recently put on the *hishoku* list are not, according to the vernacular press, particularly the type of men who ought to be shelved; neither are the five new Governors distinguished by any talents or accomplishments. The Tokyo papers, therefore, declare themselves at a loss to understand the reason why these changes were at all necessary. The *Mimpo* even goes so far as to observe that their only result will be to create new centres for propagating the influence of a few Ministers of State.

* * *

The Korean problem still exercises the minds of a certain section of the public. The *Nippon* is one of the papers that pay most attention to this subject. A writer signing himself "Kyô-kyô-sei" discusses the question of the alleged attempt to force the King of Korea to abdicate his crown in favour of his son. The writer mentions several circumstances in support of the allegation. A little more than a month ago, an extraordinary civil service examination was held at Sōul. It was formerly customary in Korea to hold an extraordinary examination whenever an expensive state ceremony was going to be celebrated, for the purpose of collecting the necessary money in the form of examination fees. The revival of the almost forgotten custom caused much surprise among the inhabitants of the Korean capital, and their astonishment was increased when they found that the fees collected for the examination were to be employed in celebrating the ceremony of coronation. The writer goes on to state that Li Chungtang is the originator of the scheme. He sent a letter on the subject to the Korean Prime Minister Chin Shun-taku (Japanese pronunciation), who, in conjunction with the Minister of the Left, Tei Bôko, and despite the opposition of a loyal courtier named Li Yûyoku, managed to follow the instruction of the Chinese Viceroy so far as to make the Crown Prince Regent of the kingdom. The reason why China desires to get rid of the present king is stated to be that he is too well disposed towards Russia. The writer argues that there is no difference between Chinese dictation and Russian dictation. If China be really careful of her own interests and the interests of Korea, she must, the writer argues, join Japan and other Powers in supporting the independence of the peninsular kingdom.

* * *

The *Kokwai*, writing on the Tei affair, observes that, trivial as the matter is, it may very possibly lead to some bitterness of feeling between the Japanese and Chinese nations. Our contemporary hopes that such a result may not ensue, and draws the attention of its countrymen to the circumstance that China is the largest purchaser of Japanese marine products. In regard to tea and silk, Japan has several competitors, but in marine products she has no fear of foreign competition, and further, in this sphere her resources are almost inexhaustible. The *Kokkai* consequently thinks that the most valuable trade for Japan is that in marine products; and inasmuch as China is her principal customer for such things, it is of paramount importance for Japan to be on intimate terms with her western neighbour. Moreover, apart from commercial considerations, the two nations ought to be mutually friendly, as they belong to the same race.

* * *

The question of foreign emigration is beginning to attract public attention. The *Jiji Shimpo* writes on the importance of giving state protection to enterprise of this nature. There are three classes of people whose emigration should be encouraged; first, wealthy and influential men of business; secondly, poor working men, and thirdly, young students without occupation. The emigration of wealthy men of business is stated to be important for creating new centres of Japanese influence throughout the world. To people of this class, it is not necessary to grant any direct aid, but every indirect encouragement should be given them. In the case of men of the second and third classes, it would be advisable to afford a reasonable degree of assistance out of the public funds. It is not apparent to what cause the opening of this question is attributable.

## *THE STATEMENT OF THE CITIZENS' COMMITTEE.*

IT is doubtless fresh in the memory of our readers that when the agitation caused by last September's Meeting began to assume large proportions, the promoters of the Meeting publicly protested against being called Anti-Revisionists. They claimed to be, on the contrary, Pro-Revisionists and insisted that their objection did not extend beyond Revision without conditions. Unfortunately this avowal had little weight with the Japanese. They continued to apply the term *hi-joyaku-kaisei* to the whole affair, and to this day they preserve the same nomenclature. It is greatly to be desired that a different view of the demonstration should be inculcated, since the aim of all educated foreigners is to obtain Japanese friendship, and since the object of revising the Treaties is, not to create international umbrage, but to cement closer relations of amity and commerce. We deem it, therefore, a matter fo sincere congratulation that the Citizens' Committee have inserted in their statement the following unequivocal declaration of goodwill and friendly sympathy :—

> The meeting has been called an Anti-Revision meeting; but so far from being opposed to Revison, there is not an intelligent member of the community who does not admit that Japan is entitled to demand some relaxtion of the terms of the present treaties. The progress she has made in various directions is recognized with sincerity and admiration, and her aspirations are regarded with sympathy; but the most persistent advocates of her cause are obliged to admit that she has not yet proved her right to claim unconditionally the promise of unrestricted judicial control over us, and it is an undoubted fact that there are many among the Japanese themselves who share their opinion. It will therefore be understood that the term Anti-Revision, as applied to the meeting, and those taking part in the resolutions arrived at, is entirely misleading.

This frank recognition of what Japan has achieved and of her title to more liberal treatment represents the mood of all intelligent and reasonable foreigners. We have for years insisted in these columns that such was the sentiment of the better classes of British subjects, and that their disposition must not be interpreted by the rancorous, vindictive, and palpably unfair utterances of writers who pretended to be their champions but were in reality their defamers. The Japanese press is presumably anxious to lead its nationals to a clear and just understanding of the Yokohama community's temper, and to remove this great question from the arena of bickering and recrimination into the higher atmosphere of intelligent and amicable discussion. We trust, therefore, that the vernacular journals will give wide circulation to the above extract from the Committee's Statement, and will recognise it as a genuine expression of the sentiment entertained by the representative men of the foreign community. In the course of this long battle to open Japan to free intercourse with the civilized world, it was inevitable that the clashing of private interests and the heat of intemperate controversy should generate some rancour and umbrage. But since the chief ends to be attained are the obliteration of racial distinctions and the removal of all restrictions upon free and friendly intercourse, bitterness and recrimination are wholly out of place. Whatever publicity has been given to the unhappily misleading aspects of last year's meeting, should now be given to the frank and kindly declaration of the Citizens' Committee.

Following this declaration is a résumé of the considerations which, in the Committee's opinion, weigh against the unconditional submission of the persons and properties of foreigners to Japanese jurisdiction. The résumé comprises some statements open to criticism and some, also, that seem regrettable. We do not propose, however, to examine it here in detail. Different minds reach the same goal by different routes, and all of us acknowledge the truth of the conclusion embodied in the Committee's summary, namely, that opportunity has not yet been afforded to acquire full faith in the competence of Japanese judicial officials to administer laws of a more or less unaccustomed and complicated character, and that foreigners consequently hesitate to submit their persons and properties unconditionally to Japanese jurisdiction. That view of the case is not to be controverted, and no reasonable Japanese should find fault with foreigners for entertaining it. Faith is a plant of slow growth. It cannot be forced, but must be fed and nurtured with solid materials. The Japanese have succeeded in all the experiments made by them hitherto. Through numerous stages of adoption and assimilation they have risen, without check or failure, to the summit of political civilization, representative institutions. In their past history every thing justifies confidence that the legal experiment upon which they have now entered will form no exception to the record of successes. But, as the Committee point out, the abolition of Consular Jurisdiction would be an irrevocable step. For good or for evil, once taken, there could be no going back. Caution, therefore, is a natural and proper mood on the part of those asked to take the step, and the present Japanese Minister of Foreign Affairs fully recognised this when he said, in the House of Representatives, that the results of the working of the new Codes must be offered to foreigners as a guarantee. The position, then, as defined by the Committee, is this: that Japan is entitled to demand some relaxation of the terms of the present Treaties, but that further practical proofs of her competence are required before foreigners can willingly place themselves under her jurisdiction. Now it has been clearly shown by past experience that no partial surrender of Consular Jurisdiction is possible. We must either submit to Japanese jurisdiction altogether or maintain the present system. The Committee fully understand this. They make no suggestion of any partial measure, but pass at once to the logical and inevitable conclusion that the only way to reconcile justice with expediency, is to make some promise the fulfilment of which shall take place at a future date. They formulate their proposal thus :—

> What the Committee would recommend would be an undertaking to abandon Extra-territorial jurisidiction as soon as the Codes shall have been a sufficient time in force to afford practical proof of their efficiency, and the administration has been shown to be satisfactory, without attempting beforehand to determine a limit of time which, from the circumstances of the case, must necessarily be based on mere guess work; and if the Japanese Government are not content to await the result of this probation, then that their demands should be conceded only on condition of the interposition of some such safeguards as have hitherto been admitted on all sides, and notably by the Japanese Government itself, to be necessary.

It is obvious, of course, that the Committee, in offering this suggestion, did not attempt to mould it into the form of a possible basis of practical negotiations. An engagement on the part of foreign Powers to strike off Japan's fetters as soon as they themselves consider her competent to walk without restraint, would simply mean that she placed her case absolutely and unreservedly in their hands, to be dealt with whenever and however they might please. Her present position is that she became entitled to demand a revision of the Treaties nineteen years ago. The Committee's recommendation would deprive her of that title, and pledge her to an engagement surrendering her autonomy *ad infinitum*. The Committee understand very well that anything of that kind is out of the question. But they were compelled to abide by the unfortunately worded resolution voted last September. We showed at the time that the resolution, literally interpreted, meant nothing more or less than the abandonment of all negotiations, inasmuch as it vetoed the only conceivable basis of practical negotiation, namely, the giving of some promise to be implemented at a fixed future date. For pointing this out we were severely taken to task and roundly accused of misrepresentation, the mover of the resolution himself leading the attack upon us. But the Committee's Statement now affords us ample justification, since the only basis suggested is that the Powers should intimate their willingness to restore Japan's judicial autonomy at some date to be determined hereafter in obedience to their own independent judgment. Japan received such an engagement years ago. She received it on the day when the foreign Powers first consented to enter into negotiations for the restoration of her judicial autonomy. To embody it in an international agreement now would simply deprive her of all initiative, wholly subserve the satisfaction of her national claims to the volition of Western States, and reduce her, at one stroke, to the level of Korea, who, in her Treaty with Great Britain concluded eight years ago, received precisely the engagement which the Citizens' Committee would now offer to Japan

Digitized by Google

in satisfaction of her deserving efforts and earnest aspirations. It is quite plain, therefore, that in advancing this proposition the Committee did not formulate an irreducible minimum of concessions. Prudent negotiators, they left themselves a margin within which some satisfactory compromise might be found. The spirit of the recommendation, rather than its precise terms, is consequently important, and so far as the spirit is concerned, Japan has nothing to complain of. The Committee not only admit her title to a modification of the Treaties, but also intimate in the clearest manner that, so soon as her "Codes shall have been a sufficient time in force to afford practical proof of their efficiency, and the administration has been shown to be satisfactory," the foreign residents will be prepared to place themselves under her Jurisdiction. These are most significant and liberal admissions. They should have the effect of removing any unfavourable conception of the foreign community's attitude. It only remains for the negotiators to discover a compromise which shall take due note of the proper caution of foreigners, without imposing any condition offensive to Japanese national sentiment.

## *THE "STATEMENT" AS TO TARIFF AND LAND.*

THE first authoritative manifesto issued by the representatives of a large body of the Yokohama foreign residents, calls for more detailed notice than it has yet received at the hands of the press. We have extracted and emphasized its liberal and sympathetic portions, but its arguments and conclusions remain to be considered.

The document discusses three questions, the cardinal points of Treaty Revision. The first is the Tariff. Concerning this the Citizens' Committee says:—

> On the subject of the Tariff the Committee are of opinion that it may be modified to meet the wishes of the Japanese Government; but that it should be regulated by Commercial Treaties with the Powers interested, as is done in European countries. This would guard against sudden changes and the imposition of excessive duties, which might ruin certain important branches of trade. The levying of tonnage, harbour, and light-house dues might in the opinion of the Committee reasonably be conceded.

It is not quite clear whether this declaration is designed to embody a protest. The language, by intention or by accident, is perplexingly vague. Thoroughly well aware that the tariff arrangements contemplated by the negotiators of the Revised Treaties have received mature deliberation at the hands of the foreign merchants themselves, and have been accepted by them as within the bounds of reason, the Committee need not have touched this phase of the problem at all. If they intend to suggest that a general promise should be exacted from Japan, pledging her perennially to levy upon her foreign trade no duties other than such as shall have been included in conventions, they propose something obviously preposterous and impossible. If they do not intend to suggest this, with what purpose do they claim that the Tariff "should be regulated by Commercial Treaties?" It is to be regulated by a Commercial Treaty, and the Committee are well aware of the fact. But no Tariff Convention is of interminable operation, and when the period of the proposed Convention expires, arrangements to replace it must be the subject of entirely new negotiations. The Commmittee cannot mean to lay down the proposition that Japan is to be bound by some special promise in perpetuity; and if their language has reference to a terminable Convention, then they merely advise what is actually contemplated with the consent of all parties, the foreign merchants themselves included. They speak of "guarding against sudden changes and the imposition of excessive duties," from which it would seem that, moved by some undefined apprehension as to what might happen were Japan's hands free, they entertain a vague hope of seeing her tied up for all time. But in the same sentence they say that the Tariff should be regulated by "Commercial Treaties with the Powers interested, as is done in European countries." Now in European countries, as the Committee most well know, tariff conventions are reciprocal. Do they suggest that Western States should negotiate reciprocal conventions with Japan? This particular clause of the statement, compiled by the representatives of a Commercial Community, ought surely to convey a distinct and unequivocal meaning, instead of being as it is, a veritable conundrum.

The second question—for convenience of discussion we change the order chosen by the Committee—relates to the tenure of land without the limits of the settlements. Concerning this point very strong language is employed by the compilers of the Statement. They set out by exempting the problem from even their qualified acquiescence in Japan's demands with regard to tariff and judicial autonomy. Of her proposals about the land they declare themselves "quite unable to recognise the justice," and they sum up their verdict in the following singularly intemperate terms:

> The Committee quite understand the object of the Japanese Government, which is arbitrarily to abolish an exceptional tenure, created by convention, and ratified by covenant, and by compulsion to obtain more favourable terms for themselves. In short, the land now held by foreigners is required by the State, and it is sought to confiscate it without their consent to the terms offered in palliation of the act of confiscation. This is the grave injustice complained of in the second resolution of the 11th of September; and the Committee cannot too strongly protest against any action on the part of the Treaty Powers which would deprive foreign land-holders of their rights without their concurrence. If the land is required for State purposes, it needs no argument to show that the consent of the land-holders is a condition precedent, and that they should not be compelled, by Treaty or otherwise, to make any sacrifice of the rights and privileges they have acquired, without due and ample compensation. The only way to adjust this question would be by the appointment of delegates, or a Commission armed with full powers to negotiate a settlement.

The impression conveyed by this protest is that the foreign land-renters are threatened with an iniquitous act of spoliation. The word "confiscation," which signifies appropriation as a penalty to the use of the State, is gravely employed, and the Japanese Government is spoken of as behaving "arbitrarily," and as "obtaining by compulsion more favourable terms for itself." It is difficult to understand how sober, calculating men like the members of the Committee, could allow themselves to be betrayed into such an abuse of language. A moment's reflection should have told them that the perusal of this part of their Statement must immediately discredit them in the eyes of the British Foreign Office as the victims of a vertigo, and the commonest prudence ought to have induced them to refrain from a suggestion implying total incompetence on the part of the plenipotentiaries to whose conduct the negotiations for Treaty Revision have been entrusted. To charge the Japanese Government, on the one hand, with seeking to effect an act of arbitrary injustice, and to declare, on the other, that special delegates alone can adjust a question which is already under negotiation by duly appointed plenipotentiaries and of which no settlement lacking the approval of Western Governments can be final—such a charge and such a declaration will certainly be regarded as at once extravagant and impertinent. There has never been any disposition on the part of the Japanese Government to treat the privileges of foreigners arbitrarily and unjustly. There has never been any disposition on the part of the Foreign Ministers to sacrifice the interests of their nationals. The Committee were ill-advised when they set themselves to formulate groundless insinuations against the good faith of the Japanese Government, and to alienate the sympathies of their own official representatives by pronouncing them untrustworthy. As for the facts of the question, they are very simple. The present holders of land in the settlements derive their titles from leases specially granted under a terminable Treaty. There is no need to consider here the quality of the leases, since the project is, not to revoke them, but to replace them by title deeds conferring permanent ownership. So far from "confiscating" the lands, they are to be secured to their present holders in fee simple. But, being thus placed on the same footing as Japanese subjects with respect to right of property, the foreign holders would be liable to the same taxes on real estate as those paid by Japanese. It is here that the difficulty arises. Some holders would gain, others lose, by the change. The Committee advances the astounding assertion that in calculating the results of the change only one kind of tax—the land tax—has been taken into consideration by the negotiators, the house-tax being ignored. What singularly inefficient folks the

Digitized by Google

Foreign Representatives and the Japanese statisticians must be in the eyes of the Committee. Need we say that the most minute and comprehensive tables have been compiled, showing exactly the difference between the present ground-rents and the taxes that would be substituted for them when the leases were exchanged for titles in fee simple? Speaking pecuniarily, the Japanese Treasury would lose by the alteration, so far as concerns Yokohama, at any rate. But the main points are that the interests of the foreign land-renters are in the hands of their own Representatives, that the Japanese Government has not the smallest disposition to treat them lightly or unfairly, and that any arrangement elaborated will have to receive the endorsement of Western States. These guarantees ought to be amply satisfactory to reasonable people. It is a pity that the Citizens' Committee allowed themselves to treat this land question in a manner calculated to impair the credit of their entire statement.

## *THE "STATEMENT" AS TO JUDICIAL AUTONOMY.*

THE third question discussed by the Statement is that of jurisdiction. We showed in a previous article that the ultimate attitude of the Committee in respect of this is eminently moderate. They frankly concede the only essential points of a practicable and mutually satisfactory basis. Their position is that the proper working of the new Codes and the competence of the Judiciary to administer them, must be demonstrated by practice, and that simultaneously with the completion of the demonstration, Consular Jurisdiction may be abolished. There can be only one test applied in this matter, namely, the test of time. After the Codes have been in smooth operation for a certain number of years, their suitability and the competence of their administrators must be taken as fairly established. Thus a simple and rational basis of negotiation is indicated.

But in reaching this conclusion the Committee make some assertions that cannot be left unchallenged. The first of these is that "the native judiciary is not yet fitted by education, knowledge, or practice either to understand or to administer the Codes of law that have recently been compiled from foreign sources." This assertion is purely conjectural. The Committee have no grounds, for it, and cannot have any grounds seeing that, the Codes not being yet in operation, the competence of their future administrators has not been put to the test. What do the Committee mean by alleging, in one breath, that the operation of the Codes can alone demonstrate the character of their administration, and in the next declaring that the Japanese judiciary is unfit to administer them? It would be perfectly just and logical to say that we possess no data for gauging the competence of the Japanese Judiciary to administer the new Codes, and that such data can be furnished only by the results of actual administration. But to set out by denying the competence of the Judiciary *in toto*, and then to claim that its competence cannot be estimated until the Codes go into operation, is a contradiction that might easily have been avoided in a document compiled after four months' cogitation. If it be true that the men upon whom will devolve the duty of administering the new Codes, have neither the knowledge nor the education to administer them, what is the sense of talking about time being "necessary to test the efficiency either of the laws or of their administration"? By placing on record this sweeping condemnation of the Japanese Bench, the Committee merely lay themselves open to a charge of prejudice.

Still graver and more indefensible is the next allegation in the Statement:— "The laws contained in the new Codes are not indigenous, but imported, not to satisfy an acknowledged want, but for the attainment of a political object, namely, the Revision of the Treaties and the abolition of extraterritorial jurisdiction." It is difficult to understand the impulse that impelled the Committee to place these extraordinary assertions on record. They deliberately deny, in the first place, that Japan had any need of new laws, and they distinctly assert, in the second, that during the past twenty years she has been legislating entirely for the sake of international politics, and not at all for the sake of her own needs. The Committee gravely ask us to believe that Japan was never in want of new laws; that she might have gone on very well with the old had she not been ambitious of achieving Treaty Revision. Let us hear what M. BOISSONADE had to say on this subject a year ago:—

> In Japan the civil judges, lacking the aid of an ancient system of jurisprudence, and being unable, for the most part, to rely on customs fixed and certain and to some extent general, are to-day obliged to solve difficulties by the principles of natural law which they find formulated in some foreign codes that constitute, to a certain extent, the common law of the Occident. Does not this prove that the need of a fixed and positive system of legislation is imperative for the country? * * The other objection made to codification is that it is inspired by foreign laws, not by Japanese customs. Here, too, I believe the criticism ill-founded. The critics do not seem to know that the provisions affecting matters in which Japanese customs have most precision, are exactly those that have been reserved for legislation more or less in the future. Thus the new Civil Code does not yet include the chapters on Persons, or on the law of Succession, of Donations, of Wills, and of Marriages as bearing on the property of the married couple. These, in fact, are matters which have always been governed in Japan by traditional customs well-nigh fixed and tolerably general, evidently adapted to the wants and sentiments of the country. * * * It cannot be charged against the authors of the new Civil Code that they have sacrificed secular customs. * * * There are very few such customs, and such as there are have been treated with the utmost respect whenever they are reconcilable with the general principles of the new law. Moreover, the law declares, with regard to many points, that its provisions shall not be applicable except in the absence of fixed local usage.

Since M. BOISSONADE wrote these words the Civil Code has been promulgated, and the Code of Civil Procedure has gone into force. It has never been alleged against either of these bodies of law that their provisions are at variance with Japanese customs. Only with regard to the Commercial Code has this objection been advanced, and there is not a member of the Citizens' Committee who does not know perfectly well that the Commercial Code is urgently needed, and that the one valid reason for postponing its operation was the expediency of putting it into force simultaneously with the new Civil Code. Do the Committee pretend to assert that Japan has no need of these new Codes, or of laws consistent with the principles of Western Jurisprudence? If they do mean to make such an assertion, then what excuse is there for all the talk of the past twenty years about the incompleteness and imperfection of Japanese laws? If they do not mean it, what is the sense of alleging that the Codes are not intended to satisfy an acknowledged want?

Above all, must it not be regarded as a most regrettable fact that a Committee elected by the community of Yokohama should have deliberately applied themselves to the task of discrediting the legislative reforms of the Japanese Government by publicly alleging that their motive has been purely political? Immediately after the abolition of feudalism Japan undertook the task of revising her laws so as to bring them as closely as possible into harmony with her new civilization. She has not yet completed the work, and of late it has been not a little impeded by the conservative reaction of the time, declaring itself in the form of an unreasoning prejudice against the new laws simply because foreigners took a leading part in their compilation. To strengthen this prejudice we now find the Citizens' Committee of Yokohama contributing all the aid in their power. A stranger episode in the history of foreign relations with Japan could scarcely be conceived. The compilers of the Statement seem to have entirely ignored the fact that their duty went beyond the preparation of a specious plea; that they represented the majority of the foreign community, and that the arguments and allegations advanced by them must be absolutely free from every taint of prejudice and exaggeration. They forgot this in the instances we have alluded to, and they forgot it when they said that the postponement of the operation of the new Commercial Code by the House of Peers was because "the Code is of foreign importation, and totally opposed to the mercantile and business customs of the Japanese." Where is this "total opposition"? Partial opposition has indeed been alleged, but it remained for the Citizens' Committee to resort to

Digitized by Google

an exaggeration not at all conducive to the validity of their argument. And if the Committee failed in a sense of the gravity and dignity of their functions, they certainly did not lack assurance when they undertook to teach a lesson in high politics to HER MAJESTY'S Secretary of State for Foreign Affairs. Lord SALISBURY need not come to this Settlement for instruction as to his proper policy towards Siam, Turkey, China, Morocco, and Persia. He is not incompetent to judge for himself to what extent circumstances alter cases, and his attitude towards Japan has never been of such an illiberal and unstatesmanlike nature as to suggest that he fears to acknowledge her progress lest countries with no comparable claim should importune him for similar concessions. It would be interesting to know whether the Committee differentiated themselves for the purposes of this Statement. Otherwise Lord SALISBURY had the pleasure of receiving counsel as to British policy in Morocco, Siam, Turkey, and so forth from a party of gentlemen comprising Germans, Frenchmen, Italians, Dutchmen, Portuguese, and a sprinkling of other nationalities.

The composite character of the Committee also imparts a peculiar aspect to their statement that "they consider a radical amendment of the police and press laws and the law of public meeting, as at present administered, a *sine quâ non* to the entertainment of the demands of the Japanese Government." It may be reasonably doubted whether the Committee have any knowledge of the Japanese Police Regulations, against which they now prefer the first complaint ever formulated publicly; but it is quite certain that several of the nationalities whose representatives signed this ultimatum ask more from Japan than they are in a position to claim in their own countries. If the British element of the Committee have the assurance to require freedom of speech, of the press, and of public meeting as an essential preliminary to putting themselves under Japanese jurisdiction, the American, French and and Swiss elements might with equal propriety ask for republican institutions, and the Italian take their stand on universal suffrage.

It does not appear, too, that the Committee saw any reason to explain the striking contradiction between their attitude in respect of Treaty Revision in 1889 and their attitude in 1890. In 1889, the United States of America, Germany, and Russia actually signed, and France was on the point of signing, a Treaty by the provisions of which foreigners outside the settlements would have been brought under Japanese jurisdiction from February 11th, 1890, and all foreign residents without exception would have come under that jurisdiction from February 11th, 1895. The provisions of the Treaty were public property. A fairly accurate copy of the document found its way into the local foreign press. Nobody could have been in any doubt about its scope and significance. Nevertheless the foreign community made no protest whatsoever, nor advanced any objection. On the contrary, judged by every available indication, the general feeling was one of acquiescence. The Treaty fell through, and in the following year fresh proposals were made by the Japanese Government. According to these proposals a number of years must elapse before any foreigner, whether inside or outside the Settlements, should come under Japanese Jurisdiction, and the date of the abolition of extra-territorialty would have been relegated to a much later period than that contemplated by Count OKUMA'S Treaty. Yet against this progromme two or three agitators succeeded in urging the great majority of the community to unite in a strong demonstration. The agitators pleaded, it is true, that in 1889 they had relied on Great Britain's obduracy. This only showed their ignorance, for Great Britain was on the point of accepting the Treaty. They asserted, also, that Viscount AOKI'S scheme included a proposal to extend Japanese jurisdiction at once to foreigners outside the settlements. This again showed their ignorance, for nothing of the kind was contemplated. But, granting for a moment that ignorance of the programme against which they undertook to lead an assault may be advanced as an excuse for the excitement of the English agitators in 1890, and that ignorance of what was really imminent may be similarly put forward in palliation of their apathy in 1889, what shall be said of the Germans and Americans who assisted in the compilation of, and appended their signatures to, this latest protest? Did they, attaching no importance to the action of their own Governments in 1889, rely solely upon the prudence and conservatism of HER BRITANNIC MAJESTY'S Principal Secretary of State for Foreign Affairs to safeguard them against the rashness and precipitancy of the Cabinets in Berlin and Washington? Had Count OKUMA'S Treaty gone into operation, as agreed by America, Germany, and Russia, the position at the time of the September meeting of 1890 would have been this—foreigners outside the Settlements whould have already been under Japanese jurisdiction for nearly nine months, and foreigners inside the Settlements would have been within fifty-one months of coming under it. The American and German Governments had actually agreed to this in 1889, yet their nationals never uttered a syllable of protest, reserving their demonstration until 1890, when nothing of the kind was imminent. How can such a fitful and contradictory ebullition be treated seriously? As for the English agitators, their action throughout this affair has brought much ridicule on themselves and on the portion of the community that followed them. If they are sincere now, their inaction in 1889 cannot be explained. Then, if ever, they should have organised a demonstration. They claim that they relied on Great Britain's prudence. But they did not even take the trouble to ascertain whether their confidence was well placed. They did not even reflect that the indifferent, if not acquiescent, demeanour of the community in 1889, was little calculated to confirm Great Britain's resistance to proposals in which three of her principal colleagues, Germany, America, and Russia, had already acquiesced. The suddenly developed keenness of their solicitude for public interests in 1890 is quite irreconcilable with their passive trustfulness in the presence of a much more pressing danger a year previously, and their qualifications to lead the community are not enhanced by their erroneous and perfunctory interpretation of Great Britain's attitude in the former year, or by their incorrect statement of Japan's proposals in the latter. It cannot fail, too, to strike any intelligent observer as very singular that the unbounded trust which these gentlemen reposed in HER MAJESTY'S Government in 1889, under circumstances of great trial, should have been suddenly replaced by a mood of profound distrust in 1890. Lord SALISBURY, according to their view, could be implicitly relied on to guard the community's privileges against the united assault of America, Germany, Russia, and Japan in 1889, but in 1890, with only Japan for *vis-à-vis*, he was no longer worthy of reliance. And now, to cap the blundering Resolutions of last September—Resolutions which exceeded in one direction by as much as they fell short in another—we have a statement so disfigured by inaccuracies and exaggerations that the excellent case which its compilers had to advocate is seriously weakened by their carelessness and want of moderation. A perfectly calm and simple exposition of the natural and reasonable reluctance of foreigners to place their persons and properties under the provisions of laws not yet in operation; and under the care of a judiciary which has not yet proved its competence to administer such laws, would have been unanswerable and convincing. Common prudence requires that the efficiency of the new Japanese Codes and the ability of their administrators should have been established by the test of actual practice before the final and irrevocable step of abolishing Consular Jurisdiction is taken. The Statement of the Committee does not, in reality, go beyond this, but instead of a plain and dignified presentation of a case strong enough to stand immovable on its own merits, they have resorted to exaggerated language, weak special pleading, unsightly errors, and unwarranted assumptions. We doubt whether, while undertaking to arraign the policy and prudence of HER MA-

JESTY'S Principal Secretary of State for Foreign Affairs, the promoters of this agitation will have succeeded in impressing his Lordship with a sense of their own impartiality, accuracy, and moderation.

## *CORRESPONDENCE.*

### THE "GEKKIN" SCALE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your report of the last meeting of the Asiatic Society, Dr. Knott is correctly reported as having said that the Scotch tune "The Braes of Balquhidder" ends on *ray*, in this following the Dorian mode which approaches so closely to the *Gekkin* scale. A member at the time demurred to the statement, when the answer was given that there were two tunes. But he seems to have been right, for the tune evidently referred to does not end on *ray* but on *me*. "The Broom o'Cowden-knowes," quoted by Dr. Knott, but not mentioned in the abstract, "Lassie wi' the Lint-white Locks," "My Boy Tammie," "Jenny Dang the Weaver," are true instances in point.

I am, yours, etc., CAMLACHIE.

Tokyo, April 13th.

### THE "LIGHT OF NARA."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—"I have just finished reading," in the correspondence column of the weekly *Mail*, a most entertaining critique on Sir Edwin Arnold's latest work.

"No genius in the history of humanity" (what a sublime sweep of thought!), "has ever kept roaring perpetually" (how pathetic the idea!). Yet it is evident that some geniuses keep flopping perpetually, or, if not perpetually, so very frequently that the effect on a long-suffering public is scarcely less excruciating than a perpetual flopping would be.

I do not know whether this literary luminary of Nara, who has so good-naturedly volunteered to enlighten the readers of the *Japan Mail* on all moral and literary topics, and who adorns all that he touches—with choice lore from the *Penny Cyclopedia* and the *Book of One Thousand Anecdotes*—I do not know, I say, whether he cares in the least for the effect produced on the aforesaid long-suffering public by his efforts to "keep roaring," or whether he writes solely for the purpose of avoiding an explosion of his cranium, by a too great pressure of accumulated ideas therein. In the latter case, he would perhaps be willing, if requested, to use some less public means of relief than the columns of a newspaper.

As he is evidently a benevolent man (witness his excellent and disinterested advice to all the blind sectarians), it is not without hope that I humbly offer this mild remonstrance for his consideration.

It would appear, from his remarks anent "The Light of the World," and from the general drift of his writings, that he loves peace and righteousness, and indeed has an impression that his eloquence in print tends to advance the cause of Christianity in Japan. One would think that the very pertinent, but as yet unanswered, questions that were elicited from two or three sources, by some remarkable propositions in physics, etc., lately put forth by him, to say nothing of the sound (and not undeserved), literary cudgelling administered by "Secularian," would have aroused some misgivings in this gentleman's mind as to the effect, on non-Christians, of his particular style of Christian exhortation. Surely he must have seen that, whatever his intentions, his methods do not tend to convince opponents, nor to further the cause of "peace."

As he, however, calmly proceeds with his performance, there seems to be room for a dreadful suspicion with regard to him. It is, that *he actually believes that he speaks for the missionary and Christian public of Japan*, and that *they* admire his profound observations, and gaze with rapture on the effulgence of his moral and intellectual glory, even if the "literary Jezebels" and their friends do not.

Mr. Editor, this is an awful mistake. Probably no class of readers would be more pleased if this doughty volunteer champion of Christianity would strictly confine his energies to his place of residence, than the Christians themselves. I know that this is true of some, at least.

The concluding paragraph of his remarks on "The Light of the World" might be taken as affording ground for hope that he contemplates retirement on half-pay—or otherwise—had it been written by any one less destitute of all sense of the inconsistent and ridiculous than the Light of Nara appears to be. He says:—"I confess my inability to praise or censure the productions of great minds, while my own mind has hitherto been sterile." This confession is pretty good, coming from one who has just perpetrated a column of "praise or censure"—unless, indeed, it is intended as a left-handed compliment to Sir Edwin Arnold! To say that "my own mind has hitherto been sterile," is hardly polite to the readers of the *Japan Mail*, unless we are to infer that a sterile mind can produce essays that are not sterile—which seems doubtful. "A critic who cannot produce anything better than the object which he criticises had better remain dumb." Then what is the inference from the Light's failure to "remain dumb"? "I hope I shall always follow this rule faithfully." Mr. Editor, as one of his many victims in the past, I do sincerely hope he will!

I am, &c., KINOUYE.

## *ELEMENTARY SCHOOLS.*

Regulations relating to the substitution of Elementary Schools of private establishment for similar schools of city establishment, are hereby prescribed according to Art. 35 of the Law for Elementary Schools (Imperial Ordinance No. 215, issued in the 10th month of the 23rd year of Meiji).

Dated the 30th day of the 24th year of Meiji.

YOSHIKAWA AKIMASA,
Minister of State for Education.

Art. 1.—In the event of a city desiring to substitute a private Ordinary Elementary School within its jurisdiction for a part or the whole of an Elementary School of city establishment, such city shall receive the approval of the *Fu* or *Ken Chiji*, after obtaining the agreement of the founder of the private Elementary School in question.

In case a Town or Village School Union wishes to substitute a private Ordinary Elementary School within its jurisdiction for a part or the whole of an Elementary School of town or village establishment, such Town or Village School Union shall receive the approval of the *gunchō*, after obtaining the consent of the founder of the Private Elementary School in question.

Art. 2.—As a general rule, items calling for consent or agreement according to the foregoing article shall be as follows:—

(1). The term of substitution.
(2). The extent of the districts from which children are to be admitted to the substituted Elementary School.
(3). The fixed number of children to be admitted to such substituted Elementary School.
(4). The question of whether a subsidy shall or shall not be allowed to such substituted Private Elementary Shool, and of the amount of such subsidy.
(5). Other items deemed necessary by the *Fu* or *Ken Chiji*.

In case any alteration is desired in one or more of the items requiring consultation, ofter receiving the approval referred to in Art. I., the approval of the *Fu* or *Ken Chiji* shall be obtained for such altered items.

Art. 3.—The term of substitution shall not exceed twice the length of the course of study in any private Ordinary Elementary School that is to be substituted for a City Elementary School. At the expiration of such term such private school may be used in substition for a City Elementary School.

Art. 4. — No private Ordinary Elementary Schools shall be used in substitution for City Elementary Schools, execepting those in the case of which a period of three years has elapsed since their first establishment, and which have been shown to possess the necessary amount of educational merit.

Art. 5.—The founder of a substituted private Elementary School shall, in the following cases, obtain the consent of a City, Town, or Village, or of a Town and Village School Union:—

(1.) In case any alteration is desired in the length of the course of study of an Ordinary Elementary School, according to Art. 11, clause 3, of the Law of Elementary Schools.
(2.) In case of obtaining permission under Art. 11, clause 2, of the Law of Elementary Schools.
(3.) In case of changing the organization of a graded school to that of an ungraded school.
(4.) In case of altering the site of a school.
(5.) In case of other items deemed necessary by *Fu* or *Ken Chiji*.

Art. 6.—The founder of a substituted private Elementary School shall, in the following cases, obtain the consent of a City Council, of *Chōchō* or *Soncho*, or of a Chief of a Town and Village School Union:—

(1.) In case of an addition to or omission from the subjects of study of an Ordinary Elementary School according to Art. 11, clause 1, of the Law of Elementary Schools.
(2.) In case of other items deemed necessary by the *Fu* or *Ken Chiji*.

Art. 7.—The founder of a substituted Private Elementary School shall in the following cases, obtain the consent of *Shicho*, *Chocho*, or *Soncho*, or of the Chief of a Town and Village School Union:—

(1.) In establishing or abolishing a supplementary course in an Ordinary Elementary School according to Art. 11, clause 3, of the Law of Elementary Schools.
(2.) In changing the organization of a graded school to that of an ungraded school.
(3.) In obtaining the approval necessary for an Ordinary Elementary School according to Art. 17-18 of the Law of Elementary Schools.
(4.) In appointing or dismissing directors or teachers of schools.
(5.) In permitting children residing without the jurisdiction under Art. 2, clause 2, to be admitted to a school, provided the number of pupils does not exceed the fixed number under Art. 2, clause 3.
(6.) In case of other items deemed necessary by *Fu* or *Ken Chiji*.

Art. 8.—The items of reports to be made to the *Shicho*, *Chocho*, or *Soncho*, etc., by the founder of a substituted Private Elementary School shall be determined by *Fu* or *Ken Chiji*.

Art. 9.—Regulations relating to the tuition fees of a substituted Private Elementary School shall be framed by *Fu* or *Ken Chiji*, subject to the approval of the Minister of State for Education.

In case of any person objecting to the mode of collecting the tuition fees of a substituted Private Elementary School, such person may demand the action of *Shicho*, *Chocho*, or *Soncho*.

Art. 10.—The founder of a substituted Private Elementary School shall not, without proper reasons, refuse the admittance to the school of children within the jurisdiction under Art. 2, clause 2, provided the number of pupils does not exceed the fixed number under Art. 3 clause 2 of the Law of Elementary Schools.

Clause 2 of the foregoing article shall apply in case any objection is made to the management of the founder with regard to the admittance of children to a substituted Private Elementary School.

Art. 11.—In case the superintending official should deem the use of a private Elementary School in substitution for a public Elementary School to be unnecessary or to be injurious to educational administration, such official may cause such substitution to be discontinued.

Art. 12.—In case a City, Town, or Village or a Town and Village School Union desires to discontinue the use of a private Elementary School as its own school, such City, Town, or Village or Town and Village School Union, shall obtain the approval of the superintending official, after consulting founder of the substituted Private Elementary school. Should they be unable to arrive at an agreement, they shall apply to the superintending official for a decision.

In case the founder of a substituted private Elementary School desires to discontinue its substitution for a public Elementary School, he shall obtain the approval of the *Fu* or *Ken Chiji* in the case of a city, or of the *guncho* in the case of a town or village, after consulting the City, Town, or Village, or Town and Village School Union interested.

If they be unable to arrive at an agreement, they shall apply for the decision of the *Fu* or *Ken Chiji*, or *guncho*.

Applications for approval or decision referred in the present article shall be made three months in advance except, in special circumstances.

Art. 13.—The founder of a substituted private Elementary School shall not abolish such school without first obtaining approval for the discontinuance of its substitution for a public Elementary school.

IN CONSUMPTION USE HORSFORD'S ACID PHOSPHATE.

Dr. A. G. RAWSON HARRIS, L.R.C.P., and M.R.C.S., "The Elms," Pembroke, Eng., says: "I administered it with the best results in a case of phthisis, first stage. The symptoms were very unfavourable; great derangement of the digestive and nervous systems, very little sleep, and no appetite; the patient herself had lost all hope, being of a fatalistic tendency of mind, and the results were all the more gratifying."

## *IMPERIAL UNIVERSITY REGATTA AT MUKOJIMA.*

Foreigners who fail to be present at the annual boatraces of the students of the Imperial University, on the Sumida River at Mukojima, miss an opportunity of seeing one of the chief aquatic galas of the capital, and at the same time of witnessing a Japanese crowd engaged in its uniquely favourite occupation—viewing the cherries in full bloom. For the Boating Committee of the University have always so fixed the date of their spring regatta that it shall occur when the mile-long avenue of *sakura* trees that lines the river bank almost from the new Azuma Bridge to the University boat-house, as well as the groups that crowd the grounds of every villa and tea-house in the vicinity, have fully robed themselves in their gorgeous attire. It is not always possible to carry out this arrangement with perfect satisfaction, for even if the committee should be spared the visitation of rain, a contingency so serious as to cause postponement of the event, a strong April gale is sufficient to rob the trees of their maturest blossoms, and cover the ground with the precious pink and white spoils. The regatta and the cherry flowers combined are always sufficient to draw a vast throng of sight-seers to the Mukojima banks, and much æsthetic, and at times boisterous, custom to the Mukojima tea-houses. Rainy weather does not heighten the beauties of the neighbourhood, and the regattas usually escape this drawback, but it is not easy to secure just such conditions as show Mukojima at its best. Whether owing to the movement of the great crowds, or to the somewhat exposed position of the bank on which the cherry trees grow, we know not, but at Mukojima gala days are mostly very dusty days. Saturday was no exception to this rule. Yokohama streets respond readily enough in all conscience to the winds which visit the Settlement, for the faintest zephyr suffices to set in motion dusky whirlwinds that sorely try the temper of those who have to face them. Tokyo dust, however, seems to be even more impalpable and sensitive to the breezes, and a calm day in the capital is indeed a welcome phenomenon. The University regatta of 1891 was not blessed by any such favourable condition; but on the other hand the weather was enjoyable enough to atone for the discomfort of an occasional visitation of dust. The huge crowds were well managed by numerous constables who, detaining all jinrikisha at the Yaomatsu tea-house near Azuma Bashi, directed and controlled the two streams of pedestrians so that little disorder was noticeable. In the avenue of cherry trees each puff of wind more forceful than usual served to scatter abroad clouds of blossoms that slowly and uncertainly settled on the ground, which ere evening presented such an appearance as might have been caused by a fall of snow—with this difference, however, that while snow flakes lie as they settle, clinging to the earth in the face of all but the strongest breezes, the pink-pale products of the cherry-flower storm were ever shifting and fluttering before the faintest airs. The river, too, for yards away from the bank was covered with petals shed by the trees above. Under this intermittent fall of cherry-blossoms the throng moved slowly along the avenue lined with the booths of men who sold masks, moustaches, cakes, and the hundred and one different wares that appeal to the tastes and purchasing powers of a pleasure-seeking crowd. On the river the scene was not less animated, boats of all kinds—from the picnic house boat whence came the tinkle of music, to the steam launch rocking under its load of students, shrieking forth their delight or chagrin as the varying fortunes of the races accorded or otherwise with their wishes and hopes—moving about in all directions. Opposite the boat-house these craft were most numerous, for no crew of amateur oarsmen out for a spin, thought their career of happiness complete till they had once dashed past the stand at full speed. Here too were the head-quarters of the Photographic Society, whose very small sampan bearing a very large and highly ornate flag, was a particularly noticeable feature of the scene. The stand formed by the upper floor of the boat-house was well crowded during the afternoon, not a few foreigners being present, and the music of the band, the busy spectacle on the river, the excitement of each contest, and the cheering of the multitude that lined both banks, combined to make the event a noteworthy one.

Of the races it is not necessary that we should say much. They were not distinguished by any particular skill in rowing; the Japanese student has not yet attained the measured, steady stroke which only can produce good speed; in two or three races fouls caused by careless steering took place, and the times given are not of much value. We append a list of the events:—

## *FIRST HIGHER MIDDLE SCHOOL REGATTA.*

The regatta of the First Higher Middle School, which took place on Sunday, was carried on under conditions somewhat similar to those of the previous day's races. Beginning like Saturday's events at an early hour in the morning, these were continued, with a slight interval about noon, till near sunset. The usual large crowds witnessed the races, which, as were those of the University, were started and umpired by naval officers. A Band stationed in the enclosure of the University Boat Club played selections during the day. The following is a list of the events:—

## *LETTER FROM SHIMANE.*

(FROM OUR OWN CORRESPONDENT.)

Matsue, April 7th.

The great event of the 24th year of Meiji in Matsue took place in the opening of the new Ohashi Bridge on the 3rd instant. As the ceremony was conducted according to the ancient customs of the province, it had a unique interest, which made it, for a stranger like myself, the most enjoyable spectacle possible to witness in a Japanese city. You may recollect that in some previous letters I related the tradition of the ancient bridge, and the difficulties encountered in making a solid foundation for the new one, over the mouth of the Ohashigawa. These difficulties were speedily overcome by a very young Japanese engineer from Hiroshima—Mr. Okuyama, of the *Doboku-kantoku-kyoku*. This was certainly quite a triumph for him—and something of a surprise to the doubters, who expected nothing short of absolute failure. While he was quietly superintending the work, naughty little boys were singing an ironical song in local dialect—

Matsue O-hashi kazari-no tame ka?
Sono hashira o kairo seyo!
Kairo-sei!
Kairo-sei!

Or, roughly translated:—"Is the Matsue Ohashi built only for ornament? Change those iron columns for something better—change for something better," etc. But the work went on under the new engineer uninterruptedly to the old Izumo chant of "*Chosaiya! Chosaiya!*"—and "*Yoiasa-no! do kueshi*" for a month. At the end of the month the bridge was ready, and probably 100,000 people passed over it on the opening day. In the meantime some funny things occurred. The curious old tradition about the man Gensuke buried under the pillar of the ancient bridge to appease some deities of Obstacles and Hindrances was very widely spread among the country-people; and during the progress of the work, many were afraid to come to town, believing that some one of them would be taken for a victim. On the great festival of Inari, when Matsue is usually full of country-people, the actual loss to local commerce, owing to this queer belief was more than a thousand *yen*. On the other hand, the barbers gained! There was a rumour that the man to be put under the new bridge would be chosen from among such of the old-fashioned country folk as wore queues; wherefore numbers had their queues cut off. Some who ventured to the city in spite of all rumours would ask those they met returning from it: "Has the victim yet been caught?" Even when the work on the bridge was quite finished, there arose a new rumour and a new alarm: it was said that the police had been instructed, after nine hundred and ninety-nine persons had crossed the bridge, to seize the one thousandth, and treat him after the manner of Gensuke. But it seems that, after all, there never was any person of the name of Gensuke sacrificed. Despite the story of the ghostly red light said to flit about the *Gensuke-bashira* be-

Digitized by Google

tween two and three o'clock in the morning,—Gensuke was the name (corrupted by local pronunciation) of an era, not of a man.

The first bridge over the Ohashigawa was constructed by Horio Yoshiharu, a famous general, who became Daimio of Izumo during the Keicho era; and it was reconstructed ten times by subsequent rulers. On such occasions there was always a curious ceremony. Throughout Izumo search was made for some fortunate old married couple, having not less than ten children, and never having lost one; and at the opening of the bridge these fortunate folk and their children were made to pass over it first. Dresses made especially for the occasion were given to them, together with one *hyo* of rice. But such families of thirteen were difficult to find in Izumo, and the expense of finding them was so considerable that in recent years the custom was modified. From the first reconstruction of the bridge by Kyogoku Akasanokana Tadataka, in the 14th year of Kwanyei, to the present time, the names of all the lucky old people chosen for the opening ceremony have been preserved in local documents. The first who so crossed the first Ohashi was Inouye Rokuzaemon with his family of thirteen. Odd numbers are lucky numbers with the Japanese. The opening of the Ohashi took place with a similar ceremony. Two fortunate octogenarians having been found in Matsue—a venerable *shisoku*, and a venerable merchant—the bridge was decorated with flags and lanterns; triumphal arches were erected over both approaches; and at one end two well-executed images were placed, Benkei on the right side and Yoshitune upon the left. The morning was beautiful and cloudless. All the ships and the lake steamers were decorated; and on either side of the bridge and beneath it hundreds of boats full of spectators lay so closely packed together that one could easily have passed the Ohashi by stepping from one to the other. The crowds on the banks probably numbered at least twenty thousand—multitudes having come from the country to see the ceremony in spite of the rumour about the one thousandth. And the roofs of the houses overlooking the Ohashigawa were also crowded. Every street in the city was beautifully decorated with lanterns, flags, and bamboos; for the day of the ceremony was also the anniversary of the Emperor Jimmu Tenno. All the neighbouring cities were largely represented in the crowd of spectators. Every available vessel was in requisition; and the steamers, even after having considerably raised their fares, could not accommodate one half of the people of Yonago and other places eager to go to Matsue. At half-past eight o'clock a shower of "daylight-fireworks" from a little boat moored in the lake, opposite the river-mouth, and an artillery-salute, announced the beginning of the ceremony. The Governor of Izumo, in full uniform, accompanied by his suite, proceeded to the centre of the bridge, and read a short address,—after which the two old couples made their appearance: Hayama Inkyo and his wife, married for sixty-two years; and the grandparents of the citizen Mitsuki Tomojiro. Everybody knows old Hayama, an uncommonly tall man, whose history as a boy is cited often as a rare example of filial devotion, and whose career as a *samurai* was a model of loyalty and courtesy. The appearance of the two old men was greeted by a great clapping of hands from the house-tops, windows, and either shore of the river. Governor Koteda gave an arm to each of the aged gentlemen, and supported them across the bridge, their venerable wives walking beside them; and, following behind them, their children, grandchildren, and great-grandchildren. After they had twice crossed the bridge in either direction, amid the showering of *hanabi* and firing of cannon, another curious ceremony took place,—the distribution of *mochi*. These, enveloped carefully in straw, were thrown from the bridge to the people in the boats and on the banks, Governor Koteda himself taking part in the distribution. The immense crowd remained throughout singularly good natured: there was no scrambling, or quarreling, even during *mochi*-throwing. Then the bridge was thrown open to all; and a sort of roar, that could have been heard half-a-mile away, went up as the crowd poured over it with a clattering of *getas* like the rumbling of a cataract, all in a hurry too; for there is a belief that the first thousand to cross a new bridge will be lucky and long-lived. In the evening the bridge and city were illuminated; and the display of fireworks sent up from the lake was really fine. The new bridge is a handsome structure, somewhat American in appearance, having a length of about 470 feet and a roadway of about 20 feet in breadth. It cost only 11,000 *yen*; but most of the iron-work was made in Matsue less expensively than it could have been made elsewhere.

## *LETTER FROM DENVER.*

(From our own Correspondent.)

Denver, March 6th.

Senator Stanford's scheme for the relief of agriculturalists, by an issue of certificates on land values, has met with a check at which no one can be surprised. Now-a-days we are governed by the money-lender, and, while the farmer feeds us all, he cannot be allowed to get rich in that employment. He ought, of course, to be content with the walk of life in which the present social order has confined him, and should glory in the high vocation of feeding those great and very intelligent persons who gamble in railroads, form pools for produce and syndicates for manufactures, and he should cheerfully pay a high price for his pots and pans, his tools, his clothes and what not, for the sake of supporting and encouraging those smart men, his owners, rulers, victors. Happy he if, at last, he may till the Elysian fields and eat the fruit thereof without fear of Wall-street!

Not only is the Stanford bill a failure, but our hoped for silver legislation has apparently become a derelict, drifting hopelessly amid the shallows of the legislative session, abandoned, even torpedoed by the captains of both the great parties. Cleveland's coffin may be made of silver. He has possibly lost the South and West for his party, certainly for himself, by his declaration against unlimited coinage of American silver. And the cry all over the country is for more plentiful money, while gold is insufficient to meet the demands of trade. That cry for more plentiful money is, however, quite traditional and likely to survive even the free coinage of *brass*, which here, at any rate, would seem to be very abundant. It does its level best to coin itself every day.

We are having an epidemic of *Grippe* and another of murders. Every few days the "saloonist" or the "divist" element crops to the surface with a new tragedy. Here are two samples. A harlot parts with a drunken farmer whom she has despoiled, sees him stagger across the back-yard of an "all-night" saloon, sees a man beating him, subsequently sees him lying against a stable door, takes no notice, afterwards hears that he is dead. A few days after three lads enter another saloon, one is prankish and squirts seltzer water over the others, is asked to desist but does not, is shot dead by two pistols with a simultaneous report. Another and a very peculiar case is known as the Millington trial. A Mr. Avery dies under peculiar circumstances. His wife has been familiar with his partner, Millington. She is disliked by her husband's relatives. Very soon after widowhood she marries Millington, taking her husband's fortune with her. The dead man's family is greatly vexed, makes inquisitions into the disease that proved fatal, exhumes the body, finds traces of arsenic, and now charge Millington and his sister and wife with foul conspiracy to murder by slow poisoning. This trial is one of the pleasant attractions of the day—or rather of day after day. Murder trials here form quite the most interesting attraction conceivable; for unless the felon be a very poor man he is certain to be leniently treated. But now that I am upon a gory subject I may as well report a curious incident which occurred at Salida, in this State, but a few days ago. Coal had been missed from the siding in the "dee-po" of that town, and certain Italians were supposed to be the thieves. A young man named Briley was set to guard it, and ordered off some of the suspected Italians who were working on a train conducted by a man named Sullivan, a resident of Salida. The next night Briley takes his revolver with him, being possessed with a fear that trouble was brewing. Sure enough he hasn't long been at his post when Sullivan makes his appearance, quarrels with Briley, strikes his face, and is shot dead by the lad's gun. Briley at once gives himself up, claiming that he has but protected his own life, and, in the absence of a jail, he is incarcerated in an empty store, his feet being chained to the floor. Sullivan's friends call a meeting, hear a garbled report of the facts, rush down to the store, break it open, tear the poor fellow away from the chains, shoot at him, drag him through the town and threaten death to his brother who tries to intercede in the name of a certain old widowed mother, away back in Iowa; they smite another man who calls their conduct brutal, shoot a few more bullets into their victim, drag him down to a railroad crossing, near the scene of the former trouble, hang the mangled, limp, pitiful form to a telegraph post, shoot at it for fun, and then go back to town, with virtuous pride in an accomplished duty. Subsequently they threaten death to all and sundry who speak of bringing them to trial. The West is a very free country with the revolver.

The Grand Cañon is a wonderful piece of nature's mightiest work, matchless in grandeur, filled with an awful hush that seems to deaden the sound of the babbling river and the rattling of the railway cars. All the scenery in its neighbourhood partakes of that mysterious mightiness that almost seems to crush, to overwhelm the gazer's soul. And here is one instance of nineteenth century poetic feeling in the presence of such immensities. I simply premise that "hog-backs" are long ridges of mountain, so called from supposed likeness to that profitable quadruped:—

Swallows are already chattering around the cornices of Cañon's homes, sturdy old hens are walking around the backyards and are exhibiting to the astonished tenderfoot their goodly broods of spring chicks, goats are sporting on the hogbacks, the cottonwoods are budding preparatory to shoot, and when the sun climbs around a little further north and lights up the bald spot on the top of Fremont's Peak, and the morning frost is misted away from the low-lands, the sky is as soft as a dude's head and as cloudless as the cerulean arch that hangs over the far-off home of the dago. Honey bees are buzzing around with red-hot exclamation points at the south end of their systems, prospecting for budding posies, flies are crawling out of our mucilage bottle and before the winter has fairly come it is gone. Fires are little needed now and open doors and windows about the city testify to the genialty of the outer air. We live in a land of wealth, health, and comfort and a paradise for bums.

No doubt the author prides himself on his humour.

Of course, you have seen the impressions of that son of the Orient, Rudyard Kipling, in Chicago, the glory of the Occident. They form good reading for Asiatics, nationalists, Ruskinites, and other folks, whoever they are, whom the march of material civilisation leaves deeply dissatisfied.

March 7th.

This morning's papers give the conclusion of yet another murder trial, in which every one expected the accused to suffer the rigour of the law. He had killed a man, from hatred, in the open street during broad daylight, right in the centre of the city. But he had wealth, it was used judiciously, and the jury found him guilty of unintentional homicide, for which nine months' imprisonment is the maximum punishment. His counsel at once moves for a new trial and secures his release on bail in the meantime. One of the jurors, with admirable naïveté, has informed a reporter that, at their first ballot, ten were for conviction and two against, but that subsequently they arrived at a unanimous verdict! Allow me to recommend this country to those gentlemen who are afraid to entrust themselves to the supervision of Japanese law. Would they prefer Salida?

## *AN OPENING ADDRESS*

At the Third Biennial Synod of the Nippon Seikokwai.

By Edward Bickersteth, D.D., Bishop, delivered at Osaka on April 4th, 1891.

"Looking each of you also to the things of others."

Reverend Brethren of the Clergy and Brethren of the Laity:—I propose to avail myself for a few minutes of the privilege commonly allotted to a Chairman, and to address to you some remarks on the occasion and business which have brought us together. It cannot but be a regret to you, as to myself, that this duty does not devolve on my predecessor in this chair. Thirty years is a large portion of a long life, and it is not less than this that Bishop Williams has devoted to the service of the Church in Japan. No one would less desire than he that I should use many words of panegyric on his lengthened Episcopate. Yet thus much I may venture respectfully to say, that only the day of God will reveal the results of his life and example. Exquisite simplicity, unflinching devotion to duty, a wide mastery of precedent and detail, and clearness of judgment have been exhibited in the highest office of the Church, and have left on its organization, in compacting which he took so large a share, as well as on the many minds which have come under his influence, impressions which will not be obliterated. There is no need for me to bespeak your prayers and hearty welcome for his successor.

Four years have elapsed since the first synod of our Church was held in this city. There seems reason for thankfulness to Almighty God for the progress which has since been made. We already at our first meeting were a Branch of the Church of Christ, by virtue of our implicit acceptance of the Catholic Creed and of the orders of the Christian Ministry. It was our business then to give expression to, and make outward claims of, this position in our Constitution, and to lay down such other laws as seemed needed for the regulation and development alike of worship and work. The interval has shown that, in the main, the canons then agreed upon were such as answer to the circumstances and needs of the Church in this country. Meanwhile, progress has been uninterrupted and rapid. Of the synod of 1887, one

Digitized by Google

Japanese member had been admitted to the Priesthood. Now of twelve Japanese Clergy, four are Priests. Then we represented a body of less than 1,500 Christians (of whom half had been baptized during the preceding year). The interests of about 4,000 are now committed to your care. The number of Catechists was then 51. Now it is 110. The number of foreign Missionaries was then 34. Now it is 93. These rates of increase are, I believe, unprecedented even in Japan.

It is right to mention these points for encouragement and thankfulness. In doing so, I am not, however, forgetful that numbers are a very imperfect criterion of a Church's present position, or probable future. I cannot, too, allow myself to forget that while the outlook as a whole is bright, all parts of the Church's organization are not equally prosperous, or carried on with the same assiduity. Some work is still inchoate, which, with more zeal, might have been further advanced. Many are still in the darkness of unbelief, who might, had we been more zealous, have by this time been walking in the light of truth. Societies, on the efficiency of which congregations and missions alike depend, are still inadequately supported, and (shall I add) the standard of spiritual life among us, as all alike deplore, is as yet far too low to claim with confidence the unrepealed Divine Promise of Pentecostal blessing. Let me express the hope that our meeting in this synod will not pass without contributing something towards an increased spiritual earnestness, as well as to the perfecting of our ecclesiastical machinery.

For what specific purposes are we met? Are there any principles which it were well to bear in mind as fitted to limit and control our discussions?

The *Agenda* paper which is in your hands, without my dwelling on it, is a sufficient answer to the first of these questions. I may occupy your attention very briefly with some reply to the second.

Let me say, then, that there are three things which, as it seems to me, if duly considered, will supply the needful limitations, as well as a main guidance, of our action.

Of these, the first is the fact to which I have already alluded, that we are a Branch of the Catholic Church. As such, we are the depositaries in our Faith and Orders of a great trust with which we have no right to meddle. To retain it, and to hand it on unimpaired to the generation which shall succeed us, is our highest privilege. It is the profession of the Christian Faith, witnessed to by Holy Scripture and enshrined in the Creed, which alone makes us to be Christians, while the organition of the Ministry, which is of God's ordering, not of human contrivance, links us with the Church of the past and with contemporary Churches in other lands. These things are not brought into debate among us. They are, if I may borrow the language of geometry, the axioms and postulates which lie at the basis of our discussions. No small part of the progress to which I have referred is due to the steadfastness of our profession in these regards. The enquirer who joins us is left in no doubt as to the character of our belief and the nature of our organization and worship.

Now this is a limitation which, as I have said, unless as a Church we would commit spiritual suicide, must always remain. Not so that which I have now to mention, which is in its own nature merely temporary. I mean the limitation which arises from our present connection with the Anglican Communion, and especially with its three branches in England, America, and Canada. Let us look at this point without prejudice. Two things are to be remembered. (1) The great majority of our Clergy are as yet foreigners, bound by the obligations of their ordination vows, supported entirely by foreign contributions and dependent on foreign Churches for their maintenance in sickness or old age, and though there would be no canonical hindrance that I am aware of—the two ministries being on the spiritual side identical—to Japanese Clergy transferring themselves to the service of the Anglican Communion, or of Anglican Clergy resigning their position in their own Church and entering the ministry of the Sei Kōkwai, yet, as you are aware, want of means in the Sei Kōkwai, and perhaps some provision of the Civil law, render this for the present impossible. This is one side of the question. On the other hand, it is plain (2) that the laws of the Church as defined by the Synod must be obeyed alike by all who minister, whether Japanese or foreign. Law would lose its fundamental character if it could be neglected by those who are especially charged with its administration.

Now what is the practical outcome of sober consideration of these two points? I conceive it to be this,—that we should exercise great caution and deliberation before making important changes in our Service Book. At present the substantial identity of the Prayer Books of England, America, and Japan anticipates and prevents alike conscientious scruples and practical difficulties. I should be sorry by precipitate action to forfeit this advantage. I am not indeed opposed to all change, even immediately. The differences of East and West—even where the Christians of the three continents are bound together by the sacred ties of a common Faith and the same spiritual lineage, render some modifications inevitable. It is true that the English Prayer Book is not the outcome of the religious thought of one nation only in any one age, but represents in an English dress the devotional treasures of many lands and centuries. Still it cannot be made entirely available here, as it is, even for immediate use. But if some changes are inevitable and desirable, let them be confined for the present to necessary curtailments and additions, and to points of order and detail, and leave the substance and fabric of the Book intact. It is too soon as yet to think of writing a new Confession of Faith outside the Catholic Creeds, even if, unlike myself, you should eventually think such to be requisite. It is too soon—we have not as yet the liturgical knowledge and skill—to recast the Prayer Book, though it may be, as has been suggested, that the substance of Greek Liturgies and the form of Shinto *norito* will prove more consonant to the genius of our language than the brief collects and suffrages of Western growth. If we were to attempt such enterprises as yet, it is more likely that we should lose what we have, than gain what we have not.

Meanwhile, the exercise of restraint in this regard will not be without its advantages. It will give opportunity for prayer and study on subjects where, if either be omitted, no good result can be expected.

Let me add one limitation more. Our action should be controlled by frank recognition that the Church must allow large differences of opinion within her pale on minor points. Every great Church, as distinguished from the sects, developes within itself individualized schools of thought. A sect is a body of men which breaks off from the historic society which Christ founded, with the view of emphasizing some particular opinions, always more or less true, on which its members have come to lay special, if not exclusive store. Owing to the presence of the truth in what it holds, the sect has a certain temporary vitality, until it be again absorbed into the Catholic Body. Now the emphasising of particular views by different sections of believers is inevitable. It is due, on the one hand, to the infinity of truth, and, on the other, to the narrow limitation of human faculties. Like other necessary phenomena, it must then be allowed for, as well as controlled, in the Church. Its true exhibition is in the formation of schools of thought, which, while all confessing the same facts of the historic Creed, contribute each their own quota towards its elucidation. Such schools are not antagonistic but complementary, not mutually destructive but ancillary the one to the other. Jew and Gentile in the first century, the Mystical School of Alexandria, and the literal interpreters of Antioch in the third and fourth, the Scotist and Dominican Schoolmen in the thirteenth—to avoid instances nearer to our own day—each in their turn contributed something to the fuller apprehension of the Faith. For the moment, they may have counted one another as foes. They were really fellow-labourers in the cause of Christ.

Now it must be evident to you that schools of thought are being formed, too, among ourselves. It is natural that it should be so for the reasons which I have assigned; doubly natural because of the character of the communion to which we owe our Christianity. It is our business to see that no attempt at exclusive or selfish legislation drives into extreme courses developments which are not in themselves unhealthy. Schools may be vehicles both of the divine grace and truth. Schisms and partisanships are sin, and too easily forfeit the one and obscure the other. Let there be among us, then, liberty for such varieties of teaching as are not inconsistent with a common Faith, and for such developments of ritual as do not conflict with a common Order. Here, if anywhere, the lessons of the past may come to our assistance. Who can read without deepening sadness the later religious history of the countries of Central Europe which accepted the Reformation of the 16th century? The movement was in itself inevitable and might have been fraught with unmingled blessings. But the sacrifice of common Order and the unbalanced assertion of individual opinions have gone far to extinguish the Faith itself in the countries which witnessed it. On the other hand, many of the Churches of the further East have, in past times suffered from the imposition, alike in practice and doctrinal statement, of a rigid and unreasoning uniformity. Let us accept the warning for ourselves. They who know that their teaching and worship are built upon Apostolic foundations need not aim at a featureless sameness, whether of doctrinal statement or ritual practice. Those with whom liberty at any time shows risk of developing into licence, will feel it needful to fall back on common order and principle. Two Apostolic words from the same Epistle, both addressed in the first instance to the assertors of unqualified liberty, may serve to clench the lesson both to them and equally to the maintainers of an unreasoning uniformity—"Came the Word of God unto you alone?" 1 Corinthians XIV. 36; "We have no such custom, neither the Churches of God," 1 Corinthians XI. 16.

Let me then earnestly recommend to you the recognition of these three points as fitted to regulate and control our discussions. The Church is not in search of a Faith but founded on a revelation. It must act within its terms. For the time being we are in close relationship with one of the Communions of the West. We will submit to the temporary limitation which this involves. It is neither possible nor desirable to mould all minds on one type nor to satisfy all desires by one form. We will not by minute regulations cramp a reasonable variety.

Subject to these limitations and controlled by the sense of the Divine Presence, we may adopt, I believe, such measures as seem good to us in the fullest confidence of being guided by the Spirit of God. We are now in the second period of our history. In the first, in which I personally had no share, the work, which was exclusively evangelistic, was mainly in foreign hands. That period has gone by and has been succeeded by the present, of which the duties are both evangelistic and pastoral, and, throughout which, co-operation should be the word inscribed over either field of energy. As time again goes on, the sphere of evangelization will grow smaller, and that of pastoral activity be continually enlarged, until, either in our own time or in that of our successors, the work which began in the hands of Foreigners will pass wholly into the hands of Japanese.

This, by Divine Providence, is the order of the Church's progress in every land. It may be helpful to remember where we now stand. The prospect is one of solemn responsibility and of inspiring hopefulness. It is opened to us, too, at a time when, more than at any earlier period if a foreigner may rightly judge, through the progress of political organization, the country stands in need of a solid core and centre of thoughtful men, who recognize the obligations of righteousness, unselfishness, and philanthropy, because they are implicated in their creed. It is not too much to say that representative government, if it is to be permanent, demands a religious people. If so,—for other systems of belief are dying or dead,—the future rests with the Church. I can only allude to this here.

For the Church of my baptism I could seek no greater grace, as individuals we could ask no higher privilege, than to have contributed, at a great crisis, to the establishment in this land of a branch of Christ's Holy Church united by bonds of Faith and affection only to its Western Mother—Apostolic in Order and Creed—a new Home where souls may be re-created into the image of God.

## *IN H.B.M. COURT FOR JAPAN.*

Before J. TROUP Esq., Acting-Assistant Judge.—MONDAY, April 13th, 1891.

### ALLEGED ATTEMPTED SUICIDE.

H. M. Pugh was charged to-day with attempted suicide.

John Henry Herring, sworn, deponed—I am a steward at the Club Hotel. At 4.15 this morning I was called by the watchman, who said the gentleman in No. 24 room was making a noise; I went there with him and found the door locked. I tried to wake him, but I could not. A gentleman in the next room asked me what was the matter, and I asked him if I might go through his room into the next one. Having obtained permission, I got some keys and opened the door, when I found Mr. Pugh lying on his back on the bed. It took me about 10 minutes to wake him up, when he told me he had taken a dose of landanum to kill himself, and he was very much surprised not to find himself dead. The two bottles produced in Court were by his bedside, and he gave them to me at the time. He gave me the two letters produced in Court and now shown me. He told me he had written them to the manager, and asked me to read them. I asked him if he wanted anything, and he said no. I stayed with him for about an hour after, and then went away, leaving the boy there. When I came

Digitized by Google

back at half-past six I found he had gone to sleep again, and, having woke him up, I gave him a cup of hot coffee, which seemed to revive him. I sent for Dr. Wheeler, and got Mr. Pugh out of bed. I gave him one or too more cups of coffee, which he vomited. He stayed in his room till he left to come up here, and seemed to be all right.

David Bordenal deponed—I am watchman at the Club Hotel. I was walking about in the yard this morning at a quarter to four when I heard a noise. I went outside in the street to ascertain where it came from. I at first thought it was a small dog, but afterwards found it came from No. 24 room, and went upstairs to call the boy, whom I asked what was the matter. He said he did not know. I suggested that he should come and call the inmate of No. 24 and discover what the noise was. We both called and knocked at the door for about half-an-hour, but got no answer. I could not open the door. Finding that I could not rouse the gentleman in the room, I called the steward. I did not enter the room myself.

To accused—The noise seemed like a noise in the throat or nose.

Ishikami Hatsutaro deponed—I am a boy at the Club Hotel. This morning I heard noises, a loud voice in the room No. 24. I knocked several times at the door but could not get in. I wanted to get up to the transom above the door, but not having a ladder could not get up. After about half an hour, during which I was trying to rouse the occupant of the room and to get in, I called the steward. He also tried to get in but failed, and at last having obtained permission from the inmate of the next room he got in by a door connecting the two rooms. The steward entered alone and opened the door from the inside. When the steward came out he went to his room, and I went to sleep again. Sometime afterwards the gentleman called for a boy, and on my going he asked the steward also what time it was. I was in the room for about 15 minutes after half-past six; I then went to other rooms for about an hour, after which I took Mr. Pugh a cup of coffee and some medicine. I was present in the room when Dr. Wheeler came. The doctor came after I gave Mr. Pugh the medicine.

To accused—I do not know what medicine it was that I gave you. It was in a bottle in a drawer in the night-table. I gave it to you from the larger of the two bottles shown me. The sound was really a kind of stertorous breathing—an exaggerated snoring.

To the Court—The accused himself, who was lying on the bed, asked me to give him the medicine.

Accused—There was only a drain in the bottle.

Mr. Troup said he should not proceed with the case till he had heard the medical evidence, and would therefore adjourn the proceedings till to-morrow at 10.30 a.m.

---

TUESDAY, April 14th, 1891.

H. M. Pugh was again brought up to-day, charged with having attempted to commit suicide.

Edwin Wheeler, M.D., deponed—I was called yesterday morning to see Mr. Pugh. I got the message a little before 8 and I saw him about half-past 8. When I went in he had just vomited some coffee and seemed in rather a distressed condition. He was then merely suffering from debility and extreme irritation of the stomach, with mental distress because as he said the laudanum had not done its work. He said—"It's no use living; I have no money, and I am sick." I had treated him previously on two occasions last month. The first visit was on the 17th March, a few days after he had arrived here by P. & O. steamer. He was then suffering from exhaustion and the after effects of a debauch. He said he had been drinking a good deal of whisky on the way up, and I think he said he had put a head on that by having some on shore. I saw him on the 18th and 19th. He had recovered on the 19th and was able to go out. On my expostulating with him about drinking, he said he could not help it; his life was so miserable he had to take something. I advised him to go to Ashinoyu as that might have a beneficial effect on the joint affection from which he suffers—rheumatic *arthretris*. I saw him again on the 24th I think. At that time his stomach was so irritable that a mouthful of water was rejected ere it could be properly swallowed. I said he had been drinking again. He said he had not been taking very much: he had only a little the day before. I think he said he had had something like eight drinks. He was in a very depressed and exhausted condition on the 24th. Yesterday morning I saw the large bottle now produced; there were then about two tea-spoonfulls left in the bottle. I tasted and smelt its contents—laudanum.

Robert Waddell Borthwick deponed—I am the manager of North and Rae, chemists. These bottles shown me bear North and Rae's labels. They have contained laudanum. The larger bottle holds 8 ounces, and the smaller bottle one ounce. They are sold according to the regulations of the British Pharmacy Act, 1868. The cork is sealed by the assistant who sells the bottle and who of course is also a qualified chemist under the Act. The laudanum we sell is all of one strength—the British Pharmacopœia strength. The dose is stated on both bottles—the adult dose being 25 drops. I recognise the accused; I have seen him once before. I saw him when he asked for laudanum, on the 7th of April. Of poisons sold under Schedule 1 we keep a register; but this comes under Schedule 2, and does not require to be registered. I knew his name, he had been getting medicine before, and had got laudanum from one of the assistants. He had been getting medicines prescribed by Dr. Wheeler. There was no prescription for the laudanum. It did not strike me then that the quantity of laudanum he received on the 7th was a large one, because he had got laudanum before in smaller quantities, for a special purpose—bathing his joints. He had it twice before.

In reply to Mr. Troup, accused said he had no witnesses to call.

Mr. Troup said it appeared to him that the evidence was sufficient to require prisoner being held over to take his trial, and then warned the accused as to any statement he might make.

Accused said he had nothing to say beyond that the evidence so far as he knew was perfectly true.

Mr. Troup then committed accused to take his trial.

---

## *JAPANESE JUGGLING AND HOW IT IS LEARNED.*

How would you fit yourself to become a lawyer? By study. How would you make of yourself a physician or a painter? By study, of course. That is the way to become a juggler. Study and study alone will fit a man for the stage with his eyes so trained, his hands so skilled and his nerves so steady that he can split a potato with a sword on the bare throat of his assistant, as I do daily upon the throat of my assistant, Omene. It requires years of patient practice before he can acquire the deftness of touch to fill empty boxes with ribbons, glasses, and trinkets before the eyes of a critical audience so that the secret of his deception will evade discovery. Those who have never given the subject thought may fancy that the spinning of a square block of wood upon the rim of a twirling umbrella is a feat easily easily accomplished. But let me tell you that it takes hours of daily practice for months and months together before it is done as easily as it appears to be.

The simple spinning of a top; the causing of a bevy of butterflies to flutter gracefully in the air, hovering over a vase of flowers, now alighting for a moment to rest and now soaring high above the fan, and the rolling of an egg on the edge of a closed fan, are tricks that take more study, more application, and more patience than many a successful lawyer has ever given to the building up of his practice.

In this article I propose telling you what kind of study you need to become a juggler. If you follow my directions you may learn how the tricks are performed, but I cannot guarantee that you will ever be a an expert artist. That depends upon your natural aptitude to that kind of work. A clumsy man, slow in his movements and sluggish in thought, can never be a stage performer. The successful juggler is quick as a flash, steady as a rock, and he measures distances and positions as accurately with his eyes as a chemist weighs out poisons on his scales.

Let me first tell you how I began my stage career. I am an Italian, and my profession is that of a chemist. I have a drug store in Turin at the present time. I have always had a love for juggling. I used to practise the tricks for my own amusement. When the Shonoski Royal Japanese troupe of jugglers visited Italy I was interested in their exhibitions and when I was offered the post of manager I accepted it.

Here I had an opportunity to acquire still more knowledge of the business, and after two years of managerial work I became a performer. When I went to London six years ago I met Omene, my assistant, to whom I am indebted for much of my success. Omene is a native of Stamboul, Turkey, and is the widow of an English officer killed in the siege of Alexandria.

Our real names? That will hardly interest the public. So far as any would-be juggler who reads what I write is concerned we are Yank Hoe and Omene, jugglers. Is that not enough?

That is sufficient about ourselves. Now come with me into a juggler's practice room. Oh, yes, jugglers spend a part of the day in practice, no matter how advanced they may be. It will not do to let the muscles grow stiff or the nerves loss their strength.

The slender cord suspended from the ceilling? That is the most useful appliance the juggler has in practising the umbrella feats. This is how it is used. Do you see that shelf in the corner filled with rubber balls, square blocks of wood, plates and round bodied bottles? Did you notice that little ring in the centre of the plates and blocks? No? That is an oversight, for without attaching the cord to that ring and suspending the object in the air, the difficulty of learning these tricks would be multiplied a score of times.

Why? I will tell you. The cord is long, as you have seen. The plate hangs so low that if you are not careful you will strike your head against it in walking across the floor. After the plate is suspended the juggler opens his long, thick handled Japanese umbrella, and stooping beneath the plate so that it rests on the rim of the umbrells twiring the handle, at first slowly and them more rapidly, but all the time evenly. As the umbrella flies around the plate begins to revolve on its rim. After it has acquired this motion the juggler gradually straightens his back until a little coil of slack cord circles around the protruding point of the umbrella.

This is not learned in one day or a week or even a month, and hundreds of times in this practice the plate slips off or topples over. Now do you see the use of the cord? It keeps the plate from falling to the floor. Without a cord the learner would spend more than half his time bending over and picking it up. Practice under those circumstances would be punishment, and the cost of broken china would eat a large hole into a small fortune.

By you do not begin learning this first with a plate or block of wood. You first use the rubber ball and then take up the other articles in turn. After a while you become expert. I throw the ball into the air and catch it on the revolving umbrella. I toss the block of wood high above the top of the curtain and as it comes down the umbrella sends it spinning, end on end until it looks like the fly-wheel of a locomotive and makes a whirring sound like a bee in flight. Now it spins in one spot and now it shoots around the umbrella like a racer off for the goal. I change the movement of the handle and it stops. Then a toss and up it flies. I catch it gently and as it topples over I make my bow. The trick is done.

Now for the top tricks. They look simple enough. It almost seems like wasting time to describe how they are done. That is the way they look—from the front of the stage. If you are of that opinion try one of them. Do not let me undeceive you when you can so easily undeceive yourself. Take a large, heavy Japanese top, with a long rounded point and a thick rounded stem. Twist this stem between the palms of your hands until the top begins to hum. Even this requires practice, and days of practice, too. But the trick is not begun. You are as yet but little further than you were when you fastened the ball into the hanging cord and began to turn your umbrella handle.

The top hums. You touch your fingers to its sides and you withdraw them quickly, as if you had touched something that was very hot. Now comes the knack of picking up the top and doing so without stopping it. Gently now; one finger and a thumb are enough if you only have the skill. Lift it up quickly, before it burns, and drop the point into the palm of your hand. Now incline your hand just a trifle, and as the top drifts toward the edge catch it on the other hand. Slowly? Yes, very slowly at first, but when you are sure of yourself, when you have given to the top impetus enough to make it sing, do it quickly. Toss it up and catch and then toss it up again and again until its motion dies out on your hand, and it totters and falls on its side like a drunken man.

When you have learned to spin the top and catch it on your hand, you are ready to learn to balance it on the edge of a closed fan or a billiard cue. This requires a nicety of touch. You must be an equilibrist as well as a top spinner. Hold the fan steadily. Put the top down gently. As it slides over to the side turn the fan as slightly as possible to the other side and it slowly comes back to the centre. Do this for a month. An hour a day? Not a quarter of that time unless your muscles are made of iron and your nerves of steel. Fifteen minutes with the fan and top will make you shake as with the palsy the first time you try it.

You have it at last. Now incline your fan point downward and the top hums down toward the floor. Raise the point and it returns to your hand. The billiard cue will call into play all you have already learned and more too. The addition will be patience chiefly. To balance a top on the rounded side of a cue takes practice. To make it travel to the chalked point and back again to the

Digitized by Google

but requires months and even years of work. But it can be done.

Let us take the cord now. This is suspended from the ceiling. Wrap it around the revolving point one turn and start the top on a trip toward the clouds. How is this done? By spinning the top to its utmost speed and by holding the cord just taut enough. It is not nearly so hard to do as the cue trick, but it has work enough about it to keep you employed for a month or two or least.

Here is a neat trick. Roll an egg end over end up and down the edge of a closed fan. This is comparatively simple. First cut a very shallow groove in the fan. Then boil your egg hard or, if you cannot do that shake it well, so that the yolk and white are thoroughly mixed. Now place it in the groove, and by giving the fan a little outward push you can make the egg roll over. Keep on with these little pushes until the egg reaches the end. Then reverse the movement, pull instead of push and it comes back to the starting point. An expert egg roller can take a perfectly round rubber ball and roll it back and forward on the fan without using a groove, but it is impossible to do it with an egg.

You have often witnessed the butterfly trick and you have probably often wondered at the skill of the performer. If you have ever left the theatre to try the experiment of keeping half a dozen tissue paper butterflies balanced in the air by the movement of your fan your wonder has been doubled. Now I am going to tell you a secret. There is a deception pracised in this trick. It is not so difficult as you think it is.

When the performer comes out on the stage and cuts out of a sheet of paper his collection of butterflies he has concealed in his hand a long hair from a woman's head. It is so thin that it is invisible from a distance. He folds the end of this in his first butterfly. The second is fastened a few inches lower down and so on until all are tied together in a row. The other end of the hair is then attached to the juggler's chin or forehead by a bit of flesh colored wax. When he begins to wave his fan and send the breeze wherever he may choose the butterflies cannot soar beyond the length of their tether.

That seems simple enough, does it not? But if you want to see how hard it is just try. It is true that the butterflies cannot fly away from you, but that fact does not lessen the difficulty you will have in making the things fly at all. It requires weeks of practice to be able to start them in a natural way, and to keep them suspended in the air for any length of time takes many weeks longer. Now comes the difficult part of the trick. To make them alight on a vase of flowers and hover over a bouquet at your will takes months of time. When it is once learned, however, it makes one of the prettiest features in the juggler's repertory.

The most difficult feat that I accomplish, and indeed the most daring trick I have ever seen, is by far harder to learn than any that I have described. Before you attempt it I caution you to be more certain of your nerves, more sure of your skill than you have ever been before. The slightest mistake, the fraction too much of an ounce of power, and you are a murderer.

These are your properties:—A sword with an edge keen as that of a razor, a potato fresh from market, an assistant who does not know what nervousness means and has the most absolute confidence in your skill, and a command over your own nerves that is perfect.

First you show your audience that the potato is real by throwing it down on the floor or by letting them examine it. Next you satisfy them that the sword is sharp by cutting a playing card into pieces before their eyes, as though it were a slice of cheese. Your assistant then kneels down before you, with her neck bared. You place the potato upon the warm flesh, shield your eyes from the light, balance your sword in your hand, measure the distance of the stroke and its strength. Then z—ip, a flash, your assistant tosses her head and the potato falls on the floor divided in the middle, cut through to the thin skin.

Still more difficult is the front cut. Your assistant lies outstretched on her back, her head hanging over the edge of a stool. The potato is placed on the throat and the thrust is made. You must not look into her open eyes. You must not look at your sword. Watch the potato and strike quickly and surely.

The way to practise this is to begin with a rubber ball resting on a table. After you have learned to strike it directly in the centre every stroke try potatoes. When you can cut through them, stopping the blade the instant the skin is penetrated, and when you can do this, not ninety-nine times out of a hundred, but every time you try it, you are ready for your living block.—YANK HOE, in the *N. Y. Herald*.

## *TIME TABLES AND STEAMERS.*

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6,* 7, 8.05, 9, 9.35.† 10.45, and 11.40† a.m., and 1.10, 2.20,† 3.35,‡ 4.45, 5.55, 6.50,† 8.30, 9.50,* and 11.15* p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.45,* 8.20, 9.20,* 10.20, and 11.25* a.m., and 12.50, 1.50,* 2.55, 4.51,* 5.45, 7.05, 8, 8.58,† 10, and 11.05* p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Tsurumi Stations. Those marked (†) run through without stopping at Omori and Tsurumi Stations. Those marked (‡) run through without stopping at Tsurumi Station.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, and 10.25 a.m., and 12.30, 3.10, 4.30, 5.45, 7.40, and 10.40 p.m.; and KOZU (up) at 6.09, 7.30, 9.40, and 11.05 a.m., and 1.03, 3.13, 5.15, 7.17, and 9.43 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

A tramway runs between Kozu and YUMOTO (distance 4 *ri*.) Jinrikisha may be hired between YUMOTO and MIYANOSHITA (distance 1½ *ri*)

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.26 and 9.40 a.m., and 12.10, 3.50, 5.09, 6.25, and 8.20 p.m.; KAMAKURA (down) at 7.35 and 9.51 a.m., and 12.21, 4.01, 5.18, 6.36, and 8.31 p.m.; and DZUSHI (down) at 7.43 and 10 a.m., and 12.30, 4.10, 5.25, 6.45, and 8.40 p.m., YOKOSUKA (up) at 6.25, 8.02, and 11.20 a.m., and 3, 4.30, 5.45, and 7.35 p.m.; DZUSHI (up) at 6.41, 8.16, and 11.36 a.m., and 3.16, 4.46, 6, and 7.51 p.m.; and KAMAKURA (up) at 6.50, 8.25, and 11.46 a.m., and 3.26, 4.55, 6.08, and 8 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TOKYO-SHIOGAMA RAILWAY.

TRAINS LEAVE URNO (down) at 6, 6.35, 8.50, and 11.35 a.m., and 2.45 and 5.45 p.m.; UTSUNOMIYA (down) at 9.57 a.m. and 3.04 and 6.11 p.m.; SHIRAKAWA (down) at 8 a.m. and 12.34 and 5.42 p.m.; KORIYAMA (down) at 9.24 a.m. and 1.53 and 7.01 p.m.; FUKUSHIMA (down) at 7.30 and 11.35 a.m. and 3.48 p.m.; and SENDAI (down) at 6.15 and 10.25 a.m. and 2.35 and 6.45 p.m.

TRAINS LEAVE SHIOGAMA (up) at 6.50 and 11 a.m., and 3.10 and 7.20 p.m.; SENDAI (up) at 7.30 and 11.40 a.m., and 3.50 p.m.; FUKUSHIMA (up) at 6.40 and 10.23 a.m. and 2.36 p.m.; KORIYAMA (up) at 8.28 a.m., and 12.15 and 4.26 p.m.; SHIRAKAWA (up) at 6.30 and 9.45 a.m., and 1.35 p.m.; and UTSUNOMIYA (up) at 6.15 and 9 3 a.m., and 12.20, 4.18 and 6.30 p.m

FARES.—Ueno to Utsunomiya, first-class *yen* 2, second-class *yen* 1.32, third-class *sen* 66; to Koriyama *yen* 4.10, *yen* 2.74, *yen* 1.37; to Fukushima *yen* 5, *yen* 3.32, *yen* 1.66; to Sendai *yen* 6.45, *yen* 4.30, *yen* 2.15; to Shiogama *yen* 6.75, *yen* 4.50, *yen* 2.25.

### TAKETOYO-OFU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 8 a.m., and 1.50 4.20 p.m., and OFU (down) at 2.55, 5.25, and 9.05 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

### SHINJIKU-HACHIOJI RAILWAY.

TRAINS LEAVE SHINJIKU, TOKYO, (down) at 6.55 and 9.55 a.m. and 12.52, 4, and 7 p.m.; and HACHIOJI (up) at 5.25, 8.25, and 11.25 a.m. and 2.20 and 5.30 p.m.

FARES—First-class *sen* 90; second-class *sen* 60; third-class *sen* 30.

### TOKYO-MAEBASHI RAILWAY.

TRAINS LEAVE Tôkyô (Ueno) (down) at 6, 6.35, 8.50, and 11.35 a.m., and 2.45 and 5.45 p.m.; and MAEBASHI (up) at 6, 8.50, and 11.45 a.m., and 2.40 and 5.45 p.m.

### UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 p.m.

* Through Trains to and from Uyeno.

FARES—First-class, 75 *sen*; second-class, 50 *sen*, third-class, 25 *sen*.

### OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4.55 p.m.

FARES—First-class, *yen* 1.56; second-class, *yen* 1.04; third-class, *sen* 52.

### YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—Fare, *sen* 20.

ARRIVED.

Per British steamer *Taichow*, from Kobe:—30 Chinese in steerage.

Per Japanese steamer *Yamashiro Maru*, from Hiroshima:—Mr. C. J. Edwards, Miss A. Young, Miss C. Rice, and 7 Japanese in cabin; and 1,100 emigrants for Honolulu.

Per British steamer *Ancona*, from Hongkong via ports:—Lieut. Raymond F. Boileau, Mr. F. Powell, Mr. C. De Mornay, Mrs. Clarke, Mr. B. Shadwell, Mr. J. B. Mansen, Mrs. S. B. Stephens, Misses Stephens (2), Messrs. Stephens, Freeze, Mullar, Baron and Baroness Campbell and maid, Mr. H. Kilching, Mr. R. Stewart, Sir Francis and Lady Boileau, Mr. and Miss Boileau, Mr. and Mrs. Kelly, Messrs. Brockbank, Schwabe, Steinthall, M. de Bunsen, Miss Nixon, Messrs. Perty Stindee, J. W. Morrison, J. B. Stone, B. J. Jackson, H. Weston, Charlesworth, Miss Robinson, Rev. and Mrs. Weithbretch, Captain Dundas and servant, Mrs. Valois, Mrs. Frantpuis, Mr. R. A. Smith, Mr. and Mrs. Harris, Mr. C. Bogler, Mr. A. Gillott, Mr. and Mrs. Irwin, Mr. Arnold, Captain and Mrs. Thompson, Miss Sharp, Mr. and Mrs. G. D. McKay, Messrs. J. O. Callaghan, Leong Feong, Lee Fing Shing, Kishikawa, H. Chung, and Chong Wing Teong in cabin; and 13 passengers in steerage.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. D. M. Johnstone, R. De B. Layard, Frank J. Wilson, S. Motoami, and K. Makino in cabin; 32 passengers in steerage.

Per British steamer *Empress of India*, from Hongkong viâ ports:—Mrs. Macauley, Rev. R. Torrance, Messrs. W. C. Carruthers, G. W. Bissell, Fred. Noble, Mr. and Mrs. Lancontagne, Mr. and Mrs. Geo. Willson, Mr. Harry Butler, Mr. G. H. Woodbridge, Major and Mrs. Foster, Dr. Fisher, Lieut. Bryan, Mr. and Mrs. James Talbot Power, Mr. W. F. Loud, Mr. A. L. Ruffe, Mr. and Mrs. Burgess, Messrs. F. W. Stroh, A. B. Westerfeldt, W. B. Wilson, H. S. Griswold, R. K. Pratt, E. C. Cornwell, A. Roy, L. R. Goulding, Canon Tristram, Mr. and Mrs. E. F. Hurlbut, Miss Hurlbut, Messrs. E. Hodge, R. F. Drew, W. Hailwood, Captain J. C. Bayly, Mr. W. S. Sidney, Mr. and Mrs. Aspden, Miss Shaw, Mr. W. P. Feeney, Mr. and Mrs. W. Bisset-Snell, Mr. Joseph H. Goodhart, Mr. E. G. Porter, Mr. and Mrs. Goddard, Messrs. Hy. Lubbock, A. C. Clark, R. Cecil, G. W. Cutter, J. W. Hammond, C. W. Hayes, James Philp, W. Glazier, A. Blain, James Perkins, C. L. Marston, E. F. Gillette, Dr. and Mrs. Warner, and Mr. A. O. Longee in cabin; Mr. E. Afister and 5 Chinese in second class, and 349 Chinese in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. and Mrs. Hughes, Mr. and Mrs. Sullivan, Mrs. Takei and child, Miss Takei, Miss Graham, Messrs. H. E. Reynell, H. S. Baggallay, Asami, Tallaksen, E. Pettet, Captain Pender, and Mrs. Becher in cabin; Mrs. Kimura, Mr. Otaka Suyesaki, Mr. Chong Ching Wing, Mrs. Kennard and maid, and Mrs. Matsuda in second class, and 56 passengers in steerage.

Per Japanese steamer *Omi Maru*, from Honolulu:—Mrs. Kaisawa in cabin; Mr. Y. C. Pus in second class, and 56 passengers in steerage.

Per British steamer *Batavia*, from Vancouver, B.C.:—2 Japanese in steerage. For Kobe: Mr. F. S. Morse in cabin. For Shanghai: Mr. and Mrs. G. Clark, Mr. J. A. Hawes, and Mr. G. E. J. Gardiner in cabin. For Hongkong: Captain Marshall, Mr. and Mrs. Dodwell and family, Miss Reading, Miss Everett, and Mr. J. P. Dowling in cabin; 44 Chinese in steerage.

DEPARTED.

Per British steamer *China*, for San Francisco:—Mr. and Mrs. Alex. Center, Miss Bessie Center, Mr. W. J. S. Shand, Rev. and Mrs. H. Mansell, Mr. and Mrs. N. Paustin, Mr. E. H. McFarland, Mr. Sam. Crump, Mr. Carl Rothenburg, Mr. and Mrs. A. D. Bramhall and maid, Miss Cole, Mr. R. C. Donaldson, Lieut. and Mrs. E. C. Perkins, U.S.N., Rev. J. B. Porter, Dr. J. Harris, Mr. and Mrs. Geo. Benton, Mr. and Mrs. Jas. Benton, Miss M. T. True and native servant, Mr. F. A. Satow, Mr. P. Percival, Mr. and Mrs. R. Dross, General Stedman, Lieut. T. S. Phelps, U.S.N., Mrs. E. B. Smith and child, Rev. and Mrs. Allchin and 3 children, Dr. and Mrs. W. M. Scranton and 3 children, Mrs. M. Scranton, Commander H. C. R. Hulbert, R.N., Mr. H. Sandbach, Mr. and Mrs. Jas. Buchanan, Miss Ure, Mr. and Mrs. J. O. P. Bland, Messrs. Yang Tung Chang, J. L. Mayers, W. J. Ford, Pace, and Liebes in cabin.

Per French steamer *Djemnah*, for Shanghai viâ Kobe:—Mr. Degron and boy, Mr. and Mrs. Orsolle Van Parys, Messrs. W. G. Payne, E. H. Browne, M. Baggallay, S. Petsaly, Miss Th. Lesueur, Messrs. M. Shitago Mitzuno, U. Mare, Y. H. Hoosun, and John Pearce in cabin.

### REPORTS.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 11th April at noon; had light southerly winds and rain with smooth sea to Oshima, which was passed at 9 p.m.; thence moderate S.S.W. winds and misty weather with moderate S.W. swell to port. Arrived at Yokohama the 12th April at 5.15 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Shimonoseki the 8th April. Arrived at Shimmoto at 4.45 p.m. and left the 9th at 8.30 a.m. Arrived at Hiroshima at 9.45 a.m. and left the 10th at 6 a.m.; had light winds and fine weather; passed Rock Island the 11th at 7 p.m. Arrived at Yokohama the 12th April at 1.15 a.m.; weather continuing fine to port.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 13th April at noon; had light variable winds and overcast sky to Oshima; thence to Vries Island strong E.N.E. winds and head sea; thence wind moderating. Arrived at Yokohama the 14th April at 8.20 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 10th April at noon; had thick foggy weather with light southerly winds and swell throughout the passage. Arrived at Nagasaki the 12th at 430 a.m. and left the 13th; had weather dull and rainy till midnight; thence to port encountered a furious N.E. gale and very heavy sea. Arrived at Shimonoseki the 14th at 10.30 a.m. and left at 12.30 p.m.; had fine weather with gentle breeze till 4 a.m. on the 15th; thence to port had strong to fresh N.E. winds and dull cloudy weather. Arrived at Kobe the 15th at 10 a.m. and left the 16th at noon; had moderate to fresh N.W. winds and cloudy weather; passed Oshima at 7.35 p.m. moderate S.E. swell; off Omaisaki the 17th at 6.45 a.m., encountered strong easterly winds; passed Rock Island at 9.45 a.m. strong head wind and dull cloudy weather. Arrived at Yokohama at 3.20 p.m.

The Japanese steamer *Omi Maru*, Captain J. Wynn, reports:—Left Honolulu the 4th April at 0.45 p.m.; had light north-easterly winds till the 7th; thence unsettled weather throughout the rest of passage; made Noshima at 5 p.m. on the 17th. Arrived at Yokohama at 9 p.m.

The British steamer *Batavia*, Captain Hill, reports:—Left Vancouver the 27th March at 5 p.m.; had severe westerly gales with heavy sea throughout the greater part of the voyage; sighted Cape Inuboye the 17th April at 1.30 p.m. Arrived at Yokohama the 18th April at 2 a.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

The market has been slow, and as regards Yarn prices have been distinctly in buyers' favour to the extent of nearly 50 cents per picul on some spinnings, whilst others have been sold at previous rates, amongst which have been further sales of Kingston 16/24's at relatively very low prices. Bombay Yarns have been quite neglected, and prices are more or less nominal. For Grey Shirtings there has been a very limited enquiry and sales are reported of only 3,500 pieces. Italian Cloth has been sold to the extent of some 2,600 pieces of various descriptions, but in other Goods there has been little doing, and prices are mostly quite nominal.

#### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼lb, 38¼ yds. 39 inches | $1.50 | to | 2.20 |
| Grey Shirtings—9lb, 38¼ yds. 45 inches | 1.65 | to | 2.52½ |

| Nos. 10/14, Bombay | | | — |

#### METALS.

Little business and no change in prices; dealers offer less for parcels to arrive, but importers are not anxious to do business on the proposed terms.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ½ inch | $2.80 | to | 2.95 |
| Flat Bars, ¼ inch | 2.90 | to | 2.95 |
| Round and square up to ¾ inch | 2.85 | to | 2.95 |
| Nailrod, assorted | | Nom. | |
| Nailrod, small size | | Nom. | |
| Iron Plates, assorted | 2.90 | to | 3.00 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.40 | to | 4.70 |
| Tin Plates, per box | 5.70 | to | 6.00 |
| Pig Iron, No. 3 | 1.40 | to | 1.45 |

#### KEROSENE.

The market continues quiet, and prices are fairly steady, but the stock is further increased by the arrival of the *F. B. Walker* and *Gerard C. Tobey*, both from New York, with cargoes of Oil.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.65 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

#### SUGAR.

Prices almost nominal for Browns, which continue to arrive. Whites also quiet.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $3.90 | to | 3.95 |
| Brown Daitong | 3.10 | to | 3.95 |
| Brown Canton | 5.00 | to | 6.00 |
| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 5.00 | to | 7.75 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 10th inst.; since that date settlements on this market have been 742 piculs, divided thus: *Hanks*, 57; *Filatures*, 286; *Re-reels* 228; *Kakeda*, 165; *Oshu*, 6. Direct shipments during the week have been 24 piculs, consequently the total export business is equal to 767 piculs.

During the first part of the week the Market was quiet with small settlements and prices were steady without being strong. Three days ago, however, one of our exporters for the States again entered the field, buying freely and practically clearing the market of our good quality filatures. Prices at once began to turn upwards again and the market closes very strong, holders looking for still further advances.

Exchange has remained on an even keel with every slight variations, and to-day's rates are practically those of a week ago.

Arrivals from the interior are now very light, and the quality leaves much to be desired. Practically speaking our season for good silks is finished. Our stock is reduced to very small dimensions, and the quality is such that a great deal of it will be unfit for export and must be returned into the interior for use by the Native weavers.

During the last week weather has been cold and rather inclement for the Spring vegetation; there has, however, been no frost or signs of any, and it is not probable that the cold weather will have any injurious effect upon the crop beyond retarding it a little. The hatching in Koshu province is expected to commence in a week's time, and we shall doubtless have some new silk between the 15th and 20th of June.

There have been two shipping opportunities during the week, the American mail of the 11th inst. and the French mail of the 12th. The former, *China*, had 925 bales for New York, and the latter, *Djemnah*, carried 530 bales for Europe. The present export figures are therefore 29,129 piculs, against 35,046 last year and 38,786 to the same date in 1889.

*Hanks.*—Some parcels of good medium *Shinshu* have been taken at $520, and our stock is now down to very small proportions, there being less than 50 piculs on offer.

*Filatures.*—Market is strong under influence of recent purchases, $640 having been paid for some good *Shinshu*, 13/15 den; $635 was paid for *Tokushinsha*, with other marks in proportion. Good quality is now very scarce: all summer reelings having been apparently taken up.

*Re-reels.*—More business has been done in these, and high prices have been paid. *Tortoise*, Chop $610; *Shikishima*, $610 and *Tengensha*, $600. Holders of good silks are very strong, the bulk of the stock being medium and inferior quality.

*Kakedas.*—Our market has been cleared of these silks, and without some further arrivals from the interior no more business can be done. $590 has been freely paid for No. 1, and $580 for No. 1½, althought the bulk of the trade was done at $5 less than these quotations.

*Oshu Sorts.*—Small business in *Hamatsuki* at $530 and $520. Stock in this class is also insignificant.

QUOTATIONS.

| | | |

| Available supplies to date | 34,700 | 37,300 | 41,300 |

### WASTE SILK.

Sales in this branch are 200 piculs divided thus: *Waste Cocoons*, 13; *Noshi*, 40; *Kibiso*, 124; *Neri*, 23.

Trade languishes on account of the poor quality of the stock which consists mostly of rejections from the whole season, pickings, and cleanings. As a matter of fact our season is practically closed, there being very little besides refuse remaining. Export during the week consists of 132 bales, which were taken by the French mail for Europe. Present export figures are 28,316 piculs, against 26,302 last year and 29,492 at the same date in 1889.

*Pierced Cocoons.*—The only sale during the week has been in some *Waste Cocoons* of very low quality, which were picked up at $15 per picul.

*Noshi.*—Some few purchases of *Joshu* ranging from $72 to $85 according to quality.

*Kibiso.*—Two or three parcels of *Curlies* have been taken; Bushu at $30, *Mino* at $46½.

*Mawata.*—Nothing doing, and the remaining stock on hand will probably be used by natives themselves.

*Sundries.*—Nothing in *Tama-ito* but a few small purchases of *Neri* continue at unchanged prices.

### TEA.

The coming crop is receiving a check, a considerable fall in the temperature being reported from the principal districts; no frost has appeared, however, and the leaf is looking well everywhere.

## EXCHANGE.

Exchange has not fluctuated much this week, but is not strong at the close.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. Arthur Wadham, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

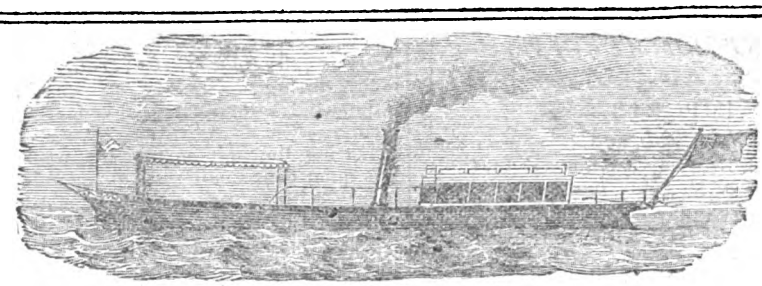
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

Screw Steamers with speeds ranging up to 30 miles an hour.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

Machinery constructed for Boats built abroad.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated bye th name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 25, 1891.

BIRTHS.

On 18th instant, at No. 6, The Bund, Yokohama, the wife of C. G. BUCHANAN-DUNLOP of a Daughter.

At No. 39, Bluff, on the 22nd inst., Mrs. CARL ROHDE of a Daughter.

## *SUMMARY OF NEWS.*

H.I.H. PRINCE KOMATSU AKIHITO left the capital on the 17th to visit his villa at Numazu.

MR. INOUYE SHIGEYASU, Director of the Yokohama Union Electric Light Company, has resigned.

THE Chinese Representative gave a most successful ball at the Rokumeikan, Tokyo, on the 18th instant.

H.I.H. PRINCE KITASHIRAKAWA YOSHIHISA left the capital on the 18th instant for Takasaki on official business.

THE Russian Representative left Tokyo on the 21st instant, to meet the Russian Prince Imperial at Nagasaki.

COUNT ITAGAKI and his immediate followers have started a new newspaper in Tokyo, under the name of the *Jiyu*.

THE Imperial Spring Garden Party was held at the Yenryokan on the 22nd instant, under very favourable circumstances.

THE promoters of the Hokota Tramway Company propose to extend the company's line to the harbour of Naka, Hitachi.

THE various Government Departments will henceforward be opened at 8 in the forenoon, and closed at 3 in the afternoon.

COUNT YOSHII expired at 1 p.m. on the 22nd instant, having lingered many days after the time when his decease was originally looked for.

A COMMERCIAL newspaper to be called the *Nippon Shogyo Shimpo* will be started in Kobe on the 25th instant. Mr. Majima Buichi will be its chief contributor.

THE political situation has not materially changed during the week. All eyes are now turned towards Count Ito, who is travelling to the capital from the South. It is hoped that he will consent to assume the direction of the Cabinet, but no certainty exists.

DURING 10 days ended the 10th instant the Kyushu Railway Company carried 57,577 passengers, from whom *yen* 12,804.40 was realized by the sale of tickets.

A GENERAL MEETING of shareholders of the Osaka Railway Company was held on the 19th instant. The net profit during the latter half of last year was *yen* 28,710.481.

THE doubling of the Tokaido line between Gotemba and Numazu, work on which is now going on, will, it is expected, be completed about the middle of next month.

THE Hon. Mrs. Swift, wife of the late American Representative, who has left Japan for home, was received in audience by Her Majesty the Empress on the 20th instant.

A RAILWAY accident occurred at the Shimbashi Terminus of the Tokyo-Yokohama line on the 20th instant. Two persons were severely injured and several were badly shaken.

THE peony garden of Mr. Uyebumi at Honjo, Yotsume, Tokyo, was opened to the public on the 16th instant. The plants will be in full blossom about the first Sunday of next month.

MR. UTSUMI, recently appointed Governor of Kanagawa and his family, arrived in Yokohama on the 21st instant, and occupied the official residence of the *Chiji* of the Prefecture at Isecho

THE *Kongo Kan* and *Hiyei Kan* sailed from Singapore on the 19th instant for Hongkong *en route* for Japan. On the following day the *Musashi Kan* started from Shinagawa for Nagasaki.

MR. YOSHIKAWA, Minister of State for Education, who had been confined for some time to his residence by indisposition, proceeded to Kamakura on the 18th instant, on three weeks' leave of absence, to recruit his health.

FIRE broke out on the night of the 14th instant, in a house at Kami-shitomura, Hatto-gori, Tottori Prefecture, and destroyed 19 dwellings, one Elementary School, and several other buildings before the flames could be subdued.

MR. SANNOMIYA, Vice-Grand Master of the Board of Ceremonies in the Imperial Household, and Baron Madenokoji, and Mr. Yamanouchi, Masters of Ceremonies, left the capital on the 19th instant for Nagasaki to meet the Russian Prince Imperial.

AN earthquake was felt in the capital on the 21st instant, at 10h. 49m. 7s. a.m. The duration was 3 minutes, and the direction was from N.W. to S.E., the maximum horizontal motion being 1.9 milimètre in 1.1 second. The shock was a sharp one.

THERE were in Shimane Prefecture at the end of the year 10,686 persons over 80 years of age. Of people aged from 80 to 90 years, 4,007 were men and 5,857 women; aged over 91 to 100 years, 276 men and 523 women; and aged over 101 years, 5 men and 18 women.

DURING the week ended the 17th instant 2,750 persons visited the Fine Art Exhibition in Uyeno Park. The total number of visitors from the opening of the exhibition to the 17th inst. was 15,949, of whom 85 were distinguished, 1,798 special, and 13,133 ordinary visitors, the rest being members of the Fine Art Society, and students of the Fine Art School and the Technical School.

THE total receipts of the Sanyo Railway Company during the past half year were *yen* 113,887.086, of which *yen* 55,915.314 was deducted for miscellaneous expenses, leaving a profit of *yen* 57,971.772. To this sum an amount brought over from the last account was added, and a dividend was declared at the rate of 6 per cent. per annum.

THE Government has granted a charter to the Kawagoye Railway Company. A meeting of promoters of the company was held on the 20th instant, at which Messrs. Yonekura Ippei, Shimizu Munenori, Masuda Chuzun, Nukiyama Saheiji, and Saito Yosoji were elected an executive committee. The survey of the proposed route of the company will be commenced on the 25th instant.

HIS IMPERIAL MAJESTY THE EMPEROR, accompanied by Marquis Tokudaiji, Grand Chamberlain, Lieutenant Colonel T. Yoneda, Mr. T. Kataoka, and Mr. Hino, Chamberlains, Mr. Saito, Secretary of the Imperial Household, and Dr. Yamashina, a Court Physician, proceeded to Uyeno Park on the afternoon of the 20th instant to visit the Fine Art Exhibition.

ON the night of the 9th instant fire occured in a house at Tennomura, Minami-akitagori, Akita Prefecture. The flames were confined to the building where the fire originated, but three persons and one horse were burned to death. Thirty-two dwellings and one elementary school were burned to the ground on the 12th instant at Akiyama, Minami-tsurugori, Yamanashi Prefecture.

A MEETING of members of the Treaty Revision Committee of the *Rikken Jiyu* party was held on the 19th instant, to discuss methods of investigating matters in connection with Treaty Revision, at which Count Itagaki, Messrs. Sugita Tei-ichi, Hoshi Toru, Kono Hironaka, Shigeno Kenjiro, Suzuki Shoji, and Komabayashi Koru were present. The Committee are to meet again on the 23rd instant.

DULNESS continues to be the principal feature of the Import trade, particularly as to Yarns and Piece-goods, while as for Woollens there is absolutely no demand whatever. The small sales of Yarn have been mostly English spinnings, and the other business of the week is made up of Shirtings, T.-Cloths, Victoria Lawn, and Mousseline de Laine in small quantities. The Metal market is quiet, though prices remain unchanged, except perhaps for Wire Nails which are slightly cheaper. Kerosene is not in request, buyers being apparently well supplied or only buy from hand to mouth parcels, and no change has taken place in values. Sales of Brown Sugar have been made on a moderate scale at late rates, but Whites are not in demand. The Silk trade has been fairly brisk; that is to say the demand for good parcels has been made without response, very little high-class silk arriving, and the stock being nearly all cleared, much of what is left is not fit for export, and unless available parcels come in from the country there can be few more heavy transactions till the new crop is handled. Waste Silk is in much the same case as Raw. Tea is coming on rapidly, and large parcels may shortly be expected. Exchange was unaltered till two days ago, when a drop occurred, but since then a slight reaction has taken place, and rates close firm.

## *EDITORIAL NOTES.*

### EMIGRATION.

In Japan as elsewhere talk about emigration always begins to be heard at a time of distress. Ten years ago when the project of emigration to Hawaii first came upon the *tapis*, it elicited strong expressions of disapproval in many quarters. Critics urged that labour is capital, and that in parting with her able-bodied inhabitants, Japan would be depriving herself of the means of growing wealthy. This general view of the disadvantages of emigration on grounds of abstract economy is not to be denied, but after all the value of labour depends not only on ability to employ it but also on opportunities to exercise it. If the individual can go abroad, earn and save some money, and finally return home to take a better place in the social scale than he originally occupied, the result is distinctly beneficial to his country as well as to himself. This was certainly possible in the case of emigrants to the sugar platations of Hawaii, and as the fact received demonstration by practical experience, the Japanese laid aside their prejudice against suffering their people to go abroad as labourers. During the past five years there have been two emigration schemes on the *tapis* in addition to that of Hawaii. One had for its object the sending of Japanese to Australia. The details of the scheme have not been published, but it is known that the projectors' agents at this end engaged a number of labourers originally without asking the permission of the Japanese Authorities, and without ascertaining the terms, as to provision of return passage money and so forth, which the Government had determined to impose in such cases. In spite of this irregularity no difficulties were ultimately raised on the Japanese side, but owing to the delay entailed in references to Australia and to hesitation on the part of the projectors, Australia had entered her phase of anti-Oriental immigration before the scheme could be carried into practice. This was fortunate, perhaps, for all concerned. Then followed a project of emigration to Guatamala, but the Government in Tokyo required the same conditions as those observed in Hawaii for the protection of the emigrants, and as these could not be guaranteed, the enterprise had to be abandoned. The notorious silver mine in Peru was another case in point. Originally based on an idea of obtaining Japanese agricultural labour, the scheme was converted, by means not yet quite clear, into a mining programme, and a number of Japanese were carried to Peru and back again without accomplishing anything except the creation of much ridicule and a little scandal. The South Sea Islands' enterprise also falls within this category. The ship and properties used by the projectors have now been sold for a bagatelle, and in all probability the idea has been abandoned, so far as concerns the poor *shizoku* on whose account it was conceived, though possibly others may benefit by the experiences recorded and the information obtained. Then, too, we have still to hear about that vessel which sailed a short time ago on a general voyage of discovery, hoping to find some "island of the blessed" hitherto hidden from the ken of the mariner and the explorer. And while these things are projected and essayed in Japan, the neighbouring empire of China silently and steadily pours out its multitudes of busy-fingered, frugal, humble emigrants, who, locust-like, settle down wherever they find food, aud locust-like are coming to be regarded as pests wherever they touch the confines of Western competition. The difference between the methods of the two nations is singular. There is a distinct flavour of romance, as well a trace of the old patriarchal spirit of feudalism, in the doings and darings of the Japanese. Theirs is the instinct of the colonist rather than of the emigrant. The Chinaman sets his face outwards, stirred solely by the impulse of bread-earning, hoping indeed that if he cannot ultimately carry his bones homeward his good friends will send them there, but in the main careless of everything except the pressing want of "bit and sup." The Japanese carries Japan with him. He wants, not raiment and victuals only, but to make a mark. The feverish spirit that drove his country's corsairs and traders, a few centuries back, to harry the neighbouring coasts and thrust themselves into the politics as well as the commerce of the lands they visited, makes its survival apparent to-day whenever an opportunity presents. So soon as things grow dull at home, men begin to talk at once of going abroad, but instead of going silently and humbly like the Chinaman, they must project explorations, exploit mines, or at any rate have the éclat of State protection. The vague talk of the vernacular press at the present juncture about Treasury-aided emigration, under circumstances quite unlike those that drive the famine-stricken Irishman to pray for the means of flying his native land, seem only an ebullition of this spirit. Whither are the Japanese to emigrate? They have under their hand regions inviting reclamation and industries calling for development, yet they talk of going abroad to seek their fortunes. Suppose that Japan were thrown open to-morrow to all the world, what would happen? Would not one result be that while the Japanese themselves are looking beyond their borders for means of sustenance and opportunities of *kudos*, the patient, poking Chinese ants would swarm into this pleasant land and convert into busy haunts many a place that lies waste to-day under the eyes of upward-gazing Japanese?

* * *

In the cheap and skilled labour of this country lies its principal source of wealth. The capitalists of other countries would gladly borrow some of this valuable factor for their own uses. Hawaii has borrowed it, with profit to herself as well to the Japanese. Australia, Guatamala, and Peru would have borrowed it. Do not these facts suggest a thought to persons who claim that the opening of the country could offer no new opportunities to Western enterprise? Is it conceivable that people whom Nature has endowed with marvellous manual dexterity and whose manner of living enables them to subsist contentedly on wages quite insignificant in the eyes of a Western mechanic—is it conceivable that these people are not capable of being converted into wealth-earning instruments? Western capital and Western organizing experience would soon alchemise such elements into precious metals. Looking from the already familiar grooves of production and distribution, it may not be possible to discern a very wide prospect, but to conclude that the capacities of the country are limited to a trade of the present fashion—a trade which has nevertheless nearly quintupled in twenty-one years—seems a very narrow and unenterprising estimate.

### SOSHI IN COURT.

Having practised their physical-force tactics within the precincts of the Diet itself, there is no reason why the *soshi* should be diffident about performing in any public building throughout the empire. We are not surprised, therefore, to learn that their latest ebullition has been in a Court of Law. It is doubtless fresh in the memory of our readers that in January last a number of *soshi* forced their way into the Yayoi-kan, in Shiba Park, while a meeting of the Radical Party was in progress, and administered a severe beating to Mr. Uyeki Yemori, one of the members of the Diet for Kochi Prefecture. Several arrests were made in connection with the disturbance, but the prisoners were several times remanded, owing to lack of evidence or other causes. On the 16th instant their trial finally commenced in the Tokyo Local Court. Among the *soshi* arraigned was one named Tokata, who being subjected to the usual *procès verbal*, made some reply that seems to have displeased a fellow-prisoner, Sakuma, for the latter, without a moment's hesitation, sprang up and gave Tokata a violent blow. It need scarcely be said that Mr. Sakuma has become an object of additional interest to the Public Procurator.

### STORIES.

Circumstantial tales describing the signing of a Revised Treaty with Great Britain, and giving even particulars of the number of articles, the manner of lithographing the draft and so forth, have been published by the *Kokkai Shimbun*, and great has been the flutter caused by them in the journalistic dove-cot of Yokohama. The *Kokkai* is an admirable newspaper. Its proprietor is one of the very few Japanese who have succeeded in "striking pay gravel" in the journalistic diggings, and his manner of conducting the *Kokkai* entitles him to be fortunate. His paper has distinguished itself on the most approved lines on this occasion. To be sensational is half the battle. The fine touches put into this Treaty Revision picture raise it to a level of distinctly high art. The number of conferences held between the British Minister and the Japanese Government, the failure of the first papyrographs, the time taken to prepare fresh copies, and other minutiæ, render it almost sacrilegious to doubt the authenticity of the *canard*, and have deservedly secured for it large credence. To chose ground beyond the reach of final contradiction and then to occupy it with all one's forces of invention, elaboration, and embroidery, is a distinctly admirable performance, and we congratulate the *Kokkai*.

* * *

Besides, we have to thank the *Kokkai* for bringing about another of those amusing incidents which have enlivened the annals of Yokohama journalism during the past four months. Here it is:—

The Fifty-five Thousand Organ.—April 10th.

We think there is little doubt that the subject of Treaty Revision has been practically shelved. The difficulties attending it caused by the present state of Japanese public opinion and the increase of factional spirit are such as to baffle the powers of the wisest of Japan's statesmen. We hope to supply our readers with information on this subject to-morrow.

The Ditto.—April 11th.

Judicial autonomy is not a subject worth serious discussion, at any rate for the present. The indications are abundant that it has been indefinitely shelved.

The Ditto.—April 16th.

There is little doubt that a document of some kind has been prepared and that there have been meetings of the Cabinet to consider the same. It is possible that the British Minister has promised to forward the new draft to the English Foreign Office. There would be nothing extraordinary in this, as for some years the Japanese Government has been perpetually engaged in making new proposals on Treaty Revision or withdrawing old ones.

### THE CABINET.

Appearances do not indicate that the reconstruction of the Cabinet is likely to be effected with ease and celerity. Count Yamagata adheres firmly to his intention of resigning, and no one seems disposed to take his place. The original expectation was that Count Saigo would accept the Presidency, but this arrangement is said to be quite impossible, Count Saigo not only refusing to fill the position, but even declaring that he too will resign should Count Yamagata retire. So, at least, says the *Jiji Shimpo*, which, in its issue of the 19th instant, takes a very gloomy view of the situation. It represents Count Oyama also as being anxious to resign the portfolio of War in favour of General Takashima, an officer who has been recognised for the past three years as one of the coming men. Further, Count Yamada is reported by the same authority to have again tendered his resignation, in consequence of Count Yamagata's retirement, but the Minister President is endeavouring to induce him to re-consider his determination, and Viscount Nomura's good offices have been employed for the purpose. The present outlook, according to the *Jiji*, is that Count Ito, and Count Ito only, can be induced to assume the direction of administrative affairs, but in that event Viscount Aoki will not consent to remain at the Foreign Office, and Mr. Yoshikawa will resign the portfolio of Education. Counts Matsukata and Goto, and Mr. Mutsu would thus appear to be the only Ministers likely to remain at their posts. Such is the *Jiji Shimpo's* account, but we do not find it possible to reconcile this wholesale disturbance with our own information. The one difficulty, if what we have heard be correct, is that no statesman of note and ambition is willing to accept the post of Minister President during this period of political transi-

Digitized by Google

tion. All earnest politicians wish to inaugurate the system of genuine constitutional government, without dependence on clan influence. but the time for that most desirable reform is not yet ripe, nor is the machinery for effecting it prepared. If there were any reasonable prospect of accomplishing the transition without loss of credit to the last holders of portfolios under the old *régime*, there would be less reluctance to assume the responsibility of engineering the change. No one, however, can see very clearly by what steps the issue will be attained, or what degree of friction will be evolved in the process, and consequently the prominent men hesitate. Doubtless the difficulty will be overcome, and present appearances point to Count Ito as the man to overcome it; but that his return to power would be the signal for an exodus of several members of the Cabinet as now organised we do not believe; unless, indeed, the Count declines to assume control without a free hand to effect reconstruction on altogether new lines. From the moment of opening the first Diet it was morally certain that the administrative machine must be a good deal shaken and disturbed before finally adjusting itself to the new gearing. An imminent crisis was tided over last December, but the effort of averting it left some traces, and there has been since then a growing conviction that changes must come ere long. If Count Ito agrees to preside over the Cabinet again, a measure of stability may be anticipated, but unless the teachings of history be valueless, not half a dozen Count Itos—were they so disposed—could effectually divert Japan from the goal towards which she is steadily moving, government by party. It is an immense misfortune to the nation that it should have lost, just at this difficult juncture, the services of three men of whose adjusting and pacifying influence the general public has little notion. Prince Sanjo, Baron Motoda, and Count Yoshii are dead. Had they been spared a few years longer, Japan might have travelled the last stages of her modern political metamorphoses more smoothly and comfortably.

### NEW AUXILIARY SCHOONER FOR THE YOKOHAMA WHALING CO.,

THE Yokohama Engine and Iron Works, Limited, have now on the stocks, and will launch about the 23rd or 24th instant, a new schooner of about 160 tons for the Yokohama Whaling Co. The vessel measures 112 feet over all, and 99 feet between perpendiculars, 23 feet beam, and over 10 feet depth of hold. Her lines are those of the *Nemo*, (lately converted to auxiliary power) but modified forward, being somewhat fuller than the original model. The frames and fittings of the new ship are of hardwood throughout, the planking of the main deck being of Oregon pine and that of the poop (which is 46 feet in length) *hinoki*. She is copper fastened, and copper sheathed to the water line, and carries above her planking at each bow a belt of hard wood 4 inches thick in places and 2 inches at the thinnest part, extending from the stem as far as the forerigging, 1½ feet above and 3 feet below the water line. The object of this belt is, of course, protection from ice. The schooner has a powerful compound engine driving a two bladed screw, and since, though a heavier ship than the *Nemo*, she has more engine power, it is expected that she will steam at a speed of about six knots The boiler and engine room are under the poop, the cabin being aft of these. Built of nothing but the finest material, the new ship is well adapted to the purpose intended and is a credit to the enterprising company who have in hand her construction.

### POLITICAL PARTIES AND TREATY REVISION.

THE perplexity of the Radicals on the subject of Treaty Revision reflects itself in their proceedings. The very first subject they began to talk about after the prorogation of the Diet was Revision, and one of the principal apparent outcomes of the great meeting in Osaka was the appointment of a Committee to consider this matter. But the eleven members of the Committee do not seem to have accomplished anything up to the present. They set out upon a *yuzei*—which means, in less compressible English, a political speechifying tour—and were engaged collecting the views of the provincials and impressing their own upon them by this process, when the press in Tokyo suddenly began to write as though Revision was imminent. Therewith the principal members of the Party, resident in Tokyo, fell into a flutter, and decided that if they were to be in at the death at all, they must begin to ride in earnest. Accordingly, they held a meeting on the 18th instant, and discussed until 6 o'clock in the evening without arriving at any decision, when they adjourned until the 19th, having obtained a promise from Count Itagaki that he should attend on the latter day in the capacity of adviser.

* * *

The occupants of the two Treaty Revision camps are now called the *Danko-ha* and the *Hi-danko-ha*, or the party in favour of carrying out Revision and the party opposed to it. If the politicians in the second camp were as sensitive as some of our friends in this Settlement, they would protest against the name, for although a small section does really or nominally object to mixed residence, and would postpone Revision rather than grant that privilege to foreigners, the great majority are strongly in favour of Revision provided that it be unconditional. Similarly in Yokohama, a small section of the Community are avowedly opposed to Revision on any terms at present, while the majority favour Revision with conditions. The Yokohama folks will not, however, submit to be called *Hi-joyaku kaisei-ha* (Anti-Revisionists), whereas the Japanese do not object to the cognate term *Hi-danko-ha*. There appear to be 583 members of the *Hi-danko-ha*, and three representatives have been chosen by them, Messrs. Sasakawa Daisuke, Mizushita Sekikichi, and Shimura Tomokichi, who announce their intention of interviewing Counts Saigo and Goto and Viscount Aoki. They did not succeed up to the 18th inst.

### CIVILIZATION.

THE *Scotsman*, commenting on the statement of the Citizens' Committee, says:—'Put in the smallest compass, the question resolves itself into this:—"Is the civilisation of the Japanese more than skin deep?' They are a delightful people, and in many ways deserve to be called the French of the East. But political stability is not generally believed to be the most striking virtue of the French of Europe, and an Oriental Frenchman is an object rather of delightful contemplation than for elevation to the judicial bench. It is a huge experiment, and the European, especially the Englishman, to whom in matters political 'Slow but sure' is an axiomatic truth which it is rank heresy to controvert, may be pardoned if he does not care to stake his liberty or his property on the issue." How characteristic this is of much of the writing that appears on the hackneyed subject of Treaty Revision. According to the view of a highly respectable British paper, it is doubtful whether the Japanese is fit to sit upon a judicial bench under any circumstances, and the reason of his inherent unfitness is that he partakes too closely of the nature of a Frenchman! "An Oriental Frenchman" the solemnly insular *Scotsman* calls him, doubtless very well pleased with itself for the neatness of the epithet. And then we have the old query;—"Is his civilization more than skin deep?" Civilization, indeed; who is to define civilization? The other day we overheard one of a party of travellers say to his Japanese guide in very cockney English:—"Japan has become greatly civilized, I suppose, in the last twenty years?" This very courteous representative of advanced civilization was evidently ignorant that when his own ancestors dressed in untanned skins and fed upon acorns, the Japanese wore silks and had reached a high pitch of refinement in their general mode of life. We talk much of the majesty of the law and its perfect administration among ourselves, but it is not necessary to go very far back in the pages of history to find a state of affairs that would have shamed the Japanese when we first made their acquaintance. Even to-day there are phases of our much vaunted civilization against the introduction of which this country ought to fight with all the preseverance and resolution it can command. It is a pity that Pharisaical and unjust talk cannot be refrained from in discussing this matter. The plain truth is so convincing and so simple, namely, that though Japan has succeeded in putting into efficient operation and administering her new codes of criminal law, foreigners have a right, as a matter of common prudence, to ask that proofs of similar success in regard to her civil law shall be forthcoming before they consent to entrust their properties to its sole guardianship. So long as a solution of the problem may be sought by amicable negotiation, there is not the smallest occasion to go beyond that incontrovertible and moderate assertion of the foreign residents' claim. The sweeping and unwarranted verdicts too often pronounced by shallow critics, their illiberal condemnations of the Japanese, and their silly suspicions, serve no purpose except to stir up bitterness and indignation. We do not believe for a moment that the British Government will agree to anything likely to expose Her Majesty's servants to undue risks and, so far as we know, the Japanese Government has not hitherto asked for anything of that nature.

### THE NEW DIET.

WE read in the *Jiji Shimpo* that, on the 18th instant, the tenders for the building of the new Houses of Parliament were opened, and it was decided that the contract should be given to the Japan Building Company (*Nippon Kenchiku Kaisha*), whose estimate was *yen* 75,100. This includes the cost of construction and of materials, exclusive of timber. For the latter the tender of the Japan Engineering Company (*Nippon Doboku Kaisha*) was accepted, the sum being 47,900 *yen*. Thus the total outlay on account of the edifice is 123,000 *yen*, and as the appropriation made by the Diet is 180,000 *yen*, there remains a sum of 57,000 *yen* for furniture and miscellaneous expenses. Presumably the work will henceforth be carried on with expedition. The public imagined that despite the estimate of seven months given by the Government Delegate in the House of Representatives, some difficulty would be experienced in getting the buildings ready by November, but though only six months now remain, nothing has been done except to pull down the forest of chimnies that stood among the ruins, and to clear away a portion of the débris. Doubtless the authorities see their way clearly, but, considering that the conflagration took place early in January, and that we are now near the end of April, it ought to be time for resolute work.

* * *

Opposite the Diet enclosure on the north-east side, and within the Hibiya Parade Ground, two spacious edifices have been in course of erection since last autumn. They are wooden houses in foreign style, roomy, well proportioned, and precisely identical in dimensions and appearance. Many conjectures have been hazarded by foreigners about the purpose for which these edifices are erected, but the needful information has always been ideographically recorded on the gates leading to them. They are to be the residences of the Presidents of the two Houses of Parliament. Very comfortable and spacious residences too, but to be required to keep them up on a salary of four thousand *yen* annually can hardly be called kindness.

### THE FOREIGN OFFICE.

THE *Kokkai*, which at present occupies itself conspicuously with the affairs of the Foreign Office, undertaking to instruct the public in all the minutiæ of that Department's doings, gives an interesting statement of the linguistic accomplishments of its officials. The total number of these, from the Minister himself down to the junior employé, is 99, and precisely a third of them can speak and write some foreign language. The proportions are; English speaking officials, 12; German-speaking 8; French-speaking, 7; Russian-speaking, 1; Chinese-speaking,

Digitized by Google

4; and Korean-speaking, 1. Considering that America and Great Britain are both included in the English-speaking section, its representation cannot be called very large. On the other hand, that one man in every three, from the top to the bottom of the ranks, should be versed in some foreign tongue, is decidedly a good record. Times have changed in Japan. How easy it is to look back to an era when even the most rudimentary knowledge of English or French was a rare accomplishment, whereas, now-a-days, one experiences a sensation of mild surprise if any Japanese met in society is unable to converse in one or other of these two foreign tongues. On the foreign side, too, knowledge of the Japanese language has become more wide-spread than formerly. It would be natural to suppose that as the proportion of Japanese acquainted with a foreign tongue increases rapidly, and as the services of competent interpreters become more and more accessible, the foreign residents would refrain from the exceedingly difficult task of studying Japanese. But such is not the case. Apart from the missionaries, who of course consider it an imperative duty to acquire the language of the country, not a few residents at the open ports are now able to express their ideas more or less fluently in Japanese. Classes for the study of the language have been held of late years, and the results are sufficiently apparent. To what extent this improved and constantly improving capacity for mutual understanding has brought with it an increase of friendly relations and intercourse is, however, another question.

### THE PRINCE IMPERIAL IN KAGOSHIMA.

PRINCE SHIMADZU of Satsuma is reported to be making great preparations for the entertainment of his illustrious visitor, the Prince Imperial of Russia, and his efforts are seconded by the people of Kagoshima. The latter have built a floating pier with a huge *torii*, made of the giant bamboos for which Sasshu is famous. The idea, apparently, is that the Prince should land on the pier and pass under the *torii*, according to the old custom that the feet of Imperialism must never tread among the tracks of the multitude. The pier and town will be illuminated on the night of the Prince's stay, and fire-works *ad libitum* will be sent up. Among the amusements planned by the House of Shimadzu for the Prince's benefit are the dances called *bo-odori* (pole-dancing) and *musha-odori* (military dancing), together with the sport of *Inu-o-mono*, a species of equestrian archery much practised formerly in the southern province. The Imperial visitor is to be regaled with *Kamakura-ryori*, a kind of cooking that has been preserved in the House of Shimazu ever since the time of Yoritomo, in the eleventh century. It will be decidedly interesting for the Prince Imperial to see how Japanese chiefs fared eight hundred years ago, when William the Conqueror was reigning in England.

### THE BEHRING SEA DISPUTE.

THE interest that would otherwise have centered on the result of the *Sayward* case, now before the Supreme Court of the United States, is to a great extent nullified by the recently acquired certainty that the Behring Sea Dispute will be submitted to arbitration. Lord Salisbury's last despatch to Sir Julian Pauncefote opens thus:—

The despatch of Mr. Blaine, under date of the 17th December, has been carefully considered by her Majesty's Government. The effect of the discussion which has been carried on between the two Governments has been materially to narrow the area of controversy. It is now quite clear that the advisers of the President do not claim Behring Sea as a *mare clausum*, and, indeed, that they repudiate that contention in express terms. Nor do they rely, as a justification for the seizure of British ships in the open sea, upon the contention that the interests of the seal fisheries give to the United States Government any right for that purpose which, acording to international law, it would not otherwise possess. Whatever importance they attach to the preservation of the fur seal species—and they justly look on it as an object deserving the most serious solicitude—they do not conceive that it confers upon any maritime powers rights over the open ocean which that power could not assert on the other grounds.

The same despatch concludes with a concise presentation of the points in dispute, and a clear statement of the British Government's attitude in respect of them, from which it appears that an agreement to arbitrate has been virtually concluded. There are the words of the despatch:—

In regard to the questions as they are proposed by Mr. Blaine, I should say that as to the first and second no objection will be offered by her Majesty's Government. They are as follows:

"'1. What exclusive jurisdiction in the sea known as the Behring Sea and what exclusive rights in the seal fisheries therein did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States?

"'2. How far were these claims of jurisdiction as to the seal fisheries recognized and conceded by Great Britain?'

"The third question is expressed in the following terms:—'Was the body of water now known as Behring Sea included in the phrase "Pacific Geean" as used in the treaty of 1825 between Great Britain and Russia, and what rights (if any) in the Behring Sea were given or conceded to Great Britain by the said treaty?

"Her Majesty's Government would have no objection to referring to arbitration the first part of that question if it should be thought desirable to do so, but they would give that consent with the reservation that they do not admit that the decision of it can conclude the larger question the arbitrator would have to determine. To the latter part of No. 3 it would be their duty to take exception. 'What rights, if any, in the Behring Sea were given or conceded to Great Britain by the said treaty?'

"Great Britain has never suggested that any rights were given to her or conceded to her by the said treaty. All that was done was to recognize her natural right of free navigation and fishing in that as in all other parts of the Pacific Ocean. Russia did not give these rights to Great Britain, because they were never hers to give away.

"'4. Did not all the rights of Russia as to jurisdiction and as to the seal fisheries in Behring Sea, east of the water boundary, in the treaty between the United States and Russia of March 30, 1867, pass unimpaired to the United States under that treaty?'

"The fourth question is hardly worth referring to an arbitrator, as Great Britain would be prepared to accept it without dispute.

"The fifth proposed question runs as follows:—

"'5. What are now the rights of the United States as to the fur seal fisheries in the waters of Behring Sea, outside of the ordinary Territorial limits, whether such rights grew out of the cession by Russia of any special rights or jurisdiction held by her in such fisheries or in the waters of Behring Sea, or out of the ownership of the breeding islands and the habits of the seals in resorting thither and rearing young thereon and going out from the islands for food, or out of any other fact or incident connected with the relation of these seal fisheries to the territorial possessions of the United States?

"The first clause, 'What are now the rights of the United States as to the fur seal fisheries in the waters of the Behring Sea outside of the ordinary territorial limits?' is a question which would be very properly referred to the decision of an arbitrator. But the subsequent clause, which assumes that such rights could have grown out of the ownership of the breeding islands and the habits of the seals in resorting thereto, involves an assumption as to the prescriptions of international law at the present time to which her Majesty's Government are not prepared to accede.

"The sixth question (relating to the establishment of a closed period in seal fishing) which deals with the issues that will arise in case the controversy should be decided in favour of Great Britain would perhaps more fitly form the substance of a separate reference. Her Majesty's Government has no objection to refer the general question of a close time to arbitration, or to ascertain by that means how far the enactment of such a provision is necessary for preservation of the seal species; but any such reference ought not to contain words appearing to attribute special and abnormal rights in the matter to the United States.

"There is an omission in those questions which I have no donbt the Government of the President will be very glad to repair, and that is, the reference to the arbitrator of the question what damages are due to the persons who have been injured, in case it shall be determined by him that the action of the United States in seizing British vessels has been without warrant in international law. Subject to these reservations, her Majesty's Government will have great satisfaction in joining with the Government of the United States in seeking by means of arbitration an adjustment of the international questions which have so long formed a matter of controversy between the two Governments."

### A FANCY CABINET.

THE *Nippon*, which has been distinguishing itself during the present year by manufacturing sensations within the four walls of its office, gives its idea of the Cabinet likely to be formed if Count Ito becomes Minister President. The various portfolios are thus assigned:—Foreign Affairs, Viscount Okabe; Home Affairs, Mr. Shirane; Finance, Mr. Watanabe; Army, General Takashima; Navy, Viscount Kabayama; Justice, Mr. Miyoshi; Education, Mr. Kuki; Agriculture and Commerce, Mr. Mayeda; Communications, Mr. Mayejima; while the Household Department is given to Viscount Shinagawa; the Presidency of the Privy Council to Count Yamagata, and the Chief Secretaryship of the Cabinet to Mr. Ito Myoji. The Vice-Ministers are Messrs. Kawase, Kyoura, Nakamura, Kawakami, Ito (Shunkichi) Kawazu, Hamao, Saito, Kurino and Hanabusa; the Vice-President of the Privy Council being Count Yanagiwara (Sakimitsu.)

### BALL AT THE ROKUMEIKAN.

ON Saturday evening, the 18th instant, a ball was given in the Rokumeikan by His Excellency the Chinese Minister. An unfortunate accident had temporarily crippled Lord Li, and it was at one time feared that he would not be able to be present at the ball; but His Excellency braved the suffering of a badly scalded foot, and though not in a condition to stand, managed from his invalid's place on a sofa to discharge all the duties of a most genial host. His Excellency was admirably assisted by Madame Sienkiewicz, who, in the absence of a Lady Li, kindly played the part of hostess with all her well known sunniness and grace. The party was eminently successful. Remarkable as the first instance of a general entertainment given in Japan by a Chinese Representative, the new departure inspired good humour and satisfaction from the outset, and all seemed anxious to distinguish the occasion in the manner deemed most likely to please their hospitable host, namely, by enjoying themselves thoroughly. Whether by happy accident or skilful calculation the number of guests just sufficed to fill the fine suite of rooms without crowding them, and the dancers were consequently able to enjoy themselves in a manner very unusual at such entertainments in Tokyo. It goes without saying that the decorations were beautiful and the supper excellent. Within the very short period of his residence in Tokyo, Lord Li has earned much popularity, and for his own sake, not less than on account of the novelty of the occasion, there was a general desire that the ball should prove a success. Hitherto the attitude of the Representatives of the Middle Kingdom in Japan had been one of more or less reserve in respect of social matters, and the public, while fully recognising that good reasons might be advanced for this habit, nevertheless found it slightly out of harmony with the fashions of the capital of modern Japan. The present Minister's new departure brings his Legation into welcome concord with the times and its circumstances.

### COUNT YAMAGATA.

THE *Choya Shimbun* contains a note which seems to embody a significant suggestion. The Cabinet being subject to frequent changes, any of the portfolios may be found in the hands of a man not specially indicated for the post by education or experience. Thus the War Department may at some time be presided over by an official whose speciality lies in the direction of Agriculture or Commerce. It has not been so hitherto in Japan. Ministers of War and of the Navy have always been trained officers of the services. But party government is coming in sight, and everyone knows what anomalies have resulted from party government in England, where the First Lord of the Admiralty is scarcely ever a sailor, and the Secretary of State for War is just as likely as not never to have learned how to handle a battalion. Now the affairs of the Japanese Army, says the *Choya*, lie entirely within the sphere of the Imperial prerogatives, according to the Constitution, and it would be intolerable that His Majesty should be exposed to the risk of having to consult on military matters with a Minister absolutely ignorant of such things. Therefore there is talk of establishing a Board of Military Privy Councillors, to act as advisers to the Emperor. Should the design be carried out, Count Yamagata would evidently be the very man to act as President of the Board, in the event of his resigning his present position.

### THE DISPOSITION OF POLITICIANS.

HERE is the latest about political parties and Treaty Revision—we translate it from the *Jiji Shimpo*:—"The majority of the Radical Party are opposed to Viscount Aoki's programme of Treaty Revision, though some, as Mr. Kono Hironaka and so forth, do not take an adverse view. The Radical Club, the National Radicals (*Kokumin Jiyu-to*, who are said to be Count Goto's party), the Kyodo Club and the Independents seem to be in favour of the programme. But Messrs. Furusho Kamon, Oka Jirotaro, and Amano Jakuyen of the Kyodo Club, and Mr. Masuda Shigetaka of the Independents, do not like the idea of allowing mixed residence, while Viscount Tani and Messrs. Miura and Tomita in the Upper House oppose the intended arrangement as to Tariff Revision. As for the *Kaishin-to*, no one knows exactly what attitude they mean to take, and several members of the Diet are trying to bring about a meeting of the Party, in order to elicit its opinion.

### AMENITIES OF PRISON IN JAPAN.

AMONG the many singular incidents of life in Japan, a very noteworthy one is mentioned by the *Jiji Shimpo*. It appears that in the Senji district of Tokyo, there is a prison called "Kosuge Kangoku." Formerly the site of the

Digitized by Google

"Kosuge Goten," a palace of the Tokugawa Shoguns, the grounds of the prison contain some splendid cherry trees, which, in the blossoming season, present a charming spectacle. Japanese cannot possibly live in the neighbourhood of flowers without enjoying them. That would be sacrilegeous in the extreme, even where criminals undergoing sentence are concerned. It has consequently been the custom ever since the Kosuge jail was established, to grant a holiday to the prisoners when the cherry trees are in full bloom. The 19th instant was the day chosen this year, from which date we infer that the cherries are of the double order. The prisoners made the most of their respite. They got up theatrical performances, had dancing, delivered speeches, and amused themselves in other refined fashions, "feeling," says the *Jiji*, "as if heaven had come to them in the midst of hell."

### COUNT YAMADA.

SPECULATIONS about Count Yamada's probable successor in the event of his Excellency's resigning the portfolio of Justice, are indulged in by the *Jiji Shimpo*. Three names, we read, are mentioned by knowing folks; Count Tanaka Fujimaru, Mr. Kawano Tokama, and Mr. Iwamura Michitoshi. Among these three, Mr. Kawano's prospects are not favourably regarded, his close connection with a political party being considered to disqualify him. Against Viscount Tanaka's capacity and character there is not, of course, a word to be said, his upright and benevolent disposition being universally recognised. Nevertheless the *Jiji* thinks Mr. Iwamura the most likely candidate, owing to the great popularity he has won in the Department of Justice since he became its Vice-Minister. Besides, he is supposed to stand well in the estimation of Count Ito, towards whom the eyes of the public are turned steadily at this juncture. It is all conjecture, from which we do not venture to deduce any trustworthy conclusions.

### THE RUSSIAN PRINCE IMPERIAL IN CHINA.

OF the various rumours set on foot in connection with the visit of the Russian Prince Imperial to China, the majority have gone the way of all rumours, vanished into thin air. But one survives, and seems likely to survive. It is the statement that the Prince Imperial's programme in China was materially curtailed owing to the discovery that receptions of a purely provincial character, and having nothing Imperial about them, had been prepared for him. His Imperial Highness, according to the original plan, was to have visited Woosung and Chefoo, being met at the former place by the Viceroy Shên and at the latter by the Viceroy Li. Had the two Viceroys gone to these places as delegates of their Emperor, there would have been nothing to criticise. But the story is that, instead of adopting this method, they applied for leave to make an inspection of forts, timing their journeys so as to coincide with the proposed arrival of the Prince at the above named places in their districts. By this means the Emperor in Peking was to be kept in ignorance of the coming and going of the Imperial visitor, and the latter's receptions were to be of a wholly casual and unofficial nature, so far as concerned the Imperial Court. We fail to perceive what good purpose could have been served by such manœuvring, and are correspondingly perplexed whether to credit the tale or consign it to the limbo of previous canards. The reported issue is that the Russian Government, discovering the true character of the contemplated receptions, quietly changed the Prince's programme, and announced that he would not visit either Woosung or Chefoo. It is added that the scheme would certainly have succeeded but for the intractable personality of H.E. Chang Chitung, who refused to act on the instructions of the Northern Superintendent of Trade, and stood out for an Imperial edict. Repeated telegraphic inquires from the Viceroy at Tientsin are said to have failed in eliciting the true inwardness of the Prince's changed programme, the Russian Government answering with invariable uniformity that want of time was alone responsible. It is of course possible that China may have wished to allow the Prince Imperial to pass through her territories without any exchange of the courtesies customary among friendly sovereigns, and even that she may have wished to infuse new vitality into the old fiction which places her ruler above the heads of all other earthly potentates. But is it conceivable that the Viceroy Li would have lent himself to such an ostrich-like device, and above all that Russia would have been made the *corpus vile* of the experiment; Russia, the most autocratically governed Power in the West, and therefore the least likely to overlook a deliberately planned slight to her Heir Apparent? The mischief which stories of this type are capable of working when freely circulated, and their utter untrustworthiness as a rule, make us hesitate to assist in giving publicity to any of them. But men who ought to know what they are talking about affirm, with all assurance, that things are as we have set them down here. Doubtless we shall hear, by and by, that the invertebrate policy of the Foreign Representatives in Peking is responsible for this latest exercise of Chinese idiosyncracies, but if the Foreign Representatives adopted as the basis of their diplomacy the advice so kindly tendered to them by the press at the open ports, there would soon be some lively occupation for Her Majesty's soldiers and sailors in this section of the Orient.

### OPIUM.

THE motion by Sir Joseph Pease in the House of Commons was as follows:—"To call attention to the Indian opium traffic, the cultivation of the poppy in Bengal, and the manufacture of opium by the Government, and its sale under Government licence; and to move—That this House is of opinion that the system by which a large portion of the Indian Opium Revenue is raised is morally indefensible, and would urge upon the Indian Government that they should cease to grant licences for the cultivation of the poppy in British India, except to supply the legitimate demand for medical purposes, and should at the same time take measures to prevent any increase in the production of the Malwa opium."

### THE MEETING OF PREFECTS AND GOVERNORS.

THE usual annual meeting of Prefects and Governors is now in session in Tokyo, Marquis Hachisuka, Governor of Tokyo, sitting as Chairman. The subjects of discussion and the instructions conveyed or speeches delivered to those local officials by members of the Cabinet, are never reported in detail, but the vernacular press will doubtless furnish some information ere the session closes. The *Chiho-kan Kaigi* has always been regarded with affection in Japan, as the germ of representative institutions, but its deliberations have lost all interest in that sense now that the Diet is an accomplished fact.

### SCHOOL FOR DEAF AND DUMB.

IT will be remembered by Tokyo residents that a school for the deaf and dumb was for some time located in a bare and unadorned patch of ground in the immediate neighbourhood of the great Honganji Temple, in Tsukiji. In its rooms various displays of work executed by the pupils were from time to time held, and it was here that the pictures of Mr. Theodore Wores were exhibited some three years ago. The building was a substantial brick one, its proportions somewhat out of keeping with the use to which it was put, owing to the fact that it had been originally intended merely as one wing of a considerable edifice, an intention never carried out. Now it is deserted and dark, the window panes are smashed, and the whole place has an air of desolation. The school, however, as an institution, has not been broken up, but is incorporated in the School for the Blind. A spacious wooden structure to house the joint institution is now approaching completion right beside the University Botanic Garden in Koishikawa, one wing of which will be devoted to the accommodation of deaf and dumb pupils. The neighbourhood is certainly far more healthy and attractive than the flat and swampy banks of the Tsukiji canals.

* * *

*Apropos* of Botanic Gardens; there is a large Botanic Garden in Shinjuku situated not far from the railway station, and connected with the Imperial Household Department. All the guide-books minutely describe its arrangements and contents and the attractions it has to offer to the public. But the public who take the trouble to visit it will be grievously disappointed. Arrived at the gate, they will find the extraordinary announcement—"Notice to Visitors —No Admittance."

### COUNT YOSHII.

COUNT YOSHII expired on Wednesday at 1 p.m., at his residence in Nagata-cho. The paralytic seizure that carried him off declared itself on the 27th ultimo. From the 12th instant it was generally known that his case was hopeless, but his physicians, Drs. Baelz, Takagi, Saneyoshi, and Kashimura, succeeded in postponing the end for many days after it had first seemed imminent. On the 15th instant, he was raised to the First Grade of the Second Class by special decree of the Emperor, and Wednesday, when it became evident that death was at hand, Chamberlains were despatched by the Emperor, the Empress and the Empress Dowager to convey messages of condolence. Counts Kuroda, Oyama and Matsukata were with the dying man from 10 a.m. until the moment of his decease.

* * *

In the *Official Gazette* we find a detailed statement of the late Count Yoshii's services, which we reproduce:—Count Yoshii Tomosane, Privy Councillor, First Grade of the Second Rank, First Order of Merit, originally an adherent of the Satsuma Fief, was born in February, 1829, and became, in February, 1865, an official of the Army Staff Office. In June of the following year, he received an annual pension of a thousand *koku* of rice for distinguished services, and in April, 1870, he was appointed Vice-Minister of the Home Office in conjunction with the Vice-Ministry of the Financial Department. In November, 1871, he became Vice-Minister of the Household Department. The following year, in October, he proceeded to Hakodate, to escort a Russian Prince. In April, 1875, he became a Senator, and in August, 1877, was appointed a First Class Chamberlain. In March, 1879, he received the appointment of Assistant Vice-Minister of Public Works, and in June of the following year was made Vice-Minister of that Department, in which post he served until 1884, when he was transferred to the same position in the Household Department. In April of 1885, he was made a Senator, and in February, 1886, he became Vice-Minister of State for the Household Department. April of 1888 saw him appointed a Privy Councillor, and in March of the present year he resigned his office of Vice-Minister of State of the Household Department, and became an attaché of that Department. In April he was raised to the First Grade of the Second Rank.

### THE RUMOURS.

IT is asserted by the *Jiyu Shimbun* that Viscount Aoki, happening recently to meet Count Oki, President of the Privy Council, asked the latter to take steps to insure the better guarding of diplomatic secrets communicated to the Council, the alleged ground of the request being that the public appeared to have recently obtained information which ought to have been inaccessible. Probably this story belongs to the category of those circulated lately by a section of the vernacular press, the *Kokkai's* canard for example. The editor of the *Choya Shimbun* provoked an outburst of considerable vehemence because he ventured to query the correctness of the *Kokkai's* microscopic account as to the signing of a revised treaty, the number of articles it contained, the circumstances of its papyrography, or so forth. But it is now very well known that all this pinnacle of fable, which the *Kokkai* has diligently endeavoured to prop up by further elaboration, rests on no better foundation than the lively imagination of a servant boy, who knew that a document

Digitized by Google

had been papyrographed, and being able to count its sheets, conjectured its contents. The conjecture was entirely erroneous, but it furnished a grain of truth whereon to poise the *Kokkai's* structure. The *Kokkai* is one of the best and most enterprising newspapers in Tokyo, so that its error on this occasion is commiserated. The public must have sensations, however, and certain journals bow to the necessity. The *Nippon's* method is, perhaps, the safest, as exemplified in its latest tale about Korea. It declared that the Chinese Northern Squadron had taken possession of a Korean island in the neighbourhood of Port Hamilton, but it was careful to note that the island is not marked on any map. In other words, the Northern Squadron had discovered an island and occupied it. Such a story could not hurt any one seriously, and might entertain a few. But the *Nippon* should remember that it has a *Fidus Achates* in Yokohama, who accepts all its revelations as gospel, and re-issues them for the benefit of innocent readers. A responsibility rests on the shoulders of the Tokyo journal.

### THE "JIYU."

THE promised new Radical organ made its appearance on the 22nd inst. It is called the *Jiyu*. Thus there are three journals of that name now published in Tokyo—the *Rikken Jiyu Shimbun*, the *Jiyu Shimbun*, and the *Jiyu*. The *Jiyu* introduces itself very briefly to the public. "Alas!" it says, "the *Jiyu Shimbun* has been polluted. Some of its staff, entering into collusion with the *Kokumin* Party, would sell their liberal principles. Our love of purity renders it impossible that we should endure this upward-floating of the dregs. We have therefore resolved to reject them. The *Jiyu Shimbun* will doubtless regret it, but we carry with us the liberal policy, and open new ground to receive it. Questions of connection give us no concern. The *Jiyu* will be published daily from this, 22nd instant. It will be edited by Count Itagaki, Messrs. Kurihara Ryoichi, Yeguchi Sansei, Nemoto Sei, Ikihara Moriyuki, and Miyazaki Seiran, whose whole strength and endeavour will be devoted to it. Count Itagaki's views will, from time to time, find expression in the leading articles, which will then bear his signature. Other members of the *Jiyu-to*, when they publish their views, will sign the articles."

* * *

The *Kokumin* Party alluded to here is supposed to be under the leadership of Count Goto, but we do not understand that it has yet been officially organised as a political party. The *Rikken Jiyu Shimbun* and the *Jiyu Shimbun* are both in their youth, the former having reached only its 245th number and the latter its 137th. Founded ten months ago as the organ of the Radical Party, the editorship of the *Rikken Jiyu Shimbun* apparently left something to be desired in Count Itagaki's opinion, for four months later he started the *Jiyu Shimbun*, in which the public understood that his views would be regularly ventilated. The *Jiyu Shimbun* has now broken from his hold, and the *Jiyu* takes its place. The abbreviation of name in each case may probably be regarded as an indication of the condition of the Count's immediate followers. It is a pity. Count Itagaki deservedly enjoys the respect of all honest, patriotic men, and we would fain see him absolute leader of the Party which he founded.

### THE ORGANIZATION OF A STRONG CABINET.

THE *Jiji Shimpo* thinks the task of reconstituting the Cabinet will not be an easy one. Count Yamagata is not impelled to contemplate resignation because of failures in his policy or because he wishes to obtain another office, but because he sees troublous times before him; and any statesman who succeeds him will have to be prepared to fight many battles. Count Saigo's name has been mentioned, but the Count is too anxious to get rid of his present portfolio to think of assuming new responsibilities. Count Ito's qualifications for the office of Minister-President are great and conspicuous; and it is said the mission of the Minister of the Imperial Household to Kyoto has for its object the bringing back to political life of the Count. Though well fitted to reconstruct the Cabinet at a crisis such as the present, it is not at all likely that Count Ito will accept the office, for under present circumstances he might well think it prudent to abstain from such a post. It may be concluded, then, that if Count Yamagata resigns and Count Ito declines to succeed him, Count Saigo must, though against his inclinations, take the vacant chair. For the forthcoming Minister-President whoever he may be, to temporise with and try to reconcile the different elements in the Cabinet with the hope of prolonging his term of power, would only serve in the *Jiji's* opinion to render the situation within the Government more acute than before. Our contemporary, therefore, advises the statesman who may succeed Count Yamagata to strive to surround himself with friends, and thus to strengthen his position. Some people may think that this would excite popular discontent, but the respect attaching to the new Minister-President may be expected to neutralise any such unfavourable sentiment.

### SUSPENSIONS.

THE *Chiusei Nippo* and the *Katsu-Sekai* have been suspended. They are both Conservative organs, the former being Viscount Torio's daily newspaper, and the latter a monthly magazine. The *Chiusei Nippo's* offence consisted in the publication of a series of articles the most violent we have ever read in a Japanese journal, or indeed in any journal. It is impossible to doubt that the editors of the paper deliberately made up their minds to provoke suspension when they composed and inserted such seditious tirades. Describing the present Cabinet Ministers as "wild beasts" and "venomous reptiles," the articles teemed with language calculated to excite disturbance and bring the Administration into public contempt. We do not believe in the general policy of suspending newspapers, but if ever justification existed, it was in the case of the *Chiusei Nippo*. As for the *Katsu-Sekai*, it published a letter—or rather an article in the form of a letter—addressed to Viscount Aoki, and couched in language to which no expression save brutal can be properly applied. We shall not attempt to explain the gist of the disgraceful and extravagant lucubration. The curious may read it for themselves. Suspension is not the only kind of punishment that should be meted out to the writer and publisher of such a vulgar and ferocious attack upon an individual Minister of State.

### THE CHINA ASSOCIATION.

THE annual dinner of the China Association, eaten at the offices of the P. & O. Company, Leadenhall Street, was a very great affair. Over a hundred guests were present, Sir Thomas Wade being in the chair and Mr. W. Keswick in the Vice-Chair. In the course of a long speech, to the toast of prosperity to the China Association, the Chairman made the following allusion to Japan:—

He would now pass on to Japan—a country where he thought we had even a greater advance to recognise (than that made by Hongkong) although not an advance precisely of the same kind. There was nothing like the development of commercial enterprise which we could claim for our own colony, but we could say this of Japan—that although intercourse had been forced upon her it is true some thirty-three years ago—or at all events she had accepted the fact that intercourse was no longer to be avoided, he thought it must be conceded that not in the world's history was there an instance of an Empire so determinedly exclusive as Japan had been which, in such a comparatively short period had made such extraordinary progress in the direction of outer civilisation as Japan had. He had been particularly struck by the late discussion arising out of the revision of the treaty, in which the Japanese virtually claimed to exercise their own jurisdiction over foreigners, and, subsidiarily he presumed, to resume their rights over land which may have been considered to be ceded to foreign occupants. He thought that the paper recently forwarded to the association purporting to be from the pen of a Japanese lawyer was in itself a proof of what he said of the extraordinary advance made by the Japanese. Indeed, he thought that the very claims themselves argued a very considerable advance on the part of the Japanese, even if we were unable to go the whole way with those claims. His own personal view was not quite so extreme as that of many of his countrymen who were—as he thought not at all unreasonably—disinclined to concede ex-territorial rights. He thought that the Japanese were seriously in earnest, and that was precisely the difference between them and other Orientals. He did not apprehend such danger to their liberties and rights that he would if the same powers were suggested for instance in China. As regards land he certainly should hope that in any modification of existing arrangements that might be attempted, the interests of foreigners, who had so to speak, taken land upon trust should be very carefully safeguarded. But without presuming to suggest to the Anglo-Japanese community, or to the China Association, which, in a certain sense, represented it, or to the Foreign Office, with whose progress in the negotiations he was unacquainted except what he had learned from the reply to a letter addressed to the Foreign Office by the China Association that these negotiations were still in progress, he should hope, he trusted without being presumptuous, that there might be found a means of meeting the Japanese some distance at all events, in the matter of jurisdiction. He thought that the recent correspondence suggested to them that it would right to compliment the Anglo-Japanese community upon their very great moderation, for nothing could have been more temperate in tone than their remonstrance in defence of an existing right, which it was not at all unreasonable that they should be unwilling to surrender; and he thought, on the other part, that the China Association was to be congratulated for its vigilance and the promptitude with which it came to the support of the Anglo Japanese community. He thought it was evidence of the utility of the China Association.—(Applause.)

### THE GERMANS AND THE JAPANESE DRUG TRADE.

"AT a recent meeting of the Berlin *Pharmaceutische Gesellschaft*," says the *Chemist and Druggist*, "Mr. Fritz Riedel read a paper on a collection of Japanese drugs exhibited by his firm, and subsequently presented to the Museum of the young society. The paper commenced with a glowing account of the importance of Japan as a field for the export of German galenicals and a reference to the Teutonic leanings of the modern Japanese reformer. Mr. Riedel rejoiced in the knowledge that the Japanese army was being drilled and organised on a German pattern. From that one great engine for the destruction of human life on German principles, the army, the author's remarks drifted smoothly on to the medical profession. That profession, in Japan, was also imbued with German ideas, large numbers of young Japanese now practising in their native land having obtained their degrees at German universities. German pharmacy finds its main exponent in the country of the chrysanthemum in Professor Nagai, who qualified at German universities in the seventies. Professor Baelz, of Tokyo, is prominent among the German medical practitioners of high repute established in the principal ports of the country, and whose native pupils, when they become practitioners on their own accord, spread philo-Germanic views into the remotest districts of the country, and are always amongst the most eager inquirers for, and experimenters with, the new preparations that issue from German laboratories. Mr. Riedel spoke highly of the Naimusho, the department charged with the duty of applying to all pharmaceutical preparations imported into Japan the very severe tests of the Japanese Pharmacopœia. Goods falling below that standard are not allowed to enter; those proved to be adulterated are confiscated. In return for the preparations which she buys from Germany, Japan has very little to offer to her European customers in the way of materia medica. In her dominions the rhubarb, the musk, and the tea of China are wanting, and wax, galls, camphor, and a few essential oils are the main constituents of the Japanese quota to the world's drug trade. But the collection shown at the meeting consisted principally of drugs unknown, or very little known, out of Japan, although thirty-four specimens among the number represented articles in use among the Chi-

Digitized by Google

nese, such as the root of *Scrophularia Oldhami;* the fruits of *Forsythia suspensa*, *Tribulus terrestris*, and *Quisqualis chinensis;* the seeds of *Amomum xanthioïdes*, *Murica cohinchinense*, &c. Among the purely Japanese drugs are seeds of *Canaralia incurva*, *Elosia argentea*, *Phaseolus radiatus;* fruits of *Stemone sessifolia;* root of *Hydrangea thunbergii*, *Nardostachys jatamansi* (formerly official on the continent as *Spica vel Nardus indica*), the rhizome of *Acorus gramineus*," &c.

### THE THREE NEW BANKS.

FROM time to time during the past two years public interest has been excited by statements that the Government was on the point of establishing three new Banks, namely, an industrial bank, an agricultural bank, and a bank of movable property. It was fully expected that a Bill to give practical effect to this programme would be officially submitted to the Diet during its first session, but, owing probably to pressure of other business, the Government took no action in the matter. We now read in the *Tokyo Shimpo* that the Minister of State for Finance is giving earnest attention to the matter, being persuaded that the establishment of these banks would have a useful effect in reviving trade. A detailed scheme is said to have been prepared, and will probably be submitted to the Diet when it meets this fall. Several members of the Lower House are believed to be in favour of employing the surplus of 6½ million *yen*, obtained by the prescribed reduction of expenditure, for the purposes of the Banks. The *Shimpo's* information as to the functions of the Banks is that the Industrial Bank will advance funds on the security of real property, or against promissory notes of the Agricultural Bank or of a Municipal Government, to persons desiring to start industrial enterprises; that the Bank of Movable Property will advance against shares of a public company or other similar security; and that the Agricultural Bank will make loans to small farmers on the security of their farms. The advances will be for long periods, and at low rates of interest. With regard to the constitution of the Industrial Bank and the Bank of Movable Property, the idea is that they will be carried on as joint stock companies, and that they will have note-issuing power, the notes being guaranteed by their capital, and in part by the securities against which they make advances. They will sell their own bonds at 6 per cent., and lend their money at 7 per cent., by which means the proceeds of ten millions worth of bonds, if fully employed, would give a profit of 100,000 *yen* annually; and supposing the issue of bonds to reach fifty millions, then a profit of half a million annually would be secured. The *Shimpo* says that with a paid up capital of ten millions, bonds to the extent of fifty millions might be issued, the capital itself being lent at 7 per cent. In that case the yearly gross income would be 1,200,000 *yen*, or 12 per cent. on the paid-up capital; and allowing 400,000 *yen* on account of expenses, there would remain a profit of 8 per cent. According to this programme the Banks would serve as media for collecting money from capitalists willing to lend at 6 per cent., and distributing it among persons who could afford to pay seven per cent. for the privilege of using it in industry and trade. The statement is very crude—so crude that to criticise it would be a waste of time. We give it, therefore, for what it is worth. Our contemporary adds that the relation between the Central Industrial Bank and the Agricultural Banks in different parts of the empire, would be similar to the relation existing between the Bank of Japan and the National Banks.

### CURIOUS CLAIMS.

NOTHING is easier, of course, than to make out a seemingly specious case in favour of the strange contention of the Citizens' Committee that "a radical amendment of the press laws and the law of public meeting is a *sine qud non* to the entertainment of the demands of the Japanese Government" in the matter of Treaty Revision. In discussing such a question thoughtless persons are quickly influenced by claptrap about the blessings of liberty and by frothy invectives against truckling to authority, bowing the neck of freedom under the foot of autocracy, and so forth. We, who venture to suggest that the subjects and citizens of foreign States when they come to Japan for their own pleasure and profit, have no manner of right to demand larger privileges of speech and pen than they enjoy in their own countries, or than Japan can concede with safety to herself, understand very well that we expose ourselves to accusations of truckling, toadying, and such like meanness. But to be made the target of these refined missiles does not greatly distress us. No voice has been raised more distinctly than ours in favour of freedom of speech and of the press, and we have never failed to point out that until the Japanese nation enjoys these privileges, it cannot claim to rank with the most highly civilized peoples of the West. But there is a wide gulf between this general contention and the special claim that foreign States, have a title to insist upon the practical operation of the most advanced principles of liberty in Japan, merely to suit the convenience of a few hundreds of their own nationals. Japan's first duty is to herself. The struggle made by her people to qualify for the enjoyment of privileges still withheld from the subjects of more than one Great Western Power, promises to be soon crowned with success. The event, however, is one which she must be left to shape entirely for herself. Foreigners have nothing whatever to do with it, nor would any independent country endure dictation from outsiders in matters that concern only the preservation of peace and good order within its own territories. We are not entitled to ask from Japan anything more than that her laws shall be in accord with the general principles of Western jurisprudence, and that their administration shall be reasonably competent and trustworthy. Her regulations as to the press and public meetings are entirely beyond the sphere of our interference. No doubt it would be very pleasant to import into this country the absolutely unique liberty of the subject enjoyed under Anglo-Saxon institutions, and if Treaty Revision could be safely and reasonably employed to assist in procuring this blessing for Japan, we should by all means advocate its employment. But freedom of speech and of public meeting are not in any sense capable of being dragged into Treaty Revision negotiations. They have never once in all these years found their way into the field of diplomatic discussion, and the notion that such things could possibly be regulated by international agreement is perhaps the most thoughtless and least defensible ever advanced in connection with the subject of Revision. It cannot surprise anyone to find such a claim standing in the context of that other extraordinary misrepresentation about the "confiscation" of the lands now held in the foreign Settlements, but we fail to see why a sound and simple cause should be thus needlessly disfigured by unreason and exaggeration.

### THE CABINET.

THE *Jiji Shimpo* does not care who is raised to the chair of the Minister-President, but hopes that the present crisis will be promptly terminated, and that the new Cabinet will be a strong one. Though the first session of the Diet was closed in peace, it does not follow that the same conditions will attend the next session; in any case popular feeling is distinctly hostile to the present Cabinet, and the public mind bent on finding grounds for complaint against it. The prospect before it is a pretty serious one, for in addition to the subject of Treaty Revision there can be no doubt that the Korean question will confront it at no distant day. The new Cabinet, then, must be powerful enough to successfully encounter the difficulties that may present themselves, otherwise it will be impossible for the administration either to preserve public peace or to uphold the national prestige. It is idle to expect that such a Cabinet can be formed under Count Saigo, who has hitherto been satisfied with the Cabinet of Count Yamagata, and whose changes would, in all probability, be of a very trifling character. It is probable that if Count Ito were appointed to the ruling position in the Cabinet certain reforms might be effected; but the *Jiji* cannot forget that it was during Count Ito's tenure of office at the head of the Imperial Household Department that the creation of the orders of nobility took place with their accompaniment of splendid honours and extravagant money grants, and that the mania for foreign entertainments, balls, parties, &c., prevailed. It is to be expected, therefore, that his Cabinet would consist chiefly of aged scholars and representatives of the old Court families. Whether such a Cabinet could be popular is doubtful, though a statesman of Count Ito's powers might so far succeed in adapting himself to the popular tastes as to win a certain amount of public favour. His term of power might, however, be marked by sudden changes liable to injure the stability of his Cabinet, and it is a matter of fact that his action in connection with the creation of the nobility and with compulsory contributions from the people for national defence, have caused much dissatisfaction in the public mind. On the whole case, therefore, it is to be hoped that a strong Cabinet may be organized under a Minister-President competent to deal with the crisis.

### THE "EMPRESS OF INDIA" AND JAPANESE PASSENGERS.

THE vernacular press of on Thursday alludes in terms of evident surprise to an incident said to have occurred in connection with the departure of the *Empress of India* from Yokohama. A number of Japanese, we read, variously stated at from 30 to 38, applied to the Agents of the big steamer for steerage passage on the 17th inst. Tickets were refused, however, on the ground of want of room. The would-be passengers then made inquiries on board by means of Mr. John Hall and others, when information was received from an officer of the steamer to the effect that a private agreement existed between some Chinese in Vancouver and the head office of the Company, according to the terms of which no Japanese could be taken in the steerage. The *Kokkai's* version of the affair differs somewhat from the above. It says that the Japanese bought their tickets and sent their luggage on board, but were told by the officers of the ship that they could not be carried. Enquiries made by us in Yokohama go to show that this story is quite untrustworthy. The Agents affirm that want of room was the sole and only cause of the refusal to grant passages. They would have been delighted to take five hundred Japanese in the steerage had it been possible to accommodate them, especially as steerage passengers are about the most profitable freight a steamer can have; but it happened that the *Empress of India* had to carry a double complement of cooks, bakers, stewards, and waiters, these extra hands having been shipped in the East to take the place of Europeans who came out in the vessel, but will leave her at the other side and go home across Canada, having signed for one trip only. Space available for passengers, under ordinary circumstances, was thus taken up. This very simple explanation ought to have commended itself to the credence of reasonable folks, whereas the silliness of the tale about a secret agreement between the Company and the Chinese should be patent to every one. We may mention that Mr. J. Hall, to whom reference is made by the *Jiyu Shimbun*, had not heard a word about the affair until we addressed an enquiry to him on Thursday afternoon.

### "THE CHINESE TIMES."

THE death of the *Chinese Times* is a heavy loss to journalism in the East. For five years the Tientsin weekly had been a constant source of information and pleasure to readers in China and Japan. Edited in uniform accordance with principles of true scholarship and dignified refinement, the defunct journal can boast a record entirely free from unjust censure and unkind bickering—elements that too often disfigure the careers of more ambitions sheets in the Far East. Its knowledge of Chinese affairs was unique, and its gifted editor knew how to pre-

Digitized by Google

sent his knowledge to the public with all the charms of graceful diction and skilful marshalling of facts. When such a paper fails to obtain sufficient support, it becomes exceedingly difficult to define the causes that lie at the root of journalistic success in the East. One patent explanation, however, presents itself on the surface. Here, as in the West, the backbone of a newspaper is its advertisements. Circulation is not, indeed, a secondary question where rates of subscription are treble or quadruple of those in London, Paris, or New York; but circulation without advertisements cannot suffice. Tientsin had only a pittance of advertisements to offer, and so soon as this fact was recognised, people who understand journalistic ways and means foresaw that the *Chinese Times* could never enrich its proprietors. Whether it was originally intended to enrich them, we cannot say. Our idea is that the purpose of its establishment, as well as the spirit that sustained it during several years of straitened circumstances, were due to a higher motive than mere pecuniary profit; that it was intended to play the part of a political educator in ordinary times, and to discharge a larger function in the event of international emergencies. But it died before the public could clearly decipher these aims, and nothing remains but to mourn it. To the day of its decease it preserved the same high, calm tone, taking its failure as brave men take the ills of life, without complaint and without perturbation. We shall miss it perpetually. We shall miss those lucid, impartial leaders that threw so much light into the alleys and corners of Chinese politics and Chinese life, and we shall miss the poets' corner, where so many a gem of unsuspected talent shone for the delectation of delighted readers. It was a feature without precedent in the Orient, that poets' corner. The fingers of "Tungchia" and his—or her?—lesser fellow-songsters might never have "woke to ecstacy the heavenly lyre" had not the *Chinese Times* offered them its aid, and for this alone we owe it a debt of lasting gratitude. Farewell, true reader of the times and kindly critic of your fellows. Journalism in the East was honoured by your association, and loses heavily by your loss. We cannot more fitly send our parting greeting than by quoting the last stanzas of the beautiful poem, "Life's Pro and Cons," that graced your last number:—

We lose, but live—we win, yet die; then something men call fame
Embalms the dead, whose glory's seen best in some other's shame.—
Thermopylæ's the picture—the Persian host the frame!
And just as oft—what matters it?—approve we or condemn,
'Tis victory is mere setting—defeat's the real gem:
Humanity welds gain and loss in one grand diadem!

### THE TEI SCANDAL.

THE Tei affair still awaits complete elucidation. When Mr. Numata Masanobu announced himself as the person who had sent the anonymous letter to the *Nippon*, it seemed as though the truth must be soon ascertained. But a new complication now arose, for whereas Mr. Numata stoutly insisted that he had obtained the letter, or rather a copy of the letter, from Mr. Tao Dachun, Japanese Interpreter at the Chinese Legation, Mr. Tao, with equal vigour, denied the smallest knowledge of the whole transaction. Mr. Numata has become one of the defendants of the action brought by Mr. Tei, and the preliminary investigation will take place in a few days. Should the magistrates send the case forward for trial, as they are pretty certain to do, Mr. Tao will doubtless have to appear in Court and make good his denial of having given the letter to Mr. Numata. Rumour asserts that, in view of troublesome contingencies, the Chinese Minister thinks of sending Mr. Tao away, but we should think that Lord Li will not take any step so ill-advised. Mr. Tao's departure while the case is under investigation would be construed in one sense only by the public, and the Chinese Representative must understand that very well. The *Kokkai*, which ventilates the rumour, says that one of its staff called at the Legation in Kojimachi to ascertain the truth about Mr. Tao, but that he could not gain access to the latter, and was told that any communication must be made in writing under flying seal. The same journal gives space to a tale that one of the attachés of the Legation, whose complicity in the affair had been suspected from the first, is feigning madness, or has gone really insane, and repeatedly in loud accents begs his Minister to pardon him. But these stories are, in our opinion, wild canards. What is apparently known is that Mr. Numata was a candidate for the post in the Legation obtained by Mr. Tei, and that Mr. Tao is a close friend of the former. Our own private information is to the effect that a person has been found who professes himself acquainted with the actual writer of the letter, though he declines to give the name, and that the leading counsel for Mr. Tei has probably succeeded in getting on the track of this gentlemen. It is added that should the suspicions now entertained prove correct, a surprise is in store for the public. Meanwhile, the feeling of indignation that manifested itself originally against Mr. Tei seems to be changing to one of commiseration, and we expect to see confusion soon fall upon his Japanese accusers and their foreign disciple.

### FIRES IN TOKYO.

FROM statistics published by the *Jiji Shimpo* we learn that the number of fires in Tokyo during 1890 was 628, of which 408 were extinguished without causing any serious injury. The destructive conflagrations are divided as follows:—

| | City. | Suburbs. |
|---|---|---|
| Partially destructive conflagrations | 28 | 9 |
| Wholly destructive conflagrations | 31 | 99 |
| Communicated conflagrations | 43 | 10 |

The number of houses destoryed in these various fires was 4,579, the various causes being as follow:—

| Cause. | Number of houses destroyed. |
|---|---|
| Incendiarism | 234 |
| Of suspicious origin | 24 |
| Fire places (eight conflagations) | All extinguished at once or only partially destructive. |
| Stoves (one fire) | 28 |
| Bed-braziers (ten fires) | |
| Lime (34 fires) | 30 |
| Fire to smoke out mosquitos (one conflagration) | 43 |
| Earthen-ware furnace (one conflagration) | |
| Candles (thirteen conflagrations) | |
| Fire-extinguishing pots (seven conflagrations) | 2 |
| Unknown (one fire) | Extinguished. |
| Ashes (forty-three conflagrations) | 1,043 |
| Smith's bellows (two fires) | Extinguished. |
| Ovens (forty-four conflagrations) | 2,387 |
| Braziers (thirty-seven conflagrations) | 3 |
| Straw ashes forty-four conflagrations) | 12 |
| Bath-fires (five conflagrations | 6 |
| Caterpillar fumigations (seventeen conflagrations) | 13 |
| Open fires twenty-one conflagrations) | 176 |
| Night-lights (three conflagrations) | Extinguished. |
| Lamps forty-nine conflagrations) | 341 |
| Matches (nine conflagrations) | Extinguished. |
| Oil-paper (one conflagration) | Extinguished. |
| Camphor (two conflagrations) | Extinguished. |
| Imperfectly extinguished charcoal (eleven conflagrations) | 4 |
| Volatile spirits (two conflagrations) | Extinguished. |
| Incense (one conflagration) | Extinguished. |
| Sparks (four conflagrations) | Extinguished. |

The total area of the houses destroyed was 46,469 *tsubo* (about 40 acres), the number of lives lost, 2, and the number of persons injured, 138.

### THE NEW WHALING SCHOONER "NARWHAL."

THE new schooner built by the Yokohama Engine and Iron Works (Limited) for the Eastern Whaling Co., a full description of which we published several days ago, was to have been launched yesterday afternoon. The tide serving at a quarter to five o'clock, the shores were removed, and the vessel, as she started towards the water, was named the *Narwhal* by Miss May Wheeler, who broke a bottle of wine on her bows. An unforeseen obstacle appeared here, however. Built on a piece of ground (adjoining the P. M. Co.'s Coal Wharf) considerably above the high water level, and the seaward side of which is faced by a breast-wall, the vessel could only be safely launched by cutting a gap in the wall and excavating a channel from the vessel's stern out till deep water was reached, the greatest depth available close to the wall being about three or four feet, whereas the ship required at least seven feet. The gap had not been dug deep enough, however, and the result was that after moving nearly a length the ship brought up. By means of jacks and other appliances she was again started and travelled about another length in the channel made for her, being supported on floating ways anchored on each side of the excavation, but another stoppage then took place, caused by some chains jamming under her heel, the result no doubt of a disarrangement of the cradle. The efforts made on land to get the ship off were supplemented throughout by the P. and O. tug, which was subsequently reinforced by the old P. and O. launch *Stork*, but it was ultimately deemed advisable to shore the vessel up and leave her for the night, the *Stork* being ordered to stand by in case of accident. A pretty hard southerly gale prevailed during the night, but this of course could not harm the new ship. The efforts to launch her were renewed this morning, but up till the time of our going to press they were not successful. There is every reason, however, to hope that the *Narwhal* will come off safely on the afternoon's tide. During the operations Mr. H. Cook, who was in charge of the launch, and under whose well trained supervision the ship was built, received a blow from a tautening tow rope leading from the P. & O. tug to the new vessel. He was on board the *Stork* when the accident occurred, and Dr. Wheeler, who had accompanied Mrs. Wheeler and their danghter to the launch, at once went off to Mr. Cook's assistance. Though suffering from a cut on the face and from some degree of shock, Mr. Cook's injuries were not considered at all serious.

### RAILWAY ACCIDENT.

AN accident of a serious character occurred on the 20th inst. at the Shimbashi Terminus of the Tokaido Railway. The 1.50 p.m. train from Yokohama, not being checked at the proper point when entering the terminus, ran into the buffer-stops, with the result that the engine and the carriages immediately behind it were more or less broken, one passenger being severely hurt, another badly cut about the head, and several greatly shaken. The cause of this strange mishap has not yet been fully elucidated. It looks like nothing more or less than careless driving. According to the orders, trains entering the terminus are brought to a stand by means of the hand-brakes, the vacuum brakes not being employed except under special circumstances, when they are always available, or should be always available, at a second's notice. It would appear that the vacuum brakes were not applied at all same day, and that the means for averting disaster were left unused. Some explanation may possibly be forthcoming, but at present the natural conclusion is that those responsible for the control of the train exhibited a degree of carelessness very disfiguring to the excellent record hitherto made by Japanese drivers and guards.

### THE EMPEROR AT THE FINE ART EXHIBITION.

THE Emperor visited the Fine Arts Exhibition at Uyeno on the 20th instant, at 2 p.m. His Majesty was accompanied by Marquis Tokudaiji and a number of Chamberlains. Viscount Sano, President of the Art Society, acted as guide, and the Emperor, in passing round the galleries, gave audience to several members of the Society. Arrangements had been made for an interesting work by way of addition to the exhibits; namely, the forging of a sword-blade in the old Japanese style, by the well known sword-smith Miyamoto Kanenori, who made the sacred sword for the Ise Shrine, some time ago, by Imperial order. Miyamoto worked under a little shed erected just before the verandah of the central room in the main building of the Exhibition. He was dressed in the garb of the skilled artisan of former days, namely, the robe called *sui-kan* and the head-dress known as *yeboshi*, his mouth being covered with white linen. The celebrated engraver, Uchida Unsui, also cut some ideographs on a crystal seal in His Majesty's presence. The blade and seal were presented to the Emperor by Viscount Sano. Among the exhibits purchased by His Majesty was a beautiful little porcelain vase, by Makuzu of Ota, having round the body a belt of clouded

Digitized by Google

red from which a dragon emerged, the space below the belt being covered with a tessellated design in relief. This vase had already attracted much notice, but its very high price had deterred purchasers. Another Imperial acquisition was a vase of curiously mottled reddish lilac, with maple leaves in darker red beneath the glaze, by Takemoto. His Majesty remained at the Exhibition for two hours.

### THE CONSERVATIVES.

ACCORDING to the *Kokkai* there is a disposition on the part of Conservative leaders to organize strong opposition to the present programme of Treaty Revision. A certain Count, as mysterious as the undiscovered island seized by the Chinese Northern Squadron, is said to have consulted with Viscount Torio on this subject at Atami, and the Viscount, returning to Tokyo on the evening of the 21st, at once placed himself in communication with the leading men of his party in order to arrange a tilt at the Government. The impalpable Count meanwhile remains at Atami working in the same cause, a species of cōoperation savouring of the action of Messrs. Tremlow and Brewer in the Veneering election campaign. It is a little unfortunate for Viscount Torio and his fellow-agitators that their organs, the *Chiusei Nippo* and the *Katsu-Sekai*, should have committed such resolute suicide at this juncture. The Conservatives are not a powerful coterie at the best of times, and the loss of their representative publications is a somewhat serious business. However, this is part of the tournay, perhaps.

### A BEGGAR WHO HAS BETTERED HIMSELF.

THE *Kokkai* tells a picturesque story. A few days ago, it says, a number of beggars had collected at one of their favourite haunts in Kyoto and were basking in the spring sunshine and in hopes of imminent charity, when a highly respectable-looking individual, clothed in Western garb, presented himself among them in an excited manner, and addressed them thus:—"Fifteen years ago I was your fellow-mendicant. I left you to beg here, and it has been my good fortune to rise in the world, until I now occupy an official post in the Home Department at a salary of 40 *yen* a month. I have come to Kyoto on official business, but I could not refrain from visiting my old beggar friends, to greet them and make them a small present by way of souvenir." With these words he produced some coppers, and presented each beggar with the sum of two *sen*, a contribution the amount of which showed a fine care for his old comrades' moral equilibrium.

### THE RUSSIAN PRINCE IMPERIAL IN TOKYO.

A MEETING of some of the principal residents of Tokyo was held on the 20th instant, to consider what steps should be taken by the citizens of the capital to welcome the Prince Imperial of Russia. There was talk of a ball, and also of a Japanese dinner, but the former found little support and the latter seemed scarcely feasible. The meeting ultimately decided that a theatrical performance would be most suitable. A Committee, consisting of the same gentlemen who managed the affairs of the ball given in honour of the promulgation of the Constitution in 1889, was appointed to take control of the arrangements. The names are Marquis Hachisuka and Messrs. Shibusawa, Narabara, Morioka, Ono, and Nishimura, with one other to be subsequently added. The expense of the performance is estimated at 5,000 *yen*.

### THE RUSSIAN PRINCE IMPERIAL.

HIS EXCELLENCY the Russian Minister left Tokyo by the first train on Tuesday morning, and will proceed to Nagasaki *vid* Kyoto and Kobe, to meet the Prince Imperial. According to the latest telegrams received in the Japanese capital the Prince will reach Nagasaki on the 28th instant, instead of the 29th as originally expected. Three of the largest ships of the Squadron have already entered Nagasaki harbour; the remaining five will accompany His Imperial Highness. Among the festivities in the capital during the Prince's stay will be a large ball at the Russian Legation, where a temporary ball-room has been erected for the occasion.

### MARS AND THE MUSES.

A HONEY-PENNED correspondent writes to the *Amoy Times*:—I learn from U.S. Consul Edward Bedloe, that we may expect a visit from the American Squadron under Admiral Belknap between now and August. This will be pleasant news socially, as the officers of that fleet are famously hospitable, and the Admiral, known everywhere as "the incomparable Belknap," has long been a favourite in British and American Society. He deserves his popularity, which must be very great when so clever a writer as Archibald Forbes in speaking of him says, "No naval commander in the Asiatic waters since the days of Commodore Perry can compare in ability and mental power with Admiral Belknap." The Admiral has a young son, a mere boy, who like Algernon Swinburne is both an invalid and a poet. Both father and son are warm friends of Sir Edwin Arnold, the greatest bard of to-day. Lately on the occasion of his daughter's birthday, Admiral Belknap wrote her the following lines:—

TO MISS ARNOLD.

Page after page, and line on line,
Here gems of thought in beauty shine—
The loving hands and gifted powers
Of daughters fair have culled these flowers
To note the round of natal days
And crown each one with Fancie's lays.
Among such pearls of grace and fame
I count it blest to write one's name—
Imprint it mid the Orient themes
Transfigured by rare Edwin's dreams.

G. E. B.

The same day the young lady received poetic contributions from young Grafton Belknap and Admiral Sir Nowell Salmon. When the great English poet saw the book, he added this charming sentiment:—

TO MY DAUGHTER

(On receiving complimentary verses from Admiral Belknap, Commander-in-Chief of the U. S. A. Asiatic Squadron, Grafton his son, and Admiral Sir Nowell Salmon, Commanding H. M's. China Squadron.)

Oh, happy Maid! whom two great Flags conspire
To honour, blending such melodious posies;
When Admirals rhyme, the Muse unstrings her lyre
And binds, in pride, their Mayflowers and their Roses.

EDWIN ARNOLD.

### A QUAINT BLUNDER.

ONE of the queerest mistakes we have seen for some time is made by a local English contemporary, the *Japan Gazette*, which confounds the office of "Secretary of the Treasury" in the United States with that of "Treasurer," and mixes up in hopeless confusion the names of the past and prospective holder of the two positions. Considering that the Secretary is a Member of the Cabinet, whereas the Treasurer is a comparatively petty official, the distinction between the two ought not to be difficult to comprehend. Fancy how we should laugh at an American editor who did not know the difference between the First Lord of the Treasury and the Financial Secretary to the Treasury!

### AFTER THE "GLOW" (WITH APOLOGIES TO MR. LISCOMB).

If one should knock at our front door
At midnight dark and dreary,
And say that I was "some way off,"
Quite motionless and beery;
I would not have you weep and wail,
Nor, in a raging flutter,
Go forth with servants and a light
To fetch me on a shutter;
But let me lie and contemplate
The stars and things celestial,
To rise at morn with early mists
And odours pestilential.

澤町

### ANOTHER JIYU SHIMBUN.

THERE is to be a *Jiyu Shimbun* started in Kyoto on the 1st of next June. The projectors are Mr. Ito Kumano, one of the members of the Diet for Kyoto, Mr. Nishikawa Yoshinobu, a member of the Kyoto City Assembly, and others. The name "*Jiyu Shimbun*" is evidently a favourite.

### NATURALIZATION.

THE idea of a Naturalization Law in Japan appears to occupy the minds of many people, probably because of the erroneous idea that the enactment of such a law has some connection with Treaty Revision. The *Jiyu Shimbun* says that a draft of a Naturalization Law was prepared some time ago and submitted to the Cabinet, but, the latter having taken exception to many of its provisions, the Department of Justice has decided that a new draft shall be prepared, which after approval by the Cabinet, will be submitted to the Diet in its next session.

### THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 18th inst. were as follows:—

| CONVERTIBLE NOTES. | YEN. | RESERVES AND SECURITIES. | YEN. |
|---|---|---|---|
| Notes issued | 98,838,661 | Gold coin and bullion. | 24,993,710 |
| | | Silver coin and bullion. | 18,400,235 |
| | | Public Loan Bonds | 13,470,450 |
| | | Treasury Bills | — |
| | | Government Bills | 22,000,000 |
| | | Other securities | 7,194,998 |
| | | Commercial Bills | 12,769,268 |
| | 98,838,661 | | 98,838,661 |

Of the above total issue of notes, the sum of *yen* 4,486,535 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and *yen* 72,352,126 is in actual circulation, the latter showing an increase of *yen* 1,026,784 as compared with *yen* 71,325,342 at the end of the previous week.

### CHERRY TREES AND RAILWAYS.

THE cherry trees at Koganei have brought much grist to the mill of the Kobu Railway folks this year. On the 12th instant the splendid forest of bloom at that historical spot was in full glory, and no less than seven thousand lovers of nature travelled from Tokyo that day to enjoy the spectacle, paying to the railway more than a thousand *yen*. It is said that no Japanese railway has hitherto taken so much as a thousand *yen* in a day for a distance of 12 or 13 miles, but before admitting that we should like to see the record of the Tokyo-Yokohama line for the days of the great festival at Omori.

### COAL IN HOKKAIDO.

THE output of coal from Hokkaido this year is estimated at 250,000 tons, namely, 150,000 from Poronai, 40,000 from Chibetsu, and 60,000 from Sorachi. Next year when the railway to Mororan is finished, as projected, increased facilities of carriage are expected to give a great impulse to production. An output of 350,000 tons is then anticipated, and it will be shipped to Hongkong, Shanghai, and so forth. Such at least is the account given by the *Jiji Tsutsin-sha*.

### THE IMPERIAL GARDEN PARTY.

THE Imperial Garden Party on Wednesday, at the Yenryokan, was exceptionally pleasant, owing to perfect weather and the remarkably luxuriant blossoms of the double cherries. The Emperor looked in excellent health and spirits. His Majesty graciously took advantage of the occasion to address some words of kindly sympathy to Mr. E. Dun, American Chargé d'Affaires, with reference to the sudden death of the Hon. J. F. Swift.

### SILK.

THE usual spring rumours about the state of sericulture are beginning to find their way into print. We read in a vernacular paper that at some houses in the Osumi district of Sagami province, silk worms had already been hatched on the 11th instant. The same authority adds that the mulberry crop is most luxuriant this year, as much as 30 *kwan* (247½ lbs.) of leaves being procurable for 60 *sen*.

### A JAPANESE LADY AT CAMBRIDGE.

MISS KIYO NISHIGAWA has just passed the junior Cambridge local examination, and distinguished herself in German. This young lady is, we believe, the first Japanese who has entered for the Cambridge course. She has now been five years in Europe, four of which she spent at Dusseldorf College on the Rhine, and one in England.

### TRINITY CHURCH, TSUKIJI, TOKYO.

MORNING PRAYER at 11 a.m., and Sermon by the Rt. Rev. W. H. Hare, Bishop of South Dakota.—Evening Prayer at 7.30 p.m.

Digitized by Google

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

THE question of probable changes in the Cabinet continues to occupy the most prominent place in the columns of the vernacular press. Count Ito is daily expected to arrive in the capital, in company with Viscount Hijikata, who was specially despatched by the Emperor to Kobe to bring back the Count. Some people believe that, if personally desired by the Emperor, Count Ito will not refuse to form a new Cabinet. But it generally doubted whether he will accept the offer. It is also reported that he will do his best to persuade Count Saigo to succed Count Yamagata, and that Count Saigo will ultimately yield to the persistent and united request of his friends. The papers unanimously call upon the members of the Cabinet to relieve the public from the uncertainty and perplexity of the present situation. The opposition journals, especially the organs of the *Kaishin-to*, urge upon the new Minister President, whoever he may be, the advisability of choosing his colleagues from among politicians of the younger generation. These journals believe that the time has come for the purification of the Government from abuses bequeathed as legacies from the despotic clan administration of the past twenty-three years. The present ministerial crisis, according to these papers, has been accelerated by the necessity of forming a Cabinet, better adapted to the needs of constitutional government. It is now time, says the *Hochi Shimbun*, to bring new elements into the Cabinet in order to lay a foundation for the new constitutional régime of the second Restoration. The *Mimpo* too, calls upon the organizer of the new Cabinet—supposing that a new Cabinet is about to be formed—to make a fresh departure by constructing a responsible Ministry, that is to say a Ministry responsible to the Diet.

* * *

The *Jiji Shimpo* dwells upon the importance of forming a strong Cabinet. In the present condition of affairs, the *Jiji* recognizes the extreme difficulty of carrying its recommendation into practice. But the chief of the new Cabinet, whoever he be, must, in the opinion of the Tokyo journal, be prepared to make sweeping changes in the *personnel* of the higher dignitaries of State, so as to render the Government amenable to the direction of a single mind. In another article, the same journal admits that if Count Ito should consent to become Minister President, he will be very likely to form a strong Cabinet. It recommends him, if he should really consent to form a Cabinet, to strengthen his position by bringing together under his presidency Counts Okuma, Inouye, and Goto. The time is not yet fully ripe for Count Ito to assume office, but, on the other hand, the *Jiji* thinks that this is not by any means an unfavourable opportunity for him to show his undoubted ability as a constitutional statesman.

* * *

On the question of Treaty Revision, the *Kaishin-to* organs, as well as journals favourably disposed towards that party, are evidently resolved to concentrate public attention on the question of asking the Diet's consent to the tariff schedule of the revised treaties. The *Kaishin-to* seem determined to oppose what they believe to be the Government's opinion on this point. The *Hochi Shimbun* and the *Mimpo* traverse the contention put forth by some supporters of the Government, that, the existing schedule of customs duties having been orginally promulgated by an Imperial Proclamation, the altered schedule of the new treaties may also be proclamed by an Imperial Ordinance. These papers claim that, according to Art. 62 of the Constitution, custom's duties cannot be changed except by means of law, to which the consent of the Diet is required. They consequently propose that the portion of the revised treaties relating to customs duties should be submitted to the consideration of the Diet previous to ratification.

* * *

The *Nichi Nichi Shimbun*, writing on the subject of the recovery of tariff autonomy, observes that the principal object aimed at by Japan is not to practise protective principles, but to recover the enjoyment of rights naturally belonging to her as an independent State. After the recovery of tariff autonomy, she will raise the rates of customs duties for revenue purposes, the present rates being abnormally low and insufficient. No prohibitive tariff, however, will be imposed. The consideration of the question whether the Diet's consent ought to be sought for the determination of customs duties, our contemporary proposes to discuss in a future issue.

* * *

The *Kokkai* observes that the hesitation of the Western Powers to accede to the demands of Japan for the revision of the treaties on a footing of equality, is owing to their ignorance of the real state of things in this country. Our contemporary thinks that, in her present condition, Japan cannot hope to accomplish her cherished object of treaty revision by appealing to force. The only means by which she can do so is to make herself known to other nations. The *Kokkai* advises its countrymen to show that they are an honourable, virtuous, and chivalrous people; to furnish the scientific world with new materials by engaging in the exploration of the continent of Asia and also by studying the ethnology, national history, and social conditions of Eastern nations; to show the intellectual progress of the nation by sending copies of Japanese translations of European works to the original authors or to journals in the West; to publish original treatises in European languages; to publish periodicals in foreign languages; to furnish the Japanese Legations and Consulates abroad with representative art objects of Japan; to hold an international exhibition in Tokyo; to send out war vessels to European and American ports, taking on board a staff of competent men of science.

* * *

The approaching visit of the Russian Prince Imperial receives much attention from the vernacular press. The public has shown itself so emphatically willing to give the Imperial visitor a hearty welcome, that some of the papers now warn the people against treating him with flattery and adulation. The *Mimpo* and the *Yomiuri Shimbun*, the principal exponents of this view, are of opinion that Japan ought to be on intimate terms with Russia, and they do not object to giving a hearty and respectful welcome to the Prince. But, on the other hand, they do not desire to see the people lower their own dignity as an independent nation by resorting to adulatory addresses and entertainments in order to please the future occupant of the Muscovite throne. They ridicule the journals that were at first inclined to view the approaching visit with suspicion and even ill-feeling, but now vie with each other in recommending the people to receive the august visitor with as much respect and friendship as possible.

* * *

The *Kokumin Shimbun* calls upon the people to entertain the Russian Prince Imperial as the guest not only of the Government, but, also of the nation. In 1872 Japan was honoured with a visit by a Russian Prince, who was received by the Imperial Family and the Government with every mark of respect and goodwill. At that time the attitude of the people was of little consequence, but now that the system of Government has been entirely changed, the conduct of the people towards any foreign guest of the country may have great international cousequences. Our contemporary, therefore, advises the inhabitants of all important towns, through which the Russian Crown Prince will pass, to entertain him with proper respect and goodwill.

* * *

Count Goto is now the object of adverse comment on the part of some Metropolitan papers, especially those connected with the *Kaishin-to*. Some days ago, the Department over which he presides invited tenders for the carriage of mail matter. The *Nippon Yûden Kaisha* offered to do the business at the lowest price, but the choice of the Department fell upon the next lowest tender, that presented by the *Nippon Un-yu Kaisha*. It happens that the principal shareholders of the successful company are very intimately connected with Count Goto. From this circumstance and from the fact that the tender of the successful company exactly coincided with the officially estimated cost, the papers express doubt as to the fairness of the Minister of Communications in this business of public tenders. Another affair viewed with considerable jealousy by some journals is that the *Choya Shimbun* has received permission from the Communications Department to devote a portion of its space to the publication of official information relating to the Department. The paper publishing such information is entitled to receive a subscription from the Department of Communications to the extent of about 5,000 copies daily, for distribution to the post offices throughout the country. It is stated by the press that favouritism is the order of the day in the Department of Communications. The *Yomiuri Shimbun*, a *Kaishin-to* organ, observes that while Mr. Mayejima retained the post of Vice-Minister, the known difference of political views between him and his chief went far to ensure that the Department should be impartial to all the existing parties, but now that the whole management of business is in the hands of Count Goto alone, public confidence in the integrity of the Department has been very much weakened. The *Hochi Shimbun* alludes to the vehemence with which Count Goto when out of office, attacked the evil practices of the clan Government, and declares itself grievously disappointed in its expectation that he, of all men, would be free from the abuses he had so loudly condemned just before his acceptance of the portfolio of Communications. The Count is advised to be more careful of his public conduct. The *Kokkai* also joins in animadverting on the alleged favouritism of the Department of Communications.

* * *

The *Jiyu Shimbun*, after a holiday of 18 days, began to appear again on the 19th inst. From the opening article of that day's issue, we learn that the complaints of shareholders against the former editorial staff related to the tendency shown by the latter to make the paper an organ of the men of Tosa, and not of general liberalism, in the interest of which it had been originally established. The new editor recognizes the great services rendered by Count Itagaki to the cause of liberty in Japan, but strongly protests against the *Jiyu Shimbun* being employed to serve the Count's personal purposes. The article is of considerable interest, as it indicates the degree of internal dissension to which the *Jiyu-to* has been reduced. It is a misfortune that the only statesman at present qualified to take the leadership of the party should be so closely associated with a faction disliked by politicians of a liberal tendency. If things go on in this way, there seems to be little hope of the *Jiyu-to* acquiring that cohesive and effective strength which so prëeminently characterizes the *Kaishin-to*.

* * *

The question of emigration and colonization occupies considerable space in the columns of the vernacular press. A Mr. Ishigami Kimitaro writes in the editorial columns of the *Choya Shimbun* on a scheme of emigration to Mexico. He professes to be a member of a land company of San Francisco, and in that capacity he returned to Japan in the spring of last year. Since then, after experiencing various difficulties, he has been able to form a colonization society, with the support of several influential men. He does not give the details of his scheme; but confining himself to a description of the progress of European colonization in various parts of the world, he recommends his countrymen to emigrate to Mexico. Mr. Fukumoto has begun a series of articles on the subject of colonization in the columns of the *Nippon*. In the opening article he considers the question whether the Japanese are naturally adapted for the purposes of colonization, and concludes that their high spirit, their chivalry, and their courage indicate that they are well fitted for that purpose. He also urges upon the Government the necessity of fixing its policy of colonization.

## *THE FIRST JAPANESE DIET.*

I.

THE session of the first Japanese Diet is past, but the wonder of it remains, and the foreign public has still to pronounce judgment on the results of the novel experiment. There appears to be a certain reluctance on the part of the critics. Probably they are still more or less bewildered. It seems so strange that a country twenty-five years ago steeped to the lips in feudalism, should to-day find itself in the full swing of parliamentary institutions. People can hardly yet realize the fact. Moreover full materials for forming an opinion are wanting in the case of the great majority of foreigners. Summarized reports of the debates have, indeed, been published, but these convey only an imperfect idea how the new machinery worked and how the representatives of the people acquitted themselves in their unaccustomed rôle. Probably not half a dozen foreigners, outside the members of the Foreign Corps Diplomatique, visited the Diet during its session. The apathy shown was curious. With the future of Japanese constitutional institutions at the bar of practical trial, the foreign residents seldom thought of entering the Parliamentary buildings. Common curiosity might have inspired a wish to watch the doings of the first representative assembly in the Orient. The incalculable importance of the essay to Japan herself, with whose progress—moral, political and material—we are all so closely concerned, ought to have attracted keen attention. But no. Men who will journey to Tokyo to witness theatricals, attend an evening party, or look at the spring blossoms, would not take the same trip in order to observe with their own eyes the most momentous incident in the history of modern Japan. This general indifference was truly reflected in the columns of the local foreign press. Only the briefest and most fragmentary epitomes of the proceedings were published by two out of our six open-port contemporaries, and as if to emphasise this neglect, one of the six subsequently filled a considerable part of its columns with verbatim translations of such portions of the proceedings as seemed likely to injure the reputation of the Government. The vital questions of the fitness of the Japanese people to inaugurate representative institutions, of their capacity for legislative work, of their ability in debate, of their insight into parliamentary functions, and of their readiness to take part in administrative affairs—all these questions, the answers to which furnish unerring gauges of the nation's prospects, did not receive a fraction of the attention devoted to the task of seeking to discredit the Administration. We assume, however, that intelligent observers of Japan's progress will be glad to learn something about the Japanese Diet, and for their sake we shall devote a few lines to describing the procedure and pointing out some special features of the first representative national assembly ever held in the Orient.

Imagine nine *V's* laid side by side with an interval between each, their apexes converging on the circumference of a small circular arc; and imagine transverse lines drawn across these *V's*, parallel to the circumference of the arc. Then the transverse lines represent the members' desks and each *V* represents the group of desks allotted to a "Section." The arc is the dais. At its back is the President's seat having a rostrum immediately before it, the seat and rostrum standing to each other in much the same relation as a church pulpit to the lectern beneath it, and the height of the rostrum being so adjusted that the head of its occupant is just on a level with the President's desk. It results that the President can, if he desires, lean over and communicate with the occupant of the rostrum in a tone too low to be audible throughout the House. This, of course, has its advantages, but it has also the drawback that points of order made by the President often fail to receive the publicity desirable in the interests of discipline. Beside the President, at the same desk, sits the Chief Secretary. Frequent colloquies between the two show that the President appreciates the advantage of a second opinion in cases of difficulty. At the back of the dais a long row of seats is occupied by the Secretaries and minor officials, and in the front of the dais, flanking the rostrum, stand chairs for Ministers of State and Government Delegates. Finally, the table for the shorthand reporters is immediately under the rostrum, and spacious galleries all round the circumference of the House contain the Imperial Box, the Boxes for the Peers and the Diplomatic corps, together with seats for a large number of humbler visitors.

The distribution of the three hundred members into nine "sections" is a peculiar and interesting arrangement. It is effected originally by lot, and its evident consequence is a hap-hazard intermingling of political parties. A member of the opposition finds himself sitting cheek by jowl with a strong supporter of the Government, and a violent Radical rubs elbows with a staunch Conservative. The restraints exercised by uncongenial companionship are thus brought into full play, whatever they may be worth in assisting to preserve order. The main object of the Sections, however, is to facilitate business. Much of the work has to be done by Committees, numbering either nine or some multiple of nine. Thus each Section has its own representatives on a Committee. In voting by ballot, too, the advantage of the Section system is very conspicuous.

From the conversation rooms (*danwa-shitsu*) and Committee rooms (*iin-shitsu*) the members are summoned to the Chamber by the tinkle of the President's bell—an electric bell, of course. They enter and take their places almost without a sound. A visitor in the gallery turns his back to the Chamber, and on looking round again, finds, to his surprise, that the hitherto empty desks have all been suddenly and noiselessly occupied. Before every member lies a volume which he frequently consults. It is a pretty bulky book, containing 213 Rules of Procedure. The enactment of these rules was the House's first effort of legislation. Pending the accomplishment of the work, business could not proceed in an orderly fashion. Therefore, when the session opened on November the 25th, each member received a printed copy of draft rules which had been prepared by the Government. A Committee appointed to revise the draft completed its labours in three days, and the House passed the whole body of regulations without a query. Some critics condemned this proceeding as rashly precipitate, but there has been no reason to repent it. The rules have worked well in practice, and though there has occasionally been talk of amending one or two provisions, the volume still remains as it was at the outset. Engaged in a wholly novel task and required to adhere to the letter of 213 rules, the members, it may well be supposed, showed a certain amount of hesitation and restraint in the early days of the session. A not insignificant portion of the points raised in the House turned on applications or interpretations of the rules, and after the opening words of a speaker's address it was a common spectacle to see a universal flutter of leaves as the whole assembly looked up No. 193, or some other provision referred to, like an attentive congregation searching for the text given out by a favourite preacher. Rules, it has sometimes been said by superficial observers, are the curse of modern Japan. The thirst for rules that used to pervade all classes of inquirers, and the rigid, undiscriminating enforcement of the letter of the law by petty officials, created the impression that the Japanese are a mechanical, statute-ridden people, without much self-reliance or independent intelligence. And yet, how natural and even inevitable it is that, failing experience, men should place explicit reliance on rules. When every feature of the civilization they are adopting is new to a people, their respect for the minutiæ of each rule accompanying the novel system is likely to be in direct proportion to their respect for the system itself. Men seldom ask for rules now-a-days. The once painfully docile student is disposed to be "a law unto himself;" the staid constable begins to glory in the exercise of his own discretion, and the volume of well thumbed "Rules of Procedure" lies comparatively neglected on each member's desk. The desks themselves are not roomy, neither do they suggest great comfort, but their occupants

Digitized by Google

appear satisfied. Fixed to the top of each desk is a solid block of wood, square in section, its sides about 2 inches and its length some 14 or 15. Attached to the desk by a hinge, it can be raised or lowered at will. When a member is present in the House, he raises this block and leaves it upright until he leaves his place, for by means of numerals painted in large white figures on its four black faces, the member's number can be read from every part of the House, and his name ascertained. It was originally contemplated that in all parliamentary references to one another, the members should use numbers instead of names, but the cold impersonality of this procedure soon made it unpopular. A trace, indeed, of the original custom still survives. A member of conservative instincts occasionally alludes to No. Fifty-five's remarks, or to No. a Hundred-and-seven's arguments, and when seeking the President's permission to speak, numbers and names are called out indiscriminately. But as a general rule members allude to one another by name, suffixing not the dopular honorific *san* or *sama*, but the more refined though less respectful *kun*. This use of names, the fact that the members do not cover their heads, and a peculiar fashion of seeking to catch the President's eye, will probably strike a visitor as the most salient differences between Japanese parliamentary procedure and British. There can be little doubt that in respect of the two former points the advantage is on the side of the Japanese practice. Sitting in the House with covered head is a relic of semi-civilization, and to describe a fellow-legislator as the honourable member for "Liverpool" or "Lancashire," instead of plain Mr. So-and-So, seems a senseless piece of affectation. In Japan a cognate formula would become particularly cumbersome, since it would be necessary to say "the honourable member for No. such and such a district of No. such and such a Division." But, on the other hand, the Japanese parliamentary method of "catching the President's eye" is decidedly not to be commended. The candidate springs to his feet, grasps his numerical block, and in a loud voice calls out "President; No. 56;" or "President; ARAI SHOGO," and remains thus, repeating his call at intervals, until he or some one else is definitely recognised. It is not "Mr. President," but simply "President" (*Gicho*), and no one seems as yet to have any idea of giving way because a better man is simultaneously seeking recognition. Thus it sometimes happens that seven or eight members are on their feet at the same time in different parts of the House, crying "*Gicho, Gicho*," with vehement insistance proportionate to the interest of the question under consideration. The effect conveyed is decidedly disorderly, though in point of fact no idea of creating a disturbance may be entertained. Another consequence of such procedure is that a speaker's chances of indulging in a fine peroration are reduced to a minimum. The peculiar construction of the Japanese language renders it possible to recognise, almost unerringly, the opening words of the appeal which, as a point of present-day etiquette, orators are wont to make to their audience's intelligence or sympathy at the end of a speech. The form of the appeal may vary largely, but its general nature is not to be concealed. The result is that the member or members desiring to speak next, are on their feet calling "*Gicho*" before the closing sentence is half finished, and of course, under such circumstances, an impassioned or elaborate peroration becomes an absurdity. Any so-called "disorder" hitherto occurring in the House has been due to this cause. A foreign journalist recently spoke of the "rowdyism" of the Japanese Diet. It would have been difficult to choose a less appropriate term. There has been no "rowdyism," nor anything approaching such a condition. In times of excitement, several members have been on their feet together, and the President's recognition of one among them failing to be appreciated by all, it has seemed for a few moments as though no control existed But invariably so soon as it is understood that a member has obtained the President's permission to address the House, the other aspirants resume their seats. Probably the experience of this first session will indicate the advisability of interdicting all attempts to attract the President's attention by calling out to him. If the members were permitted only to rise and remain standing in silence until obtaining recognition from the chair, the only element of disorder at present visible would be removed.

---

II.

IT is optional with a member to speak either from his seat or from the rostrum with the President's permission, but the latter plan is always adopted in case of a speech of any length, and is often insisted on by the President as a means of restoring calm in the House. The interval occupied by the intending speaker's passage to the rostrum, and the formal character of the whole business, contribute materially to dissipate any tendency to excitement. It is in this part of the proceedings that the peculiar *aplomb* of the Japanese is most apparent. To be required to march up to a kind of pulpit, face an audience of, perhaps, six hundred people, and deliver one's opinions at length, would be a trying ordeal for persons afflicted with any degree of sensitiveness. But among the three hundred members of the Japanese House of Representatives, there does not appear to be a man incapable of going through this performance with absolute freedom from gaucherie or self-consciousness. The same enviable equanimity is observable throughout the delivery of a speech. For all the moral disturbance visible in his demeanour or to be detected in his voice, the speaker might just as well be addressing a familiar friend across a dinner-table as the three hundred representatives of his nation in the House of Parliament. Certainly such impassibility is an immense advantage in one sense: ideas are not clouded or the power of expressing them paralysed by nervousness. But, if Occidental standards are to be applied, there is loss in another direction: uniform absence of feeling and fervour sometimes conveys an impression of monotony and want of earnestness. It seems strange that this mood should prevail, seeing to how high a point the art of elocution, with all its accompaniment of gesture and vocal modulation, has been carried by religious teachers, as well as by professional lecturers of the *koshakushi* and *hanashika* order in Japan. But the present temper of the House of Representatives is decidedly opposed to oratorical displays. Graces of language and scholarly forms of expression are indeed highly appreciated. A man like Mr. TAKAHASHI TETSUSHIRO, who can speak for half an hour without uttering a single solecism, from the polished scholar's point of view, without a single repetition suggesting paucity of verbal resources, and always with an even flow of strong but delicately selected and artistically grouped words, is listened to with evident pleasure and attention. But, on the other hand, a man like Mr. MISAKI KAMENOSUKE, who aims at the most absolute directness, and who, equally by choice of brief language and quietly distinct utterance, seeks to divert attention altogether from the form, and to direct it entirely to the substance of his speech, can count on a not less favourable hearing. There is little tolerance of rhetorical flowers. Whatever time may be frittered away in discussing trivial and fruitless questions, the mode of expression adopted in the House is decidedly business-like. As a rule the addresses are short. A sitting virtually lasting only four hours offers little scope for lengthy oratorical achievements. As to the quality of the speeches, the peculiar character of the Japanese language is a distinct bar to eloquence. The well recognised rule of graceful writing or speaking, that consecutive sentences must not have identical endings or beginnings, can scarcely be observed when the structure of a language relegates the chief auxiliary verb to a terminal place, and when, moreover, the auxiliary itself has dimensions quite out of proportion to the part it plays. Another difficulty is caused by the want of a relative pronoun; a want tending to render sentences involved and obscure. Indeed this latter defect has left a marked impress on the oratorical style of modern Japan. It has produced a school of speakers who ruthlessly sacrifice grace and smoothness on the shrine of lucidity. When everything predicated about a subject has to be tacked behind it in the form of a long adjectival chain—as for example,

Digitized by Google

the in-connection-with-your-debt-to-the-bank-I-yesterday-communicated-to you information—one or more of the links may easily drop out of the memory of a listener. To prevent this the speaker picks up again such of the links as he desires to emphasize, and rëembodies them in short supplementary sentences, where they acquire prominence at the expense of a jerky, dislocated style. Mr. SUYEMATSU KENCHO is a leading representative of this school, the members of which have, for the most part, been forced into their inelegant but lucid habit of speech by the exigencies of scientific or philosophical lectures. The provincial constituents of the House smiled audibly once or twice when being initiated by Mr. SUYEMATSU into the methods of this new rhetorical school, but they soon recovered their gravity on discovering that each loss of grace and continuity was compensated by a gain of perspicuity and precision. Parliament itself, however, promises to forge its own fashion of speech. The necessity of publicly debating subjects—many of which were not even conceived in the Japan of twenty years ago—that is to say, were not conceived under the aspects which they present to the legislators of to-day—has given, and is daily giving, an immense impulse to the growth of the language. It seems more than probable, too, that the debates in the Diet will ultimately bridge over the gulf between the written and the spoken languages, and that with political liberty Japan will also escape from the crippling fetters of a custom which requires that the thoughts of her people can only be preserved by altering the form in which they are conceived.

We have noted impassiveness and suavity as prominent characteristics of the speakers. But there are marked exceptions. Chief among them is Mr. INOUYE KAKUGORO, certainly *the* orator of the House from a Western point of view. Capable of remaining on a placid level if his subject demands such a mood, he is equally ready to climb the summit of impassioned vehemence, and to his great command of apt expression and illustration is added a natural grace of strong and suitable gesture. If he typifies the future parliamentary speaker of Japan—and if there be such a thing as a national type of orator—critics will ultimately find no difference to record between the oratory of the Orient and that of the Occident.

No part of the story of the new Diet has more interest for Westerns than the working of the Standing Orders. These consist of the Law of the Houses (*Giin-ho*), which forms an appendix to the Constitution, and the Rules of Procedure (*Giin Kisoku*), which, as explained above, were drafted by the Government and adopted by the Houses after examination by a Committee. The framers of the Japanese Constitution were happily circumstanced in one respect; they had the experience of Western countries to guide them. They saw how it had fared with parliamentary institutions in England; how, in the face of paralysing obstruction, the House of Commons had been obliged to revoke its own liberties, to narrow the limits of debate, to restrict the rights of the majority, and to throw away not a few of the safeguards hitherto deemed necessary for the preservation of the public safety. Taught by these examples, the Japanese sought to elaborate a system which should embody the liberties properly belonging to parliamentary institutions, without offering any encouragement to license. It remains to be seen how far they succeeded in realizing their ideal.

Each House of the Japanese Diet is controlled by a President, corresponding with the "Speaker" of Western parliaments. No attempt has been made to follow the example of Great Britain, where the Speaker is supposed to be an absolutely impartial officer of the House, removed entirely beyond the range of party politics. In Japan the President and Vice-President of the Lower House are theoretically partisans, being elected by the House. They derive a semblance of independence by being nominated by the EMPEROR from among three candidates elected by the House, but as the EMPEROR naturally accepts the House's choice, this provision has no practical force. Judging by the practice of the first Diet, it seems probable that the President will always represent the party commanding the largest number of adherents in the House, while the Vice-President will be a member of the party next in point of strength. The three candidates for each office are voted for on separate lists, but the indications furnished by the list for President are accepted in voting the list for Vice-President, so that the second name on the former becomes the first on the latter. It is possible, of course, that both officials may be members of the same party, since they are elected by separate ballots. But the conduct of the House thus far shows a disposition to contrive that each of the two principal parties shall see itself represented in the presidential chair. A third office of great importance is the chairmanship of the Committee of the whole House. Its occupant is elected by the House at the beginning of the Session. He sits for only one Session, whereas the President and Vice-President sit for the whole term of a Diet's life, namely, four years. Further, no emoluments are attached to his office, while annual salaries of 4,000 *yen* and 2,000 *yen* respectively are paid to the President and Vice-President. The Chairman of the Committee of the whole House is nevertheless a person of much consequence, and the procedure of the members in respect of him was watched with great interest. In his case, also, the give-and-take spirit animating the first House was conspicuously shown, for the Presidency and Vice-Presidency having fallen to the lot of the Radicals (*Jiyu-to*) and the Independents (*Taisei-kai*), respectively—Messrs. NAKAJIMA NOBUYUKI and TSUDA MAMICHI—the chairmanship of the whole was given to Mr. SHIMADA SABURO, a distinguished representative of the Progressionists (*Kaishin-to*).

III.

THE powers vested in the President of the House are large. We shall enumerate them in detail, because the question of the presiding officer's functions has become a problem of keen and pressing interest to all the friends of parliamentary institutions in the West.

The President determines the Orders of the Day (*Giji-nittei*), including in it the subjects to be submitted to the House and their sequence. In the exercise of this function he is subjected to one restriction only, namely, that the matter appearing in the Orders of the Lower House must not be under debate simultaneously in the Upper, unless such a course be specially dictated by parliamentary convenience. The Orders of the Day contain, also, the names of the members desiring to speak to any motion. Those who have sent in their names are entitled to occupy the rostrum before casual speakers, and the supporters and opponents of a measure are placed alternately on the list. If, however, the recorded names of speakers on one side exceed the names submitted on the other, it rests with the President to supplement the latter from among members rising during the debate. He also determines whether a member shall speak from the rostrum or from his seat. The general rule is the rostrum, but when the proposed remarks promise to be brief, the speaker may stand in his place. This right of direction, though insignificant at first sight, is nevertheless capable of being exercised in a manner very embarrassing to political opponents. Of course no member is entitled to speak twice in the same debate, but this rule does not apply to the introducer of a Bill or the maker of a motion, who, for purposes of explanation, may address the House several times. With the President, however, rests the power to see that the latter privilege is not abused: he must take care that an explanation does not become an argument. He is also authorized to check irrelevancy, but as yet there has been little occasion to exercise this authority, the members having almost invariably shown a strong disposition to confine themselves to their subject and to refrain from repeating any arguments advanced by a previous speaker. The President himself is not precluded from taking part in a debate, but he must announce his intention of doing so, and vacate the chair, leaving it in the possession of the Vice-President until the end of the debate. The language of the Rules seems to delegate to him considerable power to end a debate, since it is left to

Digitized by Google

him to determine whether the discussion is concluded. But in practice he does not exercise this power. Debates are nearly always terminated by means of the closure. Any member may, at any period, move the closure (*toron shyukyoku*), and if the motion finds one supporter, it must be put to the House without discussion, the President having no such discretion in this matter as is given to the Speaker of the British House of Commons. There has as yet been no disposition to exercise tyranically the great power thus placed in the hands of the majority. The House has employed the closure as a simple instrument for facilitating procedure. Moreover, abuse of the closure is guarded against by the system of giving precedence to members who have take the trouble to intimate beforehand their intention of speaking, and by the rule that the debate must, as far as possible, he carried on alternately by supporters and opposers. After the closure has been voted, or after the President has announced that a division will be taken, no further speaking is permitted.

There are four methods of taking a vote, first, by requiring the "contents" to stand (*sansei kiritsu*) ; secondly, by calling the roll and requiring members to vote aloud from their places (*shimei tenko*) ; thirdly, by ballot without names (*mukimei tohyo*) ; and fourthly, by ballot with names (*kimei tohyo*). The President may decide which of these methods shall be employed. It need scarcely be said that he generally selects the first, but if a motion, having at least twenty supporters, is made in favour of any of the other three, the sense of the House is taken. The result of a vote by standing may be challenged by one member, and recourse must then be had to one of the other methods, at the President's discretion ; but no objection to the vote by roll-call is valid unless it finds at least twenty supporters. In the case of written ballots, white and blue papers are employed, each member writing his name. For unwritten ballots, black and white balls are used, accompanied by the cards of the voters. The President has authority to decide doubtful points in the Constitution, the Law of the House, or the Rules of Procedure, but he may consult the House's opinion, and it need scarcely be said that he generally does so. Another important power vested in him is competence to order a recess at any moment. In the ordinary routine he can either adjourn the House at the usual hour of closing —6 p.m., the time of daily session being from 1 p.m. to 6 p.m.—or extend the sitting for a special purpose. The House, too, may of course vote any change in its diurnal hours. But the peculiar power of the President is that, should the House fall into a state of excitement, or should it be found difficult to maintain order, he may either announce a recess or close the session for the day. Recourse to the latter expedient was not found necessary during the first Diet, but on several occasions short recesses were taken, and it may almost be said to have become a feature of Japanese parliamentary procedure that when the House develops a disposition to wrangle or dispute warmly, the members are sent to the Committee chambers and waiting rooms to discuss and settle the knotty point in private conclave. Over individual members the authority of the President is exercised in five ways for purposes of good order. He may either warn the offender, stop him, or direct him to retract his remarks, and if the member fail to respect the ruling of the chair, he may be either prohibited from speaking for the rest of the day, or ordered to leave the House, the President having under his direction a force of police officials provided by the Government to carry out his mandates. Nor does his power stop here. Among the Standing Committees of the House there is one called the Committee on Disciplinary Punishment. It consists of 27 members, and is competent to recommend that a member be openly repraimanded, or required to express an apology in public session, or suspended for a certain time, or expelled. Either by direct instruction of the President, or in compliance with a motion having at least twenty supporters, the Committee may be required to examine into and report upon any case calling for disciplinary punishment.

The conduct of the President in the exercise of these great powers amid circumstances where tradition, that cherished guide of feeble minds, could not afford any assistance, was watched with much curiosity and some anxiety. That he succeeded is proved by the neutral verdict of the public to-day. To preserve order and keep the machine of parliament moving smoothly, without making himself conspicuous, seems to have been his aim from the first. There were times when, to foreign observers, his methods appeared to lack firmness and dignity. Once, in the face of distinctly contumelious behaviour on the part of a member, who persisted in refusing to abide by the ruling of the chair as to the interpretation of a vote just recorded, the President ordered the offender to be removed. But while the order was actually in course of execution, the President hesitated, took the sense of the House as to the interpretation of the vote. and finding the majority against him, suffered the offending member to resume his seat. Now although the member was right in theory, he certainly erred in practice, and it was felt that the dignity of the chair suffered by the incident. On an other occasion, when the House had to consider the question of instructing the Disciplinary Committee to inquire into certain alleged irregularities of attendance on the part of the President's brother-in-law, a charge of favouritism was preferred against the President by a prominent member, but although an excited scene followed, the incident passed without further notice. Speaking cursorily, such affairs indicate a want of due firmness. The key to the situation is to be found, however, in a speech delivered from the chair early in the session, when the House seemed in danger of breaking away altogether from presidential control. In a few direct, well chosen words, delivered with perfect repose of manner, Mr. NAKAJIMA reminded the House that he was not there to rule with a rod of iron, but rather to work out, in conjunction with and by the intelligent aid of the members, the details of a procedure equally novel to all, and requiring, for its proper elaboration, the mutual forbearance and cöoperation of both sides. In short, he took the simple and straightforward view that the members and he were circumstanced alike in respect of the novelty of the situation and of the criteria available for guidance, and that their function was to evolve a system capable of general endorsement rather than to attempt to pose as finished performers. He was able to keep this fact before the House throughout, and it is impossible not to acknowledge his tact and judgment when we observe that under his manipulation the procedure of the House quietly and unobtrusively took definite and acceptable shape, and that he merged himself so completely in his office as to leave the public uncertain whether he shaped events or took direction from them. One thing is beyond doubt, that he gave no shadow of warrant for a suspicion of partisanship. His impartiality remained absolutely unimpeachable throughout, and it is certainly not the least remarkable feature of the first Japanese Parliament, that this praise must be equally accorded to the Vice-President, Mr. TSUDA, and to the Chairman of Committee of the Whole, Mr. SHIMADA SABURO. The three men, each in his own way, discharged the duties of their posts with complete independence of party ties. Perhaps their attitudes may be best and most briefly described by saying that Mr. NAKAJIMA deliberately divested himself of all subjective qualities in order to work out an ideal of neutrality ; that Mr. TSUDA was so entirely absorbed by his office as to forget his party, and that Mr. SHIMADA gave a successful demonstration of what, as a leader of the Progressionists, he considered a President ought to be. But it is evident that until parliamentary practice in Japan shall have crystallized into a distinct and recognised form no President can undertake to rule the House confidently and firmly.

---

IV.

A GREAT part of the business of the House is discharged by Committees. There are three Standing Committees, namely, the Budget Committee, consisting of 63 members ; the Disciplinary Committee, of 27,

Digitized by Google

and the Petitions Committee, of 36. The members of these Committees are elected originally by unwritten ballots in the Sections, vacancies which subsequently occur being filled by election in the Section concerned. The work of the Disciplinary Committee is entirely casual: it has no function to perform unless the President instructs it to inquire into the conduct of an offending number. The Committee on Petitions receives petitions, examines them, and presents every week to the House a list, noting their essential points. It is not yet quite clear how far the House will occupy itself with petitions. The law does not require it to debate them, unless the Committee, or thirty members at least of the House, desire that course; but it must vote whether to entertain them for transmission to the Government, or to reject them, and in the former case it must accompany the petition with a memorial. The tendency of the first Diet was to regard itself as a medium for transmitting petitions rather than as a judge of their merits, but this disposition may have been prompted by lack of time to adopt a more thorough procedure. A three months' session, the daily hours being only from 1 p.m. to 6 p.m., cannot leave much leisure for considering petitions that pour in by hundreds, and it is not improbable that, in the great majority of cases, the House will be guided entirely in this matter by the recommendations of its Committee. The Budget Committee has a function of great importance to perform. It receives the Budget immediately on the latter's being presented to the House, and examines it minutely, delegates from the various Departments of State attending throughout the Committee's session in order to furnish all required information. A period of fifteen days is allowed for this work. It proved insufficient in the case of the first Budget, for although the 63 members of Committee were divided into sections, each taking a separate Department of the Administration in the Estimates, they had much to say on this first occasion of their exercise of financial power, and party politics made themselves felt strongly in their deliberations. It had been anticipated that after the work of this large Committee, the House's attitude towards the Budget would become somewhat perfunctory. The fear was not altogether justified. Long and animated debates marked the progress of the Committee's Report through the House, and it was rejected at the last moment. Still the indications furnished by the first session are that the business of the Budget will gradually be left to the Committee alone, the House playing a secondary part. Whether the same forecast applies to the Committee system generally, as followed in the Japanese Diet, it is difficult to determine at this early stage. All Government Bills must be submitted for examination by a Special Committee before any vote is taken on them. This process may be dispensed with by desire of the Government, but is otherwise invariable. Moreover, it seems likely to be adopted generally with regard to private bills, the obvious result being that the fate of a Bill is more or less removed beyond the influence of discussion by the House itself. Thus the interval separating the Japanese procedure from that of the United States Congress is not very wide. The closure in the former case corresponds with the "previous question" in the latter; the Special Committees of Japan may easily crystallise into the Standing Committees of America, and to complete the resemblance, it would only be necessary to fix a limit of time for members' speeches. The compilers of the Japanese Constitution evidently aimed at striking a *juste milieu* between the effacement of the individual member in the American system and the excessive liberty enjoyed by him under the British. If they have succeeded, their success will mark an epoch in the history of parliamentary institutions.

Government Bills take precedence of all other measures, and it is consequently necessary to obtain the sanction of the Government before changing the Orders of the Day after these have been duly announced and transmitted to the Ministers of State and the Government Delegates. The Government thus retains the power of scotching vexatious or objectionable motions introduced without previous notice, but experience thus far does not indicate any disposition to exercise this power. Through all its stages the progress of a Government Bill is watched by Delegates from the Department under whose charge the measure is placed. These Delegates are entitled to speak at any time during a debate, provided that no member's speech be interrupted for the purpose. They must also answer questions put either by Committees or by the House, and many of them were subjected in the first Diet to an ordeal of cross-examination that showed a very earnest resolve on the part of the House to acquaint itself with the details of administrative work. Three readings are prescribed for each Bill, but one or more may be dispensed with on the demand of the Government, or on a motion by not less than ten members, provided that, in either case, at least two-thirds of the members present in the House agree. A private Bill cannot be introduced, nor can an amendment to a Bill already introduced become the subject of debate, without the support of at least twenty members. Printed copies of the Bill are, in the first place, distributed among all the members, and after a minimum interval of two days, the first reading may be opened. At this reading explanations are given and questions answered by the Ministers of State or Government Delegates in the case of a Government Bill, and by the introducer (*hatsugi-sha*) in the case of a private Bill, but no discussion takes place. Government Bills are then submitted to a Special Committee elected for the purpose, and consisting of nine members—one from each Section—or some multiple of nine. A period is allotted for the Committee's examination, and by the appointed time it submits its Report in writing—or verbally if the House sanctions that course. The Report is considered unanimous, unless at least one-third of the Committee dissent, when a Minority Report may be presented, and debated by the House. On receipt of the Report, the House discusses the general character and merits of the Bill, and votes for or against a second reading. In the case of a private Bill, the debate may be opened without preliminary examination by a Special Committee, but if the Bill be handed to a Special Committee —and the tendency is all in that direction —its subsequent treatment differs in no respect from that of a Government Bill. The second reading having been voted, an interval of at least two days must elapse before it is opened; but the House may decide to shorten this interval, or even to dispense with it altogether. The same rule applies to the third reading. At the second reading the Bill is discussed clause by clause. Amendments having the prescribed number of supporters, are either placed in the President's hands before the sitting, or introduced during the sitting. An amendment of the Committee's Report, however, requires only one supporter to become a subject of debate. The President possesses important powers in respect of the Bill at this stage. He may change the order of the clauses, group them, or re-divide them, but if a member objects, the decision of the House must be taken without debate. At the third reading, the general merits alone of the Bill are finally discussed. No amendment is permitted, unless a contradiction of terms or a conflict with the provisions of an existing law is discovered.

These comments apply only to projects of law (*horitz-an*). The House, having no power to deal directly with matters falling within the scope of the Imperial Prerogatives, cannot embody such matters in Bills. It can, however, make its voice heard in respect of them by means of Addresses to the Throne (*joso-an*), or Representations to the Government (*kengi-an*). We have seen that a project of law in the form of a Bill, or an amendment to a Bill, requires a minimum of twenty supporters to become a subject of debate. The rule is even stricter in the case of Addresses to the Throne and Representations to the Government. These must be endorsed by at least thirty members in order to come before the House. During its first session the Diet did not avail itself of its right to address the Throne, except in reply to the Imperial

Digitized by Google

Message at the opening ceremony; but several Representations were debated and voted, on such subjects as Treaty Revision, the postponement of the operation of the new Commercial Code, and so forth.

The privilege of questioning the Government is also surrounded by safeguards effectually precluding vexatious or frivolous action. A member desiring to put a question is required to obtain the support of at least thirty of his colleagues. He must then embody the question in a concise memorandum, which, having received the signatures of himself and his supporters, is handed to the President for transmission to the Government. A Minister of State answers the question, either immediately or at a fixed future date. An answer is not compulsory, of course; but if not given, the reasons for withholding it must be stated.

All other motions, urgency or ordinary —except a motion to amend the Budget, which requires thirty supporters—become subjects of debate if the proposer obtains one seconder. For the rest, the procedure of the House calls for no special notice. It will be seen that the Cabinet occupies a peculiar position towards the Diet, being nominally independent of its votes and having no recognised supporters among the members. The Ministers of State and Government Delegates, having the right to sit in the House and speak at any time, though not to vote, constitute the link between the Administration and the Legislature.

---

v.

THE Lower House consists of 300 representatives, elected by districts, the number of which varies in each prefecture according to the population. Speaking approximately, an electoral district is supposed to contain 120,000 inhabitants, but the urban districts are treated more favourably than the rural, Tokyo, with its million of citizens, returning 12 members, and Osaka, with six hundred thousand, returning 10. Within the limits of the franchise, which is very high, the composition of the Lower House consequently depends entirely on the will of the people. The Upper House, on the other hand, contains not only members of the Imperial Family and Peers, but also Imperial Nominees (*Chokuningiin*) and representatives of the highest tax-payers (*Takaku-nozei-giin*). Princes of the Blood and members of the first two orders of nobility, namely, Princes and Marquises, sit by hereditary right. The total number in this category is 41; namely, 10 Princes of the Blood, 10 Princes, and 21 Marquises. Each of the three remaining orders of Nobility elects its own representatives, subject to the condition that their number must not exceed one-fifth of the entire number of the Order. The result is 15 Counts, 70 Viscounts, and 20 Barons, all of whom, as elected Peers, sit only during a session, namely, 7 years. The nobility is thus represented by 146 members, of whom 41 sit by hereditary right and 105 by election. The Imperial nominees, who sit for life, are men selected by the EMPEROR for meritorious services to the State or for erudition. The limit of their number is fixed by a rule that, together with the representatives of the highest tax-payers, they must not exceed the total of the Peers. In each city and prefecture the fifteen male inhabitants, of and above 30 years of age, paying the highest amount of direct national taxes, elect from among themselves one representative, who, on being nominated by the EMPEROR, becomes a member of the Upper House for a session. There being 42 prefectures and 3 cities in the Empire, and the total number of Peers in the House being 146, it follows that the EMPEROR has power to nominate 101 members, independently, and that the maximum number of members in the House is 292, according to the present establishment of the Nobility. The Sovereign has not yet exercised his full power of nomination, having appointed only 74 members out of a possible 101. HIS MAJESTY'S choice has been as follows:—

| | |
|---|---|
| Representatives of the Army (including two Army Surgeons) | 11 |
| Representatives of the Navy | 1 |
| Representatives of Learning | 9 |
| Representatives of the Law | 7 |
| Representatives of Commerce | 4 |
| Representatives of Officialdom (including former Senators) | 42 |

Thus the composition of the House is as shown in the following list:—

| | |
|---|---|
| Princes of the Blood | 10 |
| Princes | 10 |
| Marquises | 21 |
| Counts | 15 |
| Viscounts | 70 |
| Barons | 20 |
| Representatives of Highest Tax Payers | 45 |
| Imperial Nominees | 74 |

It will be seen that Religion is not represented at all in this list. Japan, indeed, has no State Religion, in the strict acceptation of the term, for though a small sum is yearly appropriated by the Treasury for the maintenance of Shinto Shrines, this aid is too insignificant to establish any tangible relation such as that existing between Church and State elsewhere. There have been two or three fitful efforts by Buddhist priests to obtain representation for their order in the Lower House, but the Government has adhered firmly to the principle that a section of the population which contributes nothing to the national defence, cannot establish any valid title to the franchise. Further, the Japanese House of Peers exercises no judicial functions. It does not constitute a court of final appeal, like its British prototype, but is purely a legislative body, and its peculiar composition, consisting in equal parts of Peers and Commoners, distinguishes it radically from the Upper Chamber of the English Legislature. It is impossible to predict what form the relations between the two Houses will ultimately assume, or what degree of independence the Peers may aspire to. In theory the framers of the Japanese Constitution have evidently sought to create a body representing all those elements of the nation which, though undoubtedly worthy to take part in affairs of State, are by their nature unlikely to seek or obtain popular election. The power of the Crown to alter the composition of the House is limited. It would not be possible, for example, under the present Constitution, that the EMPEROR, on some special occasion, should appoint a number of life Peers with seats in the House, seeing that there is a fixed maximum of Imperial Nominees. Some prominent men among the Nominees showed themselves not at all friendly to the Government in the first session, evidently appreciating their independence, and being determined to exercise it.

Unlike the Lower House, the Peers have no voice in the election of their President and Vice-President, the EMPEROR choosing and nominating both of these officials. The first President of the House was Count ITO, the father of the Constitution, and one of the most distinguished among Japanese statesmen. His manner of discharging the duties of President added to his reputation. At the same time, it must be remarked that the control of the Upper Chamber proved a comparatively easy task, contrary to the expectation of many persons who predicted that as the Peers, unlike the members of the Lower House, had not received preliminary training in Local Assemblies, they would be totally at sea in the Diet. Dignified self-restraint and sobriety of language marked the debates of the House. Eloquence was not conspicuously present. A simple, straightforward, and highly courteous style seems to have been generally affected, and on no occasion did the discussions rise to any notable height of fervour or oratory.

In respect of procedure there is little difference between the two Houses. The Peers, like the Commons, are divided by lot into Sections, and each Section elects its own representative on the standing Committees. These Committees are smaller in the Upper than in the Lower House, the Budget Committee consisting of 45 members (against 63), the Disciplinary Committee of 9 (against 27), and the Petitions Committee of 27 (against 36). There is also a fourth standing Committee in the Peers, namely, the Qualifications Committee, consisting of 9 members, and having entrusted to it the function of examining into all questions relating to the qualifications of members. A curious point came up for consideration by this Committee during the first session. It had to decide whether a man qualified both to elect and to be elected, is entitled to vote for himself. The question occurred in connection with the election of a member to represent the highest tax-payers for a certain prefecture.

Digitized by Google

According to the law, the fifteen highest tax-payers in each City and Prefecture elect a candidate from among themselves, and it happened in one instance that a candidate obtained a majority of one, through balloting for himself. He would have been elected even without this peculiar proceeding, because, where the polling is equal, the elder of the two candidates receives the preference. But his opponent appealed, and the Qualifications Committee, influenced by the consideration that unless the candidates vote for themselves or for one another the balloting is carried on, not by 15 tax-payers as prescribed by law, but by 15 *minus* the number of candidates, reported in favour of the legality of the vote. The House, however, refused to endorse this report.

The Peers are invested with precisely the same legislative functions as the Representatives. They may initiate projects of law, present Addresses, make Representations, and ask Questions. Moreover, with the exception of the Budget, Government Bills may be submitted to either House first, according to administrative convenience, and the consent of both Houses is necessary before a Bill can be approved by the Throne. A special arrangement exists for bringing the Houses into agreement in respect of a Bill. In case of complete rejection, there is no resource; but in case of amendments made by one House in a Bill reaching it from the other, if the latter does not approve of the amendments, a conference of "Managers," ten from each House, takes place. By them the Bill is adjusted, after which it re-passes through the two Houses in the original order, no longer subject to amendments but only to acceptance or rejection *en bloc*. No opportunity of testing this machinery occurred during the first session, the Bills sent from one House to the other being endorsed by the latter in their entirety. During the second session, however, it is probable that the mutual functions of the two Houses will be brought into clearer operation, especially with regard to the Budget. In Japan, as in England, Parliament is precluded from making any grants of money without the previous recommendation of the Crown through its responsible servants, though grants may be suggested by means of Addresses or Representations. All expenditures are presented in the form of a Budget, which, according to law, must be submitted to the Lower House first. A large class of appropriations in the annual Budget, namely, those required for the exercise of the Imperial Prerogatives, cannot be reduced or rejected without the Government's consent. Before finally voting such reductions or rejections, the House must seek the Government's concurrence. Thus, when the Budget reaches the Peers, they may find that it contains amendments which have already obtained the endorsement of the Government, and in respect of these items their function will probably prove more or less nominal. But for the rest the Upper House does not appear at all disposed to efface itself in financial matters. It has compiled and adopted a series of elaborate rules of procedure for dealing with the Budget, and though the operation of these was not fairly tested in the first session owing to special reasons, they indicate that the independent control usually exercised by the people's representatives in affairs of supply, will be challenged by the Peers in Japan. This tendency excites no surprise in view of the peculiar composition of the Upper House, but its consequences in practice will be very interesting.

It will be observed that in no part of her Constitution has Japan so closely adopted a foreign model as in the composition of the House of Peers. The "Herrenhaus" of the Prussian Landtag is, in several leading features, very similar to the *Kizoku-in* of Japan.

In the former, as modified by the Royal Decree of Oct. 12th, 1854, sit the Princes of the Blood, who are of age; the sixteen chiefs of the mediatised princely houses; the heads of the territorial nobility (numbering about 50); a number of life peers chosen by the KING from among rich landowners, great manufacturers, and national celebrities; eight titled noblemen elected in the eight provinces by the resident landowners; representatives of the Universities, heads of "chapters," and burgomasters of towns with above fifty thousand inhabitants, and an unlimited number of members nominated by the KING for life, or for a more or less restricted period. Here we probably have the germ of the Japanese House of Peers, though several important points of difference are at once discerned. The Japanese Princes of the Blood, Princes, and Marquises, correspond with the first two elements of the Prussian Chamber, and like them sit in their own right. But the three junior orders of the old territorial nobility of Japan send to the House only one-fifth of their number, elected by themselves; the forty-five reprentatives of the highest tax-payers take the place of the other various independent members of the Prussian Assembly, and in Japan the power of the SOVEREIGN to nominate life peers is strictly limited, whereas in Prussia no bounds are fixed. The Japanese system is at once simpler and less autocratic than the Prussian. Scarcely anything has been borrowed without modification. Thus, while the Prussian rule that Ministers of the Crown as well as state officers representing them may at any time attend and speak in the Diet, evidently suggested the Japanese arrangement as to Ministers of State and Delegates of the Government, the compilers of the Japanese Constitution withheld from the Diet the right possessed by the Prussian Landtag of demanding the presence of a Minister. Again, while the Prussian Chambers select their own Presidents, Vice-Presidents, and Secretaries, we have seen that in Japan the President and Vice-President of the Lower House, though elected by the House, are finally appointed by the EMPEROR; while the same officials in the Upper House are purely Imperial nominees, and the Secretaries of both Houses are government officials. Another important difference is that, whereas in Prussia Bills, both financial and otherwise, must be first submitted to the Chamber of Deputies, in Japan this rule applies to the Budget only. These points are worth noting, because, when the Japanese Constitution was in process of compilation, an idea obtained credence that its provisions would be merely a slavish copy of German models, and many people seem to labour under that impression to the present day. The claim advanced on behalf of the Prussian "Herrenhaus" would hold with greater accuracy in respect of the Spanish Senate, the composition of which presents a strikingly close resemblance to that of the Japanese "Kizoku-in."

From the facts set down here, it will be seen that the framers of the Japanese Constitution and Parliamentary procedure borrowed from the three representative systems of the West, and adapted the results with judgment and intelligence to the conditions of their own country. They took their sectional divisions of the Chambers from Continental Europe, but at the same time greatly reduced the duties devolving on the sections. They had recourse to the United States for so much of the Committee system as is calculated to facilitate the discharge of business, but were careful to eliminate the elements that practically paralyse the debating functions of Congress. They went to England to obtain the spirit of liberty which presides—though to a diminished and diminishing extent—at the discussions in Westminster, but they endeavoured to introduce checks and safeguards capable of preventing the growth of abuses that threaten to bring ridicule on Parliamentary institutions even in the country of their birth. Thus, independently of the great interest attaching to the working of the Japanese Constitution as a test of the capacity and character of the nation, its electic nature gives it a strong title to the attention of students of representative government throughout the civilized world.

---

VI.

HAVING framed the Constitution and drawn up rules of procedure, Japanese statesmen had to consider a point of great importance and no small difficulty, the question of stenographic reports. In this as in other parliamentary matters Japan was exceptionally circumstanced. Herself devoid of practical familiarity with constitutional government, she nevertheless had the ripe experience of other countries to guide her. Looking abroad, she saw

Digitized by Google

that in the great majority of cases, countries enjoying the blessing of a parliament took official care that its proceedings should be fully and accurately recorded. Great Britain, indeed, offered a singular exception. It is natural that wherever institutions spring from seed sown by the gradually developing instincts and inclinations of the people, their equipment, even in the last stages of their growth, should remain more or less beyond the pale of official regulation and control. In England, up to the year 1855, parliamentary debates were recorded entirely at private expense. The work was left to the enterprise of newspapers and the liberality of private subscribers. Then the Treasury, strongly urged by eminent statesmen, agreed to purchase five guineas' worth of copies of "Hansard" per session! Not until the great lengthening of debates that followed the re-constitution of the House after the passing of the Reform Act, when the newspaper reports proved quite insufficient, did the Government make a grant in aid to the Hansard Publishing Union, the amount varying from £3,000 to £6,000 annually, according to the number of volumes produced. This continued up to the close of the 1888 session, when the contract for the debates was put up to public tender and secured by the Hansard Union, who undertook the work without subsidy. The conditions of the contract gave discretion as to the fullness of the Reports, within the limit that no speech should be abbreviated by more than one-third. Under this agreement the debates are now recorded, practically verbatim reports being given of the leading speeches in the Lower House and of all the speeches in the Upper, and two-third reports of the minor speeches. On the third day after each debate proofs are sent to the various speakers, and two clear days are allowed for revision, the reports being finally published on the seventh day with asterisks attached to the speeches that have been revised. This is accomplished by means of six shorthand reporters in the Commons and one in the Lords, with provision for additional aid on special occasions. It will be observed that this arrangement is lacking in several respects. First, all the speeches are not reported verbatim, and, secondly, they do not find their way into the hands of the members until seven days after their delivery. An ideal system would be one which, combining accuracy with celerity, enabled every member to have a verbatim report of each day's proceedings in his hand the following morning. To the advantages of such a system British statesmen are not indifferent, but the opinions expressed by select Parliamentary Committees appointed, from time to time, to consider the question, show that doubts have been entertained as to whether the labour and expense involved would be compensated by results sufficiently superior to those obtained by the present plan. This view has, however, lost much of its force. Since obstruction began to play such a fatally discrediting rôle in parliamentary debates, the amplitude of journalistic reports has steadily diminished, and among metropolitan journals to-day *The Times* alone publishes something like a full record. It has been pointed out that whereas an almost verbatim report of Lord BEACONSFIELD'S maiden speech, on December 7th, 1837, appeared in almost all the morning papers of the time, the same speech, if delivered to-day, would be recorded in a few lines at best. Thus, though the actual practice of England, the mother of parliaments, did not encourage the Japanese to inaugurate a system of official reporting, her tendency obviously pointed in that direction, and the example of other countries was almost unanimous. It is very plain that an official report must be verbatim, because neither the discretion of a reporter nor the impartiality of a bureau could properly be trusted to condense; and that it must be uncorrected, except as to grammar, because all changes would prejudice its credit and interest. The question to be considered then was whether the stenographic resources of Japan sufficed for carrying out such a work.

A dozen years ago stenography may be said to have been born in this country. The Japanese had an immense difficulty to contend with. In the West they found systems of shorthand admirably adapted to the purely phonetic tongues of Europe and America, but how could any of these systems be adjusted to an ideographic language abounding in homonyms, and supposed to be incapable of intelligible record by a purely syllabic or alphabetic script? The question suggested so many difficulties to foreigners that they dismissed the shorthand project as incapable of realization. Not so the Japanese, however. There lived in Tokyo a certain MINAMOTO KOKI, a man of gentle birth but limited means, who conceived the ambition of supplying this particular deficiency in his nation's literary equipment. How long he worked in silence we cannot tell, but about the year 1879 the public began to hear of an institution called the *Sokki Koshu-jo* (place for practising stenography), where it was understood that certain youths were accustomed to meet for the purpose of studying and elaborating a stenographic system which MINAMOTO had devised. The enterprise did not attract much attention. Occasions to utilise stenographic skill profitably were few. Vernacular journals had not risen to the level of furnishing verbatim reports of any kind. Proceedings of Local Assemblies, cases in law courts, political speeches, and scientific lectures did not receive any lengthy notice. The outlook for students of shorthand was, in fact, most gloomy. None the less MINAMOTO and his fellow-labourers persevered, until, though no actual proofs of their skill were publicly furnished, it came to be understood that an efficient system of Japanese stenography existed and could be utilized at any moment. Probably if we could learn the details of what these stenographic pioneers had to endure before any tangible reward came within their reach, another page would be added to the interesting records of courageous perseverance so often shown by the Japanese in their struggle to atone for their country's isolation of centuries. MINAMOTO'S slender means exhausted in a long fight against the difficulties of his undertaking and the absence of recompense; the straitened and discouraging circumstances under which he received his band of co-workers at his poor dwelling in Bancho; their slow and laborious acquisition of ability, and then the ill-rewarded search for opportunities to exercise it—all these things, incidental to many a story of noble effort, deserve to be well remembered by every student of Japan's parliamentary history.

We have said that the Japanese Government resolved to organise an official system of shorthand reporting, but it should be noted that this decision was not arrived at until the return from Europe, last summer, of Mr. KANEKO KENTARO, formerly Chief Secretary of the Cabinet and now Chief Secretary of the House of Peers. This gentleman, after a most intelligent and exhaustive study of parliamentary procedure in the West, came home from England fully persuaded of the necessity of an official stenographic record, and supported by written recommendations in the same sense from eminent Englishmen. Inquiry showed that many of MINAMOTO'S fellow-students were scattered throughout the provinces earning pittances of from five to ten *yen* monthly, but that about a dozen practised their art, under scarcely more favourable conditions, in the capital. These twelve assembled, one evening last September, in a house in Hiyoshi-cho, Tokyo, by invitation of Mr. KANEKO, and there, under the leadership of their best experts, Messrs. WAKABAYASHI and HAYASHI, proceeded to record a lecture given by Mr. KANEKO on the experiences of his Western tour. Two days of this work produced most satisfactory results, finally dispelling all doubts as to the thoroughness and competence of MINAMOTO'S system. But it remained to be seen whether a sufficient number of experts could be procured. The experiment showed that to translate ten minutes' shorthand writing into longhand, fifty-five minutes were required. A basis of calculation was thus furnished at once. Six stenographers would be the minimum needed for reporting a debate, and seven would be the number dictated by prudence. Further, in view of the peculiar difficulties of phonetically recording an ideographic language, and also of the fact that immediate publication was desired, Mr. KANEKO

Digitized by Google

concluded that two reporters should be constantly present in order to check each other's work. Thus fourteen stenographers were needed for each House, together with a reserve to provide against casualties or undertake extra work in Committee, the total for the Diet being put at thirty-six. Advertisements offering salaries of from two *yen* to three and a half *yen* daily—rewards hitherto beyond the highest hopes of Japanese stenographers—speedily brought a large company to the capital, and during the course of a month's steady practical testing, every condition being as closely as possible assimilated to the actual circumstances of the future Diet—the required number were selected, and the Authorities obtained satisfactory assurance that the contemplated undertaking would be a success. The system elaborated was very thorough. Five sections compose the whole staff of reporters for one House; namely, the Stenographic Writers (*Sokki Kiso-gakari*), 14 in number; the Stenographic Revisers (*Sokki Kosei-gakari*), three in number; the Orthographic Revisers (*Monji Kosei-gakari*), consisting of the Secretaries of the House and the Chief of the Stenographic Bureau; the Fair Copyists (*Seisha-gakari*), eight in number; and the General Officials (*Zatsumu-gakari*), six in number. Each pair of stenographic writers sits for 15 minutes in the House, and has an interval of 75 minutes to translate the result into long-hand. (For greater expedition the latter task was from the first supposed to be divided between the two experts, but they ultimately came to divide the former also.) The long-hand report, immediately on completion, is passed to the Stenographic Reviser, who is allowed an hour and a half to examine it, after which, having appended his stamp, he hands it to the Orthographic Revisers. These in turn transfer it to the Fair Copyists, from whom they again receive it, subject it to another examination, stamp it, and finally give it to the General Officials, whose business is to forward it, with proper instructions, to the printers, and to keep a record of the whole transaction. This organization worked excellently. Verbatim reports of the proceedings in each House appeared the next morning at six o'clock in the *Official Gazette*, even the very provincialisms of the speakers being accurately reproduced, to their no small dismay. It is said, indeed, that some of the members set themselves at once to study terse and polished phraseology when they saw that the stenographers were capable of transmitting exact likenesses of their oratory to posterity.

The system was maintained throughout the session without a hitch, and, on the prorogation of the Diet, it was determined to give permanent posts as chief stenographers to Messrs. WAKABAYASHI and HAYASHI, the remainder of the staff being allowed to disperse, under promise of reassembling when the Diet meets again The Government would fain have engaged Mr. MINAMOTO, to whose initiative, ability, and patience stenography in Japan owes its existence. But like a genuine Japanese of the old School, MINAMOTO declined to accept any office or reward. He had worked for a cause not for himself, and he preferred to keep his achievement free from every taint of selfishness.

Without the success of this stenographic effort Japan's first Diet would have left much to be desired. The historian has no keener subject of regret in the case of countries like England and America than the fact that the records of their earliest parliamentary proceedings have been preserved only in a very abbreviated and imperfect form. It has been well said that the story of a parliamentary debate resembles that of a newspaper: read eagerly the first day, it is thrown away the next, to become, after the lapse of years, worth its weight in gold. Where better than in verbatim reports of parliamentary proceedings can the annalist obtain information as to the character and career of buried statesmen, the former conditions of society, the spirit and growth of legislation, and the phases and motives of epoch-making controversies? Above all are these considerations important in Japan's case. The civilized world watches with sympathising curiosity her great experiment of constitutional government, and expects that no lacuna shall be left in the remarkable chapter which she is adding to the history of civilization. Future generations of her own people will be able to trace, behind these verbatim reports, the personalities of her first parliamentary legislators; will know the thoughts that moved the nation in this remarkable era, the temperaments on which they acted, and the diction in which they were expressed. The life of the day, with all its reality, its colour, and its variety will be stereotyped in perpetuity. Assuredly this is matter for sincere congratulation, and Mr. KANEKO had full justification for the enthusiastic terms in which he conveyed the gratitude of the country to her pioneer stenographers at the close of the Diet's session. He dwelt also upon another point of greatest interest and importance. The "Genji Monogatari" of MURASAKI SHIKIBU won the nation's allegiance to pure Japanese. The "Gaishi" of RAI SANYO led educated men to the mine of Chinese riches. The stenographic records of the Diet will, in all probability, bridge over the gulf that separates the written from the spoken language, thus conferring on literary Japan the immense boon of being able to record its thoughts in the phraseology of their conception.

## *OUT-DOOR GAMES FROM THE WEST.*

OF the many Western games which one after another have been introduced into Japan, some are likely to remain in vogue, while others will probably in time disappear. It is astonishing what roughness is often displayed when foreign games are played in this country. It might be thought that the mild-tempered and less muscular Japanese youth would play at football and baseball in perhaps a listless and effeminate fashion. But such is by no means the case, these rough games being apt to develop a peculiar ferocity on a Japanese college campus. Perhaps the reason is to be found in the well-known dictum that the absence of reserve force and power manifests itself in a feverish display of spasmodic energy. The fiercer the ebullition, the weaker the actual force at bottom. It is not the horse which prances and caracoles most at the outset that will carry its master farthest over country. The diet and sedentary habits of Japanese students are such that it is impossible for them to be of powerful physique.

Many of our games have radical objections to their enduring popularity. Baseball and football are too violent for persons of sedentary habits, and may do far more harm than good if engaged in incautiously; but both have the merit of cheapness. Both, however, have the demerit of ceasing to be congenial at an early stage in life. Cricket, which might prove an admirable discipline in many ways, never seems to have taken root. The ancient and royal game of golf is an institution, and requires peculiar conditions for its successful cultivation; to treat of it adequately, a separate article would be required. Tennis, if played in good form, is a somewhat expensive game, and is far too heating unless due precautions in the way of change of raiment be taken. Is there any other game which possesses the merits of any of the above, without the accompanying defects?—a game that is inexpensive like baseball, good for middle age as well as for youth, like cricket and golf, and requiring but a limited area for its enjoyment, like tennis?

Archery is an ancient Japanese recreation, and has of late years been practised with considerable energy in the capital and elsewhere. A range is easily constructed in the corner of a moderate-sized garden, and there is very little waste of material as in tennis and golf. But it is so purely a question of individual skill, with little of the element of luck in struggling competition, as to provide less amusement than a real game. When one's adversary at archery makes a bull's eye, nothing one can do will oust him. The only plan is to show oneself equally skilful. At golf we may drive beyond our opponent, at cricket we may catch him out, and the glow of triumph in so doing is an exhilarating sensation not to be gained

Digitized by Google

in any other way; triumph for one's own side superadded to satisfaction in the discomfiture of an opponent.

There is one western game which possesses particular advantages in a climate like Japan, where physical life, especially among the upper classes, has no great measure of robustness. The ancient game of open-air bowls, dating at least as far back as the fourteenth century, is not to be confounded with the alley game, in which upright pins are used. It is a sport which requires a smooth piece of lawn, about seventy feet in length, by ten in breadth, and a number of balls of the hardest wood, about six inches in diameter. The object played at is a smaller ball, known as the jack, which is movable. The players vary in number from one to four on a side, each player being provided with two or four bowls. It is the object of players to lie as near the jack as possible, and the bowls which, at the conclusion of the whole throw, lie closest, count to the side which has thrown them. Should one of the bowls strike the jack and displace it, its new position is not disturbed. One peculiarity of the game is specially to be noted. The bowls are perfectly circular only in one plane. Of the two hemispheres right and left of this plane, one is slightly flat while the other is bulged. The consequence is that the bowl, as it slows down in approaching the jack, develops more and more of a curve in its course. The peculiarity is referred to by SHAKESPEARE in "Hamlet":—

> With windlasses and with assays of bias,
> By indirections find directions out.

The jack, known as the "mistress" in the dramatist's time, is not aimed at directly. The play accordingly admits of innumerable "fine points," in the way of elaborate curves by which the jack can be reached even when invisible to the player. An obstruction causing the bowl to deflect is called a "rub," referred to in the same drama when *Hamlet* in his wonderful soliloquy exclaims: "Ay, there's the rub!"—that's the obstruction which spoils the shot!

There is no more delightful open air recreation than bowling as now played. In the north of England and in Scotland every town has its district bowling-greens, and almost every village its club. Once laid out, the green is kept up at comparatively small expense. Many town corporations have set their mark of approval on the game by the establishment of public greens. In this mild climate where, during several hours of the day even in midwinter, open-air recreation of a mild kind is pleasurable, especially if the spot be sheltered, the game might be played with advantage all the year round. The lawn could find a suitable place in some sheltered nook of a Japanese garden. A set of bowls, easily made by any carpenter, will last for a lifetime. Readers of KINGSLEY'S "Westward Ho!" will remember how, when the news reached Plymouth that the Armada was sailing up the channel, DRAKE was engaged in playing at bowls on the Hoe. He chose to finish the game leisurely, and then got on board his vessel as coolly as if nothing special was about to happen. It is only, however, within the past century and a half, since the reign of GEORGE II., that the game has come to attain widespread popularity. During the past winter probably the first set of bowls made in Japan were turned by a carpenter in Ginza. There is no reason why the game should not have a considerable vogue here.

J. M. D.

## *THE REGISTRATION BILL.*

The following Bill passed the Upper House last session, but failed to receive the consent of the Lower owing to want of time:—

January 19th, 1891.

We hereby report the amendments made upon the Registration Bill by the Special Committee.

HACHISUKA MOSHO, Marquis,
President of the Committee on the Registration Bill.

To Count ITO HIROBUMI,
President of the House of Peers.

### THE REGISTRATION BILL.

CONTENTS.

Chapter 1—General Rules.
Chapter 2—General Rules as to reporting to the authorities.
Chapter 3—Matters to be reported to the authorities.
1—Birth.
2—Denial of Legitimacy.
3—Recognition of Illegitimate Children.
4—Marriage.
5—Adoption.
6—Death.
7—Heads of Families and members of families.
8—Abolition and Exclusion of Presumptive Heir.
9—Guardianship, &c.
10—Absconding.
11—Status of Japanese subjects.
12—Admission to the Registration List.
13—Transfer of Registration.
14—Removal from the Registration List.
15—Alteration of family name and personal name.
16—Change of family ranks (*Kazoku, shizoku*, &c.)
17—Amendment of Registration.
Chapter 4—Procedure of Registration.
Chapter 5—Re-registration.
Chapter 6—Punitive Rules.
Chapter 7—Supplementary Rules.

[Passages enclosed in brackets [ ] are portions of the original bill struck out, and passages in *italics*, but not enclosed in parentheses, are parts inserted, by the Special Committee.]

### CHAPTER I.—GENERAL RULES.

[Art. 1.—Registration means the obtaining of a document and its entry in a book under the control of a registrar (*mibun toriatsukai-ri*) in accordance with Art. 289, relating to Persons (*jinji-hen*), of the Civil Code.]

Art. [2] 1.—Registration shall *be under the control of a registrar.* An original and a copy of the document of registration, in which every member of each family is mentioned, shall be prepared in accordance with the form given in the appendix.

Registrars shall compile the registration list for each municipality, town, and village, and prepare a record of the same.

Art. [3] 2.—The original registration documents shall be placed in each Registry office, and the copies deposited in rural district or island offices, in the case of towns and villages, or in city or prefectural offices in the case of municipalities.

Art. [4] 3.—Registrars shall prepare [originals and copies of] lists showing persons of permanent registration (*hon-seki nin*) and those of non-permanent registration (*hi hon-seki-nin*) in the beginning of each year, file them into books, and note in them matters essential to registration.

Art. [5] 4.—Registrars shall, on the back of the cover of each registration book, state the number of sheets contained in said book; sign their name and mention their office; append their official seal, and also stamp their official seal on each sheet.

Registrars must not register the details of registration until the foregoing conditions are complied with.

Art. [6] 5.—Registrars shall, after the last entry in the list on December 31st in each year, append a statement showing that such entry is the concluding one, and affix thereto their official seal with their name and office; shall [retain the original in their office and] deposit [the copy] *it* in the respective rural district or island office, in the case of towns and villages, or in the city or prefectural office in the case of municipalities before January [15th] *31st* of the following year.

Should the book be filled up before the date mentioned in the last paragraph, such book shall be closed in accordance with the process mentioned in the foregoing clause and a new book opened in accordance with Arts. [4] 3 and [5] 4.

Art. [7] 6.—No matters shall be entered in the registration document or in the book, except those provided for in this law.

Art. [8] 7.—The entries in the registration document and in the book must be clear and legible, and must contain no abbreviated words or arbitrary signs. With regard to numerals relating to year, month, day, time, or age the characters 壹, 貳, 參, 拾 must be used instead of 一, 二, 三, 十.

Art. [9] 8.—Each item of entry in the book must be numbered, and no blank space should be allowed to remain between such items.

Art. [10] 9.—Should any omission or mistake occur while an entry is being made in the registration document or the book, the registrar shall amend or alter the same by the side of each line, and mention at the top of the paper the number of characters so altered or added, affixing to the same his seal. Characters to be erased must only have a line drawn through them, so that after erasure they may still be legible.

Art. [11] 10.—Any one may, on payment of a fee at the Registry Office, examine the registration document or request a copy of the same. Such fee shall form a part of the revenue of the respective municipality, town or village, and the amount of such fee shall be fixed by Imperial Ordinance.

When a registrar makes such a copy he shall certify that it is a true copy, append his name and office, and affix his official seal.

Art. [12] 11.—The jurisdiction of registrars shall be similar, in respect of boundaries, to municipal, town, or village jurisdiction.

A registrar may not transact official business at any place out of [his jurisdiction] *his office.*

Art. [13] 12.—The office of registrar shall be filled by the head of the respective municipality, town or village.

With regard to matters relating to the registration of the head of a municipality, town, or village, his assistant shall discharge the office of registrar. With regard to matters relating to the registration of both the head of a municipality, town, or village, and his assistant, the office of registrar shall be filled, in a municipality, by a member of the municipal council, and, in a town or village, by a member of the town or village assembly. The same rule also applies, in the case of the inability of both the head of a municipality, town or village, and his assistant.

Art. [14] 13.—The matters essential to the registration of officers and men in the Army and Navy, who may be engaged on an expedition, shall be decided by [Imperial Ordinance] *special law.*

### CHAPTER II.—GENERAL RULES FOR REPORTING TO THE AUTHORITIES.

Art. [15] 14.—Persons who have matters to report (*todoke ide nin*), as provided for in Chapter 3, shall intimate the same to the registrar of their place of permanent registration (*hon-seki chi*); but when such persons reside outside the jurisdiction of such registrar, they may report to the registrar in whose jurisdiction is the place in which they reside.

Art. [16] 15.—By place of permanent registration (*honseki chi*) is meant the place where a person's registration document is kept. In case, however, of addition, exclusion, entrance, and transfer of registration the place to which registration is transferred shall be regarded as the place of registration.

Art. [17] 16.—Matters which are to be entered in the registration document shall be reported in writing, but may if convenient be intimated orally.

Art. [18] 17.—In the case of the statement referred to in the foregoing article being made in writing, the person doing so shall state the essential matters, and the date of intimation in accordance with the provisions contained in Chap. 3; sign his family name and personal name, affix his seal, insert his age, occupation, and place of permanent registration, and shall produce the same to the registrar.

Art. [19] 18.—In the case of the statement referred to in Art. 16 being made orally, the person doing so shall attend before the registrar and state orally the matters to be reported in accordance with the provisions contained in Chap. 3; the registrar shall set down distinctly such oral statement, as well as the date of such statement, and the name, age, occupation, and place of the per-

Digitized by Google

manent registration of the person making the same, in a document, shall read the same over to such person and shall cause him to [sign his name or] affix his seal below his name.

Art. [20] 19.—In the case of a person who is a member of a family having to report matters essential to registration, the name and place of permanent registration of, and such person's relationship, to the head of his family (*Koshu*) must be stated.

Art. [21] 20.—When, in reporting matters essential to registration, the presence of a witness is required, such witness, and the person reporting such matters, shall state their names, ages, occupations, and places of permanent registration, sign their names and affix their seals in accordance with the provisions of Arts. ]18] 17 and [19] 18.

Art. [22] 21.—Should persons who have to sign their names to an intimation reside outside the jurisdiction of the place of permanent registration, the place of their actual residence must be stated in the said intimation.

Art. [23] 22.—If the places of permanent registration of two families differ, when matters relating to addition, exclusion, entrance or removal of registration of such two families are concerned, or if the place where intimation is made is not the place of permanent registration of either of such families, in addition to the original a copy must be prepared of the document mentioned in Arts. [18] 17 and [19] 18. The same procedure must be observed in the case of intimation of the transfer of the registration of a whole family.

Art. [24] 23.—If a person who has to make intimation be under incapacity, the person who exercises the power of a parent over him or her, or his or her guardian shall make such intimation. Such facts shall, however, be mentioned in the document of intimation.

Art. [25] 24.—When a person who has to make intimation cannot attend personally before the registrar owing to illness, or for some other reason, an agent with limited power (*buri-dairi-nin*) may appear.

Art. [26] 25.—Any witness or agent in relation to matters essential to registration shall be a Japanese subject [of adult age] and need not necessarily be a relative. [A disqualified person may not however, become a witness or agent.] In the case of intimation by a foreigner resident in Japan, a foreigner may act as witness or agent. He must, however, be conversant with the Japanese language.

Art. [27] 26.—In the case of a Japanese obtaining in a foreign country a document relating to his personal registration in accordance with the law of that country, a copy of such document must be produced by him before the Japanese Minister Plenipotentiary or before a Japanese Consul in that country. Should there be no Japanese Minister Plenipotentiary or Consul in such country, such Japanese shall produce a copy of the document described before a registrar within three months of his return home.

Art. [28] 27.—Japanese in a foreign country may report matters essential to registration to the Japanese Minister Plenipotentiary or to a Japanese Consul in such country in accordance with this law.

Art. [29] 28.—Copies of any document or of any letter of intimation received by a Japanese Minister Plenipotentiary or a Japanese Consul under the provisions of the two preceding articles shall be transmited within three months by such official to the Minister of State for Foreign Affairs, who shall in turn within five days forward the same to the registrar of the place of permanent registration of the Japanese from whom such document or letter of intimation was originally received.

Art. [30] 29.—Any person reporting matters essential to registration may on payment of a fee require a [receipt for the letter of intimation or a] certificate of intimation. Such fee, however, shall, when such [receipt or] certificate is given by a registrar, become part of the revenue of the respective municipality, town, or village; and when given by a Japanese Minister Plenipotentiary or Japanese Consul it shall become part of the revenue of the State. The amount of such fee shall be fixed by Imperial Ordinance.

## Chapter III.—Matters to be reported.

### 1. Birth.

Art. [31] 30.—When a child is born the fact must be reported within ten days, together with the following particulars:—

(1) The name of the child; whether the child is legitimate (*tekishutsu-shi*), legitimatized (*sho shi*), or illegitimate (*shisei-shi*); and also whether it is male or female.

(2) Year, month, day, and hour, as also place of birth.

(3) Family name and personal name, occupation and place of permanent registration of father and mother.

[Art. 32.—In case of the birth of an illegitimate child (*shisei shi*), intimation cannot be made as to the name of the child's father unless the latter admits the patternity of the child.]

Art. [33] 31.—Intimation of birth must be made by the father of a child. When the father is absent, in the case of a legitimate child, or when the child is an illegitimate one, the mother or a relative living in the same house, or a relative by marriage, or a physician or midwife present at the child's birth, or, failing these, one who has been present and assisted at the birth, shall report the birth to the authorities.

Art. [34] 32.—If the father or mother [fails to] *cannot* intimate any birth that has taken place in a hospital, a prison, or other public institution the president of the hospital, the governor of the prison, or the superintendent of such other public institution shall intimate the birth to the authorities.

Art. [35] 33.—Any person finding a foundling shall [at once deliver the child, its clothing and other property] *within 24 hours intimate the fact* to the registrar [and state the place, year, month, day, and time of finding, with other particulars.] The registrar shall state in a document of examination *the clothing and property of the child, the place, year, month, day, and time of finding and other particulars, together with* the supposed year and month of the child's birth, its sex, the name given to it, the name and locality of the hospital for foundlings where the child is to be sent; or the name, occupation, place of permanent registration or residence of the person who is to take charge of it, and attach the same to the letter of intimation.

When any change takes place in the hospital or in the person taking charge of the child, both the former and the new hospital or person shall [at once] *within 24 hours* intimate the fact.

Art. [36] 34.—Should the judgment of a law court deciding upon the father or mother of a foundling become final and settled, the clerk of such law court shall transmit a copy of such judgment to the registrar of the child's place of permanent registration within five days.

Art. [37] 35.—Should a newly born child or a foundling die before intimation of birth, or finding, has been made, the birth, or finding, and death must be reported with, in the case of a child newly born, the certificate of a physician, or in the case of a foundling the report of the police inquest upon the body.

Art. [38] 36.—Should a child be born during a sea voyage, the purser in the case of a vessel of war or other vessel owned by the Government, or the master in the case of other vessels, shall within 24 hours, before a witness chosen by him from among those on board, state in the log the various matters mentioned in Art. [31] 30, sign his name [or] *and* put his seal thereon, cause the witness to do the same, and state also the age, occupation, and place of permanent registration of such witness.

Should such vessel of war or other vessel arrive in a port of Japan first after the above procedure has been observed, a copy of the entry made as above must within 24 hours be sent to the [registrar of such port] *authorities at such port having jurisdiction over matters occurring at sea.* Such [official] *authorities* shall send such copy within 5 days to the registrar of the place of permanent registration of the parents of the child.

Should such vessel of war or other vessel arrive in a port of a foreign country first, a copy of the entry made as above must be sent at once to the Japanese Minister Plenipotentiary or a Japanese Consul in such country, who shall within 3 months transmit the same to the Minister of State for Foreign Affairs; and the latter shall in turn, within 5 days, forward the same to the registrar of the place of permanent registration of the parents of the child.

### 2. Denial of legitimacy.

Art. [39] 37.—Should the judgment of a law court in an action relating to denial of the legitimacy of a child become final and settled, a copy of such judgment shall within 5 days be sent to the registrar of such child's place of registration.

### 3. Recognition of illegitimate children.

Art. [40] 38.—Where the father recognizes an illegitimate child, he shall intimate the fact together with the following particulars:—

(1) Name and sex of child; year, month, day and hour of birth.

(2) Should the child become a legitimate one (*tekishutsu shi*) or a legitimatized one (*sho shi*) that fact should be stated.

(3) Name, occupation, and place of permanent registration of the father.

### 4. Marriage.

Art. [41] 39.—[In each intimation of marriage the following particulars shall be stated.] *In case of the performance of the ceremony of marriage, the husband and wife and one witness shall conjointly report the fact within 10 days, with the following particulars:—*

(1) Name of the husband and wife, the year, month, day, and hour of their birth, their occupation, and place of permanent registration.

(2) Name, occupation, and place of permanent registration of the real as well as the foster-father and foster-mother of each.

(3) If the marriage be a *nyúfu Kon-in** or if it be a *muko yōshi engumi*† those facts should be stated.

(4) The year, month, and day of betrothal.

(5) The year, month, day, and place of celebration of the marriage ceremony.

(6) If a legitimatized or an illegitimate child has been born to the couple, previous to their marriage, the name of such child should be given.

In a case where marriage has involved the abolition of a family (*haika*), such fact must be stated; and should there be other members of the family so abolished, the name, and the year, month, day, and hour of birth, the names of the real and foster father and foster mother, and the occupation and place of registration of every such member must be given.

Art. [42] 40.—Should the judgment of a law court in an action relating to the non-existence or nullity of a marriage, or to divorce, become fixed and final, a copy of such judgment shall be sent by the Clerk of such Court to the registrar of the place of permanent registration within 5 days.

Art. [43] 41.—[When a letter of intimation is presented with regard to divorce by mutual consent, the following particulars shall be stated in such letter.] *In the case of divorce by mutual consent, husband and wife shall report the fact with the following particulars:—*

(1) Name, year, month, day, and hour of birth, occupation and place of permanent registration of husband and wife.

(2) Name, occupation, and place of registration of real and foster-father and foster-mother.

(3) Name, occupation and place of permanent registration of the family head (*Koshu*) of the original home to which the husband or wife is about to return.

### 5. Adoption.

Art. [44] 42.—[Letters intimating the fact of adoption must state the following particulars.] *When adoption is celebrated or accepted, such fact shall be intimated by the parties and one witness* within 10 days, with the following particulars:—

(1) Name, year, month, day, and hour of birth, and the occupation and place of permanent registration of the adopted person (*yoshi*) and of such person's foster-father and foster-mother.

(2) Name, occupation, and place of permanent registration of real father and mother.

(3) If the adoption be with a view to the adopted person becoming a son-in-law, that fact should be stated.

(4) Year, month, and day on which offer of adoption was made.

(5) Year, month, day and place of celebration of adoption ceremony.

The provisions of paragraph 2, Art. [41] 39, must be observed in the case of members of any family the abolition of which is involved in the celebration of any adoption.

Art. [45] 43.—In the case of the marriage of an adopted son-in-law (*mukoyōshi*), intimation of such marriage must be made in addition to the intimation of adoption.

Art. [46] 44.—Should the judgment of a Law Court in any action relating to the non-existence or nullity or to the dissolution of adoption become fixed and settled, the Clerk of such Court shall within five days send a copy of such judgment to the registrar of the place of permanent registration.

Art. [47] 45.—[The following matters shall be mentioned in the letter intimating dissolution of adoption by mutual consent] *When adoption is dissolved by mutual consent the parties shall intimate that fact with the following matters:—*

(1) Name, year, month, day and hour of birth, occupation and place of permanent registration of adopted child and of foster-father and foster-mother.

(2) Name, occupation and place of permanent registration of real father and mother.

(3) Name, occupation and place of permanent registration of the head of the family to which the adopted person is about to return.

### 6. Death.

Art. [48] 46.—When a person dies the head of the family, or the person living in the family (*dō-kyosha*), or failing these the proprietor or superintendent of the house or the land on which it is

* *Nyúfu Kon-in* is that form of marriage in which a man marries a widow and adopts her family name.

† *Muko-yóshi engumi* is that form of marriage in which a man is adopted into a family and married to a daughter.

Digitized by Google

situated, shall report the fact with the following matters:—

(1) Name, age, sex, occupation, and place of permanent registration of the deceased person.

(2) The year, month, day, hour, and place of death.

Art. [49] 47.—A medical certificate as to the cause of death or a copy of the verdict of an inquest should be attached to each intimation of death.

Art. [50] 48.—No corpse can be buried without the permit of a registrar having been [obtained] *received*. In the case of a person who has died or is believed to have died from other than natural causes, a police permit must be [obtained] *received*.

Art. [51] 49.—A registrar may not issue a funeral permit unless upon the lapse of 24 hours after death. This rule, however, may for sanitary reasons be subject to special limitations.

Should a registrar consider it necessary, he may in person examine the body of the deceased or detail a doctor to do so.

Art. [52] 50.—Should *it be impossible for* the head of the family or the person living in the same family [fail] to intimate a death that has occurred in a hospital, prison, or other public institution, such intimation shall be made by the chief of such institution.

Art. [53] 51.—In the case of a person who has died from causes other than natural, or in prison, or by capital punishment, such fact shall not be stated in the letter intimating death.

Art. [54] 52.—The provisions of Art. [38] 36 shall apply in cases where persons die during a sea voyage. Where, however, all those on board a vessel—passengers as well as crew—have died by the wreck of a ship of war or other vessel, the intimation of death shall be made by the authorities that have conducted an investigation into such casualty, to the registrars of the deceased persons' places of permanent registration.

In cases where only a portion of a ship's crew and passengers have died, such authorities shall draw up a report in accordance with the oral evidence of the survivors, and transmit the same to the registrars of the deceased persons' places of permanent registration.

Art. [55] 53.—In cases where the bodies of persons who have died by calamity cannot be found, the local police shall draw up reports stating the sex, name, place of residence and places of permanent registration of the deceased and shall transmit the same to the registrars of the deceased persons' place of permanent registration, and of the place were the calamity occurred.

Art. [56] 54.—If the place of permanent registration of a deceased person be unknown, or the identity ofsuch person cannot be established, the local police shall draw up a report of the inquest and transmit the same directly to the local registrar.

Art. [57] 55.—Should, in the case mentioned in the last article, the deceased person's place of permanent registration become known, intimation of the death shall be made within 10 days in accordance with Art. [48] 46.

### 7. HEADS AND MEMBERS OF FAMILIES.

Art. [58] 56.—When a person becomes by succesion head of a family, he shall report such fact and the following matters within 10 days. In case of retirement (*inkyo*) the person so retiring shall report the fact conjointly with the person succeeding him.

(1) Family name and personal name, class (*shizoku, kazoku*, &c.) of family, occupation, and place of permanent registration of head of family.

(2) Name and relationship to the former head of the family.

(3) Circumstances leading to succession, and year, month, and day of succession.

When changes in the family order of succession occur in consequence of the provisions of a will a copy of such instrument must be produced.

In the case of members of a family that has been abolished by its head succeeding to another family, the provisions of paragraph 2, Art. [41] 39 shall be applied.

Art. [59] 57.—Should any person become head of a family by the separation of his original family, or by refounding an abolished or extinct family, or by establishing a new family, he shall report the fact to the authorities within 10 days, with the following matters. In the case of separation from a family, however, the head of such family shall, conjointly with the head of the new family, report the fact.

(1) Family name and personal name, year, month, day, and hour of birth, occupation and place of permanent registration of head of family.

(2) Name and year, month, day, and hour of birth of members of family.

(3) Family name and personal name, occupation and place of permanent registration of real and of foster-father and foster-mother of head and members of family.

(4) Reason why, and year, month, and day on which, head of family entered upon that position.

In case of the refounding of an abolished or extinct family, letters of concurrence must be produced from the nearest of kin of such family, and from the head of the main or the nearest collateral branch of such family.

Art. [60] 58.—If a person who has become head of a family by succession has [obtained] *received* permission to abolish such family, he shall report the fact within 10 days, with the following matters:—

(1) Family name and personal name, class of family, occupation and place of permanent registration of such person.

(2) Names of members of family.

(3) Cause of abolition of family.

(4) Year, month, and day on which permission was given by local law court.

Art. [61] 59.—Where a [member of a family] *person, who, by engaging in marriage either as husband or wife, has entered another family*, returns to his or her former and real home [under the provisions of paragraph 2, Art. 248, Part "Persons" of the Civil Code] *owing to the death of his or her consort*, or where [a junior relative (*hisokushin*) who had entered another family, is received back into his or her former and real home in accordance with the provisions of Art. 256 of the same part of the Civil Code] *such person takes to his or her present home a junior relative who has been living at his or her real parental home, or where a person, who has left his or her home of wedlock or adoption in consequence either of the nullity of marriage or adoption, or of divorce or dissolution of adoption, takes to his or her real home a junior relative who has been living in such home of wedlock or adoption*, the heads of both families, the person so received back, and any one who has been consulted as to such step shall report the fact with the following matters:—

(1) Name, year, month, day, and hour of birth, and relationship to head of family, of such person who so returns, or of such junior relative.

(2) Family name and personal name, occupation, and place of permanent registration of father and mother of person who returns or of junior relative.

(3) Family name and personal name, occupation, and place of permanent registration of heads of both families.

(4) The cause of return or of readmission.

Art. [62] 60.—Where [a real house or family opposes the return of a former member in accordance with paragraph 2, Art. 247 of the Part "Persons" of the Civil Code] *a person who has become a husband or a wife and has thus, or by adoption, entered another family without permission of the head of his or her real family, wishes to return to his or her real family*, the head of such real family shall, if he opposes such return, report the fact with the following matters:—

(1) Name of person wishing to return.

(2) Reason of opposition to such return.

(3) Year, month, and day on which the marriage or adoption took place.

### 8. ABOLITION AND EXCLUSION OF PRESUMPTIVE HEIRSHIP.

Art. [63] 61.—Should presumptive heirship be abolished or excluded, or should abolition or exclusion of a presumptive heirship be cancelled, the head of the family shall report the fact, with the following particulars:—

(1) Name and age of presumptive heir.

(2) Cause of abolition or exclusion or of cancelling of abolition or exclusion.

### 9. GUARDIANSHIP, PROHIBITION OF EXERCISE OF RIGHTS OF PROPERTY, PROVISIONAL PROHIBITION OF EXERCISE OF RIGHTS OF PROPERTY, LIMITED EXERCISE OF RIGHTS OF PROPERTY, AND PROVISIONAL EXERCISE OF RIGHTS OF PROPERTY.

Art. [64] 62.—In the case of guardianship, prohibition of exercise of rights of property, *provisional prohibition of the exercise of rights of property*, limited exercise of rights of property, or provisional exercise of rights of property, the guardian, warden, or person in temporary control shall report the fact within 10 days, with the following matters:—

(1) Family name and personal name, age, occupation, and place of permanent registration of the minor, of the person under prohibition of the exercise of rights of property, *of the person under provisional prohibition of the exercise of rights of property*, of the person under limited exercise of rights of property, or of the lunatic.

(2) Family name and personal name, occupation, and place of personal registration of guardian, warden, or person in temporary control.

(3) Year, month, and day on which guardianship, prohibition of the exercise of rights of property, *provisional prohibition of the exercise of rights of property*, limited exercise of rights of property, or provisional exercise of rights of property began.

Art. [65] 63.—Persons under prohibition of exercise of rights of property, or under provisional prohibition of the exercise of rights of property, and lunatics who have recovered from their illness, shall, on the removal of such prohibition or on such recovery, intimate the fact to the authorities within 10 days.

When limited exercise of rights of property ceases, the warden shall, in accordance with the last paragraph, report the fact.

### 10. ABSCONDING.

Art. [66] 64.—When judgment is given showing presumptively or actually that absconding has taken place, such fact shall be reported within 10 days by the petitioner in the action, with a copy of such judgment.

Art. [67] 65.—When the residence of the absconder has become known, the petitioner in an action relating to the absconding, or the successor of the absconder, shall report the fact within 10 days.

### 11. STATUS OF JAPANESE SUBJECTS.

Art. [68] 66.—Persons desirous of gaining the status of Japanese subjects [in accordance with Art. 8, Part "Persons" of the Civil Code] shall intimate the fact with the following matters, and produce also a copy of certificate of birth:—

(1) Family name and personal name, occupation, and place of permanent registration of the applicant.

(2) Family name and personal name, occupation, name of native country, and place of permanents residence of applicant's father and mother.

(3) [Causes mentioned in Art. 8, Part "Persons" of the Civil Code] *Legal causes for application.*

(4) Name of office where, and year, month and day when, intention of application was intimated.

Art. [69] 67.—Any person who desires to recover the status of a Japanese subject [in accordance with Arts. 13 and 14, or paragraph 2, Art. 15, Part "Persons" of the Civil Code] shall intimate the fact with copy of certificate of birth and the following matters:—

(1) Family name and personal name, occupation, present place of permanent registration and former place of permanent registration.

(2) Family name and personal name and former place of permanent registration of father and mother.

(3) Cause by which status of a Japanese subject was lost.

(4) *Legal cause for application for recovery of status.*

[(4)] (5) Name of office where, and year, month and day when intention of application was intimated.

[(5) Fact of and reason for dissolution of marriage in the case provided for in Art 15, Part "Persons" of the Civil Code.]

Any person who has received from the Government permission to return to Japan shall produce such permit.

Art. [70] 68.—Any person who becomes head of a family by gaining or recovering the status of a Japanese subject, shall mention such fact in the letter intimating the desire to gain or recover such status.

Art. [71] 69.—When a judgment of a Court of law in regard to the loss of status of nationality becomes fixed and settled, the clerk of such court of law shall within 5 days send a copy of the same to the registrar of the place of permanent registration of the party concerned.

### 12. ADMISSION TO THE REGISTRATION LIST.

Art. [72] 70.—Any Japanese who is not registered must be enrolled on the registration list by [obtaining] *receiving* the permission of the local Court. When permission is [obtained] *received* the head of the applicant's family shall intimate such fact within 10 days, with the following matters:—

(1) Family name and personal name, year, month, day, and hour of birth, occupation and place of permanent registration of head of family.

(2) Name, year, month, day, and hour of birth, and relationship to the head of the family, of its other members.

(3) Family name and personal name, occupation, and place of permanent registration of real and of foster-father and mother of the head of the family, and of each member of such family.

(4) Reason why applicant has not yet been admitted to registration.

(5) Year, month, and day on which permission of local Court was given.

*Art. 71.—When a foreigner fixes his place of permanent registration in Japan such fact shall be intimated to the authorities by the head of his family, with the following matters:—*

*(1) Family name and personal name, year, month,*

Digitized by Google

*and day of birth, place of permanent registration and name of native country.*

*(2) Name, year, month, and day of birth of members of family.*

Art. [73] 72.—The intimation as to the fixing of a place of permanen registration [in Japan] in the case of a naturalized person [or foreigner] shall be in accordance with special laws [and the Civil Code].

### 13. TRANSFER OF REGISTRATION.

Art. [74] 73.—If the place of permanent registration be changed, the head of the family shall intimate that fact to the registrar, producing also a copy of the registration document that he received from the registrar of the former place of permanent registration.

### 14. REMOVAL FROM THE REGISTRATION LIST.

Art. [75] 74.—In the case of persons whose absconding has been proclaimed, registrars shall, as soon as the age of such persons, if alive, has reached 100 years, or when 30 years have elapsed since the date of disappearance or receipt of last tidings of such persons, and without waiting for intimation, remove the names of such persons from the registration list.

Art. [76] 75.—A registrar shall, in the case of any family that has become extinct [under the provisions of Art. 260 of the Part "Persons" of the Civil Code], *owing to 30 years having elapsed since the disappearance of, or receipt of last tidings from, the head of such family whose absconding had been proclaimed, and owing to the absence of any member to assume the rights of such family*, at once remove such family from the registration list without waiting for intimation.

When the heritable property of a deceased person, head of a family, has lapsed to the State; or if there be no heritable property, and no one to succeed to the family rights appears within [one] *three* years, the provisions of the last paragraph shall apply.

Art. [77] 76.—When the judgment of a Law Court in the case of double registration becomes fixed and settled, the clerk of such Law Court shall transmit a copy of such judgment to the registrar of the place of registration, from the registration list of which the court has decided that the name of the person should be removed.

### 15. ALTERATION OF FAMILY NAME AND PERSONAL NAME.

Art. [78] 77.—Any person who is desirous of resuming a former family name, or who is desirous of altering his personal name, must [obtain] *receive* the permission of the local court. When such permission is [obtained] *received* he shall intimate that fact within 10 days, producing also *a copy of* the permit of the local court.

### 16. ALTERATION OF FAMILY CLASS.

Art [79] 78.—In the case of a person who is ennobled or raised to the rank of *shizoku*, or who is deprived of the rank of *kwazoku* or *shizoku*, the head of the family shall intimate that fact, producing also a copy of the order or permit of the authorities *within 10 days.*

Art [80] 79.—When a *kwazoku* or *shizoku*, head of a family, has lost rank by being sentenced to punishment for the commission of a crime, the clerk of the respective Court of Law shall within 5 days, transmit a copy of the judgment to the registrar of the place of permanent registration.

### 17. AMENDMENT OF REGISTRATION.

Art [81] 80.—When the judgment of a Court of Law as to amendment of registration becomes final and settled, the clerk of such Court of Law shall, within 5 days, send a copy of such judgment to the registrar of the place of registration of the person in whose case the amendment is made.

## CHAPTER 4.—PROCEDURE OF REGISTRATION.

Art. [82] 81. When a registrar has received intimation of matters essential to registration he shall instantly enter the matters thus intimated in the list of persons of permanent registration or in the list of persons of non-permanent registration, as the case may be, and shall affix his seal at the end of such entry.

Art. [83] 82.—The registrar shall, in case intimation has been made in writing, inscribe at the end of such letter of intimation the words "received the—day of the—month of the—year of—," and, in case oral intimation has been rendered into writing, the word "rendered into writing the—day of the—month of the—year of—." In either case he shall sign his name with his official title, and put his official seal thereto.

Art. [84] 83.—When a registrar has completed the procedure set forth in the two foregoing articles he shall instantly proceed in accordance with Arts. [85] 84 and [92] 91.

Art. [85] 84.—Matters relating to presons of permanet registration shall, when there is a specified period of time within which intimation about such matters is to be made, be entered in the registration list with the dates of the occurrence of the matters as well as of the intimation of the same; and, when there is no such specified period of time, entries shall be made only with the date of intimation. In either case, the registrar shall put his seal at the end of each entry.

Art. [86] 85.—Each registrar shall make the entries of those matters which are to be added to registration, in their proper order.

A matter which is to be struck off the registration list shall be erased by a line drawn through it.

Art. [87] 86.—Any registrar to whom it has been intimated that a whole family is about to come under his jurisdiction, shall register such family anew, in accordance with Art. [2] 1., and incorporate such registration in the list.

When a whole family intimates departure from the jurisdiction of a particular registrar, its entries in the list shall be cancelled by a line drawn through the entries, and an entry to that effect made in the book of cancelled registrations (*josekicho*).

Art. [88] 87.—When succession in a family is intimated, the registrar shall revise the registration of the new head of the family in accordance with Art. [2] 1 and on the model of the registration of the preceding head of the family. The old entry, however, shall be preserved and copied into the list of cancelled registrations, the registrar placing his official seal between the old and the new entries to show their relation.

Copies of entries of registration made or revised under this or the previous article shall be placed together, on December 31st in each year, and deposited in the rural district or island office in the case of a town or village, or in the city or prefectural office in the case of a municipality, before the [15th] *31st* of January following, with a statement showing the number of pages in the list, and bearing the official title and the family name and personal name and the official seal of the registrar.

Art. [89] 88.—When the registration of a whole family is transferred, the registrar of the new place of resignation shall immediately on completing the entry intimate the fact by letter to the registrar of the former place of registration.

Art. [90] 89.—In a case involving addition or admission to, or exclusion or removal from the registration list, of two families whose places of permanent registration are not the same, a registrar shall, in the event of addition or admission to his list, intimate the fact, as soon as he has made the entry, to the registrar of the former place of registration; and in the event of exclusion or removal from his list shall send the original letter of intimation and appended documents, as soon as the entry is cancelled, to the registrar of the new place of registration.

Art. [91] 90.—When a matter intimated by a person of non-permanent registration refers to the registration of one family, or when such matter refers to the admission or exclusion of the registration of two families, of which the permanent registration are in one and the same jurisdiction, the registrar shall transmit the letter of intimation to the registrar of the place of permanent registration, together with appended documents.

Art. [92] 91.—In case matters intimated by a person of non-permanent registration relate to addition or admission to, or exclusion or removal of the registration of two families whose places of permanent registration are not the same, the local registrar shall send the original letter of intimation with appended documents to the registrar of the place where addition or admission is to take place, and a copy of the same to the registrar of the place where exclusion or removal is to be effected.

Art. [93] 92.—A registrar shall, immediately on receiving documents sent to him in accordance with the last four articles and with Art. [29] 28, enter in the list of persons of permanent registration matters mentioned in the letter of intimation, the family name and personal name of the person, and the name and the official title of the registrar sending them, the date on which they are sent and the date on which they are received, and shall affix his seal at the end of such entry. He shall also mark on the documents the date of receipt, append his name and his official title, affix his seal and carry out the procedure of registration in accordance with Arts. [85] 84 and [88] 87.

Art. [94] 93.—A registrar shall, on receiving a copy of a judgment, carry out the procedure provided for in Art. [93] 92. Should such judgment, however, involve exclusion or removal of registration from another jurisdiction, and its addition or admission to his, he shall, after completing the entry on his list, and within 5 days, report the fact, in accordance with the same article, to the registrar from whose list exclusion or removal was effected. The latter official shall carry out the necessary procedure under the same article.

Art. [95] 94.—A registrar shall, on receiving copy of a statement relating to birth or death, or to accident to a person entered on his list, carry out the procedure provided for in Art. [93] 92.

Art. [96] 95.—A registrar shall, on receiving the report of the death by accident of a person of non-permanent registration, or of the death of a person whose place of permanent registration is unknown, inscribe at the end of such report the words "received the—day of the—month of the—year of—" state his official title, sign his family name and personal name, and affix his official seal. He should also enter the facts in his list of persons of non-permanent registration.

Art. [97] 96.—Once every month each registrar shall collect and place together all letters of intimation and other relative documents, state in a list the number of letters or documents, and the number of their pages, state his official title, his own family name and personal name, affix his official seal, and deposit such letters and documents before the 10th of the following month in the rural district or island office in the case of a town or village, and in the city or prefectural office in the case of a municipality. Such office shall preserve such letters and documents for a period of 50 years.

## CHAPTER 5.—RE-REGISTRATION.

Art. [98] 97.—In the event of the registration document being lost by natural calamity or accident, the registrar shall at once report the fact to the governor of the city or prefecture.

Art. [99] 98.—On receipt of the report described in the last article, the governor shall instruct the registrar to make a fresh registration within a stated period, and shall issue a notification to that effect.

Art. [100] 99.—When a registrar has, under the conditions provided in the last article, made a fresh registration, he shall submit his procedure for examination to the head of the rural district or island in the case of a town or village, or to the governor of the city or prefecture in the case of a municipality.

## CHAPTER 6.—PUNITIVE RULES.

Art. [101] 100.—Persons who fail to make necessary intimation within the periods provided for in this law, shall be liable to a fine of not less than *yen* 1 and not more than *yen* 1.95.

When judgment in such an event as the above has become final and settled, the clerk of the Law Court by which it has been pronounced shall, within 5 days, send a copy thereof to the registrar concerned.

Art. [102] 101.—Officials of the State (*Kanri*) or public officials (*Kôri*) who contravene this law shall be liable to a fine of not less than *yen* 2 and not more than *yen* 5.

Art. [103] 102.—Officials of the State or public officials who by contravening this law render null and void documents relating to personal status, shall be liable to a fine of not less than *yen* 5 and not more than *yen* 50.

## CHAPTER 7.—SUPPLEMENTARY RULES.

Art. [104] 103.—The office of registrar shall, in places where the Municipal Town and Village Organization is not in force, be filled by the head of the urban district (*Kucho*) or by the headman (*Kocho*); and in places where a special municipal system is in force, by the head of the urban district (*Kucho*); should *Kucho* or *Kocho* be unable to discharge the duties, the clerks of towns, villages or rural districts, may do so in their place.

Art. [105] 104.—In the case of Hokkaido, copies of registration documents [and of registration lists] and the documents mentioned in Art. [97] 96 shall be sent by urban districts to the Hokkaido Administration Board, and for the purposes of this law "governors of cities or prefectures" shall be held to mean in the case of Hokkaido the Chief of the Hokkaido Administration Board.

Art. [106] 105.—This law shall come into force on the [day when Part "Persons" of the Civil Code shall become law] 1st day of the 1st month of the 26th year of Meiji. The period for re-registration shall, however, be decided by the Minister of State for Home Affairs in accordance with the views of Governors of Cities and Prefectures.

Art. [107] 106.—The Law of Registration (*koseki-ho*), issued by Imperial Proclamation in April, of the 4th year of Meiji, and all other laws and regulations conflicting with this law, shall be repealed, and become null and void on the day when this law comes into force.

Art. [108] 107.—The Minister of State for Home Affairs shall frame and issue all orders and rules necessary for carrying this law into force.

## *OUR "SPECIAL" TELLS THE STORY OF FELIX HOLT SECUNDUS.*

IN THREE SECTIONS.—BY A. M.

### Section II.—Through the Tropics.

I had several reasons for going in the steerage. To begin with I had ascertained that ninety odd Celestials had shipped as deck-passengers forward, and it was the Chinese question I had to write up for my newspaper. I therefore fancied it would be a good line to get right into the midst of the saffron curse at once. I would be almost morally certain to get some "copy" out of the experience. And what is there that a "special" will not go through for "copy"—especially if it means a grand first-class "scoop" over the opposition dailies? In the next place I had heard whispers of certain strange occurrences in the fo'c'sle and engine-room of the S. S. *Barracoota* on previous voyages, and I wanted to see for myself whether they were fit for publication. But the main ground I had for exposing my anatomy to fourteen days of an olfactory Inferno and general bodily discomfort was the absolute certainty of improving and edifying conversation. For Mick Donovan was going in the steerage as far as Port Darwin, and Mick was about the wittiest and most amusing specimen of iniquity it has ever been my privilege to run across. He was Milesian,—his name alone was warrant enough for that, and if you *were* Didymus enough to doubt, his face would have been a clincher. It had the map of Ireland painted all over it. And then his brogue, and the things it said—especially the latter! I had met him in the Sydney Police-Court—But that would be a digression, and besides, I don't want to give folks a low idea of his moral character to begin with, and thus prejudice them against him.

So I put my best clothes and a shirt or two in a box where they would not be likely to get hurt, bought a pair of second-hand moleskins and a jumper from an "ole clo" man from Judea and shipped third class for Hongkong viâ the Queensland Ports, Port Darwin, Java, Singapore, and Saigon. I got on board and found myself in lively company. There were about a dozen diggers bound for the Kimberley Field; one half of them blind blazing drunk, and the other moiety powerfully wishful to join them. Mick was especially far-gone, "o'er a' the ills o life victorious," and a Peeler he had just succeeded in throwing overboard besides. Then we had a very much married woman of Samaria and—but as they don't play any part in the comedy it serves no point to introduce the remaining members of the human cargo forward.

That is, excepting the Chinamen. They were without exception the dirtiest lot of bipeds I ever set eyes on. After we passed the Heads it came on to blow a regular southerly 'buster, and so the Yellows were kept battened down below. This continued for two days, and then they came up. Then—but I'm anticipating.

It was rough water all the way till we ran in behind Moreton Island to pick up the passengers from Brisbane. Then the wind fell and the sea spread out flat like a mill pond or a silver-streaked pancake. Of course we were all agog to take stock of the accession to the passenger lists. *In primis* about forty Chinkies,—and to judge from their looks, smelly ones. Then two or three whites in rig-outs that were certainly not meant for the saloon. But what came in for the bulk of our attention was two individuals that stood apart in haughty isolation waiting for the lowering of the first cabin gangway. But their haughtiness was most unmistakeably not of the same stamp. In the man it was coarse-fibred, rude, and unrefined, the insolent aggressiveness of the purse-proud *nouveau riche*. It sat on him just as awkwardly as his fine clothes. It was not a true spiritual quality at all; strip the man of his money and it would be cringing. It was easy to see at a glance that it was fussy, pompous, and loud-voiced. The man was seemingly about fifty years of age, with a goat-like wintry beard and whiskers sticking out aggressively from his florid cheeks and straggling all over his gold-studded shirt-front. He was a plutocrat who wished to spell himself aristocrat—there was no mistaking that. It was some notion of this kind possibly that was at the bottom of Mick Donovan's critique of his *tout ensemble*. "Shure, an' isn't it the shtrut av an am'rous jackdaw in paycock's feathers that the craythur has?" Which criticism by the way was for the benefit of the "craythur" himself as well as for the general diversion.

With the woman it was different. There was no brummagem about her. She was tall and lithe, with grace in each and all of her supple curves, and the hall mark of blood and breeding in every line of her features. Proud she was too, even a fool could see at a glance, but her pride did not sit awkwardly upon her like an ill-made ill fitting cloak—it was part of her. So to speak it was the tempering of her soul's mettle. Hers was surely the sort of haughtiness that even a democrat could respect—it was the pride that would never stoop to meanness. She was in the full flush of ripe womanhood; possibly about six or seven and twenty. It didn't need a Dalton to tell that there was no link of sibship 'twixt her and the "craythur."

The gangway went down and preceded by the "craythur" she set foot upon it. And here it was that my friend Mick disgraced himself eternally. He had been drinking at intervals all the way up, and although it was early morning and he had not had time to take much whisky on board since he had been bundled out of his bunk, he yet had enough to fill him with the spirit of prophecy—prophecy being the same as outspokenness. He had mounted on the bulwark by way of getting a better view of the landscape, and stood there with one arm round a stanchion and his right leg crossed over the left. His throat was exposed to the breezes, which at the same time inflated balloon-wise the folds of a Crimean shirt that bulged out of the sizeable hiatus between the top band of his trousers and his waistcoat. Altogether his was a picturesque figure and pose, and when he began to saw the air with his unoccupied hand holding an unlit cigar between the fore and the middle fingers and to declaim with the raucous voice of a fishmonger, he commanded considerable attention.

In his youth Mick had had a very severe attack of State school education. Strong germs of the disease still lurked about in the pigeon-holes of his brain, and on occasion would burst into life with the eruptive effect of a volcano. They read queer trash in those State Schools, and commit a lot of it to memory. So overcome by the recollections of his misguided youth Mick struck up a chorus from Samson Agonistes, and gave it with effect; and variations thrown in appropriate to the occasion.

> But who is this? What thing av say or land—
> Faymale av sex it seems
> That, so bedecked, ornate an' gay,
> Comes this way sayling
> On a dirthy tug
> From Brishbane, bound for the Oisles
> Av Java an' Hongkong
> Wid all her bravery on an' tackle thrim
> Sails filled and shtramers wavin'
> Coorted by all the bhoys that wants a wife,
> A jackdaw shtruttin' like a paycock
> Her harbinger, a tin-yard train behoind."

Then stopping abruptly he held out his cigar and shouted in coaxing, wheedling tones that were heard all over the ship from stem to stern,

"Arrah! me lady, tip us a wink av yer luvely oiyes. It's a loight fur me seegaur I want."

The lady looked up at him half amused and half angry. But her escort jumped with rage and said something about d—d insolence. Now in spite of the implied compliment in the peroration, it struck me that that Mick's address was insolent, and a reflection upon the manners of the third cabin. So I picked up a bucket and shied it at him. It hit him on a soft spot rearward and Mick went overboard. Now Moreton Bay sharks have a bad name for voracity and that morning we had seen several black fins cleaving the surface of the water ominously like a knife; so when Mick went down into the waters of the deep there was some excitement. He was eventually fished out without any serious damage, and he came on board dripping like an ancient sea-god and perfectly sober. Of course he wanted to fight me, but as there was no room for a ring we compromised the thing by a "shout" for all hands. "Shout," be it explained, is Australian for "standing" drinks for the crowd. And that was the end of the episode.

I think I remarked there was no room for a ring,—the trouble was that with the forty extra Chows there was no room for any lawful amusement whatsoever. They littered every crack and cranny of the deck with expectorations and all kinds of filth. It was beastly and disgusting. A Zola, with his keen nose for smells and abominations of every sort, might have found some joy in the thing, but realist as I am in the sense of writing about life as it is, I couldn't see where its redeeming points came in. There is but little pleasure in fashioning a work of art out of dirt. But that's not to the point. What is, is that we made representations to the authorities about the matter, and got badly snubbed for our pains. Then we waxed wroth and held an indignation meeting. After sundry expressions of opinion Mick took up his parable.

"Bhoys" he said. "It's outrajis and clane agin the principle av incouragement to local indushtry. It's divil a bit av soap I've seed among the collection since the day I set fut on board. So I propose that we sind a dipytashun av wan and a shtick to riprisint the needcessity av a ginral claning up among the haythen. An' so be ez yez hev no manner av objection, I'll be that silf same dipytashun mesilf and I'll be bould to take my friend Johnson's Malacca along, as I misdoubt not it has consid'rable powers av pirswāyshun."

It was at dinner after dark that this motion was made, and it was seconded and carried *nem. con.* Furthermore it was acted upon without delay. Mick went out and opened the interview. It was the brogue that took the floor first and it was really and truly eloquent. But by and by the "shtick" got a chance of expressing its sentiments too, and soon it was doing the bulk of the talking. And as Mick surmised it *did* have "consid'rable powers av pirswāyshun." It cleared the deck between the bridge and the third class bunks as if it had taken the contract by piece-work and wanted to get through with it quickly. Not that the job was scamped. Judging from the Mongolian exclamations that must have been meant for oaths, the Pigtails seemed to be fully alive to the genuine workmanship of the performance.

"Now, bhoys," said Mick, as he rolled down his sleeves and seated himself at the foot of the table with a dirty pack of the Devil's Books in front of him, "It's a plan av campaign we must have, or w'll be downed by the dirthy bla'gards av Sassenach Landlords—Chaneymen I mane, intoirely. This sort of conversashun is very improvin' at dushk, but like moonloightin' it won't do by day at all, at all. The govirnmint, I mane the or-f-cers, will be pokin their dirthy noses into the mather, and the pore wurrikin maan will be throdden under the fut av appreshun as usual. So we'll foight at long range."

"How shall we do that, Mick?" asked one of this audience.

"Now, ye omadhaun av the son av a dirthy Cockatoo farmer, isn't that just what I'm goin' to dimonstrate? You know them shpuds we gits for breakfast, and tiffin, and tay, and dinner an all?"

"We do" came in a chorus from all round the table, for we had plenty of opportunity to make their acquaintance ("Shpuds," be it explained, is Hibernian for "spuds," which again is Anglo-Saxon vernacular for "potatoes,"—that is at least in all civilized countries).

"Well, thin," proceeded Mick "thim 'shpuds' is not fit to loine the bowels av a pig, let alone the innards av a whoite Christian dimocracy. But they're just the very shtuff for bombardin' the haythen wid. Now, bhoys div yez moind me? We'll just collar every blessed mother's son av a murphy that comes to this end av the shop, and if the haythen *are* obstropulous by daylight we'll tache them how to spell 'shpuds' in civilized handwritin."

And we did. After breakfast first one odoriferous Celestial and then another ventured over the dividing line we had chalked across the deck as a sort of *shubiki gwai*, and perched on the load of timber that covered the scuppers. There they sat and grinned and chattered like a lot of jabbering simians, or a flock of carrion crows that had been flying in a dust-storm for a month of Sundays. Mick gave the word to prepare for action—'wid shpud cartridge load.' We each marked our man, and then a typhoon of sloppy sweet-potatoes smote the invaders with such unerring velocity that the rout of the Moko at Hakata was a bagatelle to the stampede that ensued. We had to repeat the dose only twice to get perfect release from all disquieting malodours.

We then got to work to set our house in order, and had everything in such spick and span array that news of the reformation travelled to the first cabin and some of the passengers came forward on a visit of inspection. Of course we received them courteously, and by way of politeness as Mick phrased it he strolled aft to return the call on the following day. But he had his nose put sadly out of joint. He came back expressing his sentiments in phrases that were forcible but unfit for publication. It seems that it was the cut of his clothes that was the matter. The costume he went calling in was certainly picturesque, but then it was certainly neither fashionable nor well-cut. Besides his boots and his wide-awake it consisted of but two items; a pair of moleskins that hadn't seen water since I knocked him overboard and a flannel shirt that had reached the farthest limits of shrinkage. It left his throat freely exposed and also his chest,—a great brawny Orson-like chest with the tan running out of sight in a tangled undergrowth of matted hair that might have served a gorilla for a beautys pot. The more fastidious among the males in the saloon didn't like it, and the females were all very much scandalized. So representations were made to the skipper instanter, and the skipper talked to Mick as he would to a Chinese deck-hand, and Mick came back with his blood on the boil and his tongue wagging eloquently.

"It was that blank-blank-blank-blank Podgett that did it," shouted Mick excitedly waving his

Digitized by Google

arms like the sails of a wind mill or a semaphore trying to be unusually expressive. "But I'll ——"

What Mick proposed to do cannot be put on paper. No more can the epithets wherewith he hit off what seemed to strike him as the salient points of Podgett's physical and psychological get-up. They were neither conventional nor correct,—they were eminently original and luzidly forcible.

"An thim newspaypers till us we're a dimocracy! Sure an' its only blandatherin us they are whin they sez it. What's the good av ayquality an' wan man wan vote if there's tu be wan law fur the tramps—that's thim—an' another fur the ginlmen—that's us? Shure an' Parliminta are no better than the thimble an' three-pay thrick if that's the outcome av their ligislation!"

It is needless to observe that these remarks have been somewhat carefully edited, and that in course of the operation they have lost the main part of their virility. But in the original they were altogether too full-blooded for the delicate hot-house morals of the "young person," who does so much for the best interests of British literature.

"Bhoys," finally wound-up Mick, slapping his right hand into the palm of his left with the sound of a dynamite-blast in a tunnel, "I'll tell you, we must put on our cump'ny manners, and nixt toime they calls we must be not at 'ome. Div yez moind me now?"

We did'nt see that this in itself would be much of a retaliation. But then most of Mick's ideas were conveyed in tropes and figures that like certain diplomatic documents, allowed of considerable latitude of interpretation. So we simply set this down as a sort of metonomy, and waited the course of events to clear up the full import of the expression.

We weren't kept long in suspense. The following day we arrived at Cooktown and shipped a few more returning Chows that hadn't enjoyed the advantages of an interview with the "dipityashun av wan and a shtick" and the benefits of the education imparted there by and whoconsequently transgressed treaty limits with the sublime audacity begotten of ignorance. Several of them came and got atop of the timber and one huge lump of small-pox pits and smelliness with a wonderfully ribbon-bedizened pig-tale perched himself on the winch just outside the passage under the bridge.

"Bhoys," said Mick, when his eye had taken in the situation, "you will now plaze make a collection av shpuds. This is a free counthry an' a whoite man's land, an' we're not goin to have haythens an' Chaneymen pokin dirthy jokes at dimocracy."

We soon cleared the decks of all save one. The Chink on the winch sat there with all the stolidity of a Burmese god, mainly because by some strange accident no one had made a mark of him.

"Bhoys," said Mick, when he noticed him. "It's an Aunt Sally that we'll make av 'im. Three shots fur sixpince—the proceeds to go in rifrishments for the comp'ny afther thir pathriotic exirtions. An' it's mesilf that'll take fust shot."

Now I was standing next to Mick in front of the third class bunks about a dozen yards from the Chinaman to be "shooted" at. Right over his head I caught sight of female habiliments and a male escort approaching down the passage—the Viscountess (I forgot to say she was that) and Mr. Podgett no less. Mick must have seen them too; from what followed I'm sure he did. He was an unerring shot—like the seven hundred chosen men of Benjamin, he could sling "shpuds" at a hairsbreadth and not miss. But this time he *did* miss;—that is he didn't hit the Chinkie. The great wet sloppy potato at first grazed the root of his pig-tail and flew right on and caught Mr. Podgett in the face just as he emerged from the alley-way. It hit him on the chin and went into fragments. Some of them flew in great splotches over the Viscountess' bodice.

It was a ludicrous sight. She drew herself up to her height and swept one haughty look over the deck, while old Podgett jumped with rage, his beard bristling with "shpuds" and passion, like an infuriated Sultan out of an Alhambra burlesque. As ill luck would have it I was standing in front of the crowd and the woman's eye fell upon me with magnificent contempt. I knew that she set me down as the culprit. Then she turned round and swept off with Podgett quivering with impotent rage behind her.

"So," screamed Mick in high glee, "*we're* not at 'ome this toime, ladies and gent'men, and we're very sorry. That'l pershuade them not to thrifle with the feelins av dimocracy nixt thrip."

Next day the steamer went through Albany Pass. It is the prettiest spot within the whole stretch of the Great Barrier Reef and we were all agog to see it. The Viscountess came on the bridge, and by some accident her looks travelled down on to our deck and her eye caught mine. I never saw such a look of scorn in all my life. I was clearly very inky in her black books.

Nothing of any further consequence happened till we got to Port Darwin. It was there my work began, and lurid work it was. This place is the nearest approach to Inferno it has ever been my fortune to strike,—Port Said not even excepted. I had to do it, and I did it thoroughly, exploring all the iniquities of the opium dens, and so-called lodging-houses, and actually taking tickets in a Pak-a-pu bank. As I stood waiting for the pak-a-pû drawing I was accosted by a white woman. She looked very worn and jaded, but still there were the remains of beauty in her face. She began to speak of the place; she evidently knew it well. She took a look at the pak a-pû ticket and held forth on the mysteries of the game. She went in to see the result of the drawing; to judge from the numerous salutations she received there (some of them apparently of a jocular nature) she reckoned quite a host of acquaintances among the Celestials. Of course my tickets turned out blanks and I took my leave. The white woman sympathised heartily over my discomfiture and came along with me. She was very communicative; the store of quaint and curious information on everything bearing on China town she possessed was wonderful. And every bit of it she willingly placed at our disposal. For a good hour she continued to pilot me into tortuous windings and devious labyrinths acting as a model Cicerone all the while. And be it remarked that although the themes on which she dilated were ticklish subjects to handle there was not a single expression in her language that the most fastidious purist could possibly object to. There was not the slightest soupçon of coarseness to be detected in any of her remarks, and Heaven knows there was ample opportunity for it. Hers must be a sad history but that's neither here nor there at present. What is to the point is that as I was saying good-night to her before getting down to the wharf who should pass but the Viscountess? When she saw us she switched her garments aside with disgust, and swept on as if we had been a couple of plague-spots. Clearly she had made up her mind that I was about as bad as they make them.

The steerage was utterly depleted of Caucasians at Port Darwin, and I saw that I should feel lonesome if I didn't shift my quarters. Besides an odd six dozen Cingalese navvies and a few extra score of Chows took passage forward here. The prospect according had all the appearances of being over-smelly, and so I determined to shift my camp. According I saw the local agent, and squared the difference in the fares. When I got on board again I went aft and began to stroll up and down the quarter-deck as if I had a perfect right to do so, which indeed I had. But the old martinet of a Philistine of a skipper didn't know that, and when he came and ordered me forward he got his nose put out of joint not inconsiderably. I asked him *why* I should go forward, and when he began to talk of kicking me if I didn't move at once and generally behaving like the nigger-driver he was, I just pulled out my ticket for his inspection, and then before his very eyes wrote out a formal complaint about his insolence, read it to him, and sent it off to the company. I furthermore hinted to him that I wasn't even then quite done with him. As a matter of fact he subsequently got one of the finest drubbings I ever gave a human with the point of a pen in print, and he didn't like it. The moral of it all is simply don't be needlessly and offensively insolent even to a tramp; he may be a newspaper man in disguise, and it is just as well as not to give gentry of that kidney a show of getting their hand in.

This encounter had taken place in the presence of a few of the globe-trotters. It was comical to notice the different ways they seemed to view the thing. An old Major-General of the Engineers entered into the joke thoroughly and chummed with me straightaway on the head of it. But the majority of the select were disgusted, notably Mr. Podgett. Her ladyship also regarded my advent to a seat at the first cabin table with withering dislike. But I didn't bear her any grudge on that score; she had her reasons, sound and substantial. The man who wilfully bombards the nattiest of tea-gowns with "shpuds" is nothing short of a cad. And she was clearly impressed with the belief that it was my hand that had launched that sloppy potato. Besides she had seen me in queer company by night, and altogether she had no doubt concluded that she had better than good grounds for setting me down as a thorough-paced blackguard. Not even when I pitched the moleskins and the singlet over-board and appeared in all the glory of a brand new suit of clothes and a clean "biled rag" did she relent in the least. In spite of my first-class ticket and my new and sprucely-cut garments, I was still in her eyes at once common and unclean. And she avoided me as she would a moral leper.

This, however, did not put me out in the least, as I did not have the slightest wish to cultivate her. I had no thought of writing novels in those days, you see; if I had had it might have been different. I was not piqued in the least at her conduct; she belonged to one world and I to another, and for her world and the things it set store by I had a contempt just as intense as the scorn she doubtless felt for me. And yet before a week was out we were on more than speaking terms. We were chums,—that is as far as such a relationship is possible' twixt male and female. And the happening of the thing was in this wise.

At Port Darwin I had found such a multitude of topics to deal with that in spite of rolling off copy by the yard when I was ashore I had still a solid six columns of arrears to get through after coming on board. So during the whole blessed stretch of daylight that followed our departure from Palmerston I lay up flat on the poop scribbling for all that I was worth. The Viscountess, in common with the other trotters, passed and repassed me a score of times, and of course saw what I was at. When I started in to finish off the thing on the next forenoon, her woman's curiosity was gently tickled and she asked the Major-General who I was, and what I was doing. At least he told me so; but inasmuch as there was no necessity for telling people my business, I merely laughed and passed on to another subject of conversation. Next-day, I had nothing to do but to admire the beauties of sea and sky, and a little of that goes a long way with a moderately active man. So I went down below and rummaged out some books from my valise and set to work to kill time with them. Among them was a copy of Æschylus I had got from Hawkston. I read this all through the afternoon till the sun flopped down into the sea over the shoulder of Tumboro, just ahead of us, and the stars came out with a rush. Then I rose and leant over the taffrail watching the coruscating waters flashing from the screw and listening to the churning of the engines and humming of the wind in the shrouds, for a night-breeze had sprung up. Possibly Æschylus was the connecting link, but anyhow I got thinking of Hawkie, and unconsciously fell a-crooning the strange and weird and outlandish melody he used to whistle when he was in the dumps. I may have kept on for the best part of five minutes, when I suddenly discovered that I had an audience of one listening to me. It was the Viscountess who was honouring me with the loan of her ears. When I turned round, she stood hesitatingly, seemingly in two minds about something or other, and then she passed round the compass-box in front of the wheel and disappeared on the other side of the poop. That evening at dinner I twice caught her looking at me. I thought it a bit odd, but I didn't trouble to consider the reasons of this strange and flattering condescension on her part. A cat might look at a king, and therefore a real live dowager Viscountess had a perfect right to feast her optics on a literary vagabond itinerant—that's what a lady acquaintance once contemptuously termed me—if her fancy set that way.

Next day something happened. After doing the Chinese business I meant to go on and lie off for a spell with Hawkston in Japan. He was teaching at some outlandish place in Kiushiu, and so I got out the map of the Mikado's realm and a letter of his to make out the itinerary I should have to make after reaching Nagasaki. I stretched myself out flat on my stomach in my usual corner, on the starboard side of the poop, beside the wheel. When I had been there about ten minutes I heard the Viscountess ordering the Chinese steward to place her chair just opposite to me on the port side. I could see her sitting down from the tail of my eye.

Just at this minute a capful of breeze sprang up and turned over my map. As I was straightening it out again the wind caught Hawkston's letter and whisked it—not overboard, but right into her Ladyship's lap! I cursed inwardly at having to speak to her, but there was no help for it. So I got on my feet and lifting my hat was going to apologise for the accident when she met me half way with a kindness and courtesy that fairly took my breath away. I noticed, however, that she started violently when she caught sight of the letter; she first flushed all over and then turned deathly pale and then again waxed as red and rosy as the warm blood of ruddy health could make her.

Of course I apologised for troubling her. She handed me the letter and remarked that it was certainly less objectionable than moist potatoes. If I had thrown that unfortunate "spud," this would have been scoring off we with a vengeance. But as I hadn't, I took the opportunity of clearing up her misconception on the point, and explained firstly that the missile wasn't meant for her at all, and secondly that I wasn't the marksman in question. This broke the ice utterly. She laughed a clear ringing hearty laugh that would have set me at ease at once if I had happened to feel at all embarrassed, which I didn't in the least.

Digitized by Google

"Well, I am glad to be set right about this matter," she said, "although I had half made up my mind to forgive you on account of that somewhat severe lesson in manners you gave the Captain. What did you mean, though, by saying that he would yet hear more of the business."

"Not much. Only when he gets back to Sydney, he will find his character limned for him in the *Telegraph* in a fashion that will make him feel a trifle uneasy, pachydermatous brute though he seems to be."

"Ah!" she laughed, "I'm right. I see. I told General Chester that you must be a special correspondent. Is it not so?"

I saw I had hopelessly given myself away and so I didn't deny it. She was evidently a 'cute woman and I began to respect her.

"Bring a chair over here and let us talk," she went on.

I accepted the invitation readily enough, for brains in man or woman always command my sincerest regard.

And she had wit, a flashing steely wit, a wit that was like her frame, lithe, and supple and flexible, yet wondrous firm withal. After six sentences you could perceive, if you weren't uncommonly dense, that her culture was not of the mere afternoon-tea drawing-room order at all. She was touched up with none of that conventional brummagem veneer that nineteenth century young womankind are wont to smear all over a skin-deep intellect as a sort of spiritual bird-lime for catching husbands. No, her culture was not laid on; it was evidently bred in the bone and rooted in the soul. She struck one as a sort of throw back or reversion —(that's the correct Darwinian slang is it not?) to the women of the sixteenth century—to such types as Vittoria Colonna, to those women whose amusements, lay in construing Plato and commanding their brother's troop of *condottieri* pending the time he lay in chokee held to ransom, and who went in for foils instead of tennis-rackets and got their complexions from hunting and hawking and cross-country scampers instead of from tight-lacing and the rouge-pot. She might have walked out of "Much ado about Nothing"—a *Beatrice* who had been once though the mill of matrimonal experience, and with a dash of something peculiarly her own thrown in by way of lending additional piquancy to the character. Anyhow, that was the way I felt inclined to size her up before I had talked half an hour with her, and when I come to review the summing up, I'm inclined to think that it is about as just as one of Judge Hannen's, and that is saying something.

As I have hinted her talk was clever—brilliantly and caustically clever. After half an hour of it I began to reflect, as I answered her in the greatest possible economy of words. And the colour of my reflections was of this cast. No man or woman with brains a cut above those of a rabbit goes to the trouble of doing anything out of the ordinary without some satisfactory motive therefor. Now her ladyship had in a measure gone out of her way in honouring me with the request to anchor myself in the lounge where I lay spread out. Possibly she merely wanted to amuse herself by taking me out of the winding. Possibly she was a victim to the normal globe-trotter malady—the wretched itch for scribbling—and being on the book-making lay meant to study me for material. Possibly—but what was the good of surmising? It was neither one nor the other nor any of these things that she was after, as the sequel will abundantly show.

It wasn't at all difficult to keep in touch with the general drift of her talk. We hadn't to waste breath and effort in establishing the fundamental axioms of life. These were taken for granted tacitly, and we swept along like a pair of schläger-fighters on the *mensur*, exchanging blow for blow and knocking out no inconsiderable shower of sparks in the friendly encounter. It was delightful. There was no feeling of our being incommensurable quantities. (From the sensation of being an incommensurable quantity with a lovely woman may the good lord deliver me,—but this by the way.) That is until she shifted the current of discourse on to music, and then I brusquely remarked that I mean to "pass" in that particular deal. I furthermore added by way of explanation that I knew the difference between the "Old Hundred" and the gurgle of pale ale from the neck of a beer bottle on a thirsty day, but that all other tunes struck me as being as like each other as a family of *Dromios*.

"But I overheard you singing to yourself over the taffrail there," she said, looking towards the sternpost.

"Crooning, you mean," I corrected.

"Just as you please, then," she replied. "That was a very strange and weird melody. Where did you pick it up.'"

"A friend of mine used to relieve the tedium of the night-watches in our cattle camp with it, when we were overlanding." I said.

"Indeed! That is interesting;" she remarked, looking at me closely.

"Yes, there is a bit of romance tacked on to it, I believe. Hawkston, the man that sang it had a history. I happened to be thinking of him at the time I stood there, and I suppose that's the way I got humming it to myself."

"That letter that blew away was from him, was it not?"

"Yes," I replied with some wonder. "It was. What makes you say so?"

She laughed lightly and I fancied a trifle uneasily.

"Oh! nothing, only a guess. Women have quick imaginations as a rule. We don't reason; in many cases it is not at all necessary."

"Now how the devil did she ever guess that?" I said to myself. "She is a smarter woman than most I have met."

But of course I didn't say so to her.

She dropped the subject, and made a new break, only to come back to it on a different tack.

"I see you have a map of Java there. I should like to have a look at it." she said.

I told her that I *did* have a map of Java, but that it was below, and that I would fetch it for her; the one I had on the deck was a map of Japan.

"Japan!" she said with a slightly rising inflection. "Oh, that letter of yours is from there; I see the Nagasaki post-mark on the envelope."

I had the envelope lying in the lounge beside me, patent for her to read.

"Yes," I said, "that is so. But I will fetch you the map from below."

And I made a move to get up but she made a restraining motion with her hand.

"Please, don't trouble. I am very much interested in Japan and know nothing about the geography of that quarter of the earth. Give me a lesson in it, please."

I spread out the map, or rather the Atlas of four plates, for that is the way Hassenstein has got up his maps of Mikado Land.

"So this is Nagasaki. That is where Mr. Hawkston is, I presume?" she asked.

I explained that it was the nearest Treaty port to Nakatsu where he was, and hence the post-mark.

"What is he doing there?" was her next question.

"Well, he is supposed to be teaching a Japanese Count and a hundred of his former retainers, but his main business would seem to lie in drawing his screw and getting well again."

"What do you mean; he was in bad health?" she asked with a quick turn of her swan-like neck and a tinge of anxiety in her crisp and clear-cut words.

"Bad health! Utterly broken up and run down and completely out of gear. And no wonder either; he did a dozen men's work in the last strike. Seemed as if he wanted to do for himself. Burnt the candle at both ends and generally went on as if he had been at the head of the forlorn hope at Badajos. Likely enough there was some petticoat or other at the bottom of it; there generally is, meaning no disrespect to present company."

"Ah!"

"Yes, that snatch you caught me murdering last night is a bit of the story."

"Indeed!" she said with an intonation that meant "Tell me all about it."

"However," I said rising and answering her tone rather than her words, "we shall have to put it off till another occasion. In the first place we are losing all the scenery, and in the next we are steaming right into a thundercloud and we shall be in the midst of a roaring deluge in less than five minutes."

We had just finished the circumnavigation of the huge shoulder of Japara, which, thick and massive and impenetrably forest-clad on its fire-riven and lava-scorched mountains forms in Java the counterpart of Mount Garganus on the Adriatic side of Italy. We had just changed our course to due south, to run right into a blinding downpour of rain (lit up by dazzling lightning flashes) that swept the deck from end to end with its fury. No more talk was possible, and when this stopped we found ourselves in the roadstead of Samarang.

That evening I played poker with the General in the smoking-room. Just as we called for a nightcap preparatory to turning in, we heard some one running their fingers over the piano in the saloon below. Then came a surprise; Hawkston's tune was sung and played with a softness and a feeling that were overpowering. How the mischief had she got hold of it? If she had picked it up from hearing it when I crooned it over the taffrail she must be more than quick in the uptake. She sang words to it too, and I hadn't. What the words were I couldn't make out, but there was no mistake about the melody itself.

Next day I left the boat before she appeared on deck, and that was the last I saw of her for a week. I was fully occupied with the Chinese question, while she had gone on to see Solo and Djokya and the Boer Buddha Temple. Our next meeting was at Buitenzorg, the Simla of the Dutch East Indies.

It was amusing in its way. The hotel there—I forget its name,—is perched right on the edge of an upland plateau with its back verandah looking over a beetling precipitous ravine with two crystal streams swirling along at mill-race speed between their frond-lined banks. Away beyond is a stretch of paddy fields running up into coffee plantations which in their turn sweep up to the first curve of Salak, a huge sullen-looking fire-belching mountain mass densely clad with tropical green stuff which shelters pythons and tigers and lots of other things all equally nasty. But the view from this verandah is superb, and it is the aim of all lovers of the picturesque to locate themselves in the rooms that give upon it. Now I knew that, or rather my newest companion did. He was a Welshman with whom I had chanced to forgather in Weltewreden. He had a copper-coloured nose nicely variegated with indigo spots and blotches—the result of amateur experiments in a chemical laboratory—and a pronounced and deep-rooted dislike to youngsters. He found there were two rooms with a southern exposure; but they were not contiguous. They were separated by one which was already occupied. As I was putting myself in order at the wash-hand stand, a sound of villanous romping burst forth next door, much to poor Jones' disgust. The dividing walls did not go up to the roof quite—there is no ceiling in many Javanese hotels—and he shouted out his displeasure to me over the two partitions between. He said something about confounded kids—confounded wasn't the precise epithet he used, but it will serve —that was really ill-natured and snappish not to say in really very bad taste. That is supposing the occupants of the intervening room were not guiltless of a knowledge of English as Taffy in his rashness presumed. There was a sudden stop in the romps, and a voice I recognized at a flash said quietly and gently but at the same time very crisply.

"Hush, children, we are annoying the *gentleman*."

There was just the smallest tinge of irony in the intonation of the last word. I made no bones about calling out.

"Jones, you've caught it this time, and you deserve it."

He was a good-humoured fellow and I knew well enough that he could afterwards be brought to see the joke easily enough.

When I went outside I found the Viscountess already in a lounge chair on the verandah. I could see that she was not sorry to meet me again. We chatted till dinner time and then we sat together at table. She asked me about my plans, and on my telling her that I was free for the following day she claimed my company.

Now as it chanced next day was wet. When it rains in Java in comes down in a deluge. So instead of "doing" the gardens as she had proposed we had perforce to stay indoors. As luck would have it I had got up early and for lack of nothing better to do I set to work to put the final touches to the Romance I had dug out from the labyrinths of Hawkston's diary. Of course I had brought his MS. volumes along with me to return them. When she came into my room, I had the MS. on the table. After some casual remarks she suddenly broke in;—

"By the way, Mr. Johnson, you said something about a romance in connection with your friend Mr. Hawkston. For nothing better to do to-day, suppose you turn story-teller for my benefit."

I told her what I was doing, and said that as she and Hawkston would never cross each other in all likelihood, no great harm would be done by reading her the excerpts I had made from his diary. So I wheeled an arm-chair up beside the window for her and began.

She was evidently very much interested from the start. As I read on—with a running commentary of course—I could see that she was immensely so. Especially when I came to the runaway episode and to the conclusion. Not that she ever lost much command of her repose of manner.

"Well," I asked. "Does that amuse you? What do you think of Hawkston."

"Only that there is a dash of the Knight of La Mancha in this Australian Felix Holt. He strikes me as occasionally tilting at windmills of his own erection. He is evidently a noble and a gallant fellow. But what a morbid pride he has!"

"Pride." I said "Yes! loftier than the pride of Lucifer. And that's the Australian Democracy. It's no use trying to play any Clara Vere de Vere tricks with that. They're all very well in raw sodden nook-shotten England, but under the fiery sun of the plains and the ranges they simply will not do.

Digitized by Google

A man there stands upon his manhood, and upon that alone, and to keep that condition of things we Social Democrats mean to fight as long as soul and body hang together. And Hawkston is just as thoroughly Australian in that respect as there is any need for. The little woman misunderstood, no doubt. She may have been the daughter of a hundred Earls—of a thousand for all I know—and one to be desired in every respect. But I know enough of Hawkston to swear to it that if she made the slightest attempt at patronage, or gave the slightest hint that she was abasing herself in stooping to him—pouf! why he would just be the man to save her the sacrifice, and ring down the curtain upon the performance at the end of the second act. As I read him, he will treat women frankly and chivalrously, but he will never be a woman's poodle to humble himself to her whims and surrender his whole being at her bidding. He won't kneel at her feet as gentlemen do in high-flown yellow-backs."

"You speak frankly and forcibly," she said flushing a trifle—perhaps with anger. If it was I didn't care a cent.

"It's our fashion under the Southern Cross. It is this way, you understand. We don't wish to be rude or impudent or aggressive; we simply say what we mean. We *haven't learned to fear folks yet;* and that fear is the source of seven-tenths of those miserable lies and subterfuges that a good many fools mistake for politeness."

Just at this juncture the bell went for tiffin, and the discussion of Hawkston was adjourned *sine die*. Next morning I said good-bye to her for good as I thought, inasmuch as our ways separated. She was to remain in Java for some time longer while I had to make for Singapore in quest of fresh phases of the Yellow Agony.

(TO BE CONTINUED.)

## *THE PHOTOGRAPHIC SOCIETY OF JAPAN.*

A meeting of the Photographic Society of Japan was held in the Masonic Hall, No. 60, Yokohama, on Friday, 18th instant. From a little after midday there was an exhibition of prints on the bromide paper that Mr. Cocking had presented to the Society a few months ago. Mr. Cocking offered three prizes at the time that he presented the paper, and these were awarded by ballot of members and of the public on Friday. Mr. K. Ogura, amateur photographer, won the first prize, Mr. A. Futami, professional, the second. For the third prize there were so many prints that received an equal number of votes that no decision could be come to at the time of the meeting. It was decided to leave this matter to Mr. Cocking. The members of Committee exhibited, but did not compete for prizes, and the work of Mr. C. D. West was particularly admired. There was a set of micro-photographs by Mr. I. Isawa that were considered to show great technical merit. Flash light photographs taken at various meetings of the Society were shown, and some by Mr. Kajima were particularly good.

Mr. K. Ogawa showed a large photograph of the interior of the Russian cathedral in Tokyo. This, as a sample of interior photography, always very difficult, and also as a sample of collotype work, is as fine as anything of the kind that we have seen.

Mr. Cocking showed a large number of "Kodac" cameras. These instruments are highly ingenious, and are excellently made. The larger sizes, which have, we believe, reached this country for the first time, relieve the instrument from the stigma of being only a toy.

In the evening there was a regular meeting of the Society, when Capt. Kenderdine occupied the chair, and the following gentlemen were elected Members of the Society:—Mr. Allan Owston, Mr. A. W. Forbes, Mr. George Brinkworth, Mr. T. H. Tanner, Mr. A. T. Watson, and Mr. J. H. Brooke.

Mr. W. K. Burton gave a demonstration of a modified silver printing process. Briefly put, the process consisted in making one solution of nitrate of silver, and another of "salt" (preferably chloride of ammonium) citric acid, carbonate of soda, and a little gelatine. The solutions are warmed and mixed, when an "emulsion" that is immediately ready for application to any surface that can be sensitized, results. The process of making the emulsion, sensitizing the paper, and toning prints by Clark's platinum method, was shown. Specimens of finished prints were also shown.

Mr. BURTON said that the process had not yet been long enough in use to know whether it had any real advantages, but the possible advantages that he saw were that a single solution that would keep fairly well could be prepared in a few minutes, and was at once applicable to any surface, whereas in all other silver printing out processes, there were either two operations, that of salting and that of sensitizing, or a washed emulsion which was comparatively troublesome to make, had to be used. The process was a cheap one.

Mr. WEST thought the saving of trouble was not great. So far as he could see, the advantage of the process was that it made it possible to get a blacker colour—one more nearly approaching to an "engraving black" than by the ordinary process.

Mr. Kajima made two exposures of the meeting by flash light.

The proceedings ended with a vote of thanks to the Chairman.

The hall was kindly lent to the Society by Mr. O. Keil.

## *LETTER FROM SHIMANE.*

(FROM OUR OWN CORRESPONDENT.)

Matsue, April 15th.

I recounted in a former letter some details of a rather singular and touching double suicide which occurred in Matsue on New Year's Eve. There is a belief that when one inmate of such a house as the girl Kane lived in, commits suicide, two other suicides must occur among her companions. The belief finds some confirmation in another double suicide which took place in Chamachi, Matsue, on the night of the 10th inst., a young woman 22 years of age, known as Kaoru, and a lad of 19, named Tomo-Ichi. There was little sympathy, however, for the suicides in this case, the lad having been notoriously dissolute. According to the popular belief, a third suicide must shortly occur; and the belief is not by any means absurd. The spirit of suicide is contagious, like the spirit of crime. Tragedies occur, not isolatedly, but in groups; and if a tragedy have any very unique features, it is likely to be succeeded by another with similar features. The second Matsue suicide was purely imitative. Exactly the same measures were taken to deceive relatives, and the same poison used.

Arakawa Junosuke, of Matsue, has just sent to the Fine Arts Exhibition at Tokyo a statuette of Tenji-Tenno. Arakawa Junosuke is one of the rare survivors of that race of Japanese sculptors whose carvings are the particular architectural attraction of Buddhist temples and gateways. Almost every remarkable piece of carving in Shimane is from his hand. If you see, anywhere in Teramachi, or Tenjinmachi, a wonderful coiling of dragons over a gate, and you ask who chiselled them, the reply will almost certainly be, "Arakawa Junosuke." If in some *kakaba*, you observe any monument of unusual beauty—a smiling Jizo, or a dreaming Kwannon—and ask the name of the designer, the reply is "Arakawa Junosuke." But he is especially known, perhaps, as a carver of Shinto subjects. I have seen a very impressive relief of "Inari" made by him, and several other reliefs of ancient Japanese deities, all of which possess a particular artistic quality as rare as it is exquisite. He is especially forcible in the representation of characteristics and moods. But his art is not confined to wood carving, or to religious sculpture of any kind; he is equally noted as an engraver on metal and as a delineator of animal life. Almost every wealthy person of taste in Matsue, has something by Junosuke in his *toko;* and probably the old man's work will have no small value after he has passed away.

The beautiful black stone of the pedestal of the statuette sent to Tokyo, a polished slab set in a black persimmon frame carved to represent clouds, is from the island of Oki, belonging to Shimane Ken.

Many interesting stories are told of Arakawa Junosuke. Among others is this little anecdote:—Some years ago, while walking in the environs of the city, he observed a little tree-frog on the branch of a cedar. The pose of the tiny creature on the tree-limb, and the line of the limb itself, at once impressed him as something worthy of artistic preservation. After watching both for a while, he went to the owner of the tree and obtained permission to cut off the branch. Then he took frog and branch to his studio; succeeded in taming the frog, and, by feeding and petting it, was able soon to make it keep such a pose as he desired. For several months he studied his subject; and when his carving was finished, he carefully carried the frog back to its original habitat, and bade it farewell. Some beautiful *netsukes* in Matsue are said to be copies of the original carving of this frog.

The departure of Governor Koteda Yasusada from Shimane to Niigata, is sincerely regretted here by many thousands. The Governor had won the esteem and affection of the people during a residence of seven years in Matsue. A Japanese gentleman of the old school, in the best sense of the term, Governor Koteda, while advocating the preservation of the old polite customs and the old knightly principles of Japanese life, was also a strong advocate of liberal reforms in other matters—especially in regard to industrial affairs. He developed very considerably the local method of agriculture, and stimulated largely the commerce in marine products. Personally, his manner was of the most charming, and as genuinely kind as it was charming. His influence was also felt in artistic matters, for whatever there was of artistic ability in Matsue received his personal encouragement and aid. To visit his house was to receive a lesson in taste: every object that met the eye was beautiful, and invariably of the finest workmanship or the best school. With students the Governor was, perhaps, expecially popular. He opened a fencing-school in his own grounds, where all who wished to learn the art were gladly taught for the mere pleasure of teaching them. Besides being a swordsman, the Governor is quite an athlete and a fine archer. I have had the pleasure of seeing him shoot with a bow few Matsue folk could use, and his aim, even at a very considerable range, seemed to be unerring. Many pleasant customs and amusements were maintained and encouraged by him; but his personal kindness to those about him will be remembered longer than all else. And one foreigner—the recipient of many extraordinary kindnesses from Governor Koteda and his family—can now say of a Governor who it was once rumoored did not like foreigners, that there lives no knightlier gentleman or truer-hearted man.

## *LETTER FROM BOSTON.*

(FROM OUR SPECIAL CORRESPONDENT.)

Boston, March 24th.

There are signs of spring. Every citizen of Boston, seeing in delightful vista the Public Garden in bloom, and our boasted Common in regulation summer dress, takes courage afresh and enters with more vigour the fight with the-all-round-cutting east-wind. Boston's life is not perfect when our garden, the Public Garden, and the Common are not in bloom, and at this time between seasons the people are watching for the first flowers in our common health vantage ground. Ah, Boston is only half Boston without its common—not so very common—garden. In the meantime, however, many things local and otherwise interest and help to bridge to blooming-time. We, the people, are now giving much attention to the case of a reporter versus a policeman. At Bishop Paddock's funeral at King Chapel, a reporter, it is claimed, was assaulted without cause by an over zealous policeman who exceeded his authority, apparently, and used unnecessary force. The case has attracted general attention and is now in the courts. The Press Club and many good citizens have petitioned for the removal of the policeman. This is one of the ripples that has disturbed our ante-spring quiet, or our post-winter monotony.

The Italian "massacre" in New Orleans, an account of which has reached already the readers of the *Mail*, is the country's topic still. The Italians throughout the land have met and talked and have passed resolutions some of which are moderate expressions of opinion, and others are full of fire, vengeance, and anarchy, and the country is here yet and going about its business much as usual. While the concensus of opinion, Italian or other, is naturally against this assumption of authority on the part of a few, and declares it to a blot on our civilization, yet there is a counter opinion, mildly, cautiously expressed that the blot, hideous as it may be, is, or the making of it was, almost if not quite necessary. If officers appointed to administer the law become venal and fail to mete out justice as directed by positive proof, then some authority, some force, must come between for the good of the community. Thus do some reason. Some of Italia's sons, very wordy and full of wrath and fury, are clamouring for the speedy dispatch of the fleet of the mother country to these shores. It is the sincere hope of this people, the people of the United States, that Italy's fleet will not move on our navy till we have time to build a few more gunboats, and put some new planks in old ones. But the Orleans affair will pass into history, probably, without more ado. Unlawful as were the means employed, the rising of the people has taught the Italians and others a lesson that is bearing fruit already.

The Columbian Exposition in Chicago in 1893 looms up, on paper larger and larger everyday. The first number of the *World Colombian Exposition*, a paper to be issued monthly for the present and oftener as the time of holding the exhibition

Digitized by Google

approaches, has made its appearance in Chicago, has been sent broad cast throughout the country. This publication is as entertaining as a novel—a novel on the plan of "Looking Backward." Says the paper, "It is about established that the famous Tower of Babel, as it stood in the city of Babylon, will be an attraction of the Exposition." It may be inferred from the wording of the quotation that the original tower will be on exhibition. The Columbian Memorial is another feature of the fair. It is to be 1,492 feet high. Surrounding the tower and resting on its pedestals will be a glass dome, 400 feet in diameter in which fifty thousand persons may be seated. The cost of this structure will be about two million dollars. Again, another Eifel-tower-like production is the "Chicago Columbus Tower," 1,500 feet high, to cost two million dollars. Perhaps the most "awe inspiring" structure, according to the paper, is the great sphere, 1,893 feet in height. The first gallery of this globe will be 250 feet above the ground, or nearly as high as Bunker Hill Monument; the second gallery will be 500 feet high; the third, 700 feet; the fourth, 850 feet; fifth, 1,100 feet, and sixth, 1,300 feet. From the top of the globe down to the fourth gallery, is intended to be hotel for the accomodation of ten thousand guests. From the fourth gallery a tower will rise 1,768 feet, and this will be surmounting by a statue of Columbus 125 feet high. An electric railway circling the globe twenty times will be laid from the base of the globe to the summit, a distance of twelve miles. The editor remarks, "Calmly contemplate that." It is possible to contemplate it calmly on paper, and that is the only way it is likely to be contemplated. Chicago people now live in hotels ten or fourteen stories high with the kitchen above them. To them a hotel 1,893 feet above the ground may not be so great as to those who live nearer the earth. Among other attractions will be a "Mine Exhibit" 590 feet below the surface; a mammoth religious exhibit, in which 10,000 animals and 50,000 persons will illustrate Noah's Ark; a "Moving Sidewalk;" Revolving buildings, "Balloon Transportation;" "Glass Floral Gardens;" an air ship, 728 feet long, to carry 200 passengers 70 miles an hour, and to cost $150,000. Thus is "all Chicago," and some other parts of the country, building air-castles.

News from Washington is limited to department gossip and small talk among politicians left behind after the adjournment of Congress to look after clerkships for uneasy constituents. Superintendent Porter of census fame, or notoriety, informs all who read that his agents have made extracts of nine million mortgages, in fact, there is on file in Washington abstracts of all mortgages made throughout the United States during the last ten years. But now that Mr. Porter has nine million mortgages on hand, what does he intend to do with them? If they keep him busy and prevent his meddling further with the private affairs of the people, then his collection of abstracts will not have been made in vain. It is supposed, however, that he intends to employ the pith of the nine million mortgages in building statistical tables of great ingenuity if not usefulness. Indeed, something like this has begun already in Alabama and Iowa, where, after much inquiry, Mr. Porter's agents have discovered how many acres are mortgaged, and why they are mortgaged, or what led those who have mortgages to raise money by means of such mortgages. It is remarkable that this Government will give any man authority to pester the people, to pry into the private affairs of the people, by compelling them to tell (or go to jail) for what purpose they raised money by giving mortgages on their property. If Mr. Porter intends to stay at home to play with his nine million mortgages, the people may forgive him for insults heaped upon them, but if he take to the field again with his agents and ask questions, then the people may raise in wrath and righteous indignation and suppress Mr. Porter and his census machinery. It is believed that the Government will not again give any man authority to do what Porter did in the last census. No wonder people exclaimed, "Is this a free country!" when they were compelled to spread out their private affairs for the inspection of the Government.

The appropriations made by the last Congress are now subject to general discussion in and out of the papers. The total increase in appropriations made by the 51st Congress over those of the 50th Congress amounted to $170,446,000; of this amount $113,000,000 was the increase in pension appropriations. The estimate for pensions next year calls for $135,000,000, and will be increased, probably, to nearly $150,000,000. This is astounding in view of facts known to persons who have kept pace with events. When the appropriations for pensions amounted to $38,000,000 it was believed, even declared, by the best men in Congress, that the maximum appropriation for pensions had been reached, and that it would grow less, probably, by death of pensioners. The further we get from the time of war, the longer and fatter the pension list. The cause is not difficult to find, but the story is long, and not creditable to the nation or to its legislators. The Indian bill gave the Indians $20,000,000 for this year. An amendment to the deficiency bill of $1,000,000 provides for the payment of the French spoliation claims. This establishes a precedent, and the next Congress may be called upon to pay claims of the same kind amounting to $20,000,000. The debt (it is a just debt), is seventy years old. There are 2,000 other claims against the Government now pending in the court of claims, and the next congress may be asked to pay some or all of them, now that we have begun to pay debts seventy years old.

The agents of the Parnell fund are in this country, and it is reported that their efforts, great as they are, do not draw much money into their pockets. But it is hoped that they will get enough to take them home, and also that when they get it, they will make quick use of it.

Whatever may be the condition of the country socially, morally, we have time (and a little money) always for a "fad or fancy." We are now interested in spoons—"historic spoons," and the interest extends from Oregon to Maine. In Plymouth, where our forefathers and mothers landed in 1620 from the good ship *Mayflower*, the historic spoon is of course a "*Mayflower* spoon"; in Salem, where witches were hung, the spoon has engraved upon its handle some scene from witch-history; in Rhode Island Roger Williams is shown on a spoon; in Springfield, Miles Morga, a pioneer settler, has his portrait on a spoon. Thus on through the country in cities, towns, and villages. The first historic spoon was made in Salem, and the idea was copied immediately and extensively. Manufacturers saw their opportunity and improved it. Collectors of spoons increased and demanded every new spoon. Thus trade in spoons is good and increasing. There is hardly a town so unpretentious, and so careless of fame, as not to have a historic spoon. And spoons are useful.

## *LETTER FROM SAN FRANCISCO.*

(From our Special Correspondent.)

San Francisco, April 2nd.

The demand of Baron Fava for his passports came like a clap of thunder in a clear sky. Every one had made up his mind that the Italian Government was not going to concern itself about the assassination of the Italians at New Orleans; the truculent class swaggered with protruding paunch, and every man patted his neighbour on the back, and congratulated him on the exhibition of high spirit evinced in the murder of eleven defenceless men by a mob. In the exuberance of their joy, two citizens of New Orleans shot each other to death, and a third fired a load of buck shot into a negro prayer meeting, killing or wounding several women and children.

Meantime the King of Italy withdrew his ambassador, on the ground that this Government was not investigating the massacre with proper energy. In reply to the Italian remonstrances, Mr. Blaine drew Baron Fava's attention to the fact that Louisiana is a sovereign state, and possesses exclusive jurisdiction over crime committed within its borders. To this the Italian replied that his master the King was not concerned about the distribution of authority in this country; that he was not officially cognizant of the existence of a state called Louisiana; that he knew a national organization called the United States, with which he had diplomatic relations; that within the territory of that organization several of his subjects had come to violent deaths at the hands of a mob; and that for that outrage he demanded redress. No redress being offered, he withdrew his ambassador.

The vigorous step has caused the courage of our modern Bobadils to ooze out of their finger ends, and the papers are publishing terrifying accounts of the strength of the Italian navy. Mayor Shakespeare of New Orleans—he who declared, on the morning after the murders, that the mob had "done just right"—re-assures his trembling fellow citizens with the announcement that the Italian men-of-war draw too much water to cross the passes of the Mississippi, and that for the present the city is safe. Newspapers which chuckled over the assassination of the "Dagoes," and published fantastic fictions about the Mafia society, and its death's head and cross-bones, are now busily engaged in demonstrating that it would be unprecedented precipitation on the part of King Umberto to declare war without exhausting the resources of diplomacy. Bawling bullies who, a few days ago, were exultant over the performance of the mob, are now quaking in their bones, and declaring that the Grand Jury of New Orleans will do the right thing.

In this State, where the brutal prejudice against the Chinese predisposed the populace to sympathise with the Louisianians, and people have been inclined to take Major Shakespeare's view of the case, sober second thought has reminded people that if Italian men-of war cannot enter the Mississippi, there is nothing to prevent their entering the Golden Gate. The thought has led many of us to reconsider our first impressions, and to take a more conservative view of mob violence. It has even induced some far-seeing citizens to institute analogies, and to inquire whether, if China choose to resent the next raid upon one of our China towns, the loss of property that might result would be fully recouped by the consciousness that we had smitten the heathen, hip and thigh.

Meanwhile, in the eloquent language of a class exhorter, the Almighty has testified his wrath by afflicting the cities of the North with an aggravated form of grippe. It seems odd, if providence did resolve to take a hand in the game, that it should have chosen to make an example of New York and Chicago, instead of New Orleans. These are mysteries which our limited intellect cannot fathom. We can only note the bare facts that every second man in New York and Chicago is either sneezing or blowing his nose, and that if Robespierre had lived to publish the great work of his youth—*sur Part de se moucher*—it would now have an unprecedented sale in the eastern cities. This second attack of the epidemic is more serious than the first. Quite a number of deaths are reported, and diseases of the respiratory system, which begin with la grippe, are unusually severe.

The authorities of New York are suffering from an attack of anti-railroad fury as well as from la grippe. A few weeks ago, a collision on the New York Central Railroad caused the death of six persons. The President and Directors were at once arrested in civil suits, and there is no doubt of the company's liability to the heirs of the deceased. But now President De Pew, and his fellow directors have been held to answer on a charge of misdemeanour. The charge will not stick unless the prosecution can prove negligence, and that will not be easy. But the indictment of one who nearly got the Republican nomination for the Presidency will have a fine effect, as evidence that the authorities are no respecters of persons.

Two recent senatorial elections have attracted general attention. One was in this State, where a Republican ex-congressman named Felton was chosen to fill the unexpired term of Hearst, democrat. Notwithstanding the chatter of papers which are not well informed, I can state that Mr. Felton did not buy his seat. It is understood that one of the candidates, De Young, did take a flyer in votes by securing an option on the San Francisco delegation, and that he may have disposed of his option at a small advance to Mr. Felton, when he found he could get no unpurchased support. But in the main the election was clean, and the railroad company, which has been prominent in politics, kept its hands off. The other senator elect is Governor Palmer of Illinois, a Democrat. Palmer has passed through the political vicissitudes which have fallen to the lot of many highminded northerners. Originally a Democrat, he became a Union man when the south tried to split the country, and for fifteen years, he acted with the Republicans. When Hayes stole the Presidency to which Tilden had been elected, Palmer like many others, went back to his early love, and resumed his place in the democratic ranks. He has now been chosen Senator by the Democrats, aided by two Farmers' Alliance men. He is worthy of the honour. He served with credit during the war, and afterwards made an excellent Governor of Illinois. He would be a strong candidate for the nomination for the Presidency, were it not that he is seventy-six years old.

Your lawmakers, on whom it will probably by and by devolve to frame a new tariff for Japan, may learn a lesson from an occurrence of yesterday. The sugar clauses of the McKinley tariff went into effect at midnight on 31st March. From that hour raw sugar took its place on the free list. As the duty was 2 cents or 2½ cents per pound according to grade, the price of the article ought to have declined precisely that sum. But in fact the decline did not average over a cent. on the various grades at New York, and about ⅝ of a cent. here. It seems evident that the profit of the repeal of the duty is to go to the refiner and not to the consumer. It is the old story. When the duty on coffee was repealed some fifteen or sixteen years ago, ostensibly in order to cheapen an article of general consumption by the poor, but really in order to deplete the revenue without reducing the protection duties on manufactures, Brazil imposed an export duty equivalent to the import duty which

Digitized by Google

the United States abolished, and the cost of coffee remained the same. When, in 1882, Congress reduced the internal revenue tax on tobacco, ostensibly in order to cheapen what Mr. Blaine called "the poor man's chew," but really in order to prevent a repeal of favours to the privileged class, the manufactures of tobacco put their heads together, and resolved to make no change in their prices. They took the money which the Government relinquished—some $25,000,000 a year—and the price of tobacco remained the same to the consumer. So now, the bulk of the $60,000,000 a year which the McKinley bill abandons in the repeal of the sugar duty, will go to the refiner, and the price of sugar to the consumer will not vary much.

The correspondence between Minister Fava and Secretary Blaine has just been published, and I append the essential portions of it, as part of the history of the times. The Italian envoy wrote:—

ROYAL LEGATION OF ITALY, Washington, March 13th, 1891.

MR. SECRETARY OF STATE:—By my two notes of the 15th and the 18th inst., I had the honour to call your Excellency's serious attention to occurrences of exceptional gravity, which took place at New Orleans on the 14th, whereby four subjects of the King of Italy, who were confined in the city, where massacred by a crowd under the leadership of two American citizens. After having formally protested against the unjustifiable conduct of the local authorities, which were evidently recreant to all their duties on that occasion, I reserved to the Government of his Majesty the right to demand such satisfaction as it might think proper, since the occurrences in question constituted a patent violation of the stipulations of the treaty in force between our two countries which secures to Italian subjects residing in the United States the same protection enjoyed by American citizens, and which have always been extended to the latter in Italian territory.

The reparation demanded by the Government of the King, as I have had the honour to inform you in our interviews held during the last few days, were to consist of the following points: First, official assurance by the Federal Government that the guilty parties should be brought to justice; second, recognition of the principle that indemnity is due to the relatives of the victims.

Your Excellency was pleased to declare to me that, as the Federal Government did not think it could take this view of the case, it declined to take the aforesaid demands into consideration. Under these circumstances the Government of his Majesty, considering that the legitimate action of the King's Minister at Washington becomes inefficacious, has ordered me to take my leave. In obedience, I have the honour to announce that I am going to leave Washington as speedily as possible, leaving the Marquis Imperiali, his Majesty's Secretary of Legation, in charge of the current business of the Royal Legation.

To this, Mr. Blaine replied:—

I beg to inform you of the sincere regret with which the Government of the United States receives the intelligence of Baron Fava's speedy departure from this capital. Though he has more than once intimated this purpose, the Government of the United States has been unable to see adequate reason for such a step. The Baron's service here for the past ten years has been distinguished, maintaining at all times the most agreeable relations with the Executive Department of this Government. The regret at his leaving is enhanced when, as the President believes, he has been recalled under a misapprehension of the facts by the Government of Italy.

The cause of his sundering his diplomatic relations with this Government is thus given in his note:—"The reparation demanded by the Government of the King, as I had the honour to inform you in our interviews held during the last few days, were to consist of the following points: First, official assurance by the Federal Government that the guilty parties should be brought to justice; second, recognition of the principle that indemnity is due to the relatives of the victims."

The first demand thus stated by Baron Fava is slightly changed in phrase from that employed by him in his many verbal requests based on a telegram from the Marquis Rudini which he left with me. Marquis Rudini declared that Italy's right to demand and to obtain the punishment of the murders and indemnity for the victims is unquestionable." It is inferred that Baron Fava's change of phrase meant no change of demand I have endeavoured to impress upon him, in the several personal interviews with which he has honoured me, that the Government of the United States is utterly unable to give the assurance which Marquis Rudini had demanded. Even if the National Government had entire jurisdiction over the alleged murderers it could not give assurance to any foreign power that they should be punished. The President is unable to see how any Government could justly give assurance of this character in advance of a trial and verdict of "guilty."

In the Constitution of the United States it is declared that "in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed." It needs no argument to prove that a jury could not be impartial if it were in any sense or to any degree bound before the trial of the accused by an assurance which the President of the United States had ventured to give a foreign power

In the Constitution of the State of Louisiana, under whose immediate jurisdiction the crimes were committed, substantially the same provision is found; so the Governor of that State would be as unable to give a pledge in advance for the result of the trial under the State law as the President would be were it practicable to try the leaders of the mob under the law of the United States.

In Baron Fava's second point he demands the recognition of the principle that indemnity is due to the relatives of the victims. He is assuredly under a grave error when he declares that the United States Government declined to take this demand into consideration, and I shall regret if he has communicated such a conclusion to his Government. The United States, so far from refusing, has distinctly recognized the principle of indemnity to those Italian subjects who may have been wronged by a violation of the rights secured to them under treaty with the United States, of February 26, 1871. I have repeatedly given to Baron Fava the assurance, that, under the direction of the President, all the facts and incidents connected with the unhappy tragedy at New Orleans on the 14th of March last should be most thoroughly investigated. I have also informed him that, in a matter of such gravity, the Government of the United States would not permit itself to be unduly hurried, nor will it make answer to any demand until every fact essential to a correct judgement shall have been fully ascertained through legal authority. The impatience of the aggrieved may be natural, but its indulgence does not always secure the most substantial justice.

Your readers can easily decide which of the writers has the best of argument.

## *TIME TABLES AND STEAMERS.*

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6,* 7, 8.05, 9, 9.35,† 10.45, and 11.40† a.m., and 1.10, 2.20,† 3.35,‡ 4.45, 5.55, 6.50,† 8.30, 9.50,* and 11.15* p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.45,* 8.20, 9.20,* 10.20, and 11.25* a.m., and 12.50, 1.50,* 2.55, 4.51,* 5.45, 7.05, 8, 8 58,† 10, and 11 05* p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Tsurumi Stations. Those marked (†) run through without stopping at Omori and Tsurumi Stations. Those marked (‡) run through without stopping at Tsurumi Station.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, and 10.25 a.m., and 12.30, 3.10, 4 30, 5.45, 7.40, and 10.40 p.m.; and KOZU (up) at 6.09, 7 30, 9.40, and 11.05 a.m., and 1.08, 3.13, 5.15, 7.17, and 9.43 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

A tramway runs between Kozu and YUMOTO (distance 4 *ri.*) Jinrikisha may be hired between YUMOTO and MIYANOSHIT. (distance 1¾ *ri*)

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.26 and 9.40 a.m., and 12.10, 3.50, 5.09, 6.25, and 8.20 p.m.; KAMAKURA (down) at 7.35 and 9.51 a.m., and 12.21, 4.01, 5.18, 6.36, and 8 31 p.m.; and DZUSHI (down) at 7.43 and 10 a.m., and 12.30, 4.10, 5.25, 6.45, and 8 40 p.m., YOKOSUKA (up) at 6 25, 8 02, and 11.20 a.m., and 3, 4.30, 5.45, and 7.35 p.m.; DZUSHI (up) at 6.41, 8 16, and 11.36 a.m., and 3.16, 4.46, 6, and 7 51 p.m.; and KAMAKURA (up) at 6.50, 8.25, and 11.46 a.m., and 3 26, 4.55, 6.08, and 8 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TOKYO-MAEBASHI RAILWAY.

TRAINS LEAVE TŌKYŌ (Ueno) (down) at 6, 6.35, 8.50, and 11.35 a.m., and 2.45 and 5.45 p.m.; and MAEBASHI (up) at 6, 8.50, and 11.45 a.m., and 2.40 and 5.45 p.m.

### UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 p.m.

* Through Trains to and from Uyeno.

FARES—First-class, 75 *sen*; second-class, 50 *sen*, third-class, 25 *sen*.

### KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE KOZU at 8.26 and 10.33 a.m., and 2.03, 4 42, and 6.09 p.m., and 12.08 a.m.; GOTEMBA at 9 (8 and 11 55 a.m., and 3.32, 6.05, and 7.35 p.m., and 1.24 a.m.; NUMAZU at 10.37 a.m., and 1.10, 4.35, 7.10, and 8.30 p.m., and 2.12 a.m.; SHIZUOKA at 6 a.m., and 12.17, 3.30, 6.35, and 8.55 p.m., and 3.45 a.m.; HAMAMATSU at 9.05 and 11 55 a.m., and 2 44 6, and 9 20 p.m., and 6.10 a.m.; TOYOHASHI at 10.08 a.m., and 1.05, 3 48, 7 08, and 10.26 p.m., and 7.20 a.m.; OFU at 11.51 a.m., and 2 49, 5.21, 8 52 and 11.55 p.m., and 8.59 a.m.; NAGOYA at 5.45, a.m., and 12.45, 3.35, and 6.03 p.m., and 12.33 and 9.43 a.m.; GIFU at 6.43 a.m., and 1 52, 4.45, and 7 p.m., and 1.25 and 10 48 a.m.; OGAKI at 7.10 a.m., and 2.22, 5.18, and 7.29 p.m., and 1.54 and 11.20 a.m.; MAIBARA at 8 32 a.m., and 3 47, 6.47, and 8.46 p.m., and 3.10 a.m. and 12.50 p.m.; HIKONE at 8 43 a.m., and 3.59, 7.01, 8.57, and 1.01 p.m.; BABA (Otsu) at 10.18 a.m., and 6, 8.40, and 10 26 p.m., and 4 50 a.m., and 2.40 p.m.; KYOTO at 11.05 a.m., and 6.50, 9.30, and 11.08 p.m., and 5 36 a.m., and 3.30 p.m.; and OSAKA at 12.36, 8.18, and 11.12 p.m., and 7 a.m., and 5.05 p.m.

UP TRAINS LEAVE KOBE at 6.15 and 8.55 a.m. and 12, 1 50, and 9.30 p.m.. OSAKA at 4.45, 7.27, and 10.05 a.m., and 1.08, 2.54, and 10.36 p.m.; KYOTO at 6.07, 8.55, and 11.35 a.m., and 2.45 and 4 34 p.m., and 12.18 a.m.; BABA (Otsu) at 6.47 and 9.38 a.m., and 12.23, 3.32, and 5.19 p.m., and 1.10 a.m.; HIKONE at 8.16 and 11.07 a.m., and 1 53, 5.01, and 6.59 p.m., and 2.41 a.m.; MAIBARA at 8.30 and 11.21 a.m., and 2.09, 5.16, and 7.16 p.m., and 3 05 a.m.; OGAKI at 9.48 a.m., and 12.35, 3.25, 6.32, and 8.35 p.m., and 4.19 a.m.; GIFU at 10.14 a.m., and 1.01, 3.51, 6.58, and 9.02 p.m., and 4.44 a.m.; NAGOYA at 8 20 and 11.14 a.m., and 2.05, 4 46, and 8.10 p.m., and 5.45 a.m.; OFU at 9.01 and 11.53 a.m., and 2.52, 5.23, and 8.50 p.m., and 6.20 a.m.; TOYOHASHI at 10.40 a.m., and 1.36, 4.48, 7.09, and 10.29 p.m., and 7.56 a.m.; HAMAMATSU at 6.15 a.m., and 12 15, 2.50, 5.57, and 11.40 p.m., and 9.02 a.m.; SHIZUOKA at 5.15 and 8.51 a.m., and 3 and 5.20 p.m., and 2.05 and 11.17 a.m.; NUMAZU at 7.03 and 10.35 a.m., and 4 45 and 7.14 p.m., and 3 40 a.m., and 12 55 p.m.; GOTEMBA at 8.15 and 11 50 a.m., and 6 02 and 8 28 p.m., and 4.52 a.m., and 1.57 p.m.; and KOZU at 9.40 a.m., and 1.08, 7.17, and 9 43 p.m., and 6 09 a.m., and 3.13 p.m.

FARES—Kozu to Gotemba: first-class *sen* 66, second-class *sen* 44, third-class *sen* 22; to Numazu *yen* 1.11, *sen* 74, *sen* 37; to Shizuoka *yen* 2 13, *yen* 1.42, *sen* 71; to Hamamatsu *yen* 3.57, *yen* 2 38, *yen* 1.19; to Toyohashi *yen* 4.23, *yen* 2.82, *yen* 1.41; to Ofu *yen* 5.22, *yen* 3 48, *yen* 1.74; to Nagoya *yen* 5.58, *yen* 3 72, *yen* 1.86; to Gifu *yen* 6.15, *yen* 4.10, *yen* 2.05; to Ogaki *yen* 6.42, *yen* 4.28, *yen* 2.14; to Maibara *yen* 7.05, *yen* 4.70, *yen* 2 35; to Hikone *yen* 7 17, *yen* 4.78, *yen* 2.39; to Baba *yen* 8.10, *yen* 5.40, *yen* 2.70; to Kyoto *yen* 8.40, *yen* 5 60, *yen* 2.80; to Osaka *yen* 9.21, *yen* 6.14, *yen* 3.07; and to Kobe *yen* 9.81, *yen* 6.54, *yen* 3.27.

### OYAMA-MAEBASHI RAILWAY.

TRAINS LEAVE OYAMA (down) at 6 and 9.55 a.m. and 1.15 and 5 30 p.m.; KIRIU (down) at 7.50, and 11.48 a.m., and 3.08 and 7.23 p.m.; MAEBASHI (up) at 5.45 and 9.40 a.m., and 1 and 4.25 p.m.; and KIRIU (up) at 6 47 and 10.42 a.m., and 2 02 and 5.26 p.m.

FARES—Oyama to Kiriu, first-class *yen* 1.29, second-class *sen* 86, third-class *sen* 43; to Maebashi, first-class *yen* 1.98, second-class *yen* 1.32, third-class *sen* 69.

### OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4 55 p.m.

FARES—First-class, *yen* 1.56; second-class, *yen* 1.04; third-class, *sen* 52.

### YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3 30 p.m.—Fare, *sen* 20.

# *LATEST COMMERCIAL.*

## IMPORTS.

During the past week there has been extremely little doing in any department of the trade, and though the laid down cost of everything is being daily increased by a decline in exchange, no corresponding effect has thus far been produced on selling prices, which continue in buyers' favour in respect of the trifling hand to mouth business going on, as dealers seem indisposed to operate beyond absolute requirements. Sales of Yarn only amount to about 250 bales, chiefly English spinnings. Sales of Shirtings are about 3,000 pieces 9lb., 1,500 pieces 8½lb., and 1,000 pieces 7lb. T. Cloths; also 2,000 pieces Victoria Lawn, 1,000 pieces Cotton Italians, and 3,000 pieces Mousseline de Laine. Cloth and Blankets are dead, and most descriptions of Woollens are in deep mourning.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |

| Nos. 10/14, Bombay | | — | |

### METALS.

There is still very little doing in Metals, and prices are unchanged generally, though Wire Nails could be bought at somewhat reduced rates.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ¼ inch | $2.80 | to | 2.95 |
| Flat Bars, ½ inch | 2.90 | to | 2.95 |
| Round and square up to ¾ inch | 2.85 | to | 2.95 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom. | | |
| Iron Plates, assorted | 2.90 | to | 3.00 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.40 | to | 4.65 |
| Tin Plates, per box | 5.70 | to | 6.00 |
| Pig Iron, No. 3 | 1.40 | to | 1.45 |

### KEROSENE.

Kerosene is still very quiet, and sales could only be effected at a reduction.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.60 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1 60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

### SUGAR.

Sales of Brown have been on a moderate scale, but nothing doing in Whites.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $4.20 | to | 4 25 |
| Brown Daitong | 3.20 | to | 4.10 |
| Brown Canton | 5.00 | to | 6.00 |
| Brown Java and Penang | 5.50 | to | 6.05 |
| White Refined | 5.00 | to | 7.80 |

# EXPORTS.

## RAW SILK.

Our last issue was of the 17th inst., since which date the settlements on this market have been 637 piculs, divided thus:—*Filatures* 338 piculs, *Re reels* 218 piculs, *Kakeda* 81 piculs. From this quantity have to be deducted 9 piculs *Hanks* returned to native godowns, thus bringing the nett settlements down to 628 piculs. Direct shipments during the week have been 26 piculs, making the total export business of the week equal to 654 piculs.

During the week the demand has been strong from the United States for all classes of silk suitable for that market, and transactions would probably have been much larger were it not that stocks have been almost completely cleared of desirable qualities, so that many repeat orders cannot now be filled. Prices have in consequence remained very strong, and advances from $5 to $10 had to be paid on almost every parcel taken up.

Exchange, which had ruled pretty evenly during the week, experienced a sudden drop of ½d. yesterday, which will, no doubt, be taken advantage of by the native holders to further raise their demands.

Arrivals have been small, and the available stocks have been reduced to 2,050 piculs, about equal to the stock on the market at the same date last year when the figure stood at 2,100 piculs.

The weather is seasonable, and all looks well for the prospects of the new crop. In very early districts a few eggs have already been hatched.

There have been three shipping opportunities during the week, the Canadian Pacific steamer *Empress of India* of the 17th, the P. & O. steamer *Ancona* of the 18th, and the O. & O. steamer *Belgic* of the 23rd. The two American mail steamers took 350 and 864 bales respectively for New York, and the English mail carried 444 bales for Europe. The present export figures are therefore 30,819 piculs, against 35,048 piculs last year and 38,988 piculs in 1889.

*Hanks.*—Only a few bales were actually taken into godown, but most of them again returned. Adding thereto rejections of previous settlements this class shows a minus quantity of 9 piculs.

*Filatures.*—There has been a fair demand for Europe at from $610 to $630 for fine sizes, and there would still be buyers on that basis, but the reduced stock makes this very difficult. Buyers for America have been picking up the few remaining lots of *Shinshu* at $630 and $635; stock of these is now completely cleared off.

*Re reels.*—A few parcels of best have been taken for the United States at $600 to $610, and buyers for Europe have turned their attention to Medium sorts of *Joshu* and *Bushu* at $550 to $560, and Common at $535 and Medium *Oshu* at the same prices.

*Kakeda.*—There has been an active demand for this class, prices being pushed up to $610 for extra, $595 for No. 1, and $570 for No. 2. Stock is almost cleared, and buyers depend upon each day's arrivals for further business.

| Total { Bales | 30,177 | 34 593 | 38,634 |
| Total { Piculs | 30,819 | 35,048 | 38,988 |
| | Piculs. | Piculs. | Piculs. |
| Settlements and Direct Export from 1st July | 32,850 | 35,150 | 38 700 |
| Stock, 24th April | 2,050 | 2,100 | 2,600 |
| Available supplies to date | 34,900 | 37,250 | 41,300 |

## WASTE SILK.

A small business done in this branch, total settlements for the week amounting to 436 piculs, divided thus:—*Noshi* 82 piculs; *Kibiso* 263 piculs; *Sundries* 91 piculs.

The stocks still remaining on the market—3,450 piculs—are of anything but desirable quality, and buyers find great difficulty in filling their orders. Anything suitable is picked up at full prices, but such parcels are now almost entirely out of the market.

Shipments during the week have been confined to the steamer *Ancona* (18th inst.) which carried 171 piculs to Europe. Total export for the season stands now at 28,487 piculs, against 27,217 piculs last year and 29,591 piculs in 1889.

*Pierced Cocoons.*—Nothing done.

*Noshi-ito.*—A rather large parcel of *Joshu* (66 piculs) changed hands at from $72 to $90; the balance of the settlements consists of *Filatures* at from $136 to $142½.

*Kibiso.*—Several parcels *Bushu* and *Santan* were taken up at $26 down to $13, and some *Oshu Curlies*, No. 2, at $45 to $50½.

*Mawata.*—Nothing doing, the balance of stock not being suitable for export.

*Sundries.*—Settlements consist principally of *Boseki Wata* at from $25 to $40; also a few parcels of *Neri* at $9½ to $13.

Prices remain nominally unchanged.

QUOTATIONS.

| | 28,487 | 27,217 | 29,591 |
| | Piculs. | Piculs. | Piculs. |
| Settlements and Direct Export from 1st July | 29,950 | 28,350 | 30,500 |
| Stock, 24th April | 3,450 | 5,250 | 3,700 |
| Available supplies to date | 33,400 | 33,600 | 34,200 |

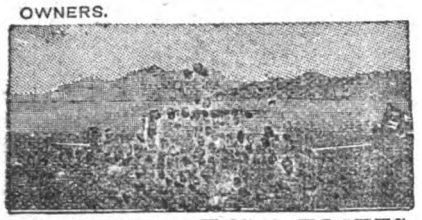
*Exchange* has remained almost stationary until yesterday when a sudden drop of ½d. was experienced; at close it seems to recover somewhat and stands firm as follows:—London, 4m/s. Credits, 3/2⅜; Documents, 3/2½; 6m/s. Credits, 3/2⅝; Documents, 3/2¾; New York, 30 d/s. U.S. $77½; 4m/s. U.S. $78; Paris, 4m/s. fcs. 4.04; 6m/s. fcs. 4.06.

Estimated Silk Stock, 24th April, 1891:—

| Raw. | Piculs. | Waste. | Piculs. |
|---|---|---|---|
| Hanks | 60 | Cocoons | 90 |
| Filatures | 720 | Noshi-ito | 1,130 |
| Re-reels | 1,100 | Kibiso | 1,925 |
| Kakeda | 100 | Mawata | 155 |
| Oshu | 65 | Sundries | 150 |
| Taysaam Kinds | 5 | | |
| Total piculs | 2,050 | Total piculs | 3,450 |

## TEA.

The weather continues favourable to the new crop, and a heavy outturn is expected from the principal districts.



# EXCHANGE.

Exchange remained unaltered till a couple of days ago, when a drop of ½d. took place. Since then there has been a slight reaction, and rates close fairly firm.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

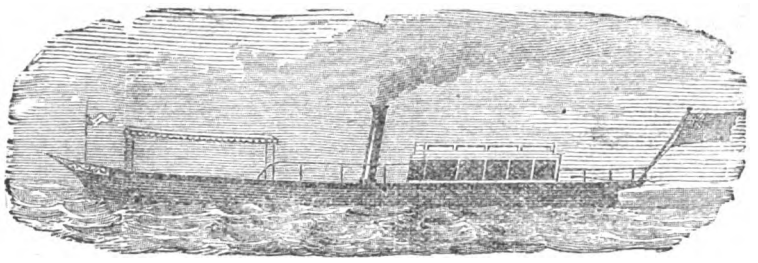
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, MAY 2, 1891.

## *SUMMARY OF NEWS.*

HER IMPERIAL MAJESTY THE EMPRESS is at present slightly indisposed.

COUNT ITO returned to the capital on the 26th ultimo, and put up at the Imperial Hotel.

H.I.M. THE EMPEROR has been pleased to grant a sum of *yen* 500 to the funds of the Japan Educational Society.

H.I.H. THE PRINCE IMPERIAL OF RUSSIA reached Nagasaki on the 28th ultimo, but will not land officially until the 4th instant.

THE Japan Railway Company has declared a dividend of ten per cent. for 1890, and has decided to purchase the Mito Railway.

THE Yokohama Spring Races came off on the 28th, 29th, and 30th instant. His Majesty the Emperor was present on the second day.

MR. MASUJIMA ROKUICHIRO, President of the Tokyo Law Institution, resigned his post on the 25th ultimo, and was succeeded by Mr. Kikuchi Takeo.

MR. SHINTO KOTODA, residing at Takabatamura, Higashi-okitamagori, Yamagata Prefecture, has discovered a gold and silver lode at Takayasu, in that district.

MAJOR MORI, a Chamberlain, was despatched by the Emperor on the 24th ultimo to the residence of the late Count Yoshii with a present to the family of the deceased nobleman.

ON the 21st ultimo fire broke out in a house at Sakaomura, Ashibagori, Fukui Prefecture, destroying 38 dwellings, 8 godowns, and 12 sheds before the flames could be subdued.

VISCOUNT KABAYAMA, Minister of State for the Navy, visited, on the 24th ultimo, the German flagship *Leipzig*, now in the port of Yokohama, and received a salute of 17 guns.

A GENERAL meeting of shareholders of the Sakurada Beer Brewery Company was held on the 27th inst. in the capital, at which a dividend was declared at the rate of 8 per cent. per annum.

AT the election held on the 27th ultimo to fill the vacancy caused by the death of Mr. Nakayama Yasujiro, a member of the Kanagawa Prefectural Assembly, Mr. Ishikawa Tokuyemon was elected.

THE political crisis continues. Count Ito has remained unshaken in his resolve to stand aloof from politics at present, and the general idea is that Count Saigo will consent to assume the post of Minister President.

AN exhibition of the paintings in oils and watercolours, made by Mr. John Varley during his residence in Japan, was held at the Tokyo Charity Hospital on the 26th, 27th, and 28th ultimo, the proceeds being devoted to the Hospital.

ON the night of the 19th ultimo fire broke out in a house at Isomemura, Minami-Akitagori, Akita Prefecture, and 82 houses and 13 sheds were destroyed, 2 houses being partly damaged before the flames could be got under control. On the 23rd instant, about 11 p.m., 137 dwellings were entirely burned and 7 houses partly damaged at Aonoichimura, Ishikawagori, in the same Prefecture.

A SPECIAL general meeting of the Privy Council was held on the 27th ultimo, and was attended by Counts Oki, Terajima, Soyejima, Katsu, and Sasaki, Viscounts Sano, Fukuoka, Enomoto, Tanaka, and Yoshida, and Messrs. Kono, Ozaki, and Inouye, by whom matters in connection with Treaty Revision were discussed. Counts Saigo and Goto, and Viscount Aoki were also present at the meeting.

THE regular general meeting of shareholders of the Domestic Transport Company was held on the 26th ultimo at the Koseikan, Tokyo. After the reading of the business report for the past year, Mr. Sasaki Sosuke was elected to the office of President, and Messrs. Yamanaka Rinnosuke, Okura Kihachiro, Yoshimura Jimbei, Moriyama Hansaburo, and Okamoto Jenshichi were elected Councillors. A dividend was declared at the rate of 10 per cent per annum.

EARLY in the morning of the 24th ultimo fire broke out in a house at Tokuyama-mura, Shitagori, Shizuoka Prefecture. The flames were confined to the building where the fire originated, but one man, aged ninety years, was burned to death. An outbreak of fire took place on the night of the 18th ultimo, in a house at Hiatarimura, Motosu-gori, Gifu Prefecture, destroying 13 dwellings and one shed before the flames could be got under control.

THE amount of Government paper currency and bank notes in circulation on the 31st March, and carried over to April 1st, was *yen* 56,831,-784.40, of which *yen* 24,213,202.00 represented Government notes above one *yen* face value, *yen* 7,156,869.90 notes under 50 *sen* face value, and *yen* 25,461,712.50 Bank notes. As compared with the previous month the above figures show a decrease of *yen* 1,492,962.00 in Government notes, and *yen* 116,766.00 in Bank notes.

A TELEGRAM from Hokkaido reports that fire broke out on the night of the 23rd ultimo in a house at Mojiricho, Yezashizawa, Hiyamagori, Toshima, and before the flames could be subdued about 600 buildings were burned to the ground. On the following morning about 2 a.m. an outbreak of fire took place in a house at Tojomura, Uyeshimagori, Nagano Prefecture, and destroyed 685 dwellings, one police station, one bank, 2 shrines, and 3 temples, 3 houses and one post and telegraph office being partly burned before the flames could be got under control. Three persons were burned to death, and three were more or less injured.

THE 8th general meeting of members of the Japan Educational Society was held on the 25th ultimo in the Lecture Hall of the Imperial University at Kanda, under the presidency of Mr. Tsuji, Vice-Minister for Education. The meeting was opened by the reading of the reports of the society for the past year by Mr. Kusakabe Sannosuke, after which the election of Councillors took place. Mr. Nagayama, on behalf of Mr. Yoshikawa, Minister of State for Education, read an address, and H.I.H. Prince Arisugawa Taruhito delivered a short speech, to which Mr. Tsuji, President, replied in suitable terms. Messrs. K. Kinotsuki, H. Muraoka, and T. Inouye also delivered speeches during the course of the proceedings.

A REPORT issued by the Home Department shows that 64 earthquakes were felt in the Empire on 24 days in March last, the day on which the largest number was felt being the 21st, when there were 9 shocks. The greatest number of earthquakes was felt between 6 a.m. and 7 a.m. The most severe oscillations took place between 4 p.m. and 5 p.m., the disturbed area being also greatest at that time. The hours which were most free from earthquakes were between 2 p.m. and 3 p.m., and 6 p.m. and 7 p.m. The provinces visited during the month were Nemuro, Kushiro, Mutsu, Rikuchu, Rikuzen, Uzen, Echigo, Iwashiro, Iwaki, Hitachi, Shimozuke, Kozuke, Musashi, Shimosa, Kazusa, Awa, Sagami, Izu, Suruga, Kai, Shinano, Mikawa, Owari, Mino, Echizen, Ise, Shima, Iga, Omi, Wakasa, Tango, Tamba, Yamashiro, Kii, Mimasaka, Bizen, Bitchu, Bingo, Hoki, Izumo, Iwami, Aki, Nagato, Iyo, Awa, Bungo, Higo, and Satsuma, Nemuro and Kushiro having no less than 11 shocks. The disturbance most extensively felt was that which occurred on the 1st, extending over 10 provinces. The provinces in which the most severe shocks were felt were Hitachi, Shimozuke, Shimosa, and Musashi, in other provinces the tremors being generally weak.

THERE is not much improvement in the Import trade so far as the amount of business is concerned, though the downward tendency of prices has received a check, and there is some enquiry. The Yarn sold has been mainly English, very little Bombay being taken. The week's trade includes Shirtings, Victoria Lawns, Turkey Reds, and Handkerchiefs, which have been bought in small lots. Metals are quiet generally, and there is no immediate prospect of improvement. Kerosene has remained unaltered in value, with only a small demand. Sugar is held for more money, and but little has moved off. The Silk trade is quiet, the stock being now poor in quality, and arrivals have only come in to the amount of sales. Waste Silk may be referred to in like terms. The new crop is coming on under favourable conditions, but nothing is yet said about the probable out-turn. Mulberry is plentiful and cheap. The Tea trade is not yet in full swing, but the quality of the leaf received so far has been favourably reported on. Exchange has not fluctuated much, and rates close at about the same figures as those of last week.

## *EDITORIAL NOTES.*

### THE "YOMIURI" ON TREATY REVISION.

We noticed the other day that the *Yomiuri Shimbun* had been publishing a series of articles on Treaty Revision, and we also gave an epitome of the earlier portions of the series. In succeeding articles the *Yomiuri* took up first the question of the advisability of granting to foreigners the privilege of mixed residence. This our contemporary declares to be an important point in connection with Treaty Revision, and if the treaties are to be revised on the basis of equality the privilege must be granted. The writer had all along believed that any scheme of revision which did not provide for mixed residence must fail. It was on this point that the outcry on the part of the Conservative party against the schemes of Counts Inouye and Okuma arose. Current rumour has it that in Viscount Aoki's draft proposal the privilege is accorded to foreigners only within the limits of the foreign settlements. If such be the case, then we (*Yomiuri*) can but regret the Minister's weakness, for he must certainly fail as his predecessors did. In this respect Japan is distinctly behind other countries, such as England, France, Germany and, Russia, which allow foreigners to possess land, while here such possession is forbidden by law, a notification issued on the 14th day of the 4th month of the 5th year of Meiji, (1872), running as follows:—"The selling of land to foreigners or the hypothecation of land to foreigners in security for debt is strictly forbidden, and local officials are ordered to make the same known to all the people of their jurisdiction." There are those who say that if foreigners are allowed to possess land, Yokohama and Nagasaki will become such places as Hongkong and Shanghai; but this is not at all probable, for even if foreigners received permission to invest their money in land in this empire, we do not think they would avail themselves largely of it. It may be said that they would purchase land for purposes of speculation, but that they can now do through the medium of Japanese. Another class of objectors say that the privilege may be allowed with respect to the main islands of Japan, but should be withheld in the case of Hokkaido, for if it were accorded in the latter instance that large island would chiefly benefit foreigners. But though at first sight this reasoning seems plausible enough, it really is not sound, for nearly all the arable land in Hokkaido is already in private ownership, and would not be sold unless it were found to be unproductive, in which state it would present but little attraction to foreign capitalists. Fears are expressed that Russia would obtain a foothold in Hokkaido if the concession were made applicable to that island, but though the great northern Power is known to be grasping in the matter of territory, that trait is characteristic only of the Government not of individuals, and Russian capitalists are as little likely as any other people to invest money unless they see a prospect of substantial profit. If our Government should now decide to refuse the concession of the right to possess land, the necessity to grant it will inevitably be forced on them in course of time by the natural tendency of human affairs. The next point discussed by the writer in the *Yomiuri* is that of foreigners and the coastwise trade. On this he is at one with Viscount Aoki, if rumour is correct in attributing to that statesman an intention to exclude foreigners from the coasting trade. He points out, however, by reference to Arts 9, 11, and 13 of the Austro-Hungarian treaty, that foreigners and foreign ships already possess the right to carry commodities between the open ports of Japan. Though navigation and commerce have attained a high degree of development in Japan—the number of native owned vessels of foreign build engaged in trade being in February, 1889, 438, with a total tonnage of 73,282—still in the matters of engineering science and navigation and marine insurance she is still in a state of infancy, and for these reasons it will be prudent to exclude foreigners from the coastwise trade as is the case in Europe and America. The *Yomiuri* then goes on to the next point, the question of bringing foreigners under Japanese jurisdiction—except in the Settlements during a period which has been variously fixed at from three to five years, or till the new Codes shall have gone into operation. Count Okuma's programme contemplated the complete abolition of extra-territoriality after a period of five years, and the removal of the foreign judges in ten years, but he was so persistently attacked by the Conservatives and Progressionists that he was compelled to suspend negotiations. Viscount Aoki's proposals are more satisfactory than were Count Okuma's, for the draft of the former contemplates the abolition of extraterritoriality without the employment of foreign judges and irrespective of the enforcement of the new Codes. It might be supposed that Viscount Aoki's scheme would commend itself to those who opposed his predecessor's policy, and on the whole it seems as if the present Foreign Minister would be justified in anticipating success, and in coming to terms with England, which proved chiefly troublesome in the negotiations of Count Okuma. The writer of the articles goes on to rebuke for their obstinacy those persons who contend that the continuance of extraterritoriality in the Settlements during a fixed number of years is in conflict with Arts. 24 and 57 of the Constitution, and concludes the discussion on this part of the subject by declaring that if Viscount Aoki's programme is accepted by the foreign Powers Japan will very soon be an independent country. Finally the question of imposing taxes on alcoholic beverages, tobacco, soy, oil, &c., and of raising the general tariff to 11 per cent., is taken up. The *Yomiuri* quotes from the Constitution to illustrate the view of those who think that any matter involving taxation should be first decided by the Diet and afterwards inserted in the treaties if necessary—a view towards which our contemporary apparently leans, and impresses on those engaged in the negotiations on the side of this country to secure that the power of the Emperor is not impaired and that at the same time the wishes of the nation shall be carried in revising the treaties. On the question of increasing the tariff the *Yomiuri* takes the stand that it must be done gradually, and combats the views of those who would have tariff autonomy recovered at once.

### A NEW PANORAMA.

A panorama, which has just been opened close to the University Hall in Kanda, is well worthy of a visit. The ground floor is occupied with a "peep-show" series of representations of the deeds of the Forty-seven Ronins. These are very realistic pictures, and their gloom is enhanced by the dim and uncertain light in which they are seen. The first picture represents the arrival of the heroes, during a snowstorm, at Kira's mansion; the second, the confusion of the attack, with the garden in the foreground; the third, the killing of the craven lord; the fourth, their weary march at the dawn of day, across Eitai-Bashi, towards Shinagawa. From the platform on the upper floor a gorgeous cyclorama is displayed. The spectator is supposed to be standing on the western bank of the Fujikawa, in the province of Suruga, close to the sea. The distant view is towards the east, with Fujisan towering off to the left, and the long peninsula of Idzu stretching out to sea on the right. Below lie the sand and gravel-beds of the Fuji-kawa, with the numerous rice-fields of the valley in between. The general effect is very fine. If any exception may be taken, it is to the crudeness of the blue colouring of sea and sky, and the relatively gigantic proportions of some of the peasant figures in the near foreground to the west. However, it is a cheap spectacle at six *sen*, and reflects great credit on its projectors.

### COMMERCIAL TREATIES AND BRITISH TRADE.

A few months ago the British Government appointed a strong Committee to investigate the probable effects of the approaching expiration of various European commercial treaties on British trade, a subject which is causing much uneasiness at home. The Committee has now published a preliminary report which, though brief, is most important and instructive. Summarised with as much brevity as possible, its substance is this. The commercial system of France is the one which has the most immediate claims on attention, not only because her trade with Great Britain amounts to more than that of any continental country, but also because the future commercial policy of other continental countries is closely bound up with that of France. France has two customs tariffs, one, the general tariff, which can be modified at the will of the Legislature at any time, and which is applied to the goods imported from such countries as do not enjoy most-favoured-nation treatment in France; the other tariff, the conventional one, is the combination of various special tariffs granted by France to other countries. Certain products, chiefly agricultural, are under the general tariff no matter what their country of origin, as a measure of protection to the farmer. The conventional tariff rates are usually about 24 per cent. less, than those of the general tariff, and Great Britain enjoys the benefit of this lower tariff by law, and not by treaty. Up to the 1st of February, 1892, Great Britain will pay on her manufactures the rates mainly of the Belgium and Swiss tariff treaties with France, unless the French law of the 27th of February, 1882, under which Great Britain enjoys the benefits of the most-favoured-nation treatment, is previously modified or repealed. All these tariff treaties are likely to be denounced by the French Government in a short time, and several have, in fact, been already donounced, so as to expire on the same date, thus leaving France free to impose whatever duties she may think fit by general tariff, or to negotiate fresh tariff treaties with the various Governments. This situation is, however, likely to be changed in a manner injurious to the interests of British trade and to the commercial intercourse betwixt the two nations, should a "Project de Loi" or Bill which has been presented to the French Legislature by the Government be passed in its present shape. By the provision of the Bill there are to be two tariffs, a general tariff, which will, in its nature, correspond to the present general tariff, but will contain considerably higher duties on most articles, and, a *minimum* tariff, which the Government will have the power to apply to those countries only whose tariffs are considered correspondingly favourable to French trade, and who give French goods their lowest tariffs. The position will thus be that, in negotiating with foreign countries, the French Government could offer them at best only the duties of this irreducible minimum, and would be prevented from granting more favourable terms under any condition. Any material increase of duties in the minimum tariff from the *status quo* of the present conventional tariff would therefore be regarded as an act of commercial hostility to other countries, and would tend to provoke a general rise of tariffs in Europe. The proposed minimum tariff presents important increases of duty on most of the chief articles of British manufacture exported to France, notably on cotton yarns and tissues and on woollen tissues. Not only have these duties been raised generally to the general tariff of 1881—*i.e.*, about 24 per cent. above the present conventional tariff—but more complicated classifications have been introduced, which will cause disputes, and, consequently, delay and friction, between the French Custom-house officials and importers. In many particular instances the duties are raised much more than 24 per cent., the extra rates for bleaching, dyeing, printing, embroidery, and generally for all processes which involve more labour as distinguished from mere material, being considerably increased. In the passage of the Bill through Committee of the Chamber further increases of duty on many articles of interest to British trade, have already been approved. The measure would shut the door to commercial negotiations with France by fixing an irreducible minimum tariff from which no reduction might be made. The effect would be injurious not only to British trade with France, but with the

Digitized by Google

Continent generally, and the general tendency of the measures threatened must be mischievous while one of the worst effects would be to excite among European nations a spirit of commercial war, which the policy adopted 30 years ago had done much to allay, with advant age to all the nations concerned. A measure that can be described as having such results is an act of commercial hostility to the country affected; and this attitude towards English trade is, indeed, hardly disguised in discussions of the subject in France. So far the Committee, and the picture which it draws is bad enough. But there are indications, especially in the commercial negotiations at present proceeding between Germany and Austria, that the other nations of Europe are inclined to make arrangements amongst themselves from which France would be excluded. Meantime, Sir Joseph Crowe, the commercial attaché to the British Embassy in Paris, has published a report showing what commercial treaties, beginning with the great Cobden Treaty of 1860, have done for France, and how much that country has lost since, in 1880, she departed from the policy embodied in these instruments. It appears that in both branches of trade, notably in imports, France is declining. It is clear that in commercial, as in social questions, a new era is dawning on Europe, and few persons seem to have confidence that, in either direction, the change will be for the better.

### PEERS.

QUITE a number of changes in the Peerage appear in the *Official Gazette*. They are as follow:—

To be Marquis, as a reward for meritorious services to the State, Count SHIJO TAKAUTA.

To be Marquis, on account of his father's meritorious services to the State, Count DATE MUNEYE.

To be Count, as a reward for meritorious services to the State, Viscount MIBU MOTOOSA.

To be Count, as a reward for meritorious services to the State, Viscount SANADA YUKITOMO.

To be Count, on account of his father's meritorious services to the State, Viscount SHIMADZU TADAAKIRA.

To be Count, on account of his grandfather's meritorious services to the State, Viscount SAWA NOBUKAZU.

To be Count, on account of his father's meritorious services to the State, Viscount KAMEI KOREAKIRA.

To be Count, on account of his father's meritorious services to the State, Viscount OMURA SUMIO.

To be Viscount, as a reward for meritorious services to the State, Baron NAGAOKA MORIYOSHI.

To be Viscount, as a reward for meritorious services to the State, Baron KIKKAWA TSUNETAKE.

To be Viscount, as a reward for meritorious services to the State, Baron NARUSE MASAMITSU.

To be Viscount, on account of his father's meritorious services to the State, Baron YAMANOUCHI TOYOTADA.

To be Viscount, on account of his father's meritorious services to the State, Baron IWAKURA TOMOAKIRA.

### COUNT ITO.

COUNT ITO, upon whose movements all eyes are fixed at present, left Kyoto on the 24th ultimo, and reached Odawara the same night. The following morning the Count was to proceed to Count Saigo's villa at Oiso, whither Counts Yamagata and Saigo were expected to go for the purpose of meeting and conferring with him. Viscount Hijikata left Kyoto in company with Count Ito, but instead of diverging to Odawara, proceeded direct to the capital to report to the Emperor. Viscount Nomura started from Kyoto the preceding afternoon, and travelled through to Tokyo. It is impossible to foresee the issue of the crisis. People waver between the conviction that Count Ito alone is the man for the crisis, and the feeling that his reluctance to resume the direction of affairs at the present moment is invincible. The alternative to Count Ito's acceptance of the premiership is that Count Saigo will be persuaded to step into the gap. But if Count Saigo had not been tolerably resolute in his intention to refuse the post, he would not have resisted the pressure already brought to bear on him by his colleagues. It may be, however, that the most popular of Satsuma statesmen only waits to see his way clearly, and to understand what assurance of support he may count on in the event of assuming the responsibility. What is abundantly evident is that Count Ito has no desire to return to power, and that his declaration to that effect when he left the Cabinet in 1888 was perfectly genuine, persistently as it was questioned by his political enemies at the time. It will be appropriate if upon Count Ito, the compiler of the Constitution, who with Count Inouye has always been among the most prominent opponents of clan government, should devolve the difficult duty of steering the ship of State through the troubled waters that separate the old time bureaucracy from genuine constitutional government.

* * *

Count Ito arrived in Tokyo at 6 p.m. on the 26th ultimo, and proceeded to the Imperial Hotel, where he is now staying. It was not expected that the Count would reach the capital so soon. People generally supposed that he would remain a day or two longer at his Odawara villa, and of course various constructions are put upon the celerity of his movements. It is difficult to see, however, why he should have loitered at Odawara. If there is any consulting to be done, Tokyo is surely the place to do it, and the natural course seems to be that the Count should repair thither as soon as possible. The *Mainichi Shimbun* has a clever note illustrating the difficulty of forming a new Cabinet. It represents several gardeners consulting about planting suitable trees in a recently cleared plot of land. One says:—"I have brought a Wistaria from Odawara, but whether it will bloom in this soil, is more than I can tell. If not, we must try the Meguro peony, and in case that also proves a failure, we can fall back upon the pine tree (*matsu*)." The allusion, of course, is to Counts Ito, Saigo, and Matsukata.

### A FOREST OF SEAWEED.

THE *Hochi Shimbun* says that when Mr. Yamamoto Yoshikata, an expert of the Department of Agriculture and Commerce, was on a trip recently to the northern districts of Japan, he discovered a huge forest of giant sea-weed—called by the *Hochi* "sea-willows," and known in the district as *Kaba-obi*—off the coast of Mutsu, Rikuchu, and Rikuzen. The forest commences in the north near Tomari-mura, Shimokita-gori in Rikuoku, and stretches southward to Sashihama, Momobu-gori, in Rikuzen. Its length is 156 *ri* (390 miles), and its maximum and minimum widths 2 *ri* and 27 *cho* respectively. It is reported to be swarming with fish of all kinds, and Mr. Yamamoto regards it as the treasure-house of Japanese pisciculture. Its distance from the shore is from 40 *ri* to 52 or 53 *ri*.

### POPULATION.

THE *Statistician*, of Tokyo, says that the census of 1889 shows the population of Japan to be divided as follows:—

| | |
|---|---|
| Persons under ten years of age | 9,268,049 |
| Persons over ten and under twenty | 7,847,918 |
| Persons over twenty and under thirty | 6,088,206 |
| Persons over thirty and under forty | 5,587,533 |
| Persons over forty and under fifty | 4,593,807 |
| Persons over fifty and under sixty | 3,[illegible] |
| Persons over sixty and under seventy | 2,298,981 |
| Persons over seventy and under eighty | 1,009,343 |
| Persons over eighty and under ninety | 207,312 |
| Persons over ninety and under a hundred | 7,234 |
| Persons over a hundred | 84 |

### ILL-FATED CAUSE.

WE have no intention of discussing at any length the series of articles now appearing in the *Japan Gazette* by way of reply to our comments on the Statement of the Citizens' Committee. If the party by whom the *Gazette* is supported, and the gentlemen in whose interests these articles have been penned, are satisfied with such a presentation of their case, we, too, are perfectly satisfied. Indeed, we should be very ungrateful did we attempt to find fault with our ingenuous and broad-minded contemporary, for it would scarcely have been possible to establish the justice of our views more completely than by this laughably lame attempt to traverse them. Never kind to the cause which the *Japan Gazette* now represents, the fates played it a very scurvy trick when they consigned it to the hands of its present champions. So far from desiring to rebut the attacks of such writers, we welcome them with satisfaction as amply confirming the truth of our own opinions.

* * *

No doubt these thrice honest controversialists will ultimately arrive at some definite idea of what the *Japan Mail* is, and by whom its writings are inspired. But at present their perplexity is very comical. Here, for example, are two photographs of this terribly wicked journal, presented to the public in the articles above alluded to:—

> Four lengthy articles on the Statement of the Citizens' Committee have appeared in the columns of the *Japan Mail*. These articles are not, as some suppose, an embodiment of the views of the Japanese Government on the question discussed, nor are they a representation of the state of Japanese public opinion. They possess no more authority than is attached to the views of a writer who plays the rôle of an exponent of the sentiments of a certain section of the foreign public.
>
> The editor of the *Mail* has been so long accustomed to suppress his own views and express those of the persons for whom he writes, that it may appear no hardship to him to be told that he is to refrain from speech when his utterances would violate Japanese sentiment.

Thus we are described in one sentence as presenting, not the view of the Japanese Government, nor yet the state of Japanese pupblic opinion, but only the sentiments of a certain section of the foreign public; and in the next, we become journalists who suppress our own views altogether and write in strict obedience to Japanese sentiment. Why should these honest folks give themselves so much concern to prove the source of the *Japan Mail's* ideas? If motives and persons are of such paramount importance in their eyes, might it not be advisable to conduct the necessary investigations in private, and refrain from publishing the results until some show of consistency can be imparted to them?

* * *

Of only one paragraph need we take serious notice. It is this:—

> There is no denying that however much they dissent from the principles of the *Japan Mail* as a paper, certain of the leading journals in Tokyo are only too ready to follow its lead when its editor transforms himself into a Japanese and undertakes a thorough anti-foreign crusade. The fact must not be overlooked that the Government scatters copies of the *Japan Mail* all over the country, and that hence lovers of agitation were able to peruse at railway stations and elsewhere the inflammatory articles on the subject of the meeting which appeared day after day.

The difficulties with which the writer of these sentences had to contend are painfully apparent. It would have been too galling to admit that the *Japan Mail* possesses any influence. On the other hand, it was necessary to fix upon the *Mail* responsibility for the excitement caused in Japan by the September Meeting. From the horns of this dilemma our honest critic rescues himself by asserting that the *Mail* possesses influence when it undertakes an anti-foreign crusade, but not otherwise! And he supports his quaint subterfuge by a falsehood; namely, that "the Government scatters copies of the *Japan Mail* all over the country." The Government does nothing of the kind. We do not believe that a single copy of the *Mail* is supplied to any person or place in Japan, directly or indirectly, by the Government. Contradictions, falsehoods, probing after motives, charges of venality—these are the weapons of the other side. What wonder if people often exclaim "ill-fated cause"?

### THE RADICAL PARTY.

WE read in the *Kokkai* that the Committee appointed by the Radical Party (*Jiyu-to*), to inquire into the question of Treaty Revision, has compiled the following report:—First, Judicial Autonomy and Tariff Autonomy must be recovered together. Secondly, with regard to the Foreign Settlements, these should be abolished two full years after the conclusion of a Treaty restoring to Japan Judicial Autonomy, and

Digitized by Google

simultaneously with the abolition of Consular Jurisdiction. Thirdly, Mixed Residence must be allowed in the text of the Treaty, but apart from the Treaty the Government must exact laws withholding from foreigners the privilege of owning shares in railways and banks, or renting mines. Fourthly, the privilege of owning real estate and of taking part in the coasting trade must be altogether withheld from foreigners. Fifthly, since customs duties form a part of the public revenue, the Tariff rates must be submitted for the approval of the Imperial Diet. Sixthly, Hakkaido being the northern gate of the Empire, the development of its resources and its colonization are matters of grave importance. The district, therefore, must not be treated in the same way as the rest of the country, but special and becoming restrictions must be imposed upon mixed residence in Hokkaido.

### DINNER TO GOVERNOR OKI.

On the evening of the 24th ult., the members of the Tokyo Club gave a farewell dinner to Mr. Oki Morikata, formerly Prefect of Kanagawa, who is about to proceed to Shiga in the capacity of Prefect. Covers were laid for over fifty guests. The chair was occupied by Mr. H. W. Denison, the foreign Vice-President of the Club, the guest of the evening sitting on his right and the Minister for Hawaii on his left. In the vice-chair was Mr. T. B. Glover, Honorary Secretary of the Club, and on either side of him were Count Kawamura and the Dutch Representative. The health of Governor Oki was proposed by Mr. H. W. Denison, who said :—

In proposing the toast of the evening it is not necessary for me to dwell upon the many amiable qualities of our guest. Unfortunately Mr. Oki has given us but short service as Vice-President, but we have all had the pleasure of his acquaintance both officially and socially, and it is sufficient for me to say that what is our loss—what is Tokyo's loss—is Shiga's gain. I ask you to drink the health of our guest, Mr. Oki.

Governor Oki, in reply, said :—

Your Excellencies and Gentlemen—I cannot tell you what pleasure you have given me by this kindly and sumptuous entertainment, and I have to express most hearty thanks for the sentiments expressed by the President, and for the manner in which you have reciprocated them. Great as is this pleasure, I feel that the honour you do me is still greater, and if I am conscious of not deserving it, I shall none the less treasure the memory of it always. Only a very short time has elapsed since you did me the honour to make me your Vice-President, and it is no small pain to me to be obliged to leave Tokyo before I have had an opportunity of endeavouring to justify that mark of confidence by making myself of some use to the club. I hope, however, that this parting is not permanent, and that I may be able to rejoin you at a future date and discharge some of the duties which I am now obliged to leave undone. When I was in Yokohama, it was my pleasure and privilege to make the acquaintance of many foreign gentlemen whose society I greatly valued, and I assure you that during the early days of my return to Tokyo, I experienced a feeling of decided loneliness. But I found that my duties as a member of the House of Peers did not make very tyrannical demands on my time. I was able to come to the Club, and soon my feeling of loneliness disappeared. In these hospitable rooms I have been able not only to extend my acquaintance with men of various nationalities, but also, as I think and hope, to strengthen and deepen our mutual regard and friendship. The constitution of the Club brings together within its precincts gentlemen of literary, official, and social distinction, thus conferring on those whose privilege it is to be admitted here the happiness and advantage of making really valuable friends, friends with whom it is indeed a gain to associate. I am very conscious of that benefit. Club life, such as I have found it in Tokyo, was strange to me. It was a pleasure which I had still to experience, and I fully appreciate it, not only for the reasons I have stated, but also because of the home like character of its enjoyments. I see now the value of such an institution, and understand what a useful part it plays in weaning men from pastimes of a far less beneficial and innocent character. And I have learned something more from the pleasant days spent in this club—I have learned to see new advantages in social intercourse. During my official career it has not always been possible to avoid difficulties and complications that scarcely yielded to the solution offered by despatches, formal interviews, and the other every-day resources of officialdom. But here I perceive a new and far more effectual solvent of such difficulties—the solvent of free and friendly intercourse. I think that in the atmosphere of genial followship which pervades our club life, no misunderstandings or serious troubles could long survive, and I do most sincerely wish that this intercourse could be extended so as to embrace all the foreigners and Japanese in Japan. For I am persuaded that if that could be effected, the partitions that still divide us would soon be broken down, and even the question of questions, Treaty Revision, could be pleasantly and satisfactorily solved. I do not know much about Shiga, the prefecture to which I have had the honour to be appointed, but I believe it can boast some natural beauties, and, as you know, it is easily accessible. I hope that you will find your way there, gentlemen. The oftener you can come and the greater the number, the more delighted shall I be to welcome you, and to renew the intercourse which has been such a pleasure to me here, and for which I thank you heartily.—(Loud applause.)

Count Kawamura said that he had known Governor Oki for twenty years. He had the pleasure, indeed, of reckoning him among his oldest friends, and he joined most heartily in wishing him success and happiness. Most heartily, too, did he echo Governor Oki's wish that intercourse such as they enjoyed in this club might be extended in the fullest and strongest sense. He hoped that the club would grow and flourish continually and that it would "end in completeness." Their guest, doubtless, had other painful partings to make on leaving Tokyo. Flowers blossomed, but they also fell—like those before him on the table—and eyes that brightened could also drop tears. —(Laughter.) Otsu, the chief town of Governor Oki's new duties, was not yet a full blown flower. It was only in a budding condition. But it was in the vicinity of Kyoto, the garden of Japan, where flowers of exceptional fragrance and beauty bloomed all the year round. He trusted that his old friend would not contemplate those flowers too intently for his peace of mind.—(Laughter and applause.) He bade their guest farewell, and hoped to have the pleasure of welcoming him back soon. —(Applause.)

Mr. T. B. Glover said that he thought the members ought to know that their departing Vice-President had presented a most beautiful prize to be played for at billiards by the members. It was an exquisite specimen of workmanship in silver and enamel, and the intention had been to let the members see it this evening, but Governor Oki had wished to have a stand made for it, and unfortunately this had not been finished in time. The Governor had expressed the hope that the competition for this prize would add some pleasant evenings to the intercourse of the members.

### DOLLS.

Just as there are congresses about all sorts of things, so there are international exhibitions of every description. A very original one that will not fail to obtain immense success among the young folks, is an international exhibition of dolls now being organized at Schweningue in Holland. The opening will take place on the 4th July next in the ball and theatrical hall of the Kurhaus, and the show will finish up with a lottery composed exclusively of dolls. To get an idea of what extension can be given to such an exhibition, one need only look at the categories mentioned in the programme of exhibition: dolls representing historical and political personages, artists, composers, and celebrated actresses: dolls representing characters in operas or comic operas and in well known dramatic works; dolls representing the national costumes of every country; mere dolls for playthings—dolls representing every class of humanity, in fact, except mendicants, whose rags have not yet been included among picturesque objects.

### FOREIGN POULTRY.

The introduction of foreign poultry has proved a disastrous speculation for many Japanese. Two years ago hens of various favourite breeds were imported at considerable expense, and a fancy price was demanded for their eggs. Minorca, Plymouth Rock, and Brahma eggs would sell for as much as thirty or forty *sen* a piece. As a pair of dainty and curious birds makes a particularly acceptable gift in this land of presents, importers for a considerable time drove a most lucrative trade. Several are said to have retired with wonderful profits on quite a small capital, and the boom spread to other centres besides Tokyo. But, as poultry is easily multiplied, the boom soon spent itself. Ordinary poultry yards were replenished with the new stock, and the eggs sunk to the market price of the article. A dozen of fresh white Leghorn eggs can be bought now in Tokyo for fifteen *sen*, no distinction whatever being made because of the species. Brahma hens are commonly met with, even in country districts.

### CONCERT IN TOKYO.

A concert was given on the 25th ultimo in the Music Hall of the Tokyo Academy of Music at Uyeno Park. The audience was one of the largest that has ever assembled in the little Uyeno hall, all the seats being filled, and many listeners, including several foreigners, being compelled to content themselves with standing space. The concert began soon after three o'clock, the first part being opened by the Army Band of thirty performers, with the introduction from Rubinstein's "Bal Costume." Eight young ladies, violin students of the Academy of Music then appeared and played a "romance" by Ondricek, which served to show the wonderful accuracy of execution possible by patient and skilful training. Nineteen girls of various ages, charmingly attired, as were the fair violinists, in their country's costume, now flocked in and ranged themselves on the stage in double file, the front rank of which—whether by accident or of design does not really matter—presented a most happy blending of colours, for while those at the end of the row were clothed in the lighter hues that so daintily enhance the grace of the Japanese robes, the effect of the whole was a gradual shading to almost sombre hues in the centre—an effect that would have been perfect but for the presence of one discordant spot of colour, which fostered the idea that the grouping was accidental. These sang with great precision and in most pleasant harmony a chorus entitled "Spring" (*Boshun*) and composed by Mr. Torii for an air by W. Bargiel. A chorus and aria from the "Magic Flute" brought on the Shikibushoku string and wind band, and afforded the audience a brilliant sample of excellent conducting and painstaking and careful rendering, the trombone solo being a marked instance of the display of those qualities. Mr. Dittrich's violin solo from "Mignon" was a masterly exposition of the theme, played as it was with fine taste and expression, and the audience marked their appreciation of the treat afforded them by recalling the performer. Mr. and Mrs. Nagahara with five associates, ladies, now gave a piece of Chinese music, with wind and string instruments, two young ladies playing the *gekkin*, while a third used the flute. As one of the performers sang a kind of accompaniment to the melody, in tones which so closely resembled the querulous chidings of the flute, when that instrument could raise its complaining voice during momentary cessations of the movement, it was at times difficult to distinguish one from the other, and their combined exercise lent a strangely quaint colouring to the whimsical theme. Returning after a brief interval, Mr. and Mrs. Nagahara, with Chinese violin and *gekkin*, performed another piece, also with snatches of vocal accompaniment, but the chief distinction of which to foreign ears must have been Mr. Nagahara's execution on the little instrument which he bowed and fingered so brillantly. This number, however, being very long, and lacking also somewhat in variety, even Mr. Nagahara's limpid, violin-like notes had ceased in some measure to hold the attention of the audience when the performers made their parting obeisance and the first half of the programme closed. The opening piece of the second part was Popp's "Herzensdieb" very well rendered by the Shikibushoku Band, and the second number brought on Mrs. Tietze whose fine soprano voice was heard to very striking effect in the area from "The Creation," her husband playing her accompaniment. The young lady violinists who had previously appeared, followed with

Digitized by Google

a "Night Tune" and a "Gavotte" of d'Egville, in which a slight instance of concerted playing was welcomed by way of variety. Later, seven of these violin students joined with four *koto* players in rendering "Fuki-no-kyoku"; and "Tamagawa," by Kuniyama, afforded lovers of purely Japanese music an opportunity of hearing *koto*, *samisen*, *shakuhachi*, and *kokiu* together, the Army Band bringing the concert to a close by a capital rendering of the Overture from Auber's "Dumb Girl of Portici." It only remains to be said that during the violin numbers and the vocal chorus Mr. Dittrich sat at the piano and contributed in a marked degree to the success of the pieces, and that Mr. Eggert conducted the chorus and aria from the "Magic Flute" with finished skill. We append the programme:—

PART I.

1. Introduction from "Bal costume".....A. Rubinstein.
By the Army-Band.
2. "Romance" for Violins with Piano .....F. Ondricek.
By the Violin-students of the Tokyo Academy of Music.
3. Chorus for 3 female voices with Piano.
"Boshun" (Spring)..... .....W. Bargiel.
Words by Mr. Torii.
By the Students of the Tokyo Academy of Music.
4. Chorus and Aria from "Magic Flute" for orchestra, W. A. Mozart.
By the Shikibushoku-Band.
5. Romance and Gavotte from "Mignon" for Violin Solo with Piano ..... ....A. Thomas—P. de Sarasate.
Mr. Dittrich.
6. Chinese Music.—*a.* "So-cho sui."
By the Nagahara Society.
*b.* "San-goku-shi."
By Mr. and Mrs. Nagahara.

PART II.

1. "Herzensdieb," pleasant tune for orchestra.....Popp.
By the Shikibushoku-Band.
2. Aria for Soprano from "The Creation" .....J. Haydn.
Mrs. Tietze
3. *a.* "Night-tune" for Violins with Piano ..... —
*b.* "Gavotte" for Violins with Piano.....L. H. d'Egville.
By the Violin-students of the Tokyo Academy of Music.
4. Japanese *Koto* Music.
*a.*—"Fuki no Kyoku" for *Koto* with Violin...Yatsuhashi.
By the Teacher and Students of the Tokyo Academy of Music.
*b.*—"Tamagawa" .....Kuniyama.
*Koto* .....{Mr. Yamase. *Shakuhachi*...Mr. Hara. Mr. Yamato. *Kokiu* .....Mr. Yamamuro.
*Samisen* ...Mr. Kushita.
5. Overture from "Dumb Girl of Portici" .....Auber.
By the Army-Band.

## THE "JIJI SHIMPO" ON EMIGRATION.

In an article on the advisability of encouraging emigration, the *Jiji Shimpo* remarks that there are three classes of persons whose departure from Japan and settling in other countries should be specially encouraged from considerations of economy, and with a view to the due preservation of law and order within the realm. Those classes are, first, well-to-do and influential merchants; secondly, poor labouring people; and, thirdly, young men who have no fixed occupation. It may be regarded as a matter for regret that merchants of good standing should leave the country, but, just as in an overstocked pond it is well that part of its denizens should be removed to another locality for the general benefit of all, so it is only prudent that the surplus mercantile population should seek new spheres of activity. And it is of the first importance that the men who go abroad to represent this country in the great field of commerce should be of high character and of good business standing, for they are the persons who are likely to succeed in the struggle with new competitors, and whose conduct is most likely to reflect honour and credit on, and to bring material profit and benefit to their native country. Hitherto very few of this class have left Japan, a fact which our contemporary attributes to the lack of encouragement afforded them; and the *Jiji* suggests that Japanese steamers should be run to foreign countries to give such people the facility of travelling under their own flag and avoiding the inconveniences which they might experience on ships owned by foreigners. The emigration of the poor working classes should, our contemporary thinks, be encouraged and, so to speak, protected by Government providing the cost of travel, for beyond doubt the presence in the Empire of people reduced to the lowest ebb of poverty and distress, and consequently liable in their desperation to commit disorderly acts is greatly to be avoided, when in foreign lands they might live in comfort and plenty. The case of the third class, young men without fixed occupation, is somewhat more difficult to deal with. Owing to the facilities provided for education very many youths are yearly thrown forth from the schools of the empire, upon the world, most of them very poorly fitted to engage in any employment. No openings in Government service are available for them, and engagements in private are equally out of their reach. Such youths eventually join the ranks of the *soshi*, a class which, though in many respects deserving of condemnation, is still described by the *Jiji* as worthy of pity in view of the condition of its members. It is vain, says the Tokyo journal, to expect that these people will in this country turn their attention to industrial pursuits, and emigration appears to be the only means of rescuing them from their unhappy state. Like the labouring class, these youths are unable to pay the cost of their own emigration, and therefore Government should assist both in the same way.

## AN EPISODE OF COLONIZATION IN TONQUIN.

The story of the "Société Française des Charbonnages du Tonkin," as told by M. Bavier Chauffour in a vigorously written brochure, deserves to be studied by everyone interested in colonization. M. Bavier Chauffour set out from Paris in February, 1884, commissioned by a group of French capitalists, to examine the industrial and commercial resources of Tonquin. Making the carboniferous basin of the Bay of Along his objective point, he had to think, at the outset, of protecting himself against the pirates who infested that district. A force of twenty armed coolies seemed the simplest kind of guard, but General Millot, who commanded in Tonquin at the time, declined to sanction anything of the kind. Why M. Bavier Chauffour asked the General's leave, we do not gather. Such a procedure is not consistent with English ideas of going to work, but probably there were good reasons for it. Forbidden to provide an escort at his own expense and unable, of course, to obtain military assistance, M. Bavier Chauffour adopted the courageous course of setting out with only two friends to explore the country. The sufferings of the little party seem to have been great, but they persevered; found a promising vein of coal; mapped the district—a task never before attempted—and then applied themselves to acquire a legal title to their discovery. The Annamite Government were the undoubted owners of the country. They had not surrended their title to anyone, or been deprived of it by anyone. M. Bavier Chauffour accordingly proceeded to Hué, to treat directly with the Authorities there. Long and patient negotiations were at length crowned with success. He obtained a lease of the carboniferous area for a century, on agreeing to pay a hundred thousand dollars, with the condition, voluntarily added on his part, that the Annamite Government should have a share of the proceeds of the enterprise. All this was accomplished by August 26th, 1884. It may be supposed that the gravest difficulties were now overcome, and that nothing remained but to make preparations for the work of mining. M. Bavier Chauffour's friends knew better. A letter written to him, shortly after quitting Hué, by M. Rheinart, French Chargé at that place, predicted with remarkable foresight the calumnies and envious charges of which he was destined to be the victim. Before he reached France the Government had appointed a Commission to draw up mining regulations in respect of Tonquin. It would seem as though this Commission was specially instructed to bar M. Bavier Chauffour's claims, for it decided that mines already discovered could be acquired by tender only, and it expressly included M. Bavier Chauffour's mine in this category, though his discovery was only a few months old. The Regents at Hué were then required to sign a convention in the above sense, with a clause declaring that since June, 1884, no concession had been made by them to any one. Naturally the Regents fought against endorsing such a falsehood. They had leased a carboniferous district to M. Bavier Chauffour in August, 1884, and they shrank from disavowing the act. But the French Representative insisted, and of course the Hué Court could not resist effectually. All that the Regents succeeded in obtaining was a written guarantee absolving them from any responsibility to M. Bavier Chauffour. "Le gouvernment de la Rèpublique," said the guarantee, "accepte pleinement la responsabilité de cette déclaration qui pourra éte valablement opposée à M. Bavier Chauffour, dans le cas où celui-ci voudrait intenter une action, de ce chef, à la cour de Hué." Despite this guarantee and the newly signed Convention, the Regents addressed to the French Government in March, 1885, a protest setting forth that the concession to M. Bavier Chauffour had been made before the conclusion of the Convention, and therefore while the Court at Hué possessed the full right to make it; that full information of the concession had been given before the Convention was ever proposed; that the Convention had been signed virtually under duress, and that M. Bavier Chauffour's rights of property ought to be respected. His rights were not respected, however, and what is more singular, when, in pursuance of his policy of dealing directly with the original owners of the mine, M. Bavier Chauffour sent his agent to confer with the Court at Hué, the French Representative, though permitting the conference, wrote to the Annamite Authorities, in these tetms:—"It is well understood that the French Government does not recognise the validity of the concessions that you have made, whether in favour of M. Bavier Chauffour or of any other person, but inasmuch as the French Government does not propose to substitute itself for you in respect of claims that may be preferred in consequence of engagements entered into by you despite your incompetence to contract them, I have not deemed it my duty to prevent M. Ivatts from addressing himself to you in his capacity of Agent for M. Bavier Chauffour." The Court at Hué thus found itself in a pleasant predicament. Having signed a convention annulling the concession to M. Bavier Chauffour in consideration of a written promise that the Government of the Republic accepted all responsibility for the breach of contract, it was now quietly told that it must take the responsibility on its own shoulders. In justice, however, note must be taken of the fact that the unfortunate Annamites were not left without aid. The French Representative relieved them of the embarrassment of M. Ivatts' claims, by ordering that gentleman to quit Hué. In face of such obstacles many men would have succumbed. M. Bavier Chauffour proceeded as though nothing had happened. His engagement with the Annamites required that he should pay a hundred thousand dollars before August, 1886. He carried the money across Tonquin and Annam, offered it vainly to the Viceroy in Hanoi and the Regents in Hué, and after carting it about for three weeks, left it in Haiphong, where it lay for seven months. The record then lapses into a long series of wearisome negotiations, until at last, in April, 1888, M. Bavier Chauffour obtained an act of concession from the French Government and the "Société Française des Charbonnages du Tonkin" commenced its work. We take these details from M. Bavier Chauffour's brochure. There is doubtless another side to the story, but as here presented it constitutes a singular history of private energy battling again official obstruction and injustice. It is hard for French colonists to succeed in face of such difficulties. Let us close the singular chapter by M. Bavier Chauffour's *resumé* of what the Coal Society has achieved:—"It has already spent several millions of francs in the country. Soon numerous ships will come to enliven our port and carry off our produce. Three years ago nothing existed around us at Hongay. To-day, a little town shows itself on the coast. A thousand natives have taken up their residence there, supported by the Company. Two thousand coolies, reclaimed for the most part from piracy, work in our various galleries. Others will follow, accomplishing thus the pacification of a whole region."

## THE POLITICAL CRISIS.

According to the *Jiji Shimpo*, Count Ito proceeded to the Palace by *jinrikisha* at about 11 o'clock in the forenoon of the 27th ult. The Emperor evinced much pleasure at seeing him, and entered into a long conversation with reference

Digitized by Google

to the resignation of Count Yamagata and the formation of a new Cabinet. Subsequently the Count had the honour of lunching with His Majesty, there being also present their Imperial Highnesses Princes Kitashirakawa and Fushimi, Marquis Ikeda, Princes Mori and Tokugawa, Viscount Hijikata, and several other peers having the *entrée* of the *Jakonoma*. Count Ito did not leave the Palace until 3.30 p.m., having in the meanwhile consulted with several Cabinet Ministers who came to the Court. Nothing definite is publicly known as to what transpired at the Palace, but the general impression is that Count Ito has persisted in his refusal to form a Cabinet. The *Jiji Shimpo* affirms that Count Saigo also remains resolved not to accept the responsibility, and that he would not remain in the Cabinet at all should Count Yamagata retire. Under these circumstances Count Matsukata alone would be eligible. The same paper says that if Count Matsukata becomes Minister President, he will retain the portfolio of Finance; that General Viscount Takashima will replace Count Oyama at the War Office, and that Count Saigo's successor at the Home Office is uncertain. But the *Kokkai* alleges, with equal confidence, that Count Ito, after his visit to the Palace on the 27th inst., called upon Count Saigo and endeavoured in every possible way to persuade him to accept the leadership of the Cabinet; that other colleagues of the Count are equally persistent in urging him, and that if the Emperor asks him, he can scarcely stand aloof any longer. In the event of Count Saigo's becoming President, the *Kokkai* thinks that no other change will take place in the Cabinet.

### PARTY GOVERNMENT.

THE *Jiji Shimpo* of the 26th ultimo had the following:—Influential and thoughtful men have long insisted on the necessity of government by party in this country. Political parties are the inevitable result of a representative parliament, and yet it seems strange to hear people who would grant the nation a voice in administrative affairs object to party government. We believe, although government by party cannot but be in some respects detrimental to the administration of a country, the evil, such as it is, must be borne with. Since the Restoration, Ministers have constantly been appointed from among the members of the influential clans who rendered valuable services in the past: whenever official changes took place, those who gained office as their result were found to be, like their predecessors, adherents of these clans. On the other hand, the people have long taken an interest in political parties, and the opening of Parliament has enabled them, to a great extent, to realize their desires. Although it may not be feasible to replace at once clan government with a party cabinet, the time will soon come when the latter will become an accomplished fact, to the profound satisfaction of all political partizans. Japan has already set out towards, and is every day approaching, that destination, but if the people neglect the present opportunity, they may never be able to accomplish their object. Count Yamagata, Minister President of State, recently sent in his resignation, but no definite arrangement has yet been made as to his successor, rumour having it that either Count Ito or Count Saigo is to fill the vacancy. We believe that the reason why these two statesmen hesitate to accept the portfolio of the Premier may be found in the numerous difficulties that attach to the chief office of the State. These difficulties arise from differences of opinion among the higher officials of the Government in regard to the appointment of the two candidates referred to. Some are in favour of Count Ito, while others desire to see Count Saigo occupy the chair of the Premier. In strong contrast to the activity shown by officials as to the appointment in question, unofficial politicians seem to view the matter with indifference. If these hold the opinion that neither of the two statesmen mentioned is fit for the post of Premier, in view of the general desire to do away with clan government, it may be well for them, at this moment, to endeavour to bring forward one of their leaders, as a candidate for the Premiership, so that even if they fail, their original desire may, to some extent, be realized. But we see with regret that they remain silent and inactive at this critical moment. As the Diet is, in a sense, the battle-field of political parties, the efficiency or otherwise of its members should be exhibited there, but the policy of the Administration must be watched constantly, and thus the true function of political parties is to discuss topics of government at times other than when the Diet is in session. The members of political parties displayed extraordinary activity in the last session of the Diet, but now they seem quite dormant, and we fear that though they may know how to make speeches in the Diet, they do not know how to use their weapons practically. It is extremely to be regretted if they have given up the idea of establishing a party Cabinet. If it is so now, how many years must elapse before we can expect the establishment of government by party. It seems to us difficult to understand what these politicians mean by party government.

### PROGRESS.

THE one point of superiority which critics of international morality have been disposed to place to France's credit as compared with England is frankness. The French themselves have always been witheringly scornful of that peculiar combination so familiar to the world, British cant and British muscle. "When we steal other folks' territory," they say, "we do it without any hypocritical pretences or subterfuges. When you, of *perfide Albion*, set about the job, you drown the cry of your victims by singing hymns, and silence your critics by reciting the eighth commandment." It was felt that M. Jules Ferry had demonstrated this difference in the most striking manner possible when, in the celebrated days of Tonquin, he told the Chamber of Deputies that France's duty was to acquire an estate to bequeathe to her children of the next generation. There was a fine fresh openness about this declaration. It made good people stare and catch their breath, but Europe in general confessed that pirates deserve more respect when they openly fly a death's-head ensign than when they sail under the flag of the Decalogue. There are signs now that this superiority on France's part is not unlikely to be rudely challenged. Take, for example, the following paragraph which appears in the last number of the *St. James's Gazette* received here:—

> The lamented death of Sir William Kirby Green, our very clever and resourceful Minister to Morocco, imposes a serious responsibility upon her Majesty's Government. Whoever succeeds him at Tangier will have it in his power almost to make, or very greatly to mar, our prospects in the Moorish Empire. Morocco is a plum that has been ripening very rapidly of late years. It is not yet quite ripe; but it will be ready for plucking before very long. Then we shall see what we shall see. The two countries that have made no secret of their intention to get Morocco if they can are France and Spain. Italy has not said so much about it, but not the less is her attitude one of animated expectancy. Germany is obtaining a certain commercial footing in the country; but at present that does not count for much. We have said for years past that if it comes to a choice between France and Spain, it would be better for us to see Spain established in Morocco, despite the fact that she could not possibly govern it. Perhaps the best arrangement would be to give a bit to Spain, as a sop to her ancient aspirations, and to take the most important part ourselves. Indeed, if we are to keep Gibraltar in comfort after the downfall of the Moorish Empire, we absolutely must hold Tangier, which, indeed, is much the more important point of the two.

WE do not think that even M. Jules Ferry could give many points to the writer of this confession of faith.

### NEWS FROM CHINA AND THE SOUTH.

THE inquest with reference to the recent cartridge explosion at Singapore was concluded on the 11th ult. The verdict of the jury was as follows:—"That death was due, in the cases specified, to burns caused by the explosion of cartridges. The Jury were unable to determine the cause of the explosion, but were of opinion that it was a mistake to bring such a large quantity of ammunition to the Central Station for destruction. They are of opinion that the explosion was brought on by the inexperience of the men in charge and those executing the work of destruction." It appears that one of the injured men, Constable Bunting, is still very ill, his reason having partially deserted him. * * * Singapore papers report a cricket match at Rangoon, between ladies and gentlemen, in which the ladies' wicket-keeper donned the ordinary masculine cricket dress, "thus giving rise to much comment." * * * A Chinese detective in Singapore, having made up his mind to arrest a man who was believed to have been concerned with five others in a burglary some time before, entered a Chinese dwelling in Church Street. His intrusion was resented, and the lady of the house assisted by her son proceeded to chastise him. The detective refusing to be intimidated, retaliated, and to such effect that with a piece of wood he gave the woman injuries that very soon resulted in her death. The detective, himself, then became the object of search on the part of the authorities, who found him in the hospital, too badly beaten to say much on the subject. Interest in the missing burglar has waned. * * * The Marine Court of Enquiry with reference to the collision between the *Strathendrick* and *Devonhurst*, has found as follows:—"The chief officer of the *Devonhurst*, who was in charge of his ship from midnight until after the collision, did not watch the light approaching with sufficient care, and the Court is of opinion that in starboarding his helm under the circumstances he committed a breach of Art. 16 of the Regulations for Preventing Collisions at Sea. The Court therefore adjudge that the certificate No 89458 of Charles Horn be suspended for two years. The Court is of opinion that David James Davis, 2nd Officer of the *Strathendrick*, who was in charge of that ship from midnight to the time of the collision, committed a grave breach of the Regulations for Preventing Collisions at Sea. They regret that they feel compelled to suspend his certificate, No. 021602 for three months. The Court exonerates the masters of both vessels from all blame as regards the circumstances leading to the collision, and also finds that no blame is attributable to any of the survivors for the loss of the life of the 2nd Engineer of the *Strathendrick*, who from the evidence probably went down with the ship while endeavouring to save his effects. The Court is also of opinion that after the collision everything that was possible to be done to save life was done by the officers of both ships. The Court wishes to draw attention to the very meagre entries relating to the collision, made by Captain Hardy in his official log book, and is of opinion that such meagre details do not form a satisfactory record of the circumstances attending this collision, such as is distinctly directed to be made by the Merchant Shipping Act." * * * The shareholders of the Hongkong Peak Hotel and Trading Co. have decided to increase the capital by $50,000, creating 5,000 new shares of $10 each. * * * Residents of Hongkong had an opportunity on the 17th of witnessing a Chinese execution on a large scale. Nineteen criminals participated in the function. Thirteen of these had been arrested in connection with the *Namoa* tragedy, one of whom is reported to have confessed complicity in the *Greyhound* affair. Owing, it is said, to frequent false alarms—surely there must have been some other reason—only about half a dozen foreigners were present, and these included several reporters who duly served up the details to their readers. A visitor offered to purchase one of the executioner's swords, but the price, $75, deterred him. * * * The Governor of Formosa has hit on the scheme of encouraging the natives under his jurisdiction to be hospitable to strangers, by offering rewards for kindness shown to shipwrecked mariners. * * * Trouble has occurred between the foreign and Cantonese employés of the Chinese Engineering and Mining Co. and of the Railway Co. at Tongshan. For some time relations between the foreigners and the Canton men have been strained, the conduct of the latter being most
